The method of exposing targets with the
KEYSTONE *Overhead Tachistoscope*
 has *Several Distinct Advantages*
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated.

YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Tachistoscope *stands first*.

Just try a Keystone Overhead Tachistoscope—its superiority will be evident.

Leading Articles

OUR leading articles in the first four issues of this school year were signed by Findlay, May, Corey, Hoban—outstanding names in the audio-visual field. Continuing the practice we next offer two companion articles, both from California and strongly contrasting. In *this issue* we present "Visual Education from a 25-Year Perspective," by Dr. Frank N. Freeman of the School of Education, University of California. This eminent educator, who has conducted so much of the finest scientific research yet done in the visual field, gives a scholarly, dispassionate appraisal of the visual achievement of the past quarter century, and a penetrating analysis of procedures necessary for further significant progress. In the *February issue* will appear "Looking Ahead 25 Years in Audio-Visual Instruction", by Francis Noel, State Director of Audio-Visual Education for California, and Elizabeth Noel, his wife and constant collaborator. Francis Noel, leading figure in the wartime training programs, gives a warm, vivid picture of advances to be expected during the quarter century ahead. The two articles together are a stimulus to sound and balanced thinking which our readers will enjoy.

Our Cover Picture

THE painting "Khorramshahr, Iran", portrays a notable achievement of the war—the transformation by U. S. Engineers of a tiny fishing village in the Persian Gulf area into a highly important harbor for the trans-shipment of war materials to Russia. On this mighty pier our G. I.'s, working in 150-degree heat, once unloaded eight ships in six days. The artist is Bruce Mitchell, the sponsor, Standard Oil Company of New Jersey to whom we owe the privilege of reproduction.

There is further significance to this painting. It is one of many, by well known contemporary artists, commissioned by a great industrial firm to show a segment of American life. "All sorts of visual techniques," says the Standard Oil Company, "ranging from picture magazines to television, comics to documentary films, animated graphs to easel paintings, are playing an ever increasing part in bringing knowledge and understanding of a wide range of subjects." Standard Oil's growing collection of such paintings has been "in continuous use in publications and, as a traveling exhibition, seen by thousands". The employment of the fine arts to tell the story of an industry is another recent manifestation of visual education.

The "Church Department" Starts Soon

THE Church and the School field are alike "educational". They differ chiefly in their curricula, not in teaching purpose. The same procedures and techniques, for using their appropriate materials, are applicable to both. If visualization, then, is essential to good teaching, visual methods are equally valuable in

either field. Like the School field, under the fresh stimulus of wartime training by visual methods, the Church field is moving faster than ever before toward wider and more intensive visual teaching. Visual Education belongs in the Church as inevitably as in the School.

THE EDUCATIONAL SCREEN seeks to be of more service to this Church field. At various times in the past we have made sporadic efforts to this end by running "a page" on church activities. It was too little space to be important, and the field was too little interested. Times have now changed. We are ready for a more significant effort in a larger field. Our new "Church Department" will start with four full pages in every issue, always additional to our regular number of pages. Inasmuch as the new department will be concerned exclusively with the audio-visual idea in education, as is the magazine, our readers in both the School and Church fields will find positive values on every page.

The editor secured for the new Department is a man widely known in the Church field and of rare qualifications for the work. He is William S. Hockman, 2043 Mars Avenue, Lakewood 7, Ohio, long a Director of Religious Education in different denominational fields and author of many authoritative writings on visual instruction in the church. In February we will introduce Mr. Hockman to our readers in conjunction with his own editorial presentation of plans and proposals for the new section of EDUCATIONAL SCREEN. The four-page Church Department will begin in the March issue. (To any readers inclined to write to Mr. Hockman at once we say "Don't hesitate!" Do it now, at the address given above).

A New Project Under "School Made Films"

WE call special attention to the new feature announced in this issue in the "School Made Films" department. One of Mr. Schneider's plans for the department, of which he recently became editor, is the development of a national record, ultimately to become complete, of all school and college film productions—past, present and to come—in the United States. He has prepared a simplified "National Questionnaire", answerable with minimum time and effort, for wide circulation throughout the country.

A copy of the "National Questionnaire on School Made Films" is enclosed in this issue of EDUCATIONAL SCREEN to every subscriber. We would urge the fullest possible return. Report any and every school-made film you know from personal knowledge. If neither you nor your school has yet started such work, hand the Questionnaire to a colleague in your own city or elsewhere. Return them either to the magazine or, preferably, to Mr. Schneider direct. From the accumulating data he will draw more and more helpful material for the readers and makers of "School Made Films." **Keep the Questionnaires coming back.**

Russia Cables

A most cordial and unexpected anniversary greeting was cabled to us from Leningrad on January 3rd and reached us safely on January 7th! It read precisely as follows:

"Educational Scientific Film Department Hermen Pedagogical Institute heartily congratulates you personally and all colleagues in behalf of the 25th Anniversary of your Journal striving for development of educational films mighty means of culture serving progress mankind best wishes for the future."

Although it is our 24th anniversary, beginning our 25th year, and although the eight word signature to the message was undecipherable, we were still pleasantly intrigued by these warm words from the heart of great Russia, whoever the sender might be. The next day's mail clarified the matter.

The greeting, sent by Mr. B. Toll, head of the department named, was the first friendly gun fired in our direction, in a campaign for greater mutual understanding of things audio-visual in the educational systems of the Soviet Union and the United States. To that end an elaborate questionnaire has been prepared by the Leningrad Institute for circulation in this country through the National Council of American-Soviet Friendship, 114 East 32nd St., New York City. The Council seeks wide response from American educational institutions, will supply copies of the questionnaire in any quantities, or will welcome names and addresses to which the questionnaire will be sent direct by the Council.

The Commercial Field Has Much to Tell

FOR twenty-four years THE EDUCATIONAL SCREEN has rarely run any regular articles save those written by educators, for educators, on education. Last October we ventured an experiment with the article by Mr. Francisco, himself the head of Francisco Films Inc., producers and distributors of industrial motion pictures and filmstrips. To be sure, it was notably well written, was based on careful cooperative research with educators—but it was still a "commercial article". Reactions were interesting. One letter said, "Fine issue. First one I could ever read from cover to cover . . .", but the correspondent was also a commercial man! Another reaction was an unusual influx of articles from other firms in the audio-visual field!

The simple fact is, of course, that the commercial firms do know a great deal about their audio-visual field, not only about its technical side and their own contribution thereto, but also about the teaching procedures involved or in vogue. Long and devoted contact with teachers and classrooms has amassed this knowledge. It would be an unmitigated blessing at this moment if the average teacher, the country over, possessed a reasonable fraction of such knowledge. More and more commercial firms have enrolled in their personnel teachers direct from the classrooms, men and women of unquestionable educational background, high teaching ability and long experience in the use of visual materials—to bridge the gap from producer to consumer, to talk the teachers' language, to

give valuable information and service, to impart knowledge and stimulate action where neither existed before. These representatives have accomplished much for the field as well as for their employers, and will continue to do so indefinitely. Further, it is an excellent sign of progress in the audio-visual field, this hiring of teachers to contact teachers. The great textbook companies learned it long ago and have been practicing it for decades.

The idea is already formulated in some quarters that talk about the vital need for professional training of teachers is fol-de-rol. We need merely to have these picked commercial representatives circulate among the schools—tell them, show them, teach them—and the trick is turned. But there are flaws in the idea. The educational realm is self-propagating. The teaching profession has been trained by the teaching profession from time immemorial. It takes teachers to train teachers as much as ballplayers to train ballplayers. Further, training teachers for visual instruction is a form of higher education which requires a still higher range of teaching. Finally, higher education demands the teaching of all truth, impartially, comprehensively. The commercial representative, even knowing the whole truth, must perforce be highly selective in his offerings to his learners. Directly or indirectly he should point out the path to his company's door.

Another simple fact, however, interests us more. There are key men in the commercial field with the truly educational viewpoint and background, with capacity to think far beyond sales, plus the ability to write pleasingly and with power. An article from them still may spell benefit to their firms—if only by the mention of their connection under their names—but be highly valuable to the teaching field. The worth to the reader may outweigh any implication of profit to their companies. THE EDUCATIONAL SCREEN has long barred commercial writing—even some notably good writing—from its editorial pages, but always reserving a section expressly for our commercial friends to use as they please. For some years, however, we have had a growing suspicion that we may be depriving our readers of certain things they would like to know which are unobtainable—in our present stage of visual progress—from any academic source. So an experiment in this direction seemed logical and we began it with the Francisco article aforementioned. Another, "A Commercial Firm Favors Filmstrips for its Educational Purposes", appears in this issue. Should the practice become habitual? We shall look to our readers to decide.

Hail and Farewell

MR. Donald P. Bean came with THE EDUCATIONAL SCREEN as Publisher in October, 1944. In the summer of 1945 he accepted a position as Director of the Stanford University Press in California and his connection with THE EDUCATIONAL SCREEN is now entirely severed. Our best wishes go with Mr. Bean in the new position for which he is eminently fitted by his previous long experience as Manager of Publication for The University of Chicago Press.

Visual Education from a Twenty-Five Year Perspective

A highly stimulating pronouncement on fundamentals by an eminent authority—an antidote for muddled thinking on visual education.

WE know enough about visual aids to increase the effectiveness of instruction in many fields at least fifteen percent. This was demonstrated twenty years ago. In spite of this, comparatively little progress has been made in the more than a quarter of a century since various kinds of visual aids were adapted to use in the school. It is true that visual departments have long existed in many cities and that state and country distribution systems have been set up. It is also true that some fairly large scale demonstration programs have been tried out. It remains true, however, that the day by day instruction in most classrooms of the nation is carried on with the help of an infinitesimal amount of visual methods and materials that could be used to advantage.

This is a sober statement of fact that does not need for its support some of the extreme claims that used to be made which contrasted the ear and the eye as channels of experience. Language remains, and always will remain the predominant means to intellectual growth and communication. The picture magazines, led by *Life*, seemed to promise a revolution in the method of dissemination of information and ideas. It turns out that the really significant material they have put out has been in the form of articles. Pictures will never displace language, spoken or written.

Notwithstanding this fact, pictures have a unique and a vital part to play. Ideas are developed and communicated through language, but they are built on our experience with the world about us, received through the senses, the most comprehensive of which is vision. Ideas are spurious when they are developed in a vacuum. Moreover, words are clumsy substitutes for the concrete perceptions and images with which we have to deal when we study the properties of things and their relation to each other, as in art, mechanics or physical science. Neither realm, that of ideas which rests on language, or that of perceptions and images which rest on sense experience, can be substituted for the other.

If we still fail to give visual experience its due in teaching and study where is the bottleneck? We used to say that it was the stalemate between production and distribution on the one side, and extension of use on the other. Low production raised the cost, high cost hindered use and meager use kept down production. Everything was at dead center. How to get off the dead center seemed a problem waiting on some philanthropist or far-sighted industrialist who would be willing to subsidize large scale production in order to

FRANK N. FREEMAN

School of Education
University of California
Berkeley, California

lower the cost and thus stimulate both use and production. The problem doubtless still lies to a large degree at this point, and there are suggestions that large producers have been so convinced of the large possibilities of visual education that they may be willing to venture enough capital to get it on its feet. However, this is not the only requisite. Unless accompanied by other measures it will not be sufficient.

Some point to the extensive use and extraordinary effectiveness of visual aids in the armed forces as an indication of what will shortly happen in the school. Undoubtedly a vivid demonstration was presented by this military use. This demonstration has impressed the public and may help to give support for expanded programs in the school. Also, a large number of trained men are ready to put these programs into operation. However, the gain from the use of visual methods in the armed forces may easily be exaggerated. Nothing new in principle was discovered or put into practice. The great development was due to the existence of especially favorable circumstances, the presence of extreme urgency, the availability of unlimited funds and personnel to meet it and the unlimited control of the creation and maintenance of the program by a central authority. None of these conditions obtains in the public school. However, the armed forces' extensive use of visual methods will doubtless give impetus to their wider use in the school.

The chief requirements which now have to be met, are, it seems to me, more money, better organization and more adequate preparation of teachers. The wide publicity given to the armed forces' program and the prestige that it enjoys will doubtless help to get larger provision in school budgets. However, there will be obstacles to enlarged budgets. They will compete with other requirements, such as for increased salaries, and will meet resistance in the disposition to reduce costs of governmental agencies. A good case must be made for the increased outlay.

Better organization must provide readier use of all visual aids when they are needed. The wholly inadequate circuit system of distribution is still too widely used. It is as limited in value for films as it would be

for books. Materials must be within easy reach of the teacher at all times.

No other means will avail if teachers are not trained in the use of visual materials so that they turn to them as naturally as to books and use them as easily. The California State Board of Education has recently adopted a regulation requiring all teacher-training institutions to provide a two-unit course, or its equivalent, for those preparing for teaching credentials. This will be effective, if, in addition to learning to handle projectors and other apparatus, the teacher learns what is more difficult, to use visual materials at every appropriate place in the subject he teaches. This requires the formation of new habits of thinking of the different parts of the subject, and of teaching them, in terms of visual materials as well as of printed materials.

To bring this about in the case of new teachers is the task of the teacher-training institutions, and a difficult task it is. No small part of the difficulty lies in

the fact that teachers in these institutions are not themselves accustomed to using and thinking of visual materials. Even if all new teachers become adept at the use of visual materials, however, the teachers in service will have to be retrained—an enormous task in which local school systems and teacher-training institutions should cooperate. A major effort is needed on the part of all concerned. It is reasonable to expect that more rapid progress in the use of visual aids will be made in the next quarter century than has been made in the past. The practical demonstration of their value in war training is added to the scientific demonstration that was made in many studies. If the production hurdle can be overcome, if better organization can be worked out, if enough money can be had and if teachers in preparation and in service can be trained, visual aids can be put in their rightful place. It is not time for easy optimism. Wholehearted and cooperative effort, however, may do the job.

A Reader Speaks

MR. Winsey's article on "Art and the Small Color Slide" in your November issue was of special interest to me, as I have been making 2x2 slides in color and black-and-white by the copying process for

several years. If I were a beginner, however, or anxious to make my first slides, I think I would be a bit bewildered by the rather complex processes described, and I find this to be true of most published materials on this topic.

Slide making need not be complex or expensive, however. I am enclosing some snapshots of "poor man's" copy equipment of my own construction, which overcomes many difficulties. The stands are made of scrap lumber, in various heights. With the aid of ground-glass focusing, the area which the camera and supplementary lens-tubes and lenses cover on the base of each stand is found, and this area is cut out. The stand can then be placed on copy of any size, books of any thickness, in slanting position or straight,—and the image is still sharp. Each stand is marked with the lens and tube equipment, and has a mark underneath the top to indicate the position of some fixed point on the lens mount when it is in focus. I can then change the camera from stand to stand, fully loaded with film, and copy pictures of various sizes without resorting to ground glass.

The heavy blocks of 2x2 inch wood beneath the outer ends of the tops of these stands were used to secure greater rigidity and permanent alignment. In more recently built stands I leave the blocks out and nail a narrow board across the top and back, nailing it to the uprights and to the camera-support board. The stands can then be "nested" for space economy in storage. These stands really work. I have made thousands of sharp slides, at minimum fuss and bother. A light meter is of course needed for color work. The weight shown hanging in the background of some of the shots is a pendulum which beats seconds, to time my exposures.

Home-made copy equipment for making 2 x 2 slides

MARK FLANDERS, Director
Department of Audio-Visual Education
Public Schools, Waterloo, Iowa

We Really Learned about Eskimoes

A miniature reproduction in full detail, of class procedure in the utilization of a specific educational motion picture.

NAOMI FAUSCH

Riley School
Des Moines, Iowa

THIS discussion will be concerned with the use of a moving picture film at the elementary grade level, yet most of what is said can be applied just as aptly to teaching at any other level. We shall consider briefly how this particular film was used; second, other ways in which the same film may be used, and finally summarize the familiar principles of method and procedure for the utilization of films as teaching aids.

I have chosen as an example of a film which has been used effectively with intermediate grade children, the Erpi film, entitled *Eskimo Children*, because it illustrates several values which any good film might be expected to have. The group of children with which it was used had been studying fur-bearing animals, particularly those of North America. They had talked about the seal fur and fox fur production of Alaskan Regions, as well as other furs of lesser commercial value. The Eskimo people had been mentioned from time to time in their reading. Since no phase of life with which man is concerned may be really understood without knowledge of the people involved, their dependence upon the region in which they live, their ideas and ideals, their dependence upon other groups of people and their possible relation to the group studying them, the children's questions about Eskimoes were encouraged. This particular film was chosen because of its direct relation to their questions.

The greatest value of any visual aid is to develop and enrich concepts. A word may be added to a child's vocabulary without a great deal of meaning being associated with the new term. To avoid such verbalism we try, if possible, to supply first-hand experiences with the new word. Since first-hand experiences are often impossible to provide, the motion picture seems to be the next best visual aid. In fact, there may be occasions when seeing the film is more safe and desirable than actual first-hand experience. Not only the shape, size and general appearance of an object or the setting for a situation but the feeling of movement, mood, or attitude may be achieved through the motion picture. Let us consider the word, *tundra*, which is used in connection with the life of the Eskimoes. The word had been noticed, discussed and still pictures were found of such regions. Yet the bleakness of the tundra, the sameness of the great areas and the feel of cold winds blowing over it became a part of the understanding of the children only after viewing the film. Richness of meaning was developed as we observed the dependence of the Eskimo people upon the tundra, in this instance, for their supply of water. The film shows the mother and child going to a pool of water, dipping it out, stopping to see a sick child and giving her a drink, and returning to their own hut to

use their supply of water for various household purposes.

The dependence of this group of people upon the region in which they live for practically every need is made clear throughout the film. Not only the clothes, weapons, homes, food and tools are seen but ways of carrying out their work may also be observed through the use of this picture. Their use of furs for clothing proved a valuable understanding for the children who used this film. The importance of knowing how to make clothing from skins and furs, the need for each girl to learn to prepare and sew the skins into warm garments, the patience of the older women and that of the child in teaching and learning this skill, all tend to emphasize the value of furs to a people who must face such severe winters. There is no more effective method of developing these understandings than to see the life of a people actually being lived, and the relative importance of each activity in their lives. Other actions and processes visualized in movement by this film are the playing of games by the children, the preparation of fish for food, methods of eating, and the lessons in kayak paddling and archery for the boys.

As with many good instructional aids, the motion picture film is not usually designed to be used for only one particular situation, one particular grade level or for only one purpose. In the film which we are discussing the basic understandings are not too difficult for primary children, nor too simple for Junior High students. Neither is the vocabulary limited to only one grade level. The value of a film is not exhausted when it has been shown for one purpose. The emphases we make in using a film will determine, to a great extent, the understandings the children will get from it. Just as we might visit a farm or factory to get information needed in connection with a certain unit of work, so we might profitably make a later trip to the same place in connection with another unit of work. On our second visit, however, we would go with other purposes in mind and, therefore, secure different understandings than we did on our first visit.

The place where this film was used with the children who were studying fur production has been shown. It fitted easily into the plan for work, as the preceding study had built up partial understandings which were increased and clarified by seeing *Eskimo Children*. From this point they continued

work on the problem, extending their study into other areas. From time to time reference was made to the life of the Eskimo people in contrasting it with or comparing it with life of people in other regions. The places where this film might be used as teaching material are certainly several. It does depict a type of people little affected by our culture, whose civilization is still very primitive. Geographically, it shows a type of region where surface and climate conditions are very different from our own. One can clearly see, then, how this same film might be utilized in connection with units on types of regions, primitive peoples, co-operation, inventions, transportation, etc., to mention just a few.

We know from studies which have been made that children learn a great deal from motion pictures and remember a great deal, even without directed study or observation. This should make us more aware of the great values which may be attained from well-directed study of films. Motion pictures are a teaching aid. They are not an end in themselves. They should be carefully selected to fit a particular need. Unless they do the job better than any other available device they have no place in that particular instructional situation. To determine this, it is essential that the film be carefully previewed before using it. Another reason for this previewing is to allow for the preparation that must be made for using the film. In some cases a question has arisen in the course of the study of a unit and the film is selected to help answer those questions. In other cases the teacher has purposes in mind which he may give to the class, that they may become group purposes. We should no more be guilty of showing a film for instructional purposes without having made specific preparation for seeing it than we should be justified in taking a class on an excursion without first preparing them for it.

Usually a film is shown the first time without interruption. As one of the chief values of film is continuity, the reason for this is self-evident. A period of discussion after the first showing is usually advisable. This may be a very profitable time as it

will result in questions about parts of the picture which have not seemed clear, in clarifying words or expressions, in calling attention to important sections of the film. It should suggest definite things to be noted in the second showing of the picture. Sometimes it may be of value to stop the film and reshoot a part of it during this second projection. In seeing *Eskimo Children* the class asked if they might take a "good look" at the tundra. There might be occasions when a third showing would be worthwhile, if the film were a short one.

Of course, the real test of the use of the films is the results obtained. As teachers, one of our most important and often most difficult tasks is to evaluate the methods and materials we use. Some sort of evaluation, then, will follow the use of any film. If the purposes for which we used the film were not achieved, some more effective method must be found. We might find that the concepts are too difficult for the children to whom the picture was shown. We may find the vocabulary beyond their understanding. We may find that the film simply does not fill the need as we had expected it to do. Methods of evaluation vary with the group and the purposes for which the film was

Three scenes from "Eskimo Children" (Encyclopaedia Britannica Films, Inc.)

shown. They include discussions, written tests, application or ideas gained toward further study, observation of change of attitude, enlarged reading or speaking vocabularies, or the development of new interests. Some of these are longtime results. Some may be checked shortly after the film has been seen. Each has its own place in the evaluation procedure. We cannot be satisfied that we have done a good job simply because the film was shown. It must justify its use in the results obtained.

A New Kind of Film

A clear-cut presentation, by one of Britain's leading film directors, of the new "semi-documentary" film evolved in war-time England.

CHARLES FREND
London, England

A minor revolution took place in Britain's film production industry during the war. The extent of this revolution is not easy to define, nor at this stage is it easy to forecast its duration. In brief it may be said that the British film has evolved a national form of expression and that a type of film has developed which is technically distinct not only from Britain's own pre-war product but from those of other countries.

The outbreak of war brought about three changes in Britain's film industry. First, the supply of American films decreased while movie-going became even more popular than before. Thus a new field for sales was at once provided—a certain and immediate production stimulus. Secondly, the emotional as well as the practical impact of the war immediately opened to the creative technician a vast new horizon of subjects. Thirdly, the State provided a natural patronage in that films were required to become propaganda, direct and indirect. They had to disseminate instruction and information as well as the much needed entertainment for the relaxation of Services and civilians alike.

Propaganda films, can be divided into two categories, the direct propaganda film and the indirect. The first was of a purely documentary nature and was produced mainly by the Crown Film Unit, a Government controlled organization, and by the film units maintained by the Forces. Commercial film companies, however, actuated by motives which were a blend of patriotism and business acumen, tentatively began to experiment with what was for them a new medium. Finally they recognized its merits in the most practical fashion. Some documentary technicians, Cavalcanti among them, were absorbed into the personnel of the commercial studios, and their talents were used to unite the two schools of film production in a new type of British film—the semi-documentary, which provided the State with excellent indirect propaganda and the industry with a much-needed revolution.

But it should not be supposed that the whole or

Finally, we may conclude that the film has a real place in our teaching program and has certain values which no other teaching aid may claim. It is not how often we use it but how effectively we use it that counts. Films are becoming easier to obtain, easier to use, and better suited to the instructional program of our schools. Their value depends on how carefully we select them, how well we prepare ourselves and the children for using them, and how ably we evaluate the results obtained through their use.

even the main credit for the war-time re-birth of British films belongs to technicians trained in the documentary school. Already in the commercial studios were technicians (myself among them) who had learned their craft while working with such men as King Vidor, Erich Pommer, Alexander Korda, Rene Clair, Alfred Hitchcock, Anthony Asquith and many other craftsmen whose earliest work was in fictional feature films. Their knowledge of the technique and problems of large scale production, and the financially uninhibited enthusiasm of the documentary technicians, acted as mutually fertilizing agents in the generation of a new and individual British cinema.

As a technician perhaps I may be allowed to introduce a personal note in order to provide a clear and simple illustration of this medium, since one of the films I directed during the war represents perhaps the most direct application of the semi-documentary technique yet made. This was the film "San Demetrio, London" produced at Ealing Studios, London.

In November 1941, an eastbound Atlantic convoy was attacked by the German pocket-battleship "Von Scheer". In the convoy was a British tanker, the "San Demetrio", carrying a cargo of 12,000 tons of gasoline. This ship was shelled and set on fire and had to be abandoned by her crew, who got away in three boats. Two of these were picked up during the night by other ships, but the third, after two days and nights in a November gale, sighted a ship which proved to be the "San Demetrio", still burning but still afloat. The sixteen men in this boat agreed among themselves to reboard the tanker and fight the flames. Their successful struggle and their subsequent journey home "by guess and by God" (as one of them put it) is one of the great sea stories of this war.

Micheal Balcon, the progressive production head of Ealing Studios, decided to make a feature film of this incident. I was assigned to direct it, and a colleague, Robert Hamer, was made associate producer.

(Left) After abandoning the "San Demetrio" the men rowed all through the night. (Right) They get the fires under control after reboarding the ship.

Together we were to write a script in collaboration with F. Tennyson Jesse, who had already written an official record of the incident for the Ministry of Information, published under the title "The Saga of San Demetrio". This was a skilfully documented account of the adventure of the tanker and its crew, factual and without the slightest concession to fictional sensationalism. It not only provided us with a sound basis for a scenario, but gave us, as it were, the key to the mood of our film, which we at once determined should sacrifice everything to the maximum accuracy.

Our first task was to find an eye-witness who would be prepared to be at our side throughout the production as well as the preparation. We could not have made a better choice than we did; Chief Engineer Charles Pollard, who led the crew of 16 survivors and whose tenacity and ingenuity enabled the tanker to proceed home under its own steam. Pollard, a typical example of the British seaman, with a vast practical experience, companionable and with an ever-intruding sense of humor, became our friend in our work and outside it.

We did not press him for details straight away; we spent a lot of time together, travelled with him to docks where we went over tankers similar to the "San Demetrio", visited ship-building yards where we saw new San Demetrios being built, spent a pleasant evening with him and the excellent skipper of the "San Demetrio," Captain George Waite, who made "unlucky" choice of lifeboats, and to his sorrow was denied the chance to bring the tanker back.

The stories of the "San Demetrio" and the characters of the crew who manned her, gradually emerged in an entirely natural manner, until after a few weeks Hamer and I felt we knew them all as old friends and our way about the tanker as we knew our own Studios. The work began in earnest with Pollard ever at our side, tactful and constructively helpful, telling us that so-and-so would never have said the sentence we had just written down—remembering remarks actually made at the time and contributing enormously by this to the authenticity of dialogue we tried to achieve.

Next came the casting. The documentary directors have relied chiefly on non-actors to portray the characters in their film: but though many "natural" actors have been found in this manner, many valuable days of work have been lost owing to the nervousness of the "actors" before the camera. We recognized at the same time that the inclusion in the cast of actors too familiar to film audiences would destroy the illusion we set out to create—that the audience were actually seeing filmed an incident they knew to have happened in reality. We compromised by using one or two non-actors for minor roles while our principal characters were portrayed by first class professional actors who, nevertheless, had not yet become wellknown to the public.

Film studios in wartime Britain presented many limitations to the director. No exterior shooting was possible at night, because of the blackout regulations. "Stars" were scarce, being mostly in the Services, entertaining the troops or on other war-work. Air-raid interruptions were another difficulty. So was the shortage of materials and staff.

The future of the semi-documentary rests with the public, and generally speaking it is my impression that they react favorably to the new type of picture which the film revolution has brought to Britain. "It makes you think" is a remark frequently heard nowadays when people leave the movies—and it is intended as a compliment.

At the beginning of this article I questioned whether the new type of film had come to stay. Even before the war ended, and still more during the past fall, a strong reaction was discernible against all except the very best of war subjects. When an air-raid was in progress in the streets it was not comforting to find another one being portrayed on the screen. But this reaction need not, I believe, mean the end of the semi-documentary, for there is a great field of subjects of general and social interest which have nothing to do with war but which lend themselves to the realistic treatment which Britain's audiences have grown to like. The public may have tired of war films but they will never tire of integrity.

Arizona Schools Make Use of Audio-Visual Techniques

A frank declaration of intention to develop an audio-visual instruction program on a State-wide scale.

THE increased emphasis of audio-visual techniques in public school instruction, which is gaining so much momentum in this period of postwar development, is fully recognized by public educators of Arizona. As in other states, many forces are at work to encourage the movement here. Instruction in the public schools, as well as organization and administration of the program has been carefully surveyed, analyzed, and judged during the last several years. There is a definite movement among our educators to take an inventory of the true conditions and make the changes considered to be sound. We recognize that some changes are needed and that the importance being attached to audio-visual education is justifiable. Interest in the movement has existed for several years but, as in other states, it could not gain momentum.

In the southern part of the state the University of Arizona has long had a library of audio-visual materials, and has offered some courses to train teachers in the use of these materials. At present the University plans enlargement of its library and extension of the training courses.

In the northern part of the state, the State College at Flagstaff has inaugurated a service for the teachers served by that institution. A director of audio-visual education has been placed in charge. The College has conducted some conferences and demonstrations in audio-visual techniques and is establishing a library of audio-visual materials.

In the central part of the state, where forty percent of the population is located, the movement is being led by the State College at Tempe. In the past this institution has devoted attention to the development of audio-visual techniques but the leadership has not been dynamic. Last year the writer, in conference with the President of the College, pointed out the trend of the times and urged preparations for future service of this kind. The President readily agreed and ordered that a study be made of the problems as related to our local situation and plans be made for organizing the services.

It was decided that a conference should be the first step. In the spring of 1945 the conference was held at Arizona State College at Tempe, and interested people from all parts of the state were invited. Bruce Findlay, Director of Audio-Visual Education of the Los Angeles schools, and others from that section were invited to meet with us. Considerable interest was aroused by the lectures and demonstrations, and this stimulated our study and planning.

The usual problems were encountered, for example,

DR. HALEY D. WORTHY,
Director of Audio-Visual Education
Arizona State College, Tempe, Ariz.

that of making audio-visual materials easily accessible to the teachers. To solve this, three cooperative film libraries were organized during the summer. Two groups of schools, one composed of ten schools and the other of twelve schools, purchased over three hundred sound films and the College at Tempe agreed to store, care for, and distribute the films. In addition to these films the College made available all their audio-visual materials which had already been collected. This collection included a very good library of 3½x4 slides and some filmstrips. A director was selected and given an assistant. Before schools started in September tentative schedules were prepared for use of the films by the various schools. Our audio-visual service has expanded, many other services have been organized, and others are being prepared.

Another of the immediate problems was the necessity for training teachers in the use of these techniques. This training is needed for both those preparing to teach, and those in service. However, the immediate problem is with those in service. To meet this need, extension classes were organized at various centers in which the teachers are studying the fundamentals of audio-visual instruction. On the campus the various college departments have been encouraged to use our facilities and many have responded. The work has increased to such an extent that a Projection Club has been organized composed of teachers in training on the campus in order to have ample help in projecting films for the college classes using them, and for those who wish to preview films. In addition it trains the prospective teachers in the operation and use of the equipment. A course in audio-visual education is being given for the students on the campus. Additional courses both on the campus and by extension are being considered for the second semester, and some planning has been done toward a workshop in audio-visual education for the spring semester or the early summer session.

A third cooperative film library, composed of eight schools, was formed in the vicinity of Phoenix and their films are deposited with a commercial concern in Phoenix, for distribution.

The public schools of Phoenix have a director of audio-visual education this year for the first time and plans are going forward for an effective program of audio-visual education. Other school systems of the state are inaugurating more effective programs than any they have had in the past. Many county superin-

The Film and International Understanding

DR. JOHN E. DUGAN, Editor
Hadden Heights, New Jersey

Visual Aids on United Nations

ESTHER L. BERG

Assistant Principal, New York City Schools

(Chairman of Educational Film Library Association
Committee on The Film in International Understanding)

DEMOCRACY is not won on battle fields alone. Teaching desirable concepts and practices of democratic living is a continuing responsibility of the public schools. This applies to all grades. Democratic practices start in the kindergarten. They continue and expand and become more meaningful throughout the whole school life of the child.

New York City Schools are endeavoring to meet this responsibility. The following quotations are from communications issued by Dr. John F. Wade, New York City Superintendent of Schools, at the beginning of the present school year:

"Schools of all countries have an obligation to help build a better world by nurturing good will and cooperation in the hearts, minds, and actions of the young . . . The cause of enduring peace calls upon the schools of the world to teach the truth of universal brotherhood."

"During the coming year, the development of an understanding of the San Francisco Conference and The Charter will be one of the major goals for New York City. Each school and each teacher will develop programs and materials in accordance with the level of understanding of the children and the subject or subjects under consideration."

In order to further this purpose, a curriculum guide, "A Better World", has been prepared for use in the schools. It is a source bulletin of helpful suggestions for teachers. A list of visual aids is included to help the teacher in presenting the United Nations Charter.

Broad Objectives

The whole program moves toward the goals of helping the child to:

1. develop respect for individual human personality.
2. understand the importance of working together, assisting one another, being considerate of one another.
3. acquire a sense of devotion and responsibility to his class group, his school, his family, his community.
4. comprehend the need of interdependence in group life, community life, national and world affairs.
5. understand that he belongs to a world community.
6. learn that nations, as well as individuals, need one another.
7. respect minority points of view, the rights of others, fair play, justice and tolerance.

EDITOR'S NOTE: The problem of teaching about the United Nations Charter has been this year's greatest challenge and opportunity for films and other visual aids for international understanding. There has been much discussion and requests for specific films and sources. The problem of materials for the elementary school has been even greater than it has been for the secondary level.

Here is a list of specific films and sources used by the largest school system in our country for its elementary schools in connection with this problem. Most of the material listed as suitable for eight grade use can also be used on the secondary level satisfactorily.

The author of this article was responsible for the section on Visual Aids in the New York City Schools curriculum guide, "A Better World."

8. understand the necessity of real friendship for people of all races, of all religions, and of all nations.
9. realize the importance of economic and social security for all.
10. practice "responsible freedom."

Visual Aids for Elementary Schools

In planning this list, no attempt has been made to include all possible visual aids, but rather a sampling selected in accordance with the overall motif. Therefore these visual aids are divided into three categories:

1. *One World*, whereby the customs, the habits and the living of peoples in other countries are presented.
2. *The United Nations Charter*, including materials which bear directly on the events leading up to the forming of the Charter, its functions and functioning.
3. *Development of Informed American Opinion*, including documentary films to form the bases of discussions on world problems and thus cultivate attitudes that will lead to intelligent world citizenship.

For the visual aids selected there is indicated: (1) the grade levels for which they are best suited, (2) sources from which they may be obtained, (3) a brief description. The sources given are for New York City, and may vary in other communities. Costs, which are included in the curriculum guide, are omitted here because of the same element of variation.

I. ONE WORLD

Motion Pictures

A. Asia and the Pacific

1. *Children of Asia* (3-6) 15 min. si., American Museum of Natural History. Little Mongolian, Chinese, Indian and Burmese boys and girls at work and play.
2. *Children of China* (3-6) 11 min. sd., Encyclopedia Britannica Films. Home, school and play-life of children in Chinese villages. Chinese dialogue reproduced and interpreted.

3. *China's Gift to the West* (3-6) 30 min. si. YMCA. A Chinese and an American boy find China's products in the latter's home.
4. *Changing Face of China* (5-8) 7 min. sd. United Nations Film Information Office. India's development with steady growth of education, industry and communications.
5. *Musical Instruments of India* (3-6) 12 min. sd. UNFIO. Unusual and fascinating instruments with which Indian music is made.
6. *The Philippines* (5-8) 10 min. sd., Harmon. American rule, mixed racial population, topography and heritage of Spanish culture.
7. *Children of Japan* (3-8) 10 min. sd. EBF. Home, play and school experience of middle-class Japanese children.

B. Europe and Africa

1. *Children of Holland* (3-6) 10 min. sd. EBF. Home, school and play life of a country boy and girl in Holland. Dutch dialogue reproduced and interpreted.
2. *Little Dutch Tulip Girl* (3-6) 10 min. si. AMNH. In a dream, a little American boy is shown Holland by a little Dutch girl.
3. *Little Belgium* (5-8) 12 min. sd. New York University Film Library. A Belgian fishing colony, transplanted to England, keeps its Belgian customs and educational activities.
4. *Island People* (6-8) 11 min. sd. British Information Service. Shows individuals as representative of British people as a whole.
5. *Happy Childhood* (3-6) 11 min. sd. Brandon Films. Pre-war study of child welfare services in Russia.
6. *Little Swiss Wood-Carver* (3-6) 10 min. si. AMNH. Scenes of home life and activities of Swiss children. Story of William Tell and others is introduced.
7. *South Africa* (5-8) 15 min. sd. March of Time. South America's conglomerate population; its problems and industrialization.

C. The Americas

1. *Americans All* (3-8) 20 min. sd. OIAA. A good general introduction to South America.
2. *Central America* (5-8) 11 min. sd. EBF. The people, geography, climate and economics of Central America.
3. *Good Neighbor Family* (3-8) 20 min. sd. OIAA. Similarities and differences of Latin American and North American family, social, economic and religious life and customs.
4. *Children of Mexico* (3-6) 14 min. si. AMNH. Mexican children at work and at play.
5. *People of Mexico* (3-6) 15 min. sd. EBF. Origin and development of the Mexican people. Aztec and Spanish influence on home life, arts, crafts, food, language and music.
6. *Lima Family* (3-8) 20 min. sd. OIAA. Similarities and differences between upper-class family life in Peru and the U. S.
7. *French-Canadian Children* (3-6) 10 min. sd. EBF. Daily life of French-Canadian farming family.

Lantern Slides and Stereographs

Children of Many Lands (Kn.-4) Keystone View Co. Unit consists of 25 slides and 25 stereographs.

Slide Films

Living in Other Lands (Kn.-4) SVE Picturoles Series

Kodachromes

Series of 2x2 slides depicting life in other countries (3-6) SVE Social Studies Catalogue.

II. THE UNITED NATIONS CHARTER

Motion Pictures

1. *Bretton Woods Plan* (5-8) 10 min. sd. NYU. Round table discussion by Secretary Morgenthau, Senator Morse, Miss Strauss, and Dr. Sacher.
2. *Peace Builders* (5-8) 10 min. sd. NYU. A film record of the historic world conferences: Atlantic Charter Meeting, Quebec, Cairo, Moscow, Teheran, Hot Springs, Bretton Woods, Dumbarton Oaks, Yalta.
3. *UNRRA—In the Wake of the Armies* (5-8) 20 min. sd. UNRRA. The organization, work, personnel, and cost of UNRRA.
4. *Watch Tower Over Tomorrow* (5-8) 20 min. sd. American Assn. for the United Nations. A clear and concise explanation of the plans drawn up for world security at Dumbarton Oaks. Animated diagrams are cleverly used to clarify the different functions of the General Assembly, Security Council, etc.
5. *Yalta Conference* (5-8) 10 min. sd.-si. Willoughby's. Newsreel shots of the momentous meeting of Roosevelt, Churchill and Stalin.
6. *We, the Peoples* (7-8) 8 min. sd. Young America. Shows need for and purposes of United Nations Charter and describes the organization formed to carry it out.
7. *Now—the Peace* (7-8) 20 min. sd. Brandon. Analyzes and clarifies the need for the plan that was drawn up at the San Francisco Conference and gives a resume of the various conferences which led to the creation of the Charter.
8. *San Francisco 1945* (7-8) 20 min. sd. OWI. A record of the achievements of the Conference and indications of the work still to be done in international cooperation—this against the background of the interest of the American people and their fervent desire for a successful U.N.O.
9. *World of Plenty* (7-8) 45 min. sd. NYU. Past, present and future story of men and food. What might be done in planning for the production and distribution of food according to world needs.
10. *Mutual Aid* (5-8) 5 min. sd. Brandon. Through animation, the economic interdependence of the United Nations is shown and the way in which each country contributes to the welfare of other nations.

Slide Films

1. *United Nations Charter: Its Structure and Function* (7-8) 60 frames. NYU. Considered the clearest and most vivid explanation on film of the United Nations Organization issued so far.
2. *We, the Peoples* (7-8) 40 frames each. Young America. Unit No. 1. The Needs and Purposes of the Charter. Unit No. 2. The Charter's Organization
3. *How to Conquer War* (7-8) 138 frames. NYU. Traces the development of society through the family, tribe, city and nation. Urges the establishment of a federated world government. Shows the failure of the League of Nations and outlines the plans drawn up at Dumbarton Oaks.
4. *UNRRA Goes into Action* (5-8) 50 frames. UNRRA.

(Concluded on page 32)

A Commercial Company Favors FilmSlides for Its Educational Purposes

A sound, straightforward account of monthly health programs from the commercial field that will definitely interest our readers.

THE effectiveness of sound slidefilms as an educational medium is limited only by the skill with which the films have been produced and by the preparation and follow-up in connection with their showing. This is the conclusion reached by the Zurich General Accident and Liability Insurance Company of Chicago, a pioneer in the use of the slide-film lecture for health purposes. The "Safety Zone Program," developed by the company for its industrial risks, has as its core a series of monthly slidefilms which have struck a telling blow at sickness and accidents in the industries that have used it.

The program operates on the theory that, to be most effective, a slidefilm should concentrate on one principal point and that associated materials, stressing this same point, should be used in connection with the slidefilm. Moreover, the program should be continuous. Accordingly, a new Safety Zone film is issued each month, dealing with a timely phase of health or safety so that it will achieve the greatest possible impact. Thus a film may be seasonal—dealing with colds as winter approaches, or with vacation hazards or recreation in spring; or the film may tie in with a national campaign that has already made the public conscious of the subject—as in the case of the Tuberculosis Seal Drive, the National Physical Fitness Campaign, or the Cancer Drive.

In each plant or business establishment which uses the "Safety Zone Program" there is a Safety Zone Committee, organized according to a standard plan. Each month the Committee members receive copies of a bulletin. This bulletin announces the forthcoming film, suggests a program for a stimulating and successful 30-minute-meeting (with the film as a core), and outlines a program of advance and follow-up publicity—publicity in the plant newspaper, as well as posters, announcements and displays dealing with the subject of the film.

Thus every possible means is used to direct attention to the film. Employee interest is heightened by the fact that the programs are directed and presented by employees, that is, by their own Safety Zone Committee. By the time arrangements have been made for showing a film, all employees have been introduced to the subject through the advance publicity campaign.

Safety Zone Committee members preview the film and plan a meeting or presentation. In a properly-planned presentation the showing of the film is preceded by a brief explanation of the importance of the subject and of how the film can help clarify the subject.

Following the showing of the film there is a short talk in which the subject is discussed in terms of the local situation. For example, if the film deals with cancer, the follow-up talk may be made by a member of the city or county medical society or by a local representative of the Field Army of the American Cancer Society; the speaker will discuss local facilities for the prevention and treatment of cancer. Follow-up publicity on this subject will continue until it is time to prepare for the showing of the next film. The whole series of monthly programs builds up to the conviction that following safe, healthful living habits is wise and profitable—the way to get more out of life.

Slidefilms have been chosen as the chief visual medium in this program for several reasons. On a one-film-a-month basis, both time and cost must be considered, and slidefilms are less costly and can be produced more rapidly than movies. Also, a story which would take much more time in movie form can be compressed into 15 minutes in slidefilm form, thus saving the valuable working time of employees. Next, the equipment required for showing slidefilms is less costly as well as less complicated and easier to operate than movie equipment. Yet slidefilms, when they are done skillfully, have a continuity and flow that actually can give the feeling or effect of movement.

Safety Zone slidefilms are required to meet exacting standards, and the value of this rigid policy is indicated by the recognition which the films have won. For example, "Man-Handled", a film dealing with the safe handling of materials, recently won a national award as the slidefilm "contributing most to the field of general safety in 1944." The winning film was selected by a committee representing 17 national organizations. The award was sponsored by the National Safety Council. This is the second significant honor won by a Safety Zone film in the space of a few months. Another Zurich slidefilm, "The Heart of Our Nation", has been given distinguished recognition by the Yale University School of Medicine. Medical students saw and scored 39 motion pictures and sound slidefilms dealing with health subjects. "The Heart of our Nation" won the second highest rating—barely edged out of first place by a costly technicolor motion picture produced by Walt Disney.

In preparing the scripts for its slidefilms Zurich follows five principles:

1. *Material must be authentic.* Audiences are quick to detect any "hokum" or any gaps left in an attempt to conceal ignorance of some phase of the subject. Thus considerable research goes into each film, and

nothing is left to chance. The finished script is checked by experts in advance of shooting. If the film deals with health, the script will be checked by the American Medical Association or the National Tuberculosis Society or the American Cancer Society. If the script deals with dental care, it will be checked by the American Dental Society, and if it deals with safety or industrial hygiene, it will be checked by Zurich's own safety engineering or industrial hygiene departments.

2. *One forceful impression should be made.* A film on colds, for example, may concentrate on portraying, in as unpopular a light as possible, the thoughtless, impolite person who spreads cold germs promiscuously by venturing out into public places when he has a cold and by failing to cover or muffle his coughs and sneezes. To help achieve this unity of effect the films are written in as simple a style as possible, yet without being condescending.

3. *Preaching should be avoided.* A point may be put across more forcefully through the pictured reactions and spoken words of the characters than through observations made by a commentator or announcer. Speech should be natural. Words or phrases with a Pollyanna sound or connotation should be avoided.

4. *Titles should be catchy.* Some of the recent Zurich titles are: "Search Everyone" (cancer); "K.O. TB" (tuberculosis); "Escape the Cold Wave" (colds); "Before It's too Late" (dental hygiene).

5. *Films should contain no advertising*—not even indirect advertising.

This last point may create the reaction: "What's the angle? Why does Zurich spend all this money if the films don't even mention insurance or the company's name?" The primary reason is that the people for whom the films are made are already carrying Zurich insurance. The films are provided as a part of the Zurich safety engineering service to improve employee health, safety and morale. These direct benefits to the employee bring incidental benefits to management in reduced absenteeism, better productivity and decreased labor turnover. A second reason for omitting advertising is that a mere touch of commercialism may arouse an unfavorable audience reaction and thus ruin the effect of an otherwise forceful film.

The "Safety Zone Program" has been used with groups as small as 100 and as large as 50,000, and enthusiastic reports of users indicate that slidefilms, when they are carefully produced and are featured as a part of a coordinated, planned program, are an excellent and most effective educational medium. Although the Safety Zone films are made primarily for occupational use, they have been planned with such broad interest appeal that they have been in great demand by schools and colleges*, clinics and health centers, and civic and fraternal groups.

*The films are available on a 10-day free loan basis from local agents of the Zurich. In communities where there is no agent the films may be obtained by writing to the Industrial Welfare Department, Zurich Insurance Companies, 135 South LaSalle Street, Chicago 3, Illinois.

This fellow is lifting like a derrick—with all the strain on the weak muscles of the back and abdomen. The result is . . .

. . . a painful strain, which could have been avoided . . .

. . . by lifting this way—the right way: squatting, keeping the back as straight as possible, and letting the strong leg muscles do the heavy work

The Curriculum Clinic

Notes About Sponsored Films

PAUL C. REED, Editor

Director, Visual and Radio Education
Rochester Public Schools, New York

JUDGING from the reactions to "No Objectionable Advertising" which appeared on this page in the November issue, I think it can be reported modestly that the Curriculum Clinic is clicking. There was general approval, no significant disagreements, and some very interesting points of view expressed about sponsored films and their use in schools. Maybe you would like to read some of my mail.

From Seerley Reid—

Dr. Seerley Reid of the Motion Picture Service of the U. S. Department of Agriculture writes: "I enjoyed very much your article on 'free' films in the November issue of *Educational Screen* and, as you know, agree with you. I wish you had developed your four points more fully and explained some of your points with specifics—for example, your admonition, 'Be wary of the film when sponsor purposes are least discernible.' I know what you mean, but I'm afraid many readers may not. Also you compared sponsored films with magazines and newspapers in that they all contain advertising, but actually the advertising in a magazine is secondary to the editorial purposes of the magazine (no comments about freedom of the press—you know what I mean). Wouldn't a better comparison be that of sponsored publications and their use in schools—the NAM pamphlets, GM booklets, or even the USDA publications?"

•Well, Seerley, our friends who worked with us at OWI and U. S. Office of Education may be surprised to see us agreeing so readily, but I do agree that the sponsored publications is a better comparison. As for your first point, all I can say is that it is much easier to generalize tersely.

From Paul Smith—

Paul E. Smith, formerly Lt. USNR concerned with training aids utilization, now concerned with better instruction in the Rochester Public Schools, wrote me a memorandum which developed quite specifically some points concerning the relationship between teaching purposes and sponsor purposes: "For example, the study of the Frasch method of sulfur extraction is found in many chemistry curricula. In the South there are industrial concerns making use of this method of bringing sulfur to the surface of the ground. These plants have been working with the Frasch method for many years; they know its possibilities; they know its limitations. In a very real sense these industrial concerns are experts in this particular field; they are authorities, and as such, it is conceivable that they might produce a film on this process which would be as good as one produced by an educational film producer. If then, the curriculum calls for an under-

standing of the Frasch method, and if the film explains this method clearly, the fact that it was produced by a business interest should have little bearing on whether or not it should be used—after all, the extraction of sulfur is a commercial process.

"Evaluating a film in terms of the purpose for using it will often condemn or approve a film regardless of its origin. If aluminum is being studied as a metal valuable in alloys, or if it is being studied as one of the useful light metals, it might be difficult to justify showing a sixty or ninety minute film designed primarily to prove that aluminum is the 'metal of the future'. In such a case, the aid used consumes time all out of proportion to the importance of that particular item in the course, and presents an aspect of the subject not important so far as immediate curriculum objectives are concerned. Purpose for making the film and purpose for showing the film are too far out of step.

"If, on the other hand, growth and complexity of modern business is being considered, it would seem that a sponsored or free film on the 'romance' of some specific business might present an illustration or typical case far better than a film attempting to show complexity of business without ever mentioning a business!"

From Cleveland, Ohio—

Here is another letter—quoted in full:

My dear Reed:

I note that you too are quite concerned about the advertising film or as some of its friends say "sponsored". It is well that some are thinking and can see the harm that such films do to an instructional program.

Keep thinking about it!

Sincerely,
(signed) W. M. Gregory

Mr. Gregory indicated his concern of long standing by enclosing a reprint of an article "Education Via Film" which he had written when he was Director of the Educational Museum of the Cleveland Public Schools and which was published in *SCHOOL and SOCIETY*, May 10, 1941. A brief quotation from that article will show clearly the depth and intensity of his concern:

"It is obvious that 'free' films do not solve the problem of better instruction through this modern medium. It appears that the 'free' films are a blight that has slowed the production of instructional films . . . The market for high-standard educational films, then, is greatly curtailed by the intrusion into the school program of the 'free' film. In this critical transition stage, when the film is trying to emerge into a powerful aid to instruction, 'free' films should be removed from schools as educational 'shows'".

From a Publisher—

From the textbook editor of one of the country's leading publishing companies came this most pertinent comment: "I like very much the four points in your evaluation procedure, particularly Point 1. (Attempt to determine the sponsor's purposes). Right now, however, I have so little confidence in the teacher's ability to make judgment with respect to sponsored films, even with the application of your principles, that I would want to insist on some kind of thoroughgoing preliminary screening—possibly by a competent committee. A railroad film, for instance, might do a swell job in providing a background for the understanding of certain aspects of transportation. If, as is very likely however, and not necessarily intentional, it gives boys and girls in school a highly distorted notion of the relations between labor and management through the characters which are used to represent the two groups and though the casual exchange of conversation between them, its value as a transportation film may be completely offset. The most pernicious aspects of sponsored films are apt to be quite unintentional and to be the result of deep-seated prejudices and ways of thought of these who are responsible for the production of the film."

• I think it could be added that such dangers are inherent in the making of all instructional films, but are intensified in the sponsored film and especially so when the sponsor's purposes are obscure.

From Gardner Hart—

Writing entirely from his personal point of view and not as Director of the American Council on Education's Commission on Motion Pictures, Gardner Hart's letter is especially interesting because of the distinction he makes between "free" and "sponsored" films.

"I especially enjoyed your article in this month's *SCREEN* regarding the commercially-sponsored film. Not only are schools going to be swamped with this type of film but instructional films as well. Hundreds of thousands of dollars are going into new productions during the next year. Indications are that many of these will be very superior to the pre-war instructional film. On the other hand, it is highly probable that many will be inferior. It is the duty of every audio-visual specialist and teacher using instructional films to carefully evaluate each film in terms of the particular use for which it is to be put.

"Getting back to the subject of commercially-sponsored films, it seems to me they should be divided into two general groups—the free film and the sponsored films. There probably will be quite a difference in these two types. In the case of the free film, the total cost of the production of the film as well as the distribution is paid by the group who underwrite the production. Most all users of films are well acquainted with the free film, and, of course, these range in educational value from excellent to detrimental. No such film should ever be shown to a class without first being previewed by the teacher and a lesson carefully prepared.

"There is a new type of commercially-sponsored

film which is now being contemplated. This new type will make it possible for schools to acquire films which under ordinary conditions would be impossible due to excessive production costs or relatively few prints being needed due to the specialized nature of the subject. This new type of film will have to be good because in most cases, as it now appears, the school will be expected to pay a minimum price for the film and not receive it on a loan or free basis.

"Many production companies are now at work developing plans for this new type of film. Some of these companies are engaging groups of educators in various sections of the country to do the initial planning and are also making arrangements to have the production evaluated at various stages before the picture is completed."

• This distinction between "free" and "sponsored" seems to be one only of degree. If and when schools may purchase instructional films, the production cost having been partially subsidized by industries interested in the content of the picture, the four steps suggested in the November article as an evaluation procedure would seem to apply just the same as for pictures wholly subsidized.

With all sponsored pictures, whether they are wholly or only partially subsidized, there are purposes on the part of the sponsor for his sponsorship. In every teaching situation there should be definite teaching purposes—learning objectives. All decisions about what shall be taught and what materials shall be used must be dependent upon teaching purposes. A system of free public education, supported by general taxation, cannot subordinate teaching purposes to the purposes of those willing to subsidize the cost and content of instructional materials.

Arizona Schools Make Use of Audio-Visual Techniques

(Concluded from page 21)

tendents are leading their schools in a study of their audio-visual problems. Commercial concerns of the state with an interest in this field are cooperating with the movement, offering to promote the work in any way which is expected of commercial concerns. The local radio stations have shown unusual interest in our problems especially as they relate to radio.

Too many times in the history of American education, educators have let the pendulum swing too far in one direction because proper evaluations were not made. One thing we do want to evaluate thoroughly, and that is the correct use to be made of sound films in our classrooms. In this connection one of our greatest jobs is to eliminate the "Picture Show" use which has been all too widely practiced by our schools. This practice has been designated by the service department of Arizona State College at Tempe as "Demon Number One". It violates the fundamental principles of audio-visual instruction, and invites many other unwholesome situations, for example, the physical conditions of overcrowded rooms. Leaders in this field in Arizona mean to be on the alert to point out bad practices and to be ready to suggest methods which teachers can successfully adopt for use in their classrooms.

The ABC's of Audio-Visual Equipment

Practical Problems of Projector Purchase

Edited by
ROBERT E. SCHREIBER
and PHILIP MANNINO

TODAY, as familiarity with a variety of motion picture projectors breeds a more realistic view of the problems involved in selection, visual educators are exhibiting a praiseworthy tendency to discard the prior notion that there was *one* projector that would act as the "philosopher's stone" in turning all visual learning situations into pure gold. It is only when the particular situation is adequately appraised and a projector's characteristics related to it that a valid selection can be made. Thus, no single aspect of a projector—such as performance, dependability, ease of operation, film protection, portability, flexibility, or cost—may be defined as the one most important consideration in purchase. Situational adequacy must be the guiding concept.

Before the characteristics of adequate *performance* can be delineated, the question must be asked, *where?* Obviously projectors designed primarily for classroom use (these may be expected during the current school year) are not sufficient for auditorium exhibition, due to restricted amplification and optical systems. Manufacturers are wary of introducing a classroom projector that may be taken into an auditorium and branded ineffective under such usage. Hence, to the consideration of performance must be added that of *flexibility*. A projector that performs adequately in an auditorium will acquit itself likewise in the classroom, but not necessarily vice-versa. Once the place of use has been determined, the specifics of performance may be enumerated: first of all, adequate illumination—involving provision for bulbs up to 1000 watts, an efficient shutter system, and a coated lens of F 1.65. An amplifier providing sufficient *undistorted* output and a speaker that will handle this maximum undistorted output make an efficient two-some. An effective tone control, which emphasizes "highs" or "lows"—rather than eliminating one or the other, completes the minimum requirements of performance.

Dependability and *Maintenance* are factors that the astute supervisor will weigh well in selecting a projector. The best advice that this writer can give on these aspects is to ask the man who owns one. Few visual educators are mechanics, hence the vital innards of a projector usually remain a technological mystery. However, for the inquisitive soul, it is well to look for: a minimum number of large gears—preferably operating in the same plane, an absence—generally speaking—of chain and belt drives, and provision for adequate centralized lubrication.

The problems of adapting the 35mm intermittent sprocket for film movement to 16mm have as yet deprived the school user of the relatively trouble-free operation of this mode of film travel through the gate. Since it is not possible for the claw mechanism of most 16mm projectors to run in oil—as is the case

with 35mm machines—this part of the standard school projector is apt to cause the first major breakdown in satisfactory operation—as evidenced by unsteady screen image and film wear.

The requirement of two speed operation—as educational motion pictures pass through the transitional period of sound-silent—introduces at least two structural problems affecting dependability. The two-speed governor is a sensitive gadget which—when out of adjustment—may provoke variations in speed, which in the case of sound films results in uncomfortable "wow" in the sound as frequency variation occurs. A second problem of two-speed operation is that of lamp-house ventilation. Obviously, whether sound or silent film is being projected, the lamp must have a minimum of cooling. Hence, when this cooling is sufficient at silent speed, it is superfluous at sound speed and contributes to wear and tear on the parts involved. Thus, unless considerable silent film is to be run, a projector with sound speed only may afford more trouble-free operation. Since the price range of available 16mm projector models is relatively limited at present, cost of maintenance is about the only yardstick that can be applied. An important item in maintenance that is often neglected is the consideration of adjacent repair facilities. Transportation charges and the possibility that equipment may be out of service for long periods during repair indicate the efficacy of purchasing with an eye to the immediacy of adequate service.

Portability is a consideration closely allied to situation; most important in some—relatively unimportant in others. This aspect of projector selection may be dichotomized into intra- and inter-building use and transit. In intra-building use, weight is of primary importance—particularly if pupils and teachers must move equipment themselves. Protection of the equipment and provision for its accessories are of paramount importance when inter-building use is contemplated. For the latter, a blimp case is almost indispensable, providing quick disassembly and storage of parts for immediate transit. A projector that is carried from building to building by unknowing hands or tossed into a truck under a variety of weather conditions must be ruggedly constructed with provision for a maximum of protection.

Ease of operation and film protection may be considered together, although they are not necessarily compatible, since undue concern for the latter impedes the former. And, as always, ease of operation must be related to situation, since—if personnel of limited skill is to operate the projector, operating ease may be rightly made subservient to performance. However, if performance remains constant, ease of operation is of major importance.

(Concluded on page 36)

BAUSCH & LOMB BALOPTICON

MODEL B

This Balopticon, for use with standard lantern slides, is in production for your use. It is moderately priced and provides an economical means of illustrating lectures and group discussions. Its optical and illuminating systems are of exceptionally high quality and permit large, brilliant, clear screen pictures critically sharp from one edge of the screen to the other. Because of its sturdy construction and ease of operation, it is particularly well adapted for use by inexperienced operators and will provide long, trouble-free service. Write for complete information. Ask for Catalog E-11. Bausch & Lomb Optical Co., Rochester 2, N. Y.

BAUSCH & LOMB

ESTABLISHED 1853

School Made Motion Pictures

BEGINNING with this issue, we are enclosing a National Questionnaire on School-made Films. To show that there is a real need for the vital information called for, we take the liberty of quoting from a recent letter from the Graduate School of Yale University—typical of similar inquiries that have come to the attention of this department.

"Perhaps you or one of your editors can provide me with some information that would be helpful to me. I am anxious to locate some 16mm. films made by local school systems which show the activities carried on in present day schools in a fair and interesting manner. The use which I wish to make of them is two-fold. I want to let certain adult groups who do not get into schools see schooling today. I want to let certain professional school people see what some other schools are doing.

I would appreciate it if you could let me know places where school systems have made films which you think might be helpful in this way."

Sincerely,
S. M. BROWNELL
Professor of Educational
Administration

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

So, Readers, if you would like to serve a good cause—and what progressive educator wouldn't—you can help the EDUCATIONAL SCREEN become a clearing house for this type of information. (Your efforts might even be rewarded—a hangover from pre-progressive education. See the questionnaire for details.)

You can do one or all of the following three things.

1. **Fill out the information on the questionnaire and send it in immediately.**
2. **Give the questionnaire to others who are producing school-made films. (Additional forms will gladly be sent on request.)**
3. **If your school is not yet in the production field, please get started and tell us all about it. Thank you.**

Question Box on Film Production

QUESTION (Condensed from last month): Our school is contemplating a course in the fundamentals of motion picture photography and projection . . . A rough outline of the course of study commensurate with the abilities and needs of high school students would be of great help.

ANSWER: (Continued from last issue)

OUTLINE OF SUGGESTED COURSE IN CINEMATOGRAPHY AND PROJECTION

Unit 1. The Receptors of Light

- a) Construction of Pinhole Camera.
References: Elementary Photography by Neblette, Brehm and Preist; Laboratory Exercises in Physics by Fuller, Brownlee and Baker
- b) Demonstrate and study parts of simple box camera and compare with pinhole camera.
- c) The Motion Picture Camera; Mechanical and Optical parts.
- d) The human eye. Compare with camera. Persistence of vision.

Unit 2. The Behavior of Light

- a) Luminous Bodies. References—any science book
- b) Measurement of Candlepower with Jolly Photometer (Exp. 60. Lab. Exercises in Physics)
- c) Demonstrate Lightmeters, if available
- d) Dispersion of light by a prism. (Exp. 65. Lab. Ex. in Physics)
- e) Light travels in straight lines. (Wheat and Reh, p. 281)
- f) Experiments showing refraction of light through water and air. (Meister, Living with Science, 9A, pp. 328-333)

Unit 3. Lenses

- a) Demonstration of focal lengths of different lenses.
- b) Use pinhole camera to demonstrate form and size of images of large distant objects. Compare with box and motion picture camera lenses.
- c) Behavior of convex lenses, magnifying glasses, etc.
- d) Lenses of motion picture projectors. Relationship between projection distance and image size.
- e) Camera lenses, meniscus, achromatic, anastigmatic (Experiments 7 and 8, Elementary Photography, pp. 76-81)

f) Motion Picture Camera Lenses

Demonstrate F stops; compare with behavior of human eye under varying light conditions. (Ref. "How to Make Good Movies" by Eastman Kodak Co., pp.12-20)

- f) Demonstrate as many of the following as possible: fixed focus and focusing mount lenses, wide angle, telephoto and portra lenses. Discuss and demonstrate uses and limitations of each.
- g) Depth of field. Demonstrate why smaller apertures give greater depth. When to use or to avoid.
- h) Angles covered by lenses. Application in proper use of lightmeter. (See Eastman Kodak Reference Manual, Sec. 10)

Unit 4. Films

- a) Demonstration of various emulsion speeds of black and white film. Load three still cameras with different films. Have students take and develop pictures under varying light conditions. Compare and criticize results. Show motion pictures previously produced. Evaluate
- b) Color Films, Kodachrome and Ansco; daylight and tungsten types. Interchange of each type with proper filter and photoflood lamps.
- c) How films are made and developed.
(References: Eastman Kodak Reference Manual; Exhibit of film making loaned by Ansco for school use.) (Also see "How to take Movies in Natural Color by Bell & Howell Co., and lectures 5 and 9 of Camera Club Photographic Service, E. K. Co.)

Unit 5. The First Movie

- a) Practice loading film into camera.
- b) Focusing for distance. Group Exercises. Devices for estimating distances and field areas. Use of range finder, if available.
- c) Correction for Parallax at close-ups.
- d) Class divided into interchangeable groups—camera men, properties, lighting, script writing, acting (if called for) and directing. After each group becomes fairly familiar with all of these phases of cinematography, it may shoot several feet of film on previously agreed simple movie sequence. (Before shooting is done be sure class becomes familiar with elements of good movie scenario and shooting script. References - The A. C. L. Movie Book)

(Concluded on page 32)

NINE-STAR PERFORMANCE with the *RCA Sound Film Projector*

**Engineered specifically for
brilliant illumination and true sound reproduction!**

- ★ Correctly engineered light system provides better illumination. Consists of: 750- or 1000-watt Lamp; Silver-Coated Pyrex Glass Reflector; two-element Condenser Lenses.
- ★ Fast two-inch, F1.6 Projection Lens—For brilliant illumination, contrast and clarity.
- ★ RCA Sound Stabilizer—maintains uniform film speed for sound take-off. It assures sound reproduction at the exact pitch at which it was originally recorded.
- ★ Powerful Four-Stage Amplifier—Utilizes

- ★ "inverse feed-back" to bring you voice, music and sound as originally recorded.
- ★ Precision Engineered Filter—Maintains sound reproduction at exact recorded pitch.
- ★ 16-tooth Drive Sprockets provide for long film life.
- ★ Professional Theatrical Framing.
- ★ Provision for Microphone or Phonograph Turntable.
- ★ Even-Tension Take-Up—Assures automatic and uniform film take-up action.

For detailed information on the RCA Sound Film Projector, send for descriptive booklet. Write Educational Department, 27A, Radio Corporation of America, RCA Victor Division, Camden, N. J.

EDUCATIONAL DEPARTMENT
RADIO CORPORATION of AMERICA
RCA VICTOR DIVISION, CAMDEN, N. J.

Unit 6. Outdoor Lighting

- Review topic of Weather in any science book. Discussion of effects of sun, shadows, wind, mist, haze and clouds on outdoor photography. Demonstrate with still camera how each of the above factors determines the kind of pictures taken.
- Outdoor demonstrations of the following lighting conditions, followed by exercises in recognition of similar conditions in still and motion pictures: bright sun; hazy sun and soft shadows; open shade on bright day; overcast sky, cloudy, but bright; shaded area on bright day.
- Exercises in diaphragm setting for above lighting conditions. Compare with exposure meter, if available.
- Filters. Use of filter charts. Demonstrations to show analysis of white light and stopping powers of various filters.
- Correction for filter factors. Demonstrate need for correction by taking same scene with and without colored filters. (See Eastman Kodak Reference Manual, Section 3; also "This Filter Question" by R. H. Unselde of Bell & Howell Co.)

Unit 7. Indoor Lighting

- Preliminary study: Heat and Light from Electricity
(References: Living with Sciences, pp. 320-340)
Emphasis on proper fuses, wiring, voltage, amperage, watts.
- Positioning of photoflood lights for black and white photography; for color films.
- Comparison of charted tables for number of lamps at fixed distances with direct exposure meter readings.
- Use of polaroid filter to eliminate glare.
- Filters for correction of tungsten lamps.

Unit 8 Composition

- Elementary principles of balance and harmony. Demonstrate with still and motion pictures.
- Analysis of pictures taken by class thus far.
- Demonstrations of long, medium, semi close-up and close-up shots. Analyze several reels of film to study proportion of various shots. Criticisms of films.
- Film short scenario in class or near school grounds to emphasize and apply lessons in composition, need of close-ups and proper angle shots. (References: Lecture no. 3 of E. K. Photographic Club Program, "Snap that Picture".)

Unit 9. Projection

- Study mechanical and optical parts of still and motion picture projectors. Practice in setting up and using equipment.
- Minor repairs - splicing, soldering. Cleaning of equipment. Adjustment of lenses for various distances. Care of screens, films, slides, opaque material, etc.

Unit 10. The Film of the Class

- Planning the scenario. Class divided into small groups. Each group to produce short film, such as "How to Use Our Audio-Visual Equipment".
- Students become proficient in the care and use of each type of equipment.
- Students write exposition and description of material they wish to film. Contents transposed into scenario. Use of sequences, timing, continuity, etc. Rehearsal of scenes.
- Shooting the script. Work divided into committees. Use of fades, dissolves, and other effects, wherever possible.
- Preparation of hand-made titles, drawings, animations, etc.
- Photographing titles on positive film. Developing film in darkroom.
- Editing the film. Retakes, if necessary.
- Projection and evaluation of film.

The Film and International Understanding*(Concluded from page 23)***III. THE DEVELOPMENT OF INFORMED AMERICAN OPINION****Motion Pictures**

- The Common Cause* (5-8) 10 min. sd. NYU. The common cause of Great Britain, Russia, China, and the U.S.A.
- Interdependence* (5-8) 45 min. si. NYU. The dependence of individuals and communities upon each other.
- Two-Way Street* (5-8) 10 min. sd. NYU. How lend-lease worked to the advantage of all Allied Nations concerned.
- The Star and the Sand* (5-8) 20 min. sd. NYU. The rebuilding of shattered countries and displaced peoples. Pictures the community of Yugoslav-Partisan set-up in Egypt under the direction of UNRRA.
- Weapon of War* (5-8) 10 min. sd. NYU. In clever animation this film shows the Nazi technique of propaganda so that we will recognize it and be ready to combat it.
- When Asia Speaks* (7-8) 20 min. sd. Brandon. Asia's potential might. How our future interests are tied to those of the Oriental world.
- Challenge to Democracy* (7-8) 20 min. sd. NYU. The story of displaced peoples—Japanese-Americans evacuated from the Pacific Coast in 1942.
- The Bridge* (7-8) 30 min. sd. NYU. Will air transport help bridge the jungle to bring industrial prosperity to the South American villages.
- Lessons in Living* (5-8) 20 min. sd. Brandon. How a school project revitalized a community by giving the children a part in community life.
- China's Pattern for Peace* (5-8) 9 min. sd. Sun-Dial Films. China's industrial cooperatives, run largely by her displaced persons, are laying the foundations for the future industrialization of the country.
- The New Earth* (5-8) 20 min. sd. Brandon. A peacetime documentary record of Holland's Zuyder-Zee Project, showing how the Dutch reclaimed new farm land formerly covered by water.

Slide Film

- Foreign Trade: It's Good Business* (7-8) 58 frames. NYU. A Visual Aids Kit on Foreign Trade, consisting of the slide film, printed commentary, pamphlet (Public Affairs) "What Foreign Trade Means to You", and a comic strip "Out of the Past—a Clue to the Future".

THE INSPIRING SCREEN STORY OF THE UNITED NATIONS PLANS FOR PEACE

The Challenge of the Atomic Age!

A POWERFUL NEW FILM OF HIGH PRIORITY INTEREST FOR EVERY AMERICAN

The challenge to build a peace, is the crucial challenge for all of us today. 'NOW—THE PEACE' is a constructive, timely aid, of lasting value. Its supremely important purpose is to stimulate discussion and understanding of the problems, and the evolving patterns for building the peace.

'NOW—THE PEACE' is a factual summary of the basic United Nations Organization program for world security. It clarifies the structure; and it analyzes the plans. Most important, it shows how, by joint action to solve Relief, Food, Money problems we are helping to rid the world of conditions that breed war. For, the lesson of the past is that great deeds, not words alone, are needed to meet the great challenge!

UTILIZATION

For all youth and adult groups in and out of school; and for classroom use in current history, international relations, economic geography, and social studies.

Of specific interest for world friendship assemblies

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

SCOPE

- **Wanted: A Broad Concept of Audio-Visual Instruction**
Vernon G. Dameron, N.E.A. Director of Audio-Visual Aids—*Educational Leadership*, 3:139 December, 1945

The purpose of this article is to urge the broadening of the concept that audio-visual aids means the motion picture alone. The author proposes instead a grouping as follows: (1) The visual, with motion and sound (films and television); (2) the visual, with motion (silent films); (3) visual (filmstrips, slides, opaque projection); and (4) visual, with sound (sound filmstrips.)

This reviewer is tempted to comment on this viewpoint. The author is correct in criticizing those who tend to use the motion picture almost exclusively. But that this is a "growing tendency" is open to question. For at least five years,—even during the ten years of my own personal bibliographic research on this subject—the emphasis has in professional writings and in curriculum bulletins been to include a wide variety of devices,—which incidentally go beyond the four groups listed above: the still picture, objects, museum exhibits, maps and charts, field trip, radio and electrical transcription, etc. etc.

Research studies bear out the fact that it has not been a "growing tendency" to concentrate on the motion picture. See the review of the intensive analysis by A. L. Long elsewhere on this page, wherein he concludes that the studies made between 1939 and 1944 show "the trend toward a more unified use of film and other visual aids in the whole educational program." Briefly, we must strive toward a broad concept of audio-visual instruction and encourage the wholesome trend, *which is in the right direction*.

UTILIZATION

- **What Does It Mean To Teach?**—Edgar Dale—*Georgia Educational Journal*, 39:7 December, 1945.

With special reference to the use of audio-visual aids, the author criticizes the inefficiencies operating in many schools—as bringing children into an auditorium to see a film, with no follow-up or preparation, or showing films at a set date whether or not it is pertinent, or accepting biased materials, without question or comment.

"It is obvious that what is at fault here is a mistaken conception of teaching. A course in audio-visual education will not help a teacher if her fundamental ideas are wrong. She will merely learn to do better what she ought not to do at all."

- **Getting More Value From Classroom Films**—Joe Park—*Clearing House* 20:172 November, 1945.

The author went directly to elementary and high school pupils to find out if there is any value in a follow-up discussion after a film showing. He based his question on eight educational films. The majority of pupils believe that some discussion would help. Only in three groups out of twenty did the number of "no" answers exceed.

Teachers are urged to make greater preparation for the showing of a film, to use the time immediately after the showing, to show it a second time if necessary, to supplement with other aids, textbooks and reports, and to summarize the content of the film and fit it into the larger pattern of the subject under consideration.

- **Montgomery Uses Audio-Visual Aids**—W. T. McKee, Asst. Supt. of Education—*Alabama School Journal* 63:11 October 1945.

An interesting in-service training program is described which helps to insure better use of radio, films and other devices.

RESEARCH

- **Recent Experimental Investigations Dealing With Effectiveness of Audio-Visual Modes of Presentation**—A. L. Long, Stephen F. Austen State Teachers College, Nacogdoches, Texas—*Educational Administration and Supervision*, 31:65-78 February, 1945.

A very useful summary of research and summaries of research in the field. The 45 investigations reported by the United States Office of Education from 1939-1944 are classified under seven general headings.

1. Use of educational films in special subjects .
2. Effectiveness of educational films on various grade levels
3. Use of educational films in developing attitudes
4. Standards of evaluation
5. Comparative effectiveness of different methods of use
6. The grade range and economy of time of educational films
7. Historical and documentary investigations with educational films

The author summarizes the educational implications of these studies as follows:

1. There is a trend toward a more unified use of film and other visual aids in the whole educational program;
2. The concentration of funds and trained personnel at a single university (as at University of Chicago) will aid the visual education movement;
3. The great fund of data available from the visual aids programs in the armed services will be helpful;
4. An increase in trained personnel from the armed services will be available to schools and commercial institutions; and
5. Commercial companies will do much to help the visual education movement.

EVALUATION

- **Critique of Three to Be Served**—Clifford Ettinger—*Journal of Business Education*, 21:25 December, 1945.

A thorough-going analysis of the recent film for business education, "Three to Be Served", produced by the National Association of Manufacturers. First there is a detailed summary of content. The author then analyzes the film's purpose and questions whether this purpose has been adequately achieved. From the point of view of the teacher, the film is then evaluated for the teaching goals and facts it presents.

With such an evaluation at hand, the teacher has a practical and realistic guide to help in deciding whether or not this film would be relevant in his classroom situation.

PRODUCTION

- **Producing Authenticity**—Daniel Klugherz—*Film News*, 7 no.3 p.3 December 1945.

Documentary films demand the portrayal of people and places in an authentic background that goes beyond anything in a fiction film. The only time a documentary is assured of this quality is when its makers go directly to the source. Whereas Hollywood has improved its production methods through larger studios, more expensive equipment and thousands of employees, the documentary has no short cuts. When a producer cables a director to have a half-dozen cameramen photograph problems of reoccupation and relief, and a writer 3,000 miles away writes about it, relying on research and a technical expert, the film loses spontaneity and the common touch. It is in the commentary that one feels it most.

(Concluded on page 36)

Illustrate DISCUSSION PROGRAMS

WITH THE NEW 1945-46 SERIES OF CORONET "PICTURE STORY" SLIDEFILMS

8 SLIDEFILMS
(About 200 Pictures)
FOR ONLY \$4.00
To be released one each
month from October,
1945 . . . through
May, 1946

Informative, entertaining and thought-stimulating —Coronet slidefilms will add interest to group discussions of world events, personalities of the moment, and vital social problems. Each slidefilm contains approximately 30 pictures and captions from the Picture Story section of Coronet magazine. Each slidefilm is accompanied by a reprint of the Picture Story from CORONET, to be used as a manual. The slidefilms can be shown with any standard 35 mm. single-frame slidefilm projector. Reprints of the CORONET Picture Stories are available for individual use at \$2.00 for a set of twenty-five copies each month for eight months (200 in all).

Thousands Used the 1944-45 Series

More than 5,000 school, discussion and educational groups, 1,000 churches, and 750 different units of the 4 branches of the Armed forces used Coronet slidefilms last year. The new series will be even finer than those released in the past.

THE FIRST THREE OF THE 1945-46 SERIES

- "The Liberated"—the story of the liberated peoples of the world.
- "The Storm"—the life story (a cycle) of a storm.
- "The German"—the story of the pre-war German people and what may be expected of them in the future.

ORDER CORONET VISUAL AIDS NOW!

Projectors are again available

After getting to the source, the documentary must get to the people. Concealed cameras have been effective, as in "The City"; sometimes adding an actor to a natural background has been helpful. Other techniques are described to show how sincerity and realism may be achieved within the limitations of technical problems.

A documentary director kills authenticity when he sets out to make his film great; when he tries to sell the idea of the film, make it more important than it is; when he allows his style and personality to dominate the reality he wishes to describe. In the expected surge of informational films only those directors will capture a deeper understanding of life who do not turn aside for the bright line and sleek texture, but search intently for the truth as it quietly passes.

- **Travel Study Via 16mm Films**—W. M. Gregory—*American School Board Journal*, 111:50 December, 1945.

A very good argument in favor of films that would show the people and land of the United States to our own school children. Dr. Gregory appeals to producers to implement the study of his country that he cannot travel to see.

DISTRIBUTION

- **Mickey as Professor**—Walt Disney—*Film and Radio Guide* 12: 26 November, 1945.

Condensed from an article in the summer issue of *Public Opinion Quarterly*, Disney explains how his studios were affected by the war. "We have learned much from the films produced for CIAA and others . . . There has been no limit to the variety of content. It ranged from mechanics to medicine, nutrition to inflation, language to geology, anatomy to infant feeding."

Each one of the subjects produced was an experiment. With respect to the future, the problem resolves itself into three main parts: what concerns the film maker (he can provide technical skill), what concerns the educator (he is the subject expert, the teacher), and what concerns finance and promotion.

The author acknowledges the great possibility of educational films in the larger educational process, but as at present organized, distribution is too uncertain. The decentralized system of educational administration means that progress in a large measure must come slowly. He notes great progress in interest and budgets for educational films, but so far it is only a trend and not a large, perceptible movement.

RADIO

- **Possibility of Radio in Business Education**—Mary G. Phillips and Helen M. Johnston—*Business Education World*, 26:28 September, 1945.

One of the committees of the Association for Education by Radio is that on business education, of which Mrs. Johnston is chairman. The members of the committee are now being organized. An excellent article for those planning to write educational radio scripts.

- **The Central Radio-Sound System In Postwar Planning**—Paul W. Seagers—*American School Board Journal*, 111:49 October 1945.

Very good, practical article.

PERIODICALS

- **Public Opinion**—Volume 11, No. 2—*Building America*.

A new and very stimulating focus on the common man as a pawn in the eternal struggle for majority support. All interests converge on him through every means of communication to influence the individual's judgment. The techniques are then illustrated and analyzed because it is believed a cetergeny of "intelligent opinions are the life blood of democracy."

- **The Screen Writer**—Dalton Trumbo, editor—Screen Writers Guild, 1655 N. Cherokee Ave., Hollywood, Cal. \$2.50 a year.

A new publication in which the men and women behind the scenes of Hollywood movie making write of their craft and the social responsibilities of the motion picture.

PROCEEDINGS

● *The Proceedings of The Third Annual Visual Education Institute of The University of Wisconsin* is now available. This Proceedings answers two important questions: What materials are included in a complete program of visual education? What are some of the recommended ways of using films and other visual education materials in the classroom? Extremely practical in its suggestions, the Proceedings recounts seven demonstration and discussion situations as verbatim accounts of classroom utilization of filmstrips; slides; maps, globes, and charts; silent and sound motion pictures.

The Proceedings also includes what nationally recognized teachers, administrators, supervisors, and leaders in the field of audio-visual education think about the two questions mentioned. Among the speakers represented in the Proceedings are: L. H. Adolfson, Roger Albright, V. C. Arnspiger, Mrs. Esther Berg, James W. Brown, Leslie E. Brown, J. Margaret Carter, C. R. Crakes, Joseph Dickman, John Guy Fowlkes, John Grierson, Charles Hoff, L. C. Larson, Don Rogers, Robert E. Scott.

A limited number of Proceedings have been printed and are available at \$1.50 each. Requests should be addressed to W. A. Wittich, Editor, 1204 West Johnson Street; Madison 6, Wisconsin.

The ABC's of Audio-Visual Equipment

(Concluded from page 28)

and film protection include: a readily accessible film path for threading and the cleaning of parts, a minimum of sharp bends and twists involved in film travel, wide-opening film gates, and film tension snubbers on the takeup reel. Generally speaking, film can be damaged on *any* projector—the careless operator will find a way—and very ingenious he is. However, safety trips, flexible pawls, and sprockets that will lock only in the correct position minimize the possibilities of film damage.

Additional provisions affecting easy operation include: quick replacement of projector lamp, exciter bulb, rewind and takeup belts; rapid rewind with a minimum of reel and belt changing; access to amplifier tubes and fuses without recourse to tools; plainly marked, accessible power cord and speaker cable connections; easily detachable or pivoted reel arms; centralized, plainly marked controls; theatrical type framing device; provision for easy tilting while machine is operating; forward and reverse direction for film travel.

Inclusion of a microphone or/and phonograph plug—which contributes approximately 1% to the cost of the projector—makes the projector a potential public address system, when a microphone or record-player is introduced into the situation. However, since it is usually undesirable—in terms of weight, ease of operation, and wear and tear on the non-audio parts—to use one's projector as a public address system, purchase of a projector with detachable amplifier insures greater flexibility and efficiency in those situations where considerable use of this feature of the projector is contemplated.

With the current restrictions in the number of projector models available, the problems of projector selection now are relatively simple—in contrast to what they will be when the prewar type plethora is again a reality. Now, then, is a propitious time to perfect the criterions of purchase in terms of situation that will strengthen our point of view in the days ahead. R. E. S.

PICTORREELS

THE FINEST IN REEL ENTERTAINMENT

Introduces

FICTION, FACT and HEALTH Films

There's big talk about what will be done in visual aids. Here is what we have done and are doing. Ready now!

ENGLISH LITERATURE

FICTION FILMS—In FICTION FILMS, we present condensations of outstanding classics which afford students the opportunity to visualize period costume, architecture, manners, as well as the pageantry and adventure of the stories themselves. Accurate in every detail and specifically correlated to classroom study.

IVANHOE — The pageantry and gallantry of 12th century England come alive in this original film presentation. The highlights of the story have been condensed into a fascinating production.

TREASURE ISLAND — As Jim Hawkins related his experiences, the magic of Treasure Island is vividly recreated.

THE THREE MUSKETEERS—Flashing swords, swash-buckling adventurers, gallant cavaliers: the whole panorama of 17th Century France are captured in this exciting new visualization.

CIVICS—GOVERNMENT—CITIZENSHIP

FACT FILMS—In FACT FILMS, we present subjects designed to correlate with courses requiring factual information—civics, government, current events, economics, etc. It is their purpose to provide visual motivation for more complete study of the subject under the guidance of the instructor.

HOW A BILL BECOMES A LAW — 2 reels—Laws are part of each citizen's life. How many of us, however, know how a law is made? Where does it originate? Through what procedures does it go? What makes it the "Law of the Land"? In HOW A BILL BECOMES A LAW each step is sharply defined and visualized.

HEALTH AND BEHAVIOR

In Health and Behavior Films, we present a series of three delightful *cartoons* — one of them, "WINKY" is in color. Tests have shown that these films will accomplish desired results with children from 6 to 15. They will fit into your health program.

WINKY THE WATCHMAN — a charming cartoon in sound and color. Stresses care without featuring any particular method. Can be coordinated with dental, nutrition or general health programs.

GOOD MANNERS — Johnny's behavior is atrocious, and as a result he turns into a little pig. How he becomes a boy again is the tale.

GOOD HEALTH — Johnny again, but this time he learns how to guard his health. Wait until you see him as a pilot — he really learns his lesson.
HEALTH FILMS are available in sound only. "WINKY" in color; the other two, in black and white.
 Winky the Watchman, 1 reel [Technicolor].....\$100.00
 Good Manners, 2 reels 75.00
 Good Health, 2 reels..... 75.00

NOTE: It is not our intention to offer FICTION FILMS and FACT FILMS as substitutes for textbook study, but rather as a stimulus toward further reading and study. These visual aids are a modern tool to be used by the teacher for more interesting development of the courses in question. In FICTION FILMS and FACT FILMS we have achieved production methods which permit us to offer them at a low cost enabling all educational institutions to buy copies for their permanent film libraries. The technique, a cross between still and animated photography, is stimulating and interesting. Although presented in condensed version, each film is fully illustrated by a complete series of original illustrations in sequence.

VARIOUS VERSIONS

Because not all schools have all types of visual equipment, we offer FICTION FILMS and FACT FILMS in various versions:

- 16mm Sound 1 reel.....\$17.50
- 16mm Silent 1 reel..... 8.75
- 8mm 1 reel..... 5.50
- 35mm Full Color Slidefilms (approximately 100 frames)....\$9.75
- 2" x 2" Individual Slides in Full-Color (approximately 100 slides) \$15.00

Experimental Research in Audio-Visual Education

DAVID GOODMAN, Ph.D., Editor

Title: ORGANIZATION, ADMINISTRATION, SUPERVISION, AND MECHANICAL FACILITIES OF AUDIO-VISUAL AIDS

By EARL E. SECHRIEST, A.B., M.A., Ph.D.
(Abstract of a Doctor's Dissertation,
University of Pittsburgh, 1945)

A. Purpose of the Present Study

The purpose of the present study is (1) to examine current practices as to the organization, administration, supervision, and mechanical facilities of existing audio-visual centers in cities of 100,000 population and over, but not including the 12 largest cities, in the United States, and (2) to propose a plan for the establishment of a pattern for an audio-visual center in these cities. The investigation differs from other studies in the field of organization, administration, and supervision of audio-visual centers in that it is limited to centers in cities of a specific size. Furthermore, the study is concerned with audio-visual facilities and materials in these cities only as they relate to the central audio-visual organizations.

B. Method of Treatment

The investigation takes the form of the normative-survey method employing questionnaire inquiry and interview techniques. Literature in the field of audio-visual education in general was studied to obtain general facts concerning audio-visual aids in the United States. Proceedings of meetings of the Department of Visual Instruction of the National Education Association, superintendents' reports, courses of study and bulletins from the superintendents' offices were examined in cities which have audio-visual programs. It was determined by means of letters to all city superintendents of the 100,000 population class and over, exclusive of the 12 largest, (1) which cities have organized audio-visual programs, and (2) the name of the person designated to be in charge of the program. The questionnaire was then sent to officers in charge of existing audio-visual centers. In cities that were visited personally (they were 20 in number), interviews were held first with the superintendent of schools, and later with the officers in charge of audio-visual aids. A tour of the audio-visual center was made, and materials and equipment were examined. Two schools, one elementary and one high school, were visited in each city with the purpose of interviewing the principal and at least one teacher in each. These interviews served as a check on the officer in charge of audio-visual aids, and determined the effectiveness of the existing audio-visual program from the viewpoint of the principal and of the teacher.

I. CURRENT PRACTICES IN AUDIO-VISUAL CENTERS

Of the cities in the 100,000 and over (but not including the 12 largest) population group, 38 were found to administer audio-visual aids in accordance with some organized plan. Current practices as to the organization, administration, and supervision in these centers were examined.

A. ORGANIZATION

The centers are grouped into five types according to readily distinguishable characteristics or organization. These types with the distinguishing characteristic of each follow: (1) Library Combination, which renders the dual service of library and of audio-visual center (four cities); (2) Museum Combination, which cooperated with the school system but is not a part of it (four cities); (3) Line, which has an assistant superintendent of schools for its administrative officer (four cities); (4) Departmental, which has a highly developed organization that is a definite part of the school system (18 cities); and (5) Committee, which has a committee of teachers in charge of the audio-visual program (eight cities).

All centers, except those of the Museum Combination type, are definite parts of the school system. Organization of centers of the Line type, and of the Committee type, is slight. In the Line type center, an assistant superintendent of schools admin-

isters the audio-visual program; in the Committee type, the chairman of the audio-visual committee is in charge of the program. It is noted that these officers in charge of audio-visual aids have other duties to perform also. These officers are directly responsible to the superintendent of schools for the administration of the audio-visual program. Centers of these two types have meager materials and equipment.

Officers in charge of the Library Combination type centers are directly responsible to assistant superintendents of schools for the administration of their programs. These persons are librarians of general, or professional, libraries of the school system as well as officers in charge of audio-visual aids.

The organization of the Departmental type center is highly developed. It is on a staff basis and the officer in charge of audio-visual aids usually has the title of director. Although the director (who gives full time to his work) has a great deal of autonomy, he is responsible to an assistant superintendent of schools for the administration of the audio-visual program.

The Museum type center co-operates with the school system but is not a part of it. The Organization of this type center is highly centralized and headed by a director who receives his authority from a governing board. Although the superintendent of schools and the Board of Education have very little control over this kind of organization, they are dependent on it for their audio-visual program. In instances where teachers are provided for instruction at the museum, and in matters of transporting children to and from the museum, the Board of Education provides the necessary funds. Museums are all housed in separate buildings.

Current practices (in centers of all types) indicate that the number of personnel employed by the center depends upon the service rendered and not upon the size of the city. Other practices show that (1) materials are usually stored at the center, from which they are distributed to the schools upon requisition; and that (2) equipment is generally housed permanently in the school buildings (equipment is varied greatly in amounts but little in types); (3) that centers are commonly located in the administration buildings of the school systems; and (4) that the status of the center in the school organization varies.

B. ADMINISTRATION

Administration of the center, as a rule, is the responsibility of the officer in charge of audio-visual aids. The duties commonly performed by this officer are: (1) the preparation of catalogs and bulletins; (2) preparation of reports for superior officers; and (3) administration of routine in connection with the center. The officer in charge of the center usually selects audio-visual materials in collaboration with a committee of teachers; and generally is responsible for determining the policy of the center in conjunction with the school superintendent.

It is common practice (1) to classify materials by grade, subject, and unit (classified lists are distributed to teachers periodically); and (2) to deliver materials to the schools by means of trucks owned by the centers (deliveries are commonly made on a daily schedule). Only four cities use the regular trucks provided by the Board of Education for delivering supplies to schools.

The audio-visual centers usually serve the elementary, junior high school, senior high school, and trade school. Five four-year high schools, and seven junior colleges are also served.

There is no relation between the audio-visual budget and the size of the city. The amount of money spent depends upon the service rendered. Cities with the Departmental or the Museum Combination type centers (the most highly organized types) spend more money per pupil enrolled than any other cities. The average expenditure per pupil enrolled for the 38 cities is 23 cents.

C. SUPERVISION

There are no special audio-visual supervisors attached to the centers. Two plans for supervision are in evidence: (1) by the officer in charge, and (2) by regular subject supervisors. In actual practice the supervision of the audio-visual aids in the classroom is little in evidence, and the teachers are allowed

(Concluded on page 46)

NOW! A Series of Streamline Features for Your Recess Programs

These Hal Roach streamline productions run only fifty minutes each and in most cases can be placed on a 1600-ft. reel. This series is a "natural" for schools having only limited time for their auditorium programs. Schedule them NOW for the entire year! A new subject released every month, as follows:

January	"TANKS A MILLION"	William Tracy James Gleason	Noah Beery, Jr. Joe Sawyer
February	"NIAGARA FALLS"	Marjorie Woodworth Tom Brown	Zazu Pitts Slim Summerville
March	"ALL-AMERICAN COED"	Francis Langford Johnnie Downs	Noah Beery, Jr. Harry Langdon
April	"BROOKLYN ORCHID"	William Bendix Joe Sawyer	Marjorie Woodworth Grace Bradley
May	"DUDES ARE PRETTY PEOPLE"	Jimmy Rodger Noah Beery, Jr.	Marjorie Woodworth
June	"HAYFOOT"	All-Star Cast	
July	"FLYING WITH MUSIC"	Marjorie Woodworth George Geriot	Edward Gargan Jerry Bergen
August	"MISS POLLY"	Zazu Pitts Slim Summerville	Kathleen Howard Brenda Forbes
September	"THE McGUERINS FROM BROOKLYN"	William Bendix Grace Bradley	Arline Judge
October	"ABOUT FACE"	William Tracy Joe Sawyer	Jean Porter
November	"THE DEVIL WITH HITLER"	Allan Mowbray Marjorie Woodworth	George Stone
December	"CALABOOSE"	Jimmy Rodger Noah Beery, Jr.	Mary Brian Bill Henry

Coming Soon!

"STAGE DOOR CANTEEN" with more than 40 stars and six great bands! Write for release date.

Religious Films to be Made by New Protestant Film Commission

The Protestant Film Commission, recently organized to produce 16mm religious motion pictures for use by all the Protestant denominations, announced the appointment of Lt. Paul R. Heard, U.S.S.N.R., as executive secretary of the Commission at the first meeting of its Board of Directors last month, at 156 Fifth Avenue, New York City. Lt. Heard who is completing certain productions in Hollywood for U. S. Naval Photographic Services and is due for discharge within a few weeks, was formerly connected with the Visual Education Department at the University of Minnesota and the department of visual aids of the Methodist Board of Missions.

Officers who will head the Film Commission's program of providing suitable motion pictures for the use of church units include: President, Rome A. Betts, secretary of the American Bible Society; Vice-president, S. Franklin Mack, secretary of the Board of Foreign Missions of the Presbyterian Church in the U.S.A.; Secretary, Mrs. Norman Vincent Peale, United Council of Church Women and Treasurer, Kinsey Merritt, general manager, Public Relations Department of Railway Express Agency.

Five directors named to the Administrative Committee are: Mrs. Raymond Pace Alexander, Attorney, Philadelphia, Pa., James H. Burke, attorney, New York City; Winfred P. Elson, secretary, Foreign Missions Conference of North America, New York City; Robert D. Jordan, director of promotion, Protestant Episcopal Church, New York City; and H. Torrey Walker, manager, United Lutheran Publication House, Philadelphia, Pa.

Incorporated recently in New York State, the purposes of the Protestant Film Commission are to serve as a non-profit agency of the churches in providing, distributing and exhibiting religious motion pictures, to facilitate a coordinated approach by Protestant churches and agencies to the motion picture industry and advise with the industry regarding subjects and treatments which can win church support, and to foster the use and raise standards of presentation of visual and visual-audio materials in the churches. The board of directors voted to set an initial minimum goal of \$1,000,000 as a revolving fund to implement these aims. The annual meeting of the Commission was set for January 30th, in New York City.

Rank and Universal Tell Worldwide Film Plans

Announcement was made last month of the formation of a new worldwide distribution company called United World Pictures, to be owned jointly by Leo Spitz and William Goetz of International Pictures, the J. Arthur Rank interests of England, and by Universal Pictures. This new company will distribute English and American pictures through the physical facilities of Universal in the United States and the

Notes

Rank group in England, and will set up offices throughout the world to handle distribution. It will start to function with a minimum of eight American and eight British pictures. Mr. Rank will be chairman of the company and Matthew Fox, Universal executive, president.

Universal and Mr. Rank are also formulating plans for the production and global distribution of 16mm motion pictures in all languages for educational, religious, scientific, and industrial purposes. The company will have available to it the library of Gaumont-British instructional films, the features and shorts of the Rank producing groups and all the Universal features, documentaries and shorts. Special films may be produced for schools, educational institutions, technical colleges, and churches.

Harvard Report Stresses Films' Value

In a 267-page report on "General Education in a Free Society," just released by Harvard University, after a two-year study of educational methods by a committee of a dozen Harvard scholars under the chairmanship of Paul H. Buck, the potentialities of motion pictures as instructional instruments are emphasized.

Following are some extracts from that section of the survey headed "New Media of Education":

"More important still, the needed boost to conventional texts may come through an extension and supplementing of them by films and television. Something of a revolution is indeed taking place through these new means of bringing the world itself, and clarified versions of it, to us. Traditionally language deputizes for what has to be absent. It tells us what we might see or hear. But too often it gets in the way of, or replaces, all that could give it a meaning. . . . Now that the things and events themselves can be brought to us, the role of language is reversed. Instead of words having to explain or represent things, it is rather things, and actual processes taking place before us, which explain words or call them in question. In the making of a good instructional or documentary film the duties of language are searchingly looked into and the needless obscurities of traditional texts are exposed. A healthy criticism is started and language, gaining a rival in its new partner, has now new standards of lucidity to live up to.

"The chief success of sound-motion teaching hitherto has probably been in vocational rather than in general subjects. . . . There is good evidence that they can greatly increase both clarity and interest of presentation in many subjects. Furthermore, long retention of content and of meaning is improved sometimes in a measure great enough to be decisive.

"Films to teach and support early steps in reading are near the bottom of the ladder. It would be rash to say how far up the movie can go. Certainly the parts it can play with good effect are many. Films serve particularly well as awakeners of interest. They can present a theme, biographic, historic, or moral, with a massiveness of impact which for a while would make the impulse to continue by non-conventional methods all but irresistible, were these methods appropriately related.

In conclusion, it is stated that "numberless opportunities in fact await producers aware of educational aims and with enough imagination to pursue them. The movie has proved itself to possess the power, if there there is the wisdom to use it.

JOIN IN Joyous Song

With These New
16 MM Sound Films

Here's a new group of world-renowned hymns and famous songs just released in 16mm sound, with words superimposed on appropriate scenic backgrounds, to permit audiences to join in the singing.

Everyone from 8 to 80 loves to sing these favorites. Just the thing for school assemblies, church socials and Sunday school, etc.

Courses at California and Michigan

A course in "Instructional Materials and Equipment" (2 units) was inaugurated last fall at the University of California, Berkeley, under Frank Freeman, Dean of the School of Education. This course which is given by C. H. Siemens, Assistant to the Professor of Education, is to be a regular term offering. In addition, Mr. Siemens has set up and directs an audio-visual laboratory for teacher teaching and research.

F. Dean McClusky, now "Lecturer in Education" at the University of Michigan, Ann Arbor, has been conducting University Extension classes in "Visual—Auditory Education," at the Flint and Grand Rapids Junior Colleges and will continue to do so the second semester. Films at FAO Quebec Conference

Non-theatrical films were engaged for a major role at the Conference of the United Nations Food and Agriculture Organization held last October in Quebec. About 150 films on the production, distribution and consumption of food were projected every evening in the foyer of the main ball room of the Chateau Frontenac. Two workshops were also conducted at which the delegates could become acquainted with the audio-visual techniques of using different types of films and filmstrips for education and information. Representatives of the press, radio and motion pictures were invited to participate in the meeting by the Secretary of Agriculture Clinton P. Anderson. Representing 16mm distributors and users of films were Thomas Brandon, chairman of the U. S. National 16mm Film Committee, and C. R. Reagan, coordinator.

With the assistance of Mary Losey, Washington Film Officer of the National Film Board of Canada, they interviewed delegates, answering questions on the international use of films, and joined with staff members of the National Film Board of Canada in drafting a questionnaire to be submitted to the delegates concerning the present and future use of non-theatrical films and the specific needs in the food and agricultural fields. Replies from more than 30 nations showed that 54% of those responding wanted more films on agricultural production, 27% desired more films on nutrition, and 12% felt the greatest need for films on agricultural subjects.

Among the films shown were *Cowboy, Food—Secret of the Peace, In the Wake of the Armies, Power and the Land, The New Earth, The River, What's Happened to Sugar?*; and *World of Plenty*.

At the end of the conference, specific recommendations for a permanent films division within the permanent Food and Agriculture Organization were submitted by the Secretariat Film Office to the delegates to

include in the original recommendations of the Organization. Such a division was to have the authority to produce, utilize and stimulate through member nations the production, distribution and utilization of films and other visual aids pertinent to the organization's work.

Kruse Heads Photo Industry Board

William F. Kruse, Manager of Bell & Howell's Films Division and National Secretary of the Allied Non-Theatrical Film Association, was unanimously elected 1946 chairman of the Photographic Industry Coordinating Committee. The committee is made up of top executives of nine photographic trade associations. It meets quarterly to act on public relations and other policy matters.

The next meeting will be held in Buffalo, March 11, 1946, in conjunction with the convention and trade show of the Master Photo Finishers and Dealers Association.

State Department to Distribute Foreign Language Reels Abroad

The Interim International Information Service and the Coordinator of Inter-American Affairs Office were terminated January 1 and replaced by the Office of International Information and Cultural Affairs in the State Department. Until June 30 this agency will operate on funds allocated to it by Congress from the OWI and OIAA balances, and at the close of this fiscal year a definite appropriation for its perpetuation is expected from Congress.

Mr. William Benton, Assistant Secretary of State, has asserted that the Information Service film program would be concerned with non-theatrical subjects. During the next six months it will re-edit the pictures it has inherited from the OWI and OIAA and such other pictures as meet its needs that it can secure from other departments, such as Interior and Agriculture, and prepare them for use in various countries, thus laying the groundwork for the larger activities planned for the future. Some 75 to 100 shorts and documentaries will be supplied by Hollywood and scored by the State Department for distribution in about 60 foreign countries. In addition, the Department may finance the production of special films, or enter into production itself on a small scale.

Five major American newsreel companies have formed the United Newsreel which will donate newsreels at the rate of one a week, and stand the expense of adapting and scoring them for foreign exhibition. In most of the countries the newsreels will be distributed by the State Department and will not be shown

in theatres. They, as well as other non-theatrical films, will be shown in embassies, clubs, churches, schools and the like in an effort to give the widest possible distribution of American ideas without competing with private industry.

The Tele-Communications Division and Motion Picture Section of the State Department have moved from the department building on Pennsylvania Avenue to 1818 H Street, NW., where they will have much-needed additional space.

DeMille to Produce 16mm Films

The Cecil B. DeMille Pictures Corporation has been formed in Hollywood to make 16mm educational, industrial and religious pictures to be distributed through established 16mm channels. Officers of the new company are: Cecil B. DeMille, chairman of the board; Ralph Jester, until recently a lieutenant colonel in the Army Air Forces in charge of Combat Films Service, president; and William C. Thomas, Paramount producer, vice-president. Space has been leased at the PRC studio for production.

Mr. DeMille, who has been producing theatrical motion pictures for a long time, and Mr. Thomas will continue to produce for Paramount.

Color Slides on Latin American Republics

Over 1500 Kodachrome 2x2 slides on life in the Other American Republics, produced by the American Council on Education, have been made available for free loan to schools and colleges by the U. S. Office of Education. There are sets of slides on 33 subjects, and in order to serve as many schools as possible, each borrower is limited to one set at a time, which may be retained for a period of three weeks. Teachers' notes are included with each set.

Requests for slides should be sent to the American Republics Branch, Division of International Educational Relations, U. S. Office of Education, Washington 25, D. C. The slides are also available from the following depositories:

The Southern California Council of Inter-American Affairs, 707 Auditorium Building, Fifth and Olive Streets, Los Angeles 13, Calif.

The Rocky Mountain Council on Inter-American Affairs, 1425 Cleveland Place, Denver, Colo.

Pan American Union, Washington 6, D. C.

Art Institute of Chicago, Chicago 3, Ill.

Extension Division, The State University of Iowa, Iowa City, Iowa.

The Pan American Society of Massachusetts and Northern New England, Inc. 75 Newbury Street, Boston 16, Mass.

The Southern Council on International Relations, Box 1050, Chapel Hill, N. C.

Portland Extension Center, Oregon State System of Higher Education, Portland, Oreg.

Division of Education, Philadelphia Museum of Art, Parkway at 26th Street, Philadelphia 30, Pa.

Institute of Latin-American Studies, the University of Texas, Austin 12, Tex.

Borrowers should use the nearest depository. Sets of the slides may also be purchased from the American Council on Education, 744 Jackson Place NW., Washington 6, D. C.

Indiana Committee on Audio-Visual Materials

A State-wide committee on audio-visual materials for Indiana which was recently appointed by Dr. Clement T. Malan, State Superintendent of Public Instruction, held its first meeting in Indianapolis on November 16. The committee's function is to help work out a program and to make recommendations relative to the optimum use of audio-visual materials in the public schools of Indiana.

Among the problems discussed was the need for an elementary handbook which would include: (1) a description of all types of audio-visual materials and equipment with emphasis on the educational motion picture; (2) specific suggestions on organizing and administering an adequate program of audio-visual materials; (3) effective ways of using materials; (4) bases for evaluating a program of audio-visual materials; and (5) sources of materials and equipment.

The Committee recognizes that the successful completion of this assignment would necessitate the evolution of a number of guiding principles which would serve as a basis for the selection and treatment of content in the handbook, as well as for reports to Dr. Malan. Some of the more important projects which will be undertaken are:

1. Principles underlying the organization and administration of a service of audio-visual materials.
2. Most effective methods for using each type of material.
3. Pre-service and in-service training programs for teachers including conferences, clinics, institutes, work shops and undergraduate and graduate credit courses in the field of audio-visual materials, and suggested qualifications with respect to experience and training of directors of audio-visual materials.
4. Survey of sources of audio-visual materials available for use in Indiana Schools.
5. Study of whether or not teacher-training institutions with their present libraries of audio-visual materials are going to be able to meet the rapidly increasing demand for audio-visual materials from smaller schools and community groups.
6. Desirable teacher-material-and-equipment ratios.
7. Suggestions on ways present classrooms can be adapted in an economical fashion and new buildings should be planned for a most effective use of audio-visual materials.
8. Basis for financing a program of audio-visual materials which would include recommendations under which state-aid schools would be permitted to purchase equipment and purchase or obtain teaching materials on a service-charge basis from an educational library of audio-visual materials.
9. Plans which will enable Indiana schools to take full advantage of available surplus equipment and materials in the field of audio-visual materials.
10. The need for, and functions of, a State Supervisor of Audio-Visual Materials in the State Department of Education.

Mr. L. C. Larson, Assistant Professor of Audio-Visual Education, Indiana University, is chairman of this significant Committee. It is hoped that other states will follow Indiana and institute a similar program to determine their needs for audio-visual material and best ways of meeting them.

ENTERTAINMENT and EDUCATION

go hand-in-hand on the screen

World War II has emphasized the importance of motion pictures . . . both from the entertainment and educational standpoint. Motion Pictures have become the world's greatest medium of expression . . . with ear appeal as well as eye appeal.

Experimental Research in Audio-Visual Education

(Concluded from page 38)

to use these materials without the advantages of trained leadership.

The practice of allowing the teachers' judgment to be the basis for determining the actual need for audio-visual aids is common. Teachers' judgment is commonly found to be the basis for the appraisal of the effectiveness of the audio-visual programs, a large majority of the officers in charge of the centers consider improvement great in the enrichment of the content material of the curriculum. It is commonly found that (1) financing the audio-visual program, (2) building up library materials, and (3) finding trained personnel are the problems with which the officers in charge find most difficulty in establishing effective programs.

II PROPOSED PATTERN FOR AN AUDIO-VISUAL CENTER

A. INTRODUCTION

Current practice indicates (1) that audio-visual aids have been centralized in a department which supplements the school program but lacks integration with it; and (2) that there is need for a definite pattern for audio-visual centers.

B. ORGANIZATION

The proposed pattern for an audio-visual center stresses the close integration of the audio-visual program with the school curriculum. It is, therefore, recommended that audio-visual aids shall be organized through a center (1) which shall be a part of the curriculum department, and (2) which shall operate as service department. The center shall be located in the service building of the Board of Education (1) in order that materials shall be convenient for delivery, along with other school supplies, by the regular delivery service of the school system, and (2) in order that necessary repairs of equipment shall be made by workmen regularly employed for repair services in the technical department of the Board of Education.

Materials shall be classified according to a plan which divides the subject matter of the curriculum into 10 main headings (these to be further divided and subdivided) to which a key number shall be given following the general pattern of the Dewey Decimal System.

Materials shall be stored at the center (in, or near, the room where repairs are made) from which they shall be circulated to the schools upon requisition; equipment shall remain permanently in the school buildings.

C. ADMINISTRATION

It is recommended that the administration of the center shall be the responsibility of the officer in charge, and that the officer shall be an assistant to the curriculum director. In this way, he can look to the curriculum director for advice and steering in the essentials of the integration of the audio-visual

Munday & Collins 814 West Eighth St.
Los Angeles 14, Cal.

program with the curriculum. The director of the curriculum is, in turn, responsible to the superintendent of schools.

The duties of the officer in charge of the audio-visual center shall include (1) production (of visual aids not commonly available); (2) distribution (responsible for proper functioning of the distribution system); (3) research (evaluation of materials, cost studies on maintenance and equipment, determining sources of audio-visual aids); and (4) supervision (to the extent of aiding in the selection of materials, and of being available for conferences with teachers).

The selection of materials and equipment shall be the responsibility of the officer in charge of the center, the subject supervisors, and the curriculum director. Criteria for the selection of materials shall be certain standards developed by experts in the field. The formation of the policy of the center shall be the responsibility of the officer in charge, the superintendent of schools, and the curriculum director.

The personnel of the center shall be (1) clerical and (2) technical. Using Enlow's formula, it is found that the smallest city included in this study (according to population) should have a staff of 3.3 persons, the median city should have a staff of 6, and the largest city should have 12. This formula is recommended as a yardstick for determining an adequate number of personnel for audio-visual centers.

For maintaining the proposed audio-visual program, it is recommended that 75 cents per pupil enrolled shall be provided annually for the audio-visual budget, thereby placing this expenditure on a par with the expenditure for the library. The budget shall include expenditures for materials and equipment. Salaries of personnel shall be paid from the regular budget as are salaries of other employees of the Board of Education.

D. SUPERVISION

It is recommended that the general subject supervisors of the school system shall be responsible for the supervision of audio-visual aids in the classroom. The audio-visual program does not introduce a new subject to the curriculum; it provides tools for broadening the scope and heightening the imagery of subjects already a part of the curriculum.

It is recommended that the effectiveness of the audio-visual program, as well as the outcomes of the program, shall be determined by the regular testing agencies already in existence in the school system.

E. CONCLUSION

This study maintains that the proposed pattern for audio-visual centers has a genuine contribution to make to the advancement of education. The development of audio-visual materials and equipment is now far in advance of the program of the educator. The proposed center should be a means of using these aids more effectively in large city school systems. Research and planning are needed for the smaller schools which might be formed into groups, or county units, for more effectively administering audio-visual aids in order that school children throughout the country may enjoy the benefits which these tools render in the learning process.

Current Film News

■ **ENCYCLOPAEDIA BRITANICA FILMS INC.**, 20 N. Wacker Drive, Chicago 6, has produced several new one-reel classroom films on timely topics, such as:

Democracy—presenting the nature and meaning of democracy. Its two unique characteristics—shared respect and shared power—are defined and described. The film then goes on to discuss two important conditions which have historically promoted the growth of democracy: a balanced economic distribution and enlightenment.

Despotism—illustrating the thesis that all communities can be ranged on a scale running from democracy to despotism. The two chief characteristics of despotism—restricted respect and concentrated power—are defined and illustrated. Two of the conditions which have historically promoted the growth of despotism are explained and exemplified. These are a slanted economic distribution and a strict control of the agencies of communication.

Like its companion film, "Democracy," this subject presents basic social science concepts in such a way as to make them comprehensible on the junior High school level. Both films were produced in collaboration with Harold D. Lasswell, Ph.D., Yale University.

Property Taxation—produced in collaboration with H. F. Alderfer, Ph. D., Pennsylvania State College.

Fundamental operations in arithmetic are practically applied in a graphic exposition of the essentials of property taxation. The film portrays the social usefulness of property taxation, the types of government expenditures supported by property levies, public financing through bond issues, and procedures of levying taxes on property.

Consumption of Foods—a study of the food needs and deficiencies of the world's peoples. Standards for caloric intake and a balanced food consumption guide are developed. The adequacy of food consumption in the major population regions of the world is analyzed and compared with the caloric standard and the balanced food consumption guide. Problems related to bringing consumption levels up to desirable standards are posed and ways of solving them are depicted.

Distributing America's Goods—produced in collaboration with J. Frederic Dewhurst, Ph.D., The Twentieth Century Fund—showing why it costs as much as it does to distribute America's goods. Sequences are devoted to the distribution costs of the producer, the wholesaler, the retailer, and transportation. The film shows how fifty-

nine cents out of each purchase dollar goes to pay for the distribution of the article, and indicates ways in which distributors and consumers can cooperate to reduce distribution costs.

This film and the following two subjects on World Food Problems were made in collaboration with O. E. Barber, Ph. D., University of Maryland.

Production of Foods—concerns the technology and geography of food production. Photographic and animation sequences depict the role of land in production; the methods employed in the production of plant and animal products; and the relation of animal food production to plant foods. Problems concerning the increase in world production of foods are posed and possible solutions suggested.

Distribution of Foods—technical developments in the preservation and transportation of foods, the economic problems involved, and the world flow of foods. How the developments in food transportation and food preservation have enormously increased the possibilities for distributing perishable foods on a world basis. Other sequences pose the problem of family income; the problem of maintaining a flow of food from producer to consumer; the problem of tariffs; and depict the inter-continental movement of major foods on an animated map background.

■ **PAN AMERICAN WORLD AIRWAYS**, 135 E. 42nd St., New York 17, through three new 16mm films in full color, take their audiences by flying Clipper to Latin America, Alaska and Bermuda.

Wings over Latin America—40 minutes—highlights the cultural, historical and economic aspects of 14 Latin American republics. It presents colorful views of Nassau, Yucatan with its Mayan ruins, Canal Zone, Colonial cities of Colombia, Ecuador, Peru and Chile on the West Coast; over the Andes to the East Coast and the cities of Buenos Aires and Rio de Janeiro, then up to Belem at the mouth of the Amazon, finishing at Havana and Miami.

Wings to Alaska—25 minutes—focuses attention on the unexploited natural beauties of the Territory, with its lusty young industries, pioneering people and outdoor sports. Featured are the fishing and gold mining industries, and tourist attractions.

Week-end in Bermuda—15 minutes—is the story of two days' respite from a world of automobiles, machines, and great stone cities.

These films are distributed by the YMCA Motion Picture Bureau.

■ **Y.M.C.A. MOTION PICTURE BUREAU**, through its newly established unit **ASSOCIATION FILMS**, 347 Madison Avenue, New York 17, has just released an instructional sports film called

Play Volleyball—2 reels—introducing the essentials of top-notch volleyball play. It is designed to aid both the beginner and experienced player in improving their play. Narrated by Bill Slater, Paramount sportscaster, the film vividly presents the highlights of a spirited game, with the skills of serving, receiving, passing, setting-up, spiking, blocking, and patterns of play explained with the aid of slow motion and "freeze" (stop action) photography.

Collaborating in the production were outstanding officials of the U. S. Volleyball Association and other national athletic organizations. The film was produced by the American Institute of Motion Pictures.

An instructional guide, supplied with each film, suggests how to use it in classes for players and officials. It may be rented or purchased.

■ **WESTINGHOUSE ELECTRIC CORPORATION**, through its School Service Dept., 306 Fourth Ave., Box 1017, Pittsburg 30, offers for school use without rental charge:

Music in the Sky, which reproduces the Sunday musical radio show starring baritone John Charles Thomas as soloist, and story-teller John Nesbitt. The film also takes its audience behind the scenes in the studio for a brief insight into technical operations necessary to broadcast a nationwide program. It is available in both 16mm and 35mm.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, report the following new subjects:

A Diary For Timothy—5 reels. A British soldier serving overseas, writes a diary for his baby son, Timothy, born six months before war's end. This diary forms the commentary for the film which pictures the violence of war on the continent, the thoughts of the men who fight and the lives of the people at home as in city and country they work and wait, depressed by news of military defeat, cheered by the hope of victory. The hopes and plans for peace by a people caught in the toils of war given new and sensitive treatment.

Heir to the Throne—1 reel—a thumbnail sketch of the life of Princess Elizabeth. Opening on her eighteenth birthday, when royalty comes of age, the film traces the highlights of her crowded life - her atten-

dance at state functions, the Jubilee, the Coronation, review of the Grenadier Guards, of which she is Colonel-In-Chief. Scenes from her personal daily life are shown. The film makes it apparent that while the Princess has been trained to fulfill all the requirements of a queen, her parents have brought her up to be a natural and understanding young woman.

A Harbor Goes to France—2 reels—official British Army film recording the history of "Operation Mulberry", the prefabricated harbor which was used by the Allies in the invasion of Europe.

Progress Report—1 reel—three short "magazine items" showing how Britain is dealing with her postwar problems. The first describes the turning of marsh land into playing fields by the use of rubble hauled from London. The second explains

how magnesia is extracted from sea water and its important role in post-war industry. The third shows the new home of Wedgewood china - a modern factory and village built in the countryside.

■ **DR. THOMAS B. McCRUM**, DDS, 4144 Charlotte St., Kansas City, Mo. offers a new film on dental health:

Open Wider, Please—1 reel, 16mm sound—which makes its appeal direct to children, explaining the construction of teeth and their functions; the importance of correct diet to supply the minerals Nature needs for building strong, straight teeth, how to brush teeth effectively, the harmful effect of decayed teeth on the general health, and the importance of early detection of cavities by twice-yearly visits to a dentist.

Entertainment Films

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Ave., New York 19, has acquired exclusive 16mm world distribution rights to the United Artists release:

Stage Door Canteen—14 reels—The story, told against the background of activities in this famous service men's canteen, concerns the romance of an American soldier about to leave for overseas duty and a young Broadway actress who is serving as hostess. Some 48 well-known personalities of stage and screen appear, and six lead-

ing bands are featured, including those of Benny Goodman, Xavier Cugat, Kay Kyser, Count Basie, Freddie Martin and Guy Lombardo.

The feature will also be available for rental from Ideal Pictures Corporation, 28 E. Eighth street, Chicago 5, and its twelve branches throughout the country.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have made available the following Universal theatrical feature motion pictures in 16mm sound:

Ghost Catchers - 7 reels - Olsen & Johnson in a zany farce of haunted house and musical nonsense, with a "Topper" technique.

Pardon My Rhythm—6 reels—Gloria Jean as a managerial miss

who drives teen-age band to a radio championship, with one weird stratagem after another.

This Is The Life - 9 reels - how eighteen-year-old is cured of "crush" on older hero. Cast includes Donald O'Connor, Susanna Foster, Peggy Ryan, Louise Albritton, Patric Knowles.

Cartoon Series for Teaching Purposes

The production of a series of films in cartoon form, especially planned for use in schools has been announced by Milton J. Salzburg, President of Pictorial Films, Inc. of 1270 Sixth Avenue, New York.

The first two in this series are titled *Good Manners* and *Good Health*. An exclusive contract for the production of the subjects has been signed between Pictorial and Hugh Harmon of Harmon Studios in California.

The films are planned to appeal to children of all ages and to teach a lesson as only cartoons can. In the subject *Good Manners*, the hero, "Johnny," potentially not a bad little boy, but untidy, careless and selfishly thoughtless, leads his Mother a merry chase. He is aided and abetted by imp "Badself" while imp "Goodself" fights a losing battle to bring out Johnny's better instincts. When things go from bad to worse under Badself's influence, Johnny slowly takes on the physical appearance of a little pig—ears, snout, hooves and curly little tail. Now "Goodself" goes into action and influences Johnny to improve his conduct. He gradually turns back into a little boy, but a better and more lovable version of his former self "Goodself" is the victor and "Badself" has to leave the scene.

The treatment and characterizations are such as to insure child interest and response. The technique is of recognized professional quality.

Pictorial Films, Inc. also announce renewal of their contract with Major Rudy Ising for new 16mm releases of Ising cartoons, thus assuring continued availability of entertainment subjects to round out Pictorial's comprehensive library of educational, cartoon, music and sports films and new digest series.

"More Useful than Ever"

wrote a Director of Visual Education recently on receiving his copy of the new

21st EDITION

"1000 and ONE"

(1945-46)

The Blue Book of Non-Theatrical Films

He further stated that "1000 and One" has been "standard equipment in our Department for years, and we feel that we could not keep house efficiently without it."

This is typical of hundreds of comments in praise of the practical services of the annual film directory which reach us constantly.

This 21st Edition is the largest, most complete edition of "1000 and ONE" yet published—160 pages, 16 more than in last year's edition. The volume is so carefully and simply organized as to ensure easy and speedy location of all essential information needed on the 6238 classified motion picture titles described in the volume—number of reels, whether silent or sound, description of contents, distributor sources and prices charged by such distributors. Hundreds of subjects available without rental charge are included.

"1000 and ONE" answers YOUR questions about films.

AMONG THE PRODUCERS

International Film Foundation To Produce Documentary Films

The International Film Foundation, a new, non-profit organization dedicated to the building of world understanding through the production and distribution of documentary films, was announced last month at a special meeting held at the Town Hall Club in New York with noted press, magazine, radio and educational leaders as guests.

Julien Bryan, noted lecturer and one of the world's leading producers of documentary films, has been named executive director of the new foundation. Operations will be world-wide in scope, films being made in foreign countries for distribution in the U. S. and in this country for distribution abroad. Ten sound films interpreting the peoples of Russia, China, Poland and Turkey are already in production while two expeditions, one to Europe and another to the Far East, are slated for 1946.

The documentary film, properly and naturally made, offers the most effective medium for acquainting the peoples of the world with each other, Mr. Bryan believes. By "naturally made" he means showing people as they live. "If we can achieve this," he says, "we will be taking

Julien Bryan

one of the most basic, and most important steps toward lasting peace. Show the people of the world, fruitfully, in their daily lives, and your audience will accept them as friends. The work of the foundation will be a *two-way* operation, interpreting the people of the United States to people in foreign lands, and picturing life abroad to the people here in our own country."

Mr. Bryan, who has recently completed a series of documentary films on life in the United States for the Office of Inter-American Affairs, in addition to some 23 films on life in South America, is also well-known for his "Background of the War" series produced in Europe

which portrays the conditions leading up to World War II. His most dramatic work was the motion picture "Siege," which was made in Warsaw in 1939 and showed the heroic stand made by the people of that afflicted city when Poland was attacked by the Nazis in September of that year. "Siege" was released nationally throughout the U. S. by Pathe.

The I. F. F. will operate with funds made available by the Davella Mills Foundation of Montclair, N. J. The initial grant to the Film Foundation is \$150,000 a year for two years.

Officers of the I. F. F. are: Edward E. Watts, Jr., New York, President; George F. Pierrot, Detroit, vice-president; John Henry Leh, Allentown, Pa., secretary; Thomas C. Roberts, Princeton, N. J., treasurer; Julien Bryan, New York, executive director.

National Educational Films Names Regional Directors

Regional Directors for National Educational Films, Inc. so far named are: Lt. Cdr. Don Williams, formerly instructor in Visual Education and Director of Visual Education of city systems, Great Falls, Montana and Berkely, California; Lt. Jack W. Evans, formerly Director of Visual Education, Lynchburg, Virginia, Public Schools; Lt. August Revel, formerly Director Department of Instructional Materials and Supervisor of Audio-Visual Instruction, Kern County Public Schools, California; and Lt. De. Forest S. Hamilton, formerly of Fresno State College, University of California, and Supervisor of Audio Visual Aids of Sonoma County School, California.

Other definite appointments are: *Coordinator of Education and Planning*, Lt. Cdr. Harold B. Roberts, formerly of Stanford University and the College of Idaho; *Director of Research*, Lt. Cdr. Herbert R. Jensen, formerly of the University of Minnesota Visual Education Service and the Committee on Scientific Aids to Learning; *Consultant in Primary and Elementary Curriculum Program*, Dorothy Dingley, who served as photographic specialist in the WAVES and formerly with the Long Beach Public Schools.

As reported in our December issue, Lt. Cdr. Grant Leenhouts has been named general manager of the new firm. Key writers and directors, also of Navy Motion Picture activities will become associated with the firm upon release from the service, states Lt. Cdr. W. French Githens, President.

This former all-Navy group participated in the production of more than 3,000 film titles for the Navy's war training program. They produced the Navy's War Bond and Victory Loan film program for the Treasury Department, and aided in establishing a non-theatrical distribution system that reached 40,000,000 people by the end of the war.

Bell & Howell Auto Load Camera to Appear Soon

Battle-tested and proved under the rigors of war, the new and improved Bell and Howell Filmo Auto Load 16mm magazine loading camera will soon be appearing for sale to the public. A pre-threaded film magazine makes film loading effortless, and film can be interchanged in mid-reel due to the shutter action on the film magazine. This shutter is opened automatically when the film magazine is inserted, and

B & H Filmo Auto Load

is closed automatically when the magazine is withdrawn.

A viewfinder of the "positive" type, which eliminates eye-parallax, is fully enclosed within the camera for protection. Another desirable feature is the small size and light weight of this latest Filmo. Measuring 1- $\frac{3}{4}$ by 3 $\frac{1}{2}$ by 5 $\frac{1}{4}$ inches and weighing only 2 pounds 7 $\frac{1}{2}$ ounces, it is easily carried in a coat pocket ready for instant use.

The Auto Load will be available with any of several fine, fast lenses, fully color corrected. Telephoto lenses for distant work, and wide-angle lenses for close quarters are instantly interchangeable. A choice of two models can be had, the Filmo Auto Load operating at 8, 6, 24, and 32 frames per second and equipped with a 1" F 2.5 U. F. lens, or the Filmo Auto Load Speedster operating at 16, 24, 32, 48, and 64 frames per second mounting a 1" F 1.9 F.M. lens.

New Catalog of S.V.E. Educational Picturals

A new S. V. E. Picturals Catalog of 813 educational film strips, many of them new or revised and some of them just released, has been issued by the Society for Visual Education, Inc., Chicago. It is the first post-war catalog of S. V. E. film strips and includes subjects for use in practically all courses from kindergarten to college.

Of particular interest to teachers in primary grades are two revisions of well known subjects, *Little Black Sambo* and *Little Black Bear*. These film strips have been modernized with titles set in highly readable type and new backgrounds. The reading matter in the subtitles, which are alternated with the pictures, is keyed to the Thorndike Word

List for the second and third grades.

The S. V. E. series on the National Parks of the United States now includes a total of 16 areas. Each of these film strips, made with the cooperation of the National Park Service of the U. S. Department of Interior, includes many illustrations from the files of the National Park service and other government agencies. There are also maps which show the locations of the parks with respect to other areas and the locations of important features of the park area. Each of the film strips is accompanied by an informative teachers' manual. The newest in this series are: *Carlsbad Caverns*; *Grand Canyon National Park*; *Great Smoky Mountains National Park*; *Rocky Mountain National Park*; and *Sequoia - Kings Canyon National Park*.

Another new film strip, *Wild Flowers Everyone Should Know*, presents 39 different wild flowers, all native to the Province of Saskatchewan, Canada, but generally found throughout the United States. Each flower and plant is clearly illustrated and each frame includes a caption giving both the common and the scientific names of the flower presented. A teachers' manual is furnished.

Other new or revised film strips include: *The Story of Fur*; *George Washington*; *Presidents of the United States*; and *The Origin and Definitions of Algebra*. Others will be added from month to month.

The film strips listed in the S. V. E. Pictorial Catalog are offered without any increase in price. This new catalog will be free to any teacher or supervisor who may request it from the Society for Visual Education, Inc., 100 East Ohio Street, Chicago 11, Illinois.

Slide Film on Fire Prevention

Opening with a series of spectacular fire scenes, a new 35mm sound slide film called *Fire Is Your Responsibility*, shows not only how each fire was caused but how each could have been

Frame from "Fire Is Your Responsibility"

prevented. The film gives do's and don't's for smoking, use of extension cords, wiring, care of the fuse box, cleaning and disposal of rubbish. Man is shown as the primary cause of fires and his

personal responsibility in preventing them is emphasized. The main part of the film is followed by a series of question pictures in which the audience is asked to point out typical fire hazards.

The action in this ten minute talkie-slide film is centered around a variety store and the material in it is slanted most specifically to the retail store field, yet the fire causes it covers are basic to all types of fires.

Fire Is Your Responsibility is now ready for distribution. Further information about it may be obtained by writing to the Visual Training Division of the Syndicate Store Merchandiser, 79 Madison Avenue, New York, 16, New York.

Coronet Announces Appointment of Dent to Staff

The appointment of Ellsworth C. Dent as Educational Director of *Coronet* and General Sales Manager of *Coronet* Instructional Films, effective immediately, is announced by David A. Smart, Publisher of *Coronet* and President of *Coronet* Instructional Films.

"The selection of Dent for these important assignments," said Mr. Smart, "is but one step in expanding the educational services of the magazine and *Coronet* Instructional Films. The sound film studios at Glenview, Illinois, which are the most modern and complete for the production of 16mm sound motion pictures in color, are increasing their production schedules to add new films each month to more than 60 subjects now available. At the same time, extensive research is being conducted to determine the film requirements of schools and other training institutions, so the most useful subjects can be produced. These activities will be coordinated with those of *Coronet* magazine for one primary purpose... to provide the most effective visual and other aids to classroom instruction and adult education."

Mr. Dent comes to *Coronet* with a broad experience of more than 22 years in the visual field. This work started when he was placed in charge of the Bureau of Visual Instruction at the University of Kansas, in 1923. During the fall and winter of 1933-'34, he organized the visual instruction service for the intermountain area at the Brigham Young University, Provo, Utah, and wrote the first edition of the "Audio-Visual Handbook," the fifth edition of which is now on the press. From Brigham Young, he went to Washington, D. C., to organize and direct the Division of Motion Pictures, U. S. Department of the Interior, and from there to the Radio Corporation of America, Camden, N. J., as Educational Director. He left RCA three years ago to become General Manager of the Society for Visual Education, Inc., Chicago, where he is still completing special projects preparatory to devoting full time to his new assignments.

Victor Animatograph Appoints Director of Distribution

Lincoln V. Burrows, former chief of the Photographic Division of the War Production Board, has been appointed Director of Distribution of Victor Animatograph Corp., Davenport, Iowa, manufacturers of 16mm motion picture equipment, it is announced by S. G. Rose, Executive Vice-President.

Mr. Burrows served with the WPB from April 1942 to October, 1945, dealing with the control of production and allocation of all types of photographic equipment, film and paper. From 1935 to 1942 he was associated with Eastman Kodak Company, and shortly before Pearl Harbor was sent by the firm to Washington

Lincoln V. Burrows

to assist in handling government contracts for photographic items. Mr. Burrows is a graduate of the University of Rochester and of the Wharton School of Finance and Commerce of the University of Pennsylvania, where he took his master's degree in 1935.

British Company Will Manufacture B & H Equipment

Bell and Howell Company of Chicago and British Acoustics, the engineering and manufacturing company of the Arthur Rank groups of companies in England, are entering into a long term period for an interchange of research, manufacture, and distribution of equipment and films.

British Acoustics will set up the complete manufacture in England of all Bell & Howell standard and substandard equipment including 16mm sound and silent projectors, 16mm and 8mm cine cameras, and 8mm projectors, as well as a wide range of accessories. The plants in England will be operated on Bell & Howell engineering and manufacturing methods. Distribution of products made in England will cover the British empire and certain countries in Europe and Africa.

The agreements also provide for an interchange of 16mm film distribution between the Rank 16mm libraries and Bell & Howell's Filmosound libraries.

Demonstrations that ALL Can See

More clearly than if they were right beside you, your pupils can see and understand without moving from their seats—when you perform a demonstration from your desk with a Spencer Model B Delineascope.

From a convenient horizontal projection platform, it throws a clear cut image onto an overhead screen. Science experiments, drawings, contours of spec-

imens, lantern slides—all are projected in vivid detail.

For further information about this and other instruments for visual instruction, write dept. B12.

COMPANY
 Scientific Instrument Division
 Buffalo 15, New York

Manufacturers of the **SPENCER** *Scientific Instruments*

The method of exposing targets with the
KEYSTONE *Overhead Tachistoscope*
 has *Several Distinct Advantages*
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated. YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Tachistoscope *stands first*.

Just try a Keystone Overhead Tachistoscope—*its superiority will be evident*.

The D V I Zone Plan Needs Change

WE had the pleasure and privilege, at Milwaukee in 1940, of presenting the original plan for a Zonal organization of the D V I. We were not alone in our enthusiasm for, after discussion in Committee at Atlantic City in February 1941, the plan was adopted with practical unanimity in June at the D V I meeting in Boston. The Zone Plan had a thorough trial and was found wanting. Properly we should be among the first to admit failure and urge a change.

The field of audio-visual instruction is nation-wide but is still largely unintegrated. Countless "centers" are very much alive but they function in isolation. The field has magnitude without coherence. The right national organization can knit the isolated parts into a powerful whole, and that organization should inevitably be the Department of Visual Instruction of the National Education Association. Given swift and steady membership growth, by thousands instead of hundreds, the D V I can bring unity and strength to this field of vast potentialities.

The Zone Plan was a mere first step, but it was in the right direction. It replaced the previous shotgun method of nation-wide membership campaigns from a single national headquarters, the address shifting each year, with more concentrated campaigns through ten Zone headquarters, each covering a limited and more familiar territory. It did achieve a two-fold increase, possibly three-fold, but we want fifty-fold! The question is whether to continue, modify, or discard the Zone plan. We would vote for the middle course, modification.

The Zones proved still too large and developed two major weaknesses. First, in some Zones lack of effective headquarters leadership brought insignificant returns. Second, in many Zones local centers of outstanding achievement justly claimed the right to handle membership campaigns in their own self-developed territory—which made the center a "branch" of the Zone—which called for a three-way split of the membership fee (apart from the magazine subscription) between "branch", "zone", and "national"—which brought about hopeless complexities in bookkeeping. And here lies the key to the right "zone plan"—an elastic number of Zones of any and all sizes, ultimately covering the whole country.

We would like to see, therefore, the following fundamental changes:

- (1) Abolish present arbitrary ten Zones and Zonal Officers.
- (2) Admit as "Zones of the D V I" all local centers or organizations of significant achievement in audio-visual instruction, regardless of size or area served.
- (3) Give each such Zone exclusive right and responsibility of membership campaigns within its own territory, whether city-wide, county-wide, state-wide, or larger, with no overlapping in territory.
- (4) Establish thereby a two-way division of membership fee, between "zone" and "national", with no further subdivision possible.
- (5) Give the Zones state-city names—Ohio Z1 Columbus, Texas Z4 El Paso, etc.—the number of Zones per State being unlimited, and the Z number showing order of admission within the State.
- (6) Then, with permanent national headquarters under Vernon Dameron as Executive Secretary, with Zones working territories that match their capabilities, let the Department of Visual Instruction of the N E A move forward to real accomplishment.

The New Department

WE take pleasure and pride in presenting to our readers Mr. William S. Hockman as Editor of our new "Church Department", which is to consist of four or more full pages each month always addition to the regular pages of *Educational Screen*. On the opposite page is Mr. Hockman's introductory editorial to the Church Department which begins in the March issue.

Our new colleague possesses rare qualifications and experience for the work. He received his A.B. degree from Randolph-Macon College, his A.M. degree in Religious Education from the University of Chicago. Mr. Hockman has served various denominations as Director of Religious Education—at the Central Congregational Church in Topeka, Calvary Methodist in Washington, and Lakewood Presbyterian, his present position, in Lakewood, Ohio. He has been Chairman of the Department of Christian Education, Cleveland Church Federation, for six years, and of the Directors' Section, International Council of Religious Education, for two. For some twenty summers he has taught courses in the Leadership Training Schools of the Presbyterian and other denominations, and is on the faculty of the "International Workshops in Visual Education" sponsored by the International Council.

Mr. Hockman's numerous writings in his special field are well and widely known. His leaflet written for the Methodists, "The Use of Visual Aids in the Church", has been distributed by many denominations. His "Films Promote Discussion" in the *International Journal of Religious Education* was the first article in a church publication on the film-forum technique. *Church Management* invited his study outline on "The Use of Visual Aids" for their July-August issue last, and *Religious Education* carried his "Use of Slides and Films" in their November-December visual education issue. *Our readers are free to write direct to Mr. Hockman at 2043 Mars Avenue, Lakewood 7, Ohio.*

A Reader Speaks

I was very glad to read in your recent issue that you are to have a "Church Department" in visual education. This will serve a long-felt need among church leaders.

I am personally acquainted with Mr. William S. Hockman, who has been selected to head this department. You are to be congratulated in making a wise choice of a man with such fine character and ability. More church leaders will now have an opportunity to share in his experiences in this important field.

JOSEPH MOSCA, Member Visual Aid Committee
Council of Churches of Christ, Allegheny County, Pa.

The Church Department

Editorial

WILLIAM S. HOCKMAN, Editor

THIS department is new. The magazine is old—this being the 25th volume. In it, for nearly a quarter of a century, visually-minded school people have discussed their ideas and questions with mutual helpfulness. Now the editor and publisher invite the visually-minded church leaders to use one section of this respected magazine—for the discussion of problems, for the exchange of ideas, for the enrichment and clarification of our thinking—as the church employs more widely and intensively visual means and methods in the achievement of its goals in a free and increasingly democratic society.

In the local community, school and church are never far apart in purpose and leadership. It augurs well for the future of both that they can be thus closely associated in EDUCATIONAL SCREEN in their common quest for a deeper understanding of the place of visual media in that part of the total education of the citizen to which each addresses itself.

We want this Church Department to belong to the whole church. Every unit of the church in America is invited to contribute its questions and best thinking. The large denomination and the small communion will be heard. The Kingdom comes through the efforts of all. If the sound and intelligent use of visual aids can help one part of the church, no denomination or communion can ignore visual aids. We will use the term "church" to encompass the field of religious effort and interest in the same way that the term "school" commonly denotes the field of educational endeavor. Therefore, let the church—every faith and communion—contribute to and receive from this department.

These columns not only belong to the church extensively, but intensively, also. We will welcome the comments, ideas, insights, problems, and solutions of every one within the church from the classroom teacher to the chairman of the council of bishops. The church moves forward thru the work and loyalty of many men and women, scattered up and down thru the ranks of leadership and responsibility. Each one is a part of the total church. The whole is dependent upon each. The girl who takes the (right) film can from the shelf and sends it on its way with expedition contributes to the learning experience of a group as definitely as the leader who plans the program. Let us cultivate a fellowship within the church as well as throughout the church.

We expect all the visual aids to learning, projected and non-projected, to be considered on these pages. We would do well to appraise each in relation to the general categories of objectives of the church: instruction, interest, motivation and worship. We shall welcome discussion centering in any of the four great areas of visual education: production, distribution, evaluation, and utilization. In each area the church needs to do some clear-headed thinking.

At present, too few of the producers appreciate the problems of the utilizers, and the reverse is true, also. No one should work in isolation. This department can be one medium of communication. User and producer need to know each other, consult each other, come to respect and trust each other, if the church is to receive usable materials from the studio. Those charged with evaluation and the development of criteria must be in contact with the realities of both the studio and the chapel.

All kinds of helpful articles will be welcome to these pages: the closely-reasoned discussion which will bring us all back to fundamentals; the article that illuminates with a flash of insight; the statement of a problem; and the contribution that tells us a better way to do some one thing. We want news—news from all corners of the church, and from all interests within the church. Tell us about institutes, workshops and courses in visual aids, and let us publish in the May or June issue all those projected for this summer.

We hope to list and briefly describe the new releases of all kinds of visual materials, and mention those in production. From time to time critical reviews of visual materials will be given. We will want reviews of books, and notations of helpful booklets, pamphlets, leaflets and magazine articles on visual aids in the church.

We hope to develop a "We Used" section in which you can tell us what you used, with whom it was used, why, and how, and comment on the results you secured. The church is starving for this kind of material. Thousands of church people are using visual aids each week but they are not telling each other *how* they are doing it.

We will be pleased to hear from the pastor—the head of the local church and the one responsible for the total effectiveness of the church. What is the pastor thinking about visual aids? There must be several thousand directors of religious education scattered thru the church of America. These pages belong also to you. By training and experience you are entitled to make your observations, report your experience, ask your questions.

Visual aids are being reappraised by those who are leading in the outreach of the church at home and abroad. The statesmen of the missionary movement see in visual aids an effective method to inform and energize millions of church members to support a world wide enterprise of missions and reconstruction. They must, in like manner, use visual aids to reach the masses of war-weary mankind whose bodies are hungry for food, whose minds long for truth, and whose spirits thirst for a decent amount of freedom.

Let us make these pages the cross-roads of the thinking of the church in the field of visual education. Let us use this department to stimulate and guide the growth of our knowledge, inspiration and insight.

W.S.H.

What **COLOR** is a Bluejay?

If you were to apply your own ideas of color to this well-known bird, it is likely you would color some areas incorrectly. But the CORONET sound motion picture, THE BOBOLINK AND BLUEJAY, presents young bluejays and their parents in *full, lifelike, natural color*—gives correct impressions to all who see it. It is but one of the popular color films in the new catalog of CORONET Instructional Films.

There are dozens of other Coronet natural color sound films available on birds, flowers, Indians of the Southwest, life in Mexico, science, health, safety, vocational guidance and physical education. Some are also available in black and white, and a few subjects which do not require color are black and white only. All have been produced in collaboration with subject matter specialists for classroom use. Many others are in production.

Write for the new illustrated catalog of Coronet Instructional Films—it will be mailed promptly.

Looking Ahead Twenty-Five Years in Audio-Visual Education

FRANCIS WRIGHT NOEL, Director
California State Division of Audio-Visual Education
Sacramento, California

ELIZABETH GOUDY NOEL
Formerly Specialist
U. S. Office of Education

*A masterful presentation of some possibilities ahead of
audio-visual education—the trials as well as the triumphs.*

CRYSTAL gazing is for the fakirs, prognosticating is for the seers. We are neither. Prophesying a few years ahead about any thing is hazardous . . . and twenty-five years is like long-range weather forecasting . . . anybody's guess. Weather forecasting deals with cosmic events beyond the control of man. But what happens to audio-visual education in the next twenty-five years is decidedly within the control of *audio-visual education leaders*. If their leadership is based upon an understanding of the principles of democratic education, adequate educational preparation for their work, broad experience in the various aspects of audio-visual education, wise application of such experience to problems in the field, and courage and ability to do the things they believe in, then the future is bright. There is much evidence that such leadership is emerging. Our predictions are based upon faith in that leadership.

It takes no seer to predict an ever-increasing use of these materials by business, industry, and the agencies of government. Advertisers will use them extensively. Pressure groups will seize on these media to propagandize in favor of their special interests. Churches, clubs, and other cultural groups in our society will expand their uses of these materials. And while school use of them will lag behind this procession, the impact of the out-of-school use of audio-visual materials will certainly create a greater demand for their use in educational institutions. Increased use by educators will help to clarify the meaning of "audio-visual education" and to establish it as carefully planned and integrated instructional use of motion pictures, slides, filmstrips, stereographs, study prints, micro-projections, radio, television, posters, maps, charts, graphs, objects, models, field trips, and synthetic training devices. But audio-visual education will be recognized as more than a matter of materials and techniques, or a new way of teaching the same old things. The dynamics of the aids themselves—their content, organization, and manner of presentation—make them potential means of presenting the interrelationship of our interdependent society, of initiating new patterns of life rooted in scientific discoveries and technological advances, and of providing a means of securing the co-operation in thought and behavior so essential to order, progress and peace. The educational use of motion pictures, radio, slides, and filmstrips, as well as of the other aids, in the classroom will be accepted as an essential means of insuring education against isolation from the stream of world events.

NOTE: When the Editor of EDUCATIONAL SCREEN asked us to peer into the future of audio-visual education, we were apprehensive and with the writing of this article, apprehension increases. No claim is made for the originality of the ideas presented here and any resemblance to what may actually happen will surely be a coincidence!

The Authors

Patrick Henry's observation, "I know of no way to judge the future except by the past," is in point here, for judging the past seems to be the safest means of predicting the future. The history of America's accomplishments, of transforming a wilderness into a great agricultural and industrial nation, is one of fulfilling needs and solving problems. The history of the westward expansion, the story of the railroads and highways, the development of the telephone, telegraph and radio communications, and even the history of American education itself, show that the needs of one period become the deeds of the next. To follow this same line of thinking then, an analysis of present-day needs in audio-visual education becomes the basis for predicting the future.

Teacher competency in the field of audio-visual education. This is perhaps the most important present-day problem. Solving it is a continuous process. Even now the quantity and variety of audio-visual instruction materials greatly outflank teacher competency in effective use of them. There is statistical proof of our failure to use even a small percentage of the educational radio programs. Valuable pictorial materials are to be found in magazines, catalogues and pamphlets which can be obtained from many sources at little or no cost. Yet teacher use of these materials is still very limited. The wealth of films, filmstrips, and slides, many of which provide educational experiences not otherwise obtainable, have only scattered uses in schools. Past experience shows that increased use of all audio-visual materials depends upon teachers knowing of the materials, understanding their educational value, and having skill in using them. Developing teacher competency in the use of these aids (as well as supervisor and administrative competency) is a responsibility of both teacher training institutions and school administrators. It has two aspects, in-service and pre-service training. Teachers' colleges have the primary responsibility for the pre-service aspect. Indications are that teacher training institutions are beginning to recognize the problem. The future will bring courses, units, and practical experiences into the teacher train-

ing curriculum which will assure teacher competency in audio-visual education. Many teacher training institutions will require this work. College instructors will use these materials in their classes! In-service teacher training will receive major attention from most administrators and their supervisory staffs. Twenty-five years from now Dr. Frank N. Freeman's observation of twenty years ago, that the *skill of the teacher* makes the difference between the audio-visual instructional materials being worth while or a waste of time, will still be true, but educational institutions will have done something to implement his words.

Acceptance by the public and by school authorities of the place of audio-visual materials in a good school program. Long before our period closes, these materials will be considered as essential to the classroom as are comfortable seats, good lighting, ventilation, blackboards, books and teachers' desks. Miss X taking a new teaching position in Little Town will be aware of the values of these materials and will be thoroughly trained in their use. She will expect to find appropriate audio-visual instructional materials. Likewise, she will be given school time to familiarize herself with new materials as they are available. They will be bought from public monies. Pay assemblies with movies will not be used as a source of revenue for purchasing audio-visual equipment, nor will P.T.A.'s be asked to do so. The history of public education shows that the public will support what it believes in.

Better equipment and materials will be available. The quality of audio-visual materials and equipment will be improved as the result of past experiences, current research, and future co-operation between educators and producers. Better materials will lead to greater use and greater use will lead to lower prices. Good utilization techniques requiring class participation will be built into some materials for specialized subject fields. A much wider range of subjects will be available in all the media. New devices will make possible low-cost color and three dimension projection. The stereoscope, modernized, will again return, taking a prominent place in classroom instruction. Vectographs will come into general use especially in the visualization of mathematical concepts. Mechanical equipment will be simplified and lighter in weight. A sound motion picture projector will be manufactured especially for classroom needs. These will be probably followed later by small individual desk projectors for use by individual students.

Solution of two conflicting trends. Modern school design seeks to admit more and more light into the classroom and bilateral lighting even now is considered a *must* on the part of many school architects. Projected materials at present require reduction or exclusion of light. Present darkening facilities leave much to be desired. For those who want daylight projection the ultimate solution may be projectors with two or three times as much light power combined with a refined, improved translucent screen and reflecting box. Special classrooms for the use of projection materials have not solved this problem, nor will they. Audio-visual materials achieve their optimum educational value when they are used in the regular, in-

structional environment. Extensive and intensive use of these materials during the next twenty-five year period will make special projection rooms unequal to the demands for their use. Every classroom will provide adequate facilities for the use of all audio-visual materials.

Research. Research studies to prove whether or not audio-visual materials are more effective than are other teaching tools or whether one aid is better than another aid will, for all practical purposes, cease. Research will be directed primarily into four constructive channels: (a) Ways of producing better materials to meet educational needs; (b) Ways of utilizing the materials more effectively. (Research will provide psychological data upon which to base sound utilization techniques. These techniques will probably vary greatly in terms of the materials and the purpose for which they are used) (c) Ways of using these materials as contributions to curriculum revision, and (d) Ways of developing skills in seeing and hearing. Seeing and hearing comprehension will be given as great an emphasis in schools of the future as is given at present to reading comprehension. Dr. Samuel Renshaw, of Ohio State University, has demonstrated that tremendous gains in learning are possible when people have developed seeing and hearing skills. Naval aircraft recognition courses, based upon his theories, trained students to recognize various kinds of airplanes in as little as 1/250th of a second. Teaching pupils how to see and to listen will be as fundamental as teaching them how to read and write. Continuous evaluation of materials and practices will also characterize this period.

Decentralization of materials. Armed-force experience has clearly indicated that as intensive use of audio-visual materials develops the need to have them immediately available increases. Intensive use requires that the materials be placed as nearly as possible to the point of use. Our twenty-five year period will see continuous decentralization of distribution centers. As the unit costs of materials and equipment decreases the time will come when many schools will have substantial depositories located in each building. This will make possible the use of these materials by individuals and small groups for reference and study purposes much as they use libraries. Provisions will be made for cubicles where students can view motion pictures, film strips, lantern slides and other projected materials. Similar rooms will be available for auditioning radio transcriptions, records of speeches, and dramatic plays. Visual and auditory "reference" materials will be available in sets on various subjects, much as encyclopedias are now. Books and audio-visual materials will be correlated for certain core courses or units common to most curriculums. Teacher manuals or guides will accompany materials developed for school use; pictorial workbooks will be used in conjunction with films; and units comprised of combinations of aids will be in regular use. Textbooks and encyclopedias will contain references to appropriate audio-visual materials.

Audio-Visual Education Departments. A school district not providing its teachers with the services of

an audio-visual department or teacher service center will be considered "retarded." These departments will provide teachers and school staffs with a wide range of audio-visual materials which will be as easy to obtain as books now are from the library. Each department will be staffed by professionally competent personnel, who will provide professional counsel in the selection, utilization, and evaluation of the materials. The Department's offerings will vary considerably depending upon the school curriculum, the size of the area it serves, and the financial ability of the district to support an adequate educational program. Many states will provide equalization funds for the support of these departments and will exercise considerable direction over them in regard to their standards of educational service. Most states will have an audio-visual education office at the state level to give direction and overall leadership to the movement and to assure that the use of these materials is not conceived alone in terms of subject matter and grade levels.

International aspects of audio-visual education. This movement is world wide. Broadly conceived it has particular significance to the period of international understanding and co-operation which we are entering. Discussions by one of the authors with high authorities from the various governments of Europe and Asia who were attending the Conference of Allied Ministers of Education in London early in 1945 made it evident that they understand the importance and significance of the movement.* All were convinced that no educational system of the future could be successful except as it provided for extensive and intensive use of audio-visual materials. The next twenty-five years will see most nations of the world making use of these as "basic" teaching materials. Many undeveloped areas of the world, for example the northern regions of America and parts of Central and South America, Africa, and Asia have skipped several stages in the development of transportation, going directly from primitive means of travel to the airplane. Likewise nations which now have inadequate educational systems will omit intermediate stages of educational development and will go directly to the use of audio-visual education materials in their efforts to eliminate illiteracy and raise the educational level of their citizenry.

Educational Screen in 1970. To paraphrase Tennyson's famous lines from "The Brook," "Men may come and men may go but I go on forever"—magazines may come and magazines may go but *Educational Screen* goes on forever, if it continues to maintain high professional standards and a well-defined editorial policy, to give the kind of leadership referred to in this forecast.

To recapitulate, we predict:

1. Good leadership in the field by audio-visual education specialists.
2. Extensive use of audio-visual materials by out of school agencies.

3. Recognition of the broad concepts of audio-visual education as applied to the educative processes.
4. Great emphasis on the development of teacher competency in both its pre-service and in-service aspects.
5. Public acceptance and financial support of audio-visual education in a good school program.
6. Development of better equipment and materials.
7. Adequate physical provisions for the use of audio-visual materials in classrooms.
8. Extensive research leading to better materials and equipment, proper curriculum placement, better utilization, and the development of skills in seeing and hearing.
9. Continuous decentralization in the location of materials.
10. Widespread development of professionally staffed Audio-Visual Education Departments offering broad material and professional services to school staffs.
11. Use of audio-visual materials by most of the nations of the world in their educational programs.
12. In 1970 *Educational Screen* still a dominant influence in the field of audio-visual education.

A rosy picture has been painted. But the highroad we are to travel is not without its chuekholes and dangerous ledges. Failure to recognize and avoid these areas can drastically alter predictions. Here are some words of caution.

Those responsible for directing audio-visual education programs in schools should avoid overstressing any single aspect of the field. Such a tendency to concentrate on production or distribution of audio-visual materials is already apparent in some school systems and institutions of higher learning. This overconcentration has meant the neglect of the equally important problems of selection, utilization, and evaluation. It also has meant that many universities do not view audio-visual problems as more highly specialized than guidance or measurement problems. Often it is regarded only as an instructional device to teach existing subject matter—not as a means of altering the content of courses, of effecting changes in the placement of materials in the curriculum, of revising curriculum and perhaps altering actual school organization and administration.

In the next few years the public may be oversold on a pseudo-type of audio-visual education and there is a danger of substituting over-expansion for growth. This thing can be a Frankenstein to education. As the production and sale of these materials become big business, groups not having the best interests of education at heart may bring pressures on school people that will threaten the healthy development of the movement and lead to experiences paralleling those of a generation ago in the textbook field.

Current enthusiasm for tailor-made materials, produced for our so-called *specific* needs, may cause us to pass up a wealth of audio-visual materials of great

(Concluded on page 79)

*Francis W. Noel was Audio-Visual Consultant for the U. S. Department of State to the Conference of Allied Ministers of Education meeting in London, 1945.

Consumer Economics and Audio-Visual Aids

FRANCES NORENE AHL
Glendale High School, California

Emphatic evidence of the worth and availability of audio-visual aids for teachers of economics.

THE Educational Policies Commission of the National Education Association in its recent work, *Education For All American Youth*, maintains that "Every American youth should understand the structure and operation of the economic system, and should be sensitive to the effects, in terms of social well-being, of his economic acts as producer, consumer, and citizen." And again, "Most of us spend the major part of our waking hours in economic activities as producers of goods and services which other people consume and as consumers of goods and services which other people have produced."

Youth should understand our complex present-day economic society and the problems it presents. They should realize the recent changes that have taken place in this society and the changes that are now taking place, and how these changes will affect them. They should be brought to know the meaning of the democratic way of life and how this way of life has been wrought into the fabric of American society and American government. They should realize the extent to which the economic system is able to meet the material needs of this society.

With the heavy expenses of the recent global conflict, a national debt in excess of two hundred and fifty billion, the problems of reconversion and rehabilitation, the threats of increasing strikes and unemployment, obviously the problem of taxes is ever-present, and will be for decades to come. Surely it is not necessary today to argue that youth should study the financial structure of the government and be concerned about adequate, just and equitable tax legislation and administration.

Students should realize the nature and extent of the problems of the consumer. They should become consumer conscious. Youth should become familiar with the techniques of better buymanship. They should be trained in the importance of and the need for the wise purchase of both goods and services. They should be cognizant of fraudulent schemes and quack cures. They should learn to guard themselves against misleading advertising and high pressure salesmanship. They should take advantage of all agencies and information available for their protection.

Market quotations, price ceilings and various advertisements in the local newspapers give substantial and useful consumer information and help our boys and girls to become more intelligent about their personal spending. Students should be encouraged to prepare daily bulletin board exhibits with hints and suggestions assisting buyers. The material should be kept strictly up-to-date. Occasional brief tests on the subject matter of the items displayed will help to stimulate attention to current material.

Graphs and charts illustrating the various consumer problems, such as price and income changes; diagrams showing the causes and dangers of inflation; budgets, both family and personal, will help to focus attention on the need for the financial planning of the income. It is not only important that our students learn to budget carefully and to spend intelligently, but they should also be taught to invest wisely and to realize that they have a financial and moral responsibility to contribute to the welfare of others.

In addition to the consumer magazines—*Consumers'*

Scenes from the film, "World of Plenty" (British Information Services)

Guide, issued monthly by the War Food Administration, Washington, D. C., *Consumers' Digest* published by Consumers Research, Inc. (Washington, New Jersey), the bulletins and reports of Consumers' Union of the United States, Inc. (17 Union Square West, New York) and of Cooperative Distributors, Inc. (116 East 16th Street, New York)—one should not overlook such periodicals as the *American Magazine*, *American Observer*, *Annals of the American Academy of Political and Social Science*, *Banking*, *Business Week*, *Current History*, *Fortune Magazine*, *Ladies Home Journal*, *Newsweek*, *Reader's Digest*, *Saturday Evening Post*, *Scholastic*, *Survey Graphic* etc. which contain many helpful articles on the various phases of consumer education. The many excellent pamphlets of the O. P. A. and the leaflets put out by the National Better Business are of real value.

A classroom library of up-to-date pamphlets and clippings, charts and graphs, magazine and newspaper articles is an indispensable part of the equipment for

(Courtesy United Kingdom Information Office)
Italian civilians washing clothes at street fountain.
 From "UNRRA" (Released by National Film Board)

teaching consumer education. Such materials are also essential for a well-kept bulletin board.

Radio programs as outside listening assignments should constitute an integral part of the work. Students should be encouraged to listen to several different radio programs on consumer interests and make a report comparing the topics handled and the general usefulness of the information given. Or they may be asked to contrast two programs, one in which the statements appear sound and trustworthy and one in which false and misleading claims seem to be made.

The Recordings Division of the New York University Film Library offers a number of recordings dramatizing characteristic experiences with personal borrowing and loan sharks; presenting the salient factors that should be weighed when one is going to borrow money or buy on the installment plan.

From "Managing the Family Income"
 (Household Finance Corp.)

One no longer searches in vain for excellent motion pictures geared to help young people understand their problems as producers, consumers and citizens. For a better appreciation of some of the financial problems that developed as a part of the war and that are carried over into the postwar era there are such films as *Black Marketing* (OWI), *Partners in Crime* (BIS)—which shows the criminal aspects of black markets in England—, *Prices Unlimited* (OWI)—an excellent presentation of the conditions that would result if there were no price control—, *In The Wake of the Armies*: UNRRA (NFB), and *World of Plenty* (BIS) The latter, an original documentary film, presents the many phases of the food problem—production, distribution, waste, wartime control and postwar planning.

Such films as *Protecting the Consumer* (MOT), which shows the losses due to unscrupulous sales methods and tells the steps taken to eliminate fraud and to educate the consumer; *Triumph Without Drums*, (TFC), which relates the struggle for the passage of the Pure Food and Drug Act; and *Where Your Money Goes* (YMCA), which warns about costly buying habits and explains how distribution costs amount to fifty-nine cents out of every dollar, help to present the problems of consumer buying.

Managing the Family Income (HFC), is perhaps the best film presentation of the difficulties of budgeting. A complete lesson guide is available with this picture as well as an excellent "Budget Calendar."

There are at least three good motion pictures on the subject of social security—*Social Security* (TFC); *Old Age and Family Security* and *Social Security for the Nation* (SSB)—any one of which will help to vitalize a discussion of this timely topic.

Two films especially pertinent to the field of credit

and the problems of personal borrowing are *The Land to Have and to Hold* (USDA) and *Money to Loan* (TFC.) The first describes the Cooperative Mortgage credit system of the National farm loan associations and land banks. It might well be supplemented by the recording, *Cooperatives*, which is based on the Public Affairs Pamphlet, *Cooperatives in the United States—A Balance Sheet*, and which presents arguments for and against these societies and associations. The second film exposes the operation of the unscrupulous small-loan company.

The list of motion pictures available for the field of consumer education is constantly growing. We have every reason to expect that as the war years "brought appeals and pressures for units on consumer economics" there will be a tremendous increase in the production of educational films, as well as other instructional aids, especially adapted to these units.

Mississippi's State Program of Visual Education

THE teachers of the public schools of Mississippi have long recognized that the schools of the state were not adequately meeting the needs of its boys and girls in a changing social order. Schools designed as preparatory schools for the colleges and State University no longer provided the necessary training for the heterogeneous group that attended the public schools. Different activities and content, with improved ways of learning, were needed.

The writer's interest in audio-visual education has been continuous through his 15 years experience in school administration in Mississippi. By 1940, growing interest throughout the State brought him an invitation to discuss and demonstrate "The Motion Picture as an Aid to High School Instruction" before the Mississippi Educational Association. In 1941 interest in audio-visual teaching was definitely on the up-swing, only to find itself suddenly diminishing when the production of audio-visual projection equipment was turned into the military channels. At war's end, coincidentally with the release of projection equipment for use in educational institutions, the State Department of Education in Mississippi recognized opportunity to render distinctive service to its educational system, and organized a Department of Audio-Visual Education, in September 1945, the undersigned as director.

Aims and objectives of this department were adopted as follows:

1. To develop on the part of the teachers in the educational institutions of Mississippi a desire to use these materials of instruction effectively in achieving the objectives toward which their schools are striving;
2. To acquaint the teachers with effective ways of using these tools of learning through the establishment of a series of eight Audio-Visual Conferences to be held in widely scattered areas of the state, February 20—March 1. These conferences will include discussion periods and

NORMER L. GILL, Director
Audio-Visual Education
State Department of Education
Jackson, Mississippi

questions and answer periods, but will center chiefly on classroom demonstrations in the use of films, slides, film strips, and stills;

3. To acquaint the teachers with the sources for purchase or rental of such materials, through monthly Audio-Visual News Letters sent from this office to every school superintendent and director of audio-visual education;
4. To acquaint the lay public with the possibilities inherent in the use of audio-visual aids, through meetings with social and civic groups throughout the state;
5. To develop in the teacher-training institutions the personnel and equipment necessary to train prospective and in-service teachers in the requisite techniques. Three of the State Institutions of Higher Learning in Mississippi plan the inauguration of courses in this field during the coming Summer Session, if qualified personnel to conduct them can be found. Otherwise, this department will direct audio-visual workshops in several of these Institutions that ordinarily hold Summer Sessions;
6. To develop responsibility on the part of teachers and students in evaluating and selecting materials for rental or purchase, through the medium of conferences with teacher groups throughout the state, which will be supplemented during the coming Sessions in the Institutions of Higher Learning;
7. While a continuous evaluative program is being conducted in the individual schools in which this program has been launched, we plan a rather exhaustive evaluation of the entire state program at the end of the second year of the program.

Even in the Army!

An Army Trainee speaks his mind on "methods" of teaching with motion picture films in a military training center.

ROBERT B. KONIKOW

Formerly with Division of Training Aids, U. S. Office of Education

A training film, even a good training film, is not an entity unto itself. It is an integral part of a curriculum and should not be considered outside of that curriculum. It is not designed for showing in a projection room, but rather to a group of trainees with specific background and motivation. When most of us who work with training films attend a screening in a projection room, we have to imagine ourselves in the circumstances in which the film is designed to be shown. At best this is a difficult procedure, and it is rare indeed that one can successfully reproduce the conditions of the classroom. When looking at one of the Office of Education films, like "Facing, Turning, Boring, Grooving, Chamfering on a Vertical Turret Lathe using Two Heads", for example, a layman may be totally incapable of judging its training value. If it is clear to him, it is probably too simple for the budding machinist whom the film is designed to train. If it is confusing to the layman, it may very possibly be clear and lucid to the student with his previous background and experience on simpler operations.

A while back I had the rather unusual experience of being trained by films, not as a training film expert but as a plain ordinary trainee. The experience of going through basic training in the Army, of seeing films under actual field conditions have had some effect upon my understanding of the function of a training film. This, I may add, is not the result of a survey; it may not be typical of all Army training methods, but is merely the observation of what happened in one basic company in one Army camp.

I spent five weeks in a basic quartermaster training company at Camp Lee, Virginia. During this period we spent several hours a week in the auditorium looking at films both for training and orientation. We all know that these films were designed for optimum utilization, but unfortunately the actual conditions are not always optimum.

The training schedule ran roughly as follows: The several periods a day were distributed over three main forms of activity: actual field exercises or practice, class meetings with lectures or demonstrations, and film showings. The order of these varied from day to day so that some days a vigorous close order drill session might be followed by a session in a darkened auditorium, or films might open the day's program. This schedule was determined not by the commanding officer of each company but was set down by regimental headquarters for all the companies under its jurisdiction. Thus if we assume that there is a period in a training course at which the film should be used to reach maximum training efficiency, only a fraction of the audience saw it at that stage.

Another fault in the method of showing was that

the officers assigned to lead discussions and teach classes in the platoon level showed little interest in the films. The minimum number of officers, generally just the one who conducted the company from one location to another, was present and those who gave the lecture on the subject were absent. Many of them did not even take the trouble to learn which films were being shown to their men. They would then proceed to give their own lectures without reference either to the film which had been shown or the film which was going to be shown on the subject. This occasionally led to considerable confusion and waste. For example, we were shown one film on the organization of the Army. Made several months earlier, the film used the term "Services of Supply" instead of the more recently adopted "Army Service Forces." No officer either at the showing itself or at the platoon lecture which followed corrected this, and it was left up to one of the brighter trainees to inform the class of the change.

An important factor was the mental attitude of the men as they entered the theater. All the films were shown on 35mm in the same post theater which was used for entertainment purposes at night. Our training was in the summer and after an hour of strenuous physical exercise in the sun, the men marched into the theater tired and sweaty. The darkness of the auditorium and the dullness of many of the films made it necessary for officers or non-commissioned officers to patrol the aisles looking for men who were trying to catch up on their sleep. Where films which seemed important to the men were presented in an informal vernacular with pertinent humor, this was not a problem. A hard-hitting film kept its audience awake. The "Why We Fight" pictures, for example, were well received the first time they were run. Through some mix-up, one of this series was shown two or three times, with the result that its subsequent showings did not get much attention.

The men as a whole were very alert in picking out errors, even in the background. Ways of doing things that were contrary to what had been taught by their instructors were quickly picked up without any prompting. Actually, the instructors, lacking familiarity with the films, didn't bother to point out the discrepancies. One example may be noted. It was a film on military courtesy which showed the adventures of a new soldier and put him through various situations which required various actions. One of these was his request to a commanding officer for a three-day pass within the first week of his Army life. All of us having been

taught that no pass would be issued until after our basic training, a roar of resentment arose when the fortunate hero of the film asked for and obtained his pass. This was not pertinent to the method of asking, which was correct, but nevertheless was spotted and condemned immediately.

My experience was not wide enough to justify drawing hard and fast conclusions, but certain generalizations may be reached. Current thinking in training film production assumes that a film will be used in its proper place in the curriculum, that it will be properly introduced, with motivation supplied by the instructor, that there will be a follow-up by the instructor relating the film to the actual job or learning task.

I think we must realize that these assumptions outline an ideal which is probably never reached, and that, in actuality, none of them may be true. This implies that until the ideal is reached, until all teachers know how to use training films, and all supervisors accept the basic principle of proper utilization, a film will often have to do its job as best it can in spite of the way it is handled. It will have to contain within itself the elements which will enable it to do a good teaching job, the elements which lead to motivation and follow-up, as well as those of education and elucidation. It must be able to stand on its own feet and fight its way to teaching, perhaps in spite of the instructor rather than with his assistance.

The Film Library that Salvage Built

Some schools have funds for visual materials; some schools merely wish and wait; and some schools get busy and do something about it.

JESSE D. BROWN, Principal
Hartley School, York, Pa.

THE old adage, as expressed by Peter Pindar, may or may not be true—
"You can not make, my lord, I fear,
A velvet purse of a sow's ear"—

But York has discovered, even during the war, that such a valuable addition to a school system as a film library can be built from what otherwise would be waste materials—waste paper, scrap iron, rags, etc. And herein lies a story.

Following a pattern that was fast becoming general in the late 1920's and early 1930's, the teachers of York experimented with the idea of using visual aids in the classrooms, with emphasis on silent motion pictures. Many were soon aware of the potentialities of this newcomer in the field of education. The recognition of the possibilities that the film held, coupled with the desire to use it more widely, usually brought the teacher to a sudden stop when she discovered that too few films were available for class room use, unless purchased outright. Very few districts were willing to invest funds in this new teaching device, but teachers wanted to use it, they wanted films.

To meet the needs of our section of the State, two cooperative film libraries were organized by neighboring Teachers' Colleges, and in a relatively short time, most of our schools were members. For a few years this method of securing films seemed, at least for all practical purposes, to be the answer to the problem of where to secure films.

In due course, however, three major problems arose, none of which could be solved by the College Film Libraries. These were, (1) The distance between the school using the films and the library. As film had to be sent by parcel post, occasional delays in receiving and returning films were inevitable. Then too, the expense of transportation was quite an item, when

considered over a period of years. Many a film could be bought with the money spent for parcel post. (2) Films had to be reserved for a semester in advance. Few teachers could plan their work that far ahead, and anticipate the need for a certain film in a particular week. A good film aids but can not be the core of the teaching. On the other hand, if the need for a certain film arose, the film could seldom be withdrawn from the library because another school had it in use. Besides, member schools could withdraw each week only as many films as they had on deposit. In most cases, this was one film. (3) The method of distribution defeated the very purpose for which visual aids were intended, correlation with the course of study, and thus the showing of movies became a routine, weekly entertainment feature.

Early in 1941, the elementary principals of York decided to try to overcome all three obstacles by establishing their own Library. Tax money was not available, nor were any other funds in sight. The only assets were those that our schools had been spending in library memberships and transportation charges, approximately \$150.00 a year. Certainly, not enough to establish and maintain a library.

In spite of the visible handicaps, the decision was made to attempt to build our own film library. All elementary schools withdrew their films from the college libraries and the "York Film Library," with the writer appointed manager, was set up with thirteen sound and silent films. A very inauspicious beginning, nor did the future look too promising. But we had one firm asset—faith in our venture.

Money-raising ventures were considered and several enterprises were sponsored. Our gross income for the first school term was slightly in excess of \$500.00, sufficient only to add a dozen films to the Library.

The urgent need of scrap iron by the steel mills

Waste paper collected by school children.

occupied the country's attention at this time and the committee in charge of the Film Library put in a bid for the opportunity to collect the scrap and, of course, share in the proceeds. But we lost that first round. Later came the need for waste paper, rags, etc., a task that no one wanted, but one that had to be done. Here then, was our golden opportunity to assist in the war effort and build a library at the same time. We had to prove first, that we could collect the salvage. We proved it and, after other organizations experienced the discomforts of gathering waste paper in all kinds of weather, none questioned our right to collect this scrap and dispose of the receipts of the sale of this waste material.

Today, as a result of our early efforts, most of the paper and rag waste in the city of York is collected by the schools. Approximately one-half of all receipts go into the Library fund. Gross receipts for the month of February 1945 were \$892.00. It is not difficult to see that we have ample resources for film purchases in these days of shortages.

Those schools which were not equipped with sound projectors were encouraged to withhold most of their salvage receipts in order to purchase, if and when available, this equipment. The schools in possession of sound projectors offered the use of their equip-

ment for any community needs, O. C. D., Welfare and War Drives, Red Cross, War Bond Drives, at no cost for machine or operator.

As our position became more secure as an educational film library, we were recognized by the O.W.I. and C.I.A.A. and these governmental agencies deposited films with us. Association with the E.F.L.A. and the D.V.I. of the N.E.A. were both necessary and valuable.

Today with a monthly income of over \$300.00, we can boast of a Film Library containing 300 sound and silent films; a strip film projector, strip films, slides; screens; and all the equipment necessary to take care of any 16mm showing at any place, at any time. And nearly every dollar used to pay for all this came from the sale of salvageable materials. At the present time, the replacement value of the library and projection equipment is approximately \$20,000.00.

But we are not resting on any laurels, for a library of this size is not sufficient to care for any but our barest needs. Not only must the number of our prints be doubled and tripled, but teachers must be taught and taught again how to attain the optimum use of audio-visual aids. We feel that we owe a lot to film producers who provide classroom demonstrators. Our advice to others is, use these people, for they have a slightly different way of saying, "classroom films are not made for entertainment purposes".

Representatives of the New York Film Library attended the Mid-West Conference in Chicago last summer, beside our State conference and the Washington Conference. As users of films, we profited every time from the experiences of others. We need more get-togethers; more demonstrations of the use of films; more textbooks on this subject; more magazine articles; more of the other fellow's problems—for these are ours, too. We must not forget that we are still in the pioneer stages in the development of the use of visual aids in the field of education. Much lies ahead of us.

We in York, have learned one lesson from which others may profit—serve your community, and your community will, the more willingly, help you to get what you want and need.

Three Elementary Principals and the director (third from left) in the Film Library room.

The Curriculum Clinic

Three How-To-Use-Pictures Pictures

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

WITHIN the last year or so three instructional motion pictures have been released on the subject of how to use instructional motion pictures. *Using Visual Aids in Training*, produced by the U. S. Office of Education, was the first to be completed; and even though I had something to do with its production, I dare try to write objectively about all three. For this is not a discussion of the comparative merits of each. Rather, it is an attempt to analyze the underlying doctrine of all three and to discuss the use that can be made of these pictures to interpret it to teachers.

Using Visual Aids in Training was produced by the U. S. Office of Education "to aid instructors in using visual aids more effectively." The setting for the picture is, as you might expect, the training department of an industrial plant where one who is experienced discusses the use of visual aids in training with a beginning instructor. Specific reference is made to the use of the film *The Micrometer* to visualize principles of good film usage. A coordinated filmstrip, unique to O. of E. productions, is shown being used as one possible follow-up procedure.

Film Tactics, a U. S. Navy Training Film, was produced to give Navy instructors a clearer understanding of how to get the most out of training films. It is the story, dramatically and cinematically well told, of five instructors who used the film *The Countermarch* to teach that maneuver to Navy personnel. Of course, only one used the film well, but the factors contributing to his effective use of the medium are heightened by the errors in utilization made by the other instructors.

Using the Classroom Film, the most recent of these three pictures, was produced by Encyclopedia Britannica Films, and is aimed directly at classroom teachers. The classroom film, *The Wheat Farmer*, is shown in its entirety within this film, preceded and followed by a visualization of the classroom activities of an alert seventh grade social studies group under the direction of a teacher who knows how to use classroom films.

In reviewing and analyzing these three pictures produced by three separate organizations, it is clearly apparent that there is divergence of opinion as to how to make an instructional motion picture, but there is surprising agreement among these visual educators as to how to use an instructional picture once it is made. The basic principles—the doctrine of use—are practically identical in all three. There are different emphases; there are three entirely different kinds of groups being taught with three entirely different kinds of films; but the principles of good film usage are the same. What are they?

First, there is complete agreement that *the teacher must be thoroughly familiar with the film he is going to use and that he must have a plan for using it.* Richards, in the O. of E. film, states emphatically that

"Before you use a film, you've got to know what's in it yourself", and previewing is suggested as the best way of knowing a film's content. In the other two films, instructors are shown previewing the film before using it, and both show them making detailed specific plans for using the films. In all three films special emphasis is placed on the use of teacher manuals in preparing to use a film. (And incidentally all three film producing groups have done a thorough job of publishing manuals for all of their instructional films.) *Preview and plan* are the first principles.

Second, *prepare the student for what he is to see.* All three films develop this point. In *Film Tactics*, the necessity for student preparation is vividly driven home through the device of showing symbolically what is going on inside the heads of trainees when the instructor begins. The device gives meaning to the commentator's words that you must get the trainees "all squared away", that you must "prepare their minds", and that "you've got to get them ready for the film." In the O. of E. picture, Richards says that "If they know what they're looking for—and why—they've got a much better chance of seeing it," and he proceeds to show how he prepared a group for seeing *The Micrometer*. The specific methods of student preparation shown in the three pictures differ, but the principle that they must be prepared is constant. In the E. B. film, the pupils themselves play a prominent part in their own preparation through the discussion period preceding the showing of the film which gives *them* the opportunity of listing the questions for which they will be seeking answers. Not of least importance in this step is the role of the instructor in classifying and organizing the specific questions of pupils into general questions and problems.

The teacher demonstrates the film-slide projector—from "Using Visual Aids in Training".

"Using the Classroom Film" shows how class discussion follows screening of "The Wheat Farmer."

The third principle, common to all three pictures is that after the picture is shown, *there must be follow-up activities related to the purposes for showing the film.* The Navy picture is most specific as to the kind of follow-up activities that should be used—review, demonstrate, and test. "Review the principal points in the film, give the trainees a chance to ask questions to be sure they understand, and demonstrate if possible", the picture says in effect. Testing as a follow-up procedure is mentioned only in the Navy film, but fortunately it is shown as a review device and not as an end in itself. The E.B. film shows well the relationship between the follow-up discussion and the discussion preceding the film showing. Emphasized also is the importance of the follow-up discussion period as a way for permitting pupils to raise questions both for clarifying any misconceptions that may exist and to serve as a springboard for future classroom activities. And it makes clear that those longer range, future classroom activities are as much a part of the follow-up as is the immediate follow-up discussion. A follow-up procedure shown in the O. of E. picture is the use of the coordinated filmstrip, but the importance of actual practice as a follow-up activity when skills are being taught is also demonstrated. The instructor in the O. of E. picture epitomizes the principle of follow-up activities when he says "The teaching doesn't end when the film does. That's when the teaching begins. You must follow through."

One other factor leading to good utilization touched upon in the films probably should be considered, although not necessarily as a teaching principle. It is the necessity for proper room conditions and projection facilities. The Navy film places great stress on comfortable room temperature and adequate ventilation. The Office of Education picture pleads for "giving the picture a break"—shades drawn tight with no direct light on the screen, equipment set up in advance, and proper seating arrangement. But these suggestions, important as they are, have to do with mechanical conditions and not with teaching principles.

I am convinced, based upon observations and conversations, that most instances of poor utilization of instructional motion pictures—and other audio-visual materials too—is the result of ignoring or violating the three general principles visualized in these three pictures on how to use pictures. I believe that these principles are fundamental and basic and can be used practically as a basis for teacher training and for evaluating utilization. Of course, within this framework, there will be variation in the kind and quality of teacher preparation for using films, student preparation for seeing films, and follow-up instructional activities; but without some attention to these three areas, there is not likely to be satisfactory film utilization. How, then, can those who are using visual materials be made more aware of the importance of these principles?

If we believe in the instructional film medium for teaching, we should make use of these pictures. "Which one?" you ask. "Whichever one or ones are available to you", I reply. I have used the two civilian films with different teacher groups and either can be used effectively. The Navy film has not been made generally available, but those who are interested might try to borrow it through the Training Aids Section of the nearest Naval District Headquarters.

But whether you use *Film Tactics*, *Using The Classroom Film*, or *Using Visual Aids in Training*, remember this: These are instructional films. Preview the film before you use it, and make a definite plan in terms of your purposes. Prepare your group for seeing the picture. After the picture has been shown, follow through in terms of your teaching purposes.

A Reader Speaks

WITH the old year closed and the 25th started, I want to commend you especially for the article entitled "Art and the Small Color Slide" by Professor Winsey which appeared in your last November issue. I regard this as one of the most convincing articles on the practicability of small 2" x2" slides that has ever been published. I got a number of constructive ideas from the article and drawings, and I feel that many other educators throughout the country will profit from reading the article and studying the illustrations.

I sincerely hope you will find it possible to publish more excellent material of this type which I am sure is developing throughout the country. We certainly need this counterbalance against the great enthusiasm for sound motion pictures which seems to be sweeping the country.

You also did an excellent job earlier in the year with your editorial pointing out the need for some sound research on visual aids. I sincerely hope you will find it possible to continue your good work through 1946.

GEORGE F. JOHNSON
Specialist in Visual Instruction
Pennsylvania State College

The ABC's of Audio-Visual Equipment

Requirements of Sound and Silent Slide Film Presentation

Edited by

ROBERT E. SCHREIBER
and PHILIP MANNINO

OFTEN relegated to second place in any parade of audio-visual equipment is the small 35mm slide-film projector—optionally designated “still film”, “strip film”, or “Picturol” projector, although by any name it may do a sweeter job of visual aid—where motion is not essential—than its big brother, the 16mm projector. And, like the latter, the slide-film within recent years has found its voice—with the addition of a transcribed commentary synchronized with the picture by a series of gongs or chimes. However, since the slide-film is—for the most part—addicted to the presentation of mute evidence, its optical vehicle may be considered separately for the moment.

Generally speaking, the slide-film projector consists of a light source, condensing and projecting lenses, some means of film travel past the light beam, and provision for the film's comfort and safety at the beginning and end of its visual excursion. Shorn of the glamour of motion, it is imperative that in exhibiting the slide-film optimum conditions of illumination and focus obtain. This calls for an efficient optical system which makes the most of the usually limited amount of illumination available. If the projector is of the tri-purpose variety—incorporating provision for single and double frame film-slides and for 2x2" individual slides—some means of adjusting the condenser lenses for each mode of operation is essential.

Smooth, precise movement of the film past the light source is another “must,” since jerky operation distracts the audience and is often concomitantly indicative of film wear. The mechanism of movement should be such that easy transition from one frame to another is effected, yet—when the transition is completed—the following frame of film is locked in the same position for examination. Provision for immediate, easy vertical framing is desirable, and lateral framing is an added nicety. Stability of the projector in operation contributes to the quality of presentation. Hence, portability as a criterion of purchase reaches a practical limit when the movement of projector parts disturbs the screen image. Fan cooling saves fingers and film, while self-rewinding takeup provisions protect the film and reduce the time necessary in returning it to the can.

The addition of a sound commentary to the slide-film has annexed it to the transcription of radio education and resulted in strange equipment bedfellows for the former. Essential to the exhibition of a sound-slide-film is a good slide-film projector and well-built transcription player, but startling monstrosities have resulted from attempts to mate the two. Since the usually large (16 inch) transcriptions accompanying slide-films are recorded—for the most part—at 33 1/3 r.p.m.—in contrast to the 78 r.p.m. of the conventional phonograph record—a particularly efficient means of reproduction is required. Specifically, this mechanism

should be characterized by a constant speed motor-turntable assembly, a light-weight (three ounces or less) pickup, a well-baffled speaker (not meaning the narrator, of course), and a good quality amplifier including volume and tone controls. Of these, the user of sound-slide or radio transcriptions most often encounters difficulty in achieving constant turntable speed. This lack results in bringing a “wow”—rather than the world—into the classroom due to variations in frequency not intended by the recording artist. The average transcription player on the market today uses a motor similar to the usual home phonograph assembly with a two-speed clutch and a 12 to 16 inch turntable. Aside from the frequency with which faulty clutches are encountered, the disproportionate mechanical advantage of the pickup riding on the outer portion of the transcription—as against that of a small motor operating the turntable by a center spindle—is obvious. Hence, when the needle strikes a “heavy” passage in the laterally meandering groove, the drag is sufficient to slow the turntable and “wow” results. The danger of “wow” may be offset in several ways: by using a rim-driven turntable, a heavy turntable acting as a fly-wheel, or a combination of the two. However, since—in the school—portability is of considerable importance, compromise to the extent of having a rim-driven table without the additional, other-wise desirable weight is the most practical solution of the problem of “wow”. Hence, in the long run, the potential user of sound-slide-films will do well to explore rather carefully the possibilities of securing an adequate transcription player, or—silence may be more golden.

The slide-film, when competently utilized, is one of the most effective, practical, and economical of the teaching aids. Its visual presentation and sound accompaniment should not be stunted. R.E.S.

EQUIPMENT QUERIES

“The other members of my department maintain that thorn needles are no better than steel for playing records and transcriptions. However, I have always used the former for years with satisfactory results. Which is correct?”

The real question here is—which is most desirable, negligible record wear or faithful reproduction? Record wear is usually reduced through the use of non-metallic needles, although occasionally such a needle will shatter in a high frequency groove and do more damage than a steel. The main disadvantage to the relatively blunt thorn needle is that many of the higher tone frequencies are lost, since the needle does not ride low enough in the groove to pick up the fine graduations on the sides. However, the average steel needle—although picking up these high frequencies—is not the best bet either, since it usually has a V-shaped point which gouges the bottom of the groove

causing surface noise. Manufacturers of transcriptions and recording studios advocate the use of "shadow-graphed" steel needles, which have a rounded point. Even these should be changed after using for a 15 minute transcription side.

"I have difficulty getting the pickup to track on our playback equipment. Is this the fault of our records or the playback itself?"

It may be either. Few records but many transcriptions have rather shallow grooves. Be sure that you have the playback set up so that the turntable

Looking Ahead Twenty-five Years

(Concluded from page 69)

potential value and limit the broad development of the movement. Remember, Defoe did not write *Robinson Crusoe* for school use. Neither were the great works of literature, music, and art produced originally for school purposes. They have come into general use in schools because they were good and at various times have fulfilled school needs of instruction. So, too, many of our fine photoplays, documentary films, and radio programs do have value in educational institutions even though they were not planned for a specific "grade level or subject."

Unless educators conceive of audio-visual education in terms of its broad definition and in relation to the objectives of education in a democracy, they will gradually be forced into a position of choosing and evaluating materials *only* in terms of grade levels, subject matter, courses of study, and their contribution to the teaching of the so-called "fundamental" or the three R's.

The dynamics of these materials are not fully recognized unless they are also selected and used in terms of their potential capacity to build attitudes and appreciations, to give understandings, to develop skills and critical thinking, to present and interpret modern problems, to communicate real-life experiences, and to insure education against isolation from the stream of events.

If school people continue to insist on a strictly *academic* approach to the production and use of audio-visual materials to further fortify existing concepts and traditional patterns of education, they will miss the intrinsic values and full potentialities inherent within the materials themselves. If this happens, then agencies outside the schools that use such materials because of these values, will by the sheer weight of their *extensive* use of them exercise more influence on the behavior of children and adults than will the schools. This situation even now challenges institutionalized education.

Lastly, we must continuously check our own thinking and appraise our efforts in the field of audio-visual education and from this critical analysis revise our thinking and reset our goals in order to meet the ever-changing needs of education for today's world. This is our *Polaris*. Audio-visual education is so important that what educators do about it may in a large measure determine whether or not the schools will

is level. If the pickup moves rather stiffly either laterally or vertically, its ability to track will be impaired. A dull needle or one with a bent shank that does not allow the point to ride well down in the groove may be a source of difficulty. If the foregoing exhaust the possible discrepancies, try placing a very light weight on the pickup. However, this should be an emergency measure only, since too much weight will damage the grooves. Unless the difficulty lies primarily with the record or transcription itself, have your playback checked by a competent radio repairman.

continue to play the major role in the education of boys, girls, and the men and women of our modern, democratic society. The next quarter of a century will sit in judgment on what we do today.

Don White Named NAVED Sec'y

Major Don White of Atlanta, Ga., has been appointed Executive Secretary of the National Association of Visual Education Dealers.

White, a recently discharged Army overseas veteran, brings to this key job more than ten years' experience in visual education and photography. He was head of educational film service of the University of Georgia from its inception in 1936 until 1941, when he entered Government service as a writer and supervisor of Army training films. After a year he enlisted as a photographic aviation cadet and was commissioned an AAF photographic officer. Mr. White spent two years as photographic officer of the India-China Division, ATC.

This experience particularly qualifies White to be Executive Secretary of NAVED, an association of sev-

eral hundred dealers, consumers and manufacturers of audio-visual instructional materials and equipment. NAVED plans are to set up permanent offices in Chicago within the next three months, White announced. At present the offices are in a temporary location in the 101 Marietta Street Building, Atlan-

Major Don White

ta. With the move to Chicago a considerably increased program of activity will be undertaken along the lines of NAVED's objectives, which are to stimulate more widespread and effective use of projected visual aids in schools, churches, businesses, and homes; to improve professional practices of its members; and to promote better cooperative relations among producers, distributors and consumers of visual tools in education.

The Film and International Understanding

A British Film About America

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

UNITED STATES is a film which gives Americans that rare opportunity—a chance to see ourselves as others see us, and to enjoy the experience and profit by it. It is a film for international understanding, a good teaching film about America itself, and an excellent example of good technique in this sort of production.

Made by the British to interpret America and Americans to the British Forces, it is primarily and typically a film for international understanding. But in the very nature of things this understanding has to be brought about by an interpretation of the United States itself; and it is the nature of this interpretation which makes it an excellent teaching film about our own nation.

Four characteristics make this interpretation outstanding: 1. Its presentation of American history and civilization in terms of boldly outlined fundamental experiences and concepts. 2. Its presentation of the United States as a whole, as a country of great variety of places and people, not just one area or type. 3. Its frank fairness in endeavoring to view issues and events as an impartial outside observer, even when the American Revolution against England is involved. 4. The technical skill with which all of the above elements are presented in the film.

The picture opens in a movie theatre in England during the showing of a Hollywood gangster film. After the show an English soldier harangues his girl friend about this "authentic" presentation of American civilization. An American soldier overhears this and is torn between resentment and amusement. He thinks of his own home town in Indiana and recalls that he never has seen a gangster. He wishes that the United States could be pictured "fair and square" to the English, and he imagines what such a presentation might be like. Thus the chronicle of the United States begins.

This chronicle is a comprehensive one. Yet it is packed into forty minutes of smooth-running presentation that never gets away from fundamental issues and events. Montage and animated maps are skillfully used throughout to back up and to clarify the dramatic presentation of these issues and events. Sound, music and commentary move along with the visual presentation. The commentary is spoken by David Niven, a very excellent choice, since his voice is pleasant and understandable to both British and American ears.

Our Revolutionary forefathers are not pictured as exclusively English colonists. They are pictured as people who came from many parts of Europe, speaking a variety of languages, but all seeking liberty and greater opportunity in a new continent. They revolted against King George III because he represented the old world, reaching out for special privilege and seeking to limit liberty in the new.

The story of the United States is presented as a battle—a battle of brave, liberty-loving men to overcome pioneering hardships, to combat the forces of nature, to expand their territory across a continent, to discover and use natural resources, to build a civilization in a wilderness. The direction and extent of this expansion, together with its relationship to the nature of the country and its resources, is graphically portrayed in a series of animated maps which are skilfully coordinated with action shots.

One of the most effective combinations of action shots and animated maps is the sequence which shows how the development of the waterways and the railroads eventually made Chicago the greatest traffic center in the world.

The bold clarity with which lines of development are shown is a joy to those who have been troubled by historical presentations which became lost in details and trivia. Yet America is there in all its expanse

These diagrams from "United States" show (left) size of midsection contrasted with Great Britain, and (right) the westward progress of American railroads.

A typical Square in New York City.

The country which the settlers found west of the Alleghenies later yielded minerals, coal and oil which played an important part in the development of the industrial centers of the East.

and variety from the mountain to the prairie, from sub-zero to tropical weather, from skyscraper to cottage, from factory to farm, from luxury to slums. The land is fertile, yet the dust bowl exists. The great rivers offer beauty and power and means of transportation, yet they also can bring floods and destruction. America still is subduing the width of a continent, discovering and developing its resources. It is a land in which men struggle to win because that is the direction of survival and progress. And all of this is told without confusion in a smooth-flowing and unified sequence.

As a matter of fact, one might say that the whole film shows America as a mighty unification out of diversity—a unification of people from many lands, of diverse languages, a unification of a vast and varied expanse of territory, of many resources and potentialities . . . a mighty unification which is building a new civilization for the future out of the materials of the present and the past.

The film is notable not only for the vigor and clarity with which it presents main issues and movements, but also for the comprehensive picture, both historical and contemporary, which it sketches in such a brief presentation. The film is a great compliment to our country. It is a double compliment when we realize that the British made it for their own people. Now that the war is over, it should continue to contribute to better understanding between our two nations on both sides of the Atlantic. 16 mm prints of the film have now been made available in this country by the British Information Services through their main office in New York (30 Rockefeller Plaza) and through their depositories throughout the country.

Columbia River dam. Large rivers of America have been harnessed to provide irrigation and electric power.

As the western American boundary moved westward, the pioneers found less fertile lands which later became the grazing country for thousands of cattle.

Erratum: The January issue carried an article ascribed to Esther L. Berg. This material is now under consideration by the New York City Schools and has not yet been adopted. Through error the tentative visual aid section prepared for the New York Schools by Mrs. Berg was appended to an introduction which was not meant to be part of her manuscript, and which should not have been released.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS. Editor

ADMINISTRATION

- **Planning a Program for Use of Learning Aids**—Raleigh Schorling, University of Michigan—*California Journal of Secondary Education*, 20:399-405 November, 1945.

This article is another on the subject of making the best use of our war training experiences for education in general. The original article is provocative and very interesting. School administrators and supervisors will want to read it in full.

Altho the armed forces used a large variety of training aids on a huge scale the basic assumption always was that whatever is to be mastered should be learned in its natural setting, or in a situation that is staged as close to the real situation as possible.

The Navy assembled about 200 men who in civilian life had had wide experience with visual aids. These men were assigned the job of recommending devices. Their imagination and resourcefulness, implemented by vast sums, resulted in a classroom that is an exciting place for the learner.

Applied to our schools today, this war experience reveals that: we need to make greater use of sense experiences when staging learning situations.

The author next charts some fifteen "phoney" ideas with refutations. Among the ideas are: that learning aids refer largely to sound films, that to make a big improvement in the program is to secure a lot of surplus property, etc.

Recommendations to schools for future action in this field includes:

1. Each state needs a development unit charged with the responsibility of creative production, reliable testing, and proper utilization.
2. Each school should have a standing committee on audio-visual aids.
3. The resourceful teacher should be encouraged to write the script for at least one slide film.
4. Each association of administrators in the state or city, should have a standing committee on learning aids.
5. Each teacher-education institution should provide at least one good course in the proper use of learning aids.

- **Interpreting G. I. Education**—Carl M. Horne, State Dept. of Public Instruction, Lansing, Michigan—*School Executive* 65:47 November, 1945.

This author, as do all the writers on this subject, recommends the greater use of audio-visual aids, more learning by doing, better selection and training of teachers, and more money provided for education.

- **High School Library Participation in the Visual Aids Program in Louisiana**—Francis Lampkin Moak—1941-42. M. S. thesis, Faculty of Library Service, Columbia University, N. Y. 1945.

The work of school librarians in the state of Louisiana in administering audio-visual aids was examined through a questionnaire, supplemented by interviews with the supervisory staff in the state.

The study showed that the major problems in the use of visual materials were: lack of available aids in the classroom when most needed; failure of available aids to cover the course of study adequately; and lack of well-selected visual materials.

Librarians were found to give aid by selecting all types of materials, by storing them, and by providing the library as a source of visual instruction materials.

The library was found to stimulate the visual aids program through cooperation with other departments in the

school; through publicizing the program, showing of films, encouraging display of exhibits, and handling records of orders and finances.

- **How Can Audio-Visual Aids Aid?**—Thomas J. Blisard, Madison College—*Virginia Journal of Education*, October, 1945, p.66.

Training programs in war industries and the armed forces have demonstrated that audio-visual aids are effective teaching tools if: a) the materials are available to fit specific instructional needs; and b) the teacher is expert in using them as an integral step in his instructional procedures. The author writes from two years of experience with a large army training-program. Some of the problems as he sees them are :

Teachers need flexible projectors that can be arrested for questions or discussion, reversed, or slowed down. Viewing should be possible in a partially darkened room.

Most films have too much on them for one reel or strip. This is largely due to the schools' need to economize on purchase. When schools and colleges demand simpler content, and will pay the cost, the film companies will supply them.

The classroom teacher should have certain knowledge: first, he must have mastered the mechanical skill of operating a projector. They should also know how to use the microphone which may be attached. Next, he should know how the different audio-visual aids can be made an integral part of learning situations so that they become real instructional tools. War training programs taught us to use films effectively to present information, develop skills, for drill, review, texting, re-teaching.

Educational methods courses should recognize the part of audio-visual aids in teaching and should train teachers accordingly. Instructors in all subject matter fields through public school and college, should use these modern techniques in their teaching.

Administrators must work out ways of getting the proper materials and machines to the proper teacher, in the proper place, at the proper time. There should be sufficient projectors and a library of basic films in each school. The essential films must be immediately available and not scheduled around the building by a principal's chart reserved several weeks in advance. This may seem expensive, but good education is not cheap.

EVALUATION

- **Evaluating the Motion Picture in Science Teaching**—Allan Finstad, Seattle, Washington—*Nation's Schools*, 36:52 November, 1945

This is an abstract of an M.A. study made at the University of Washington, "An Evaluation of the Contribution of Educational Motion Pictures to Learning Based on Free Responses by Pupils." Eleven educational films were used to determine how valuable they were as teaching aids and as a means of achieving established objectives. An analysis of the responses of two films ("Nervous System," and "Digestion of Foods") is given in the article.

After having viewed the film, the pupils were asked to make statements of facts or impressions that had been gained from it. The number of concepts and the number of times they recurred were tabulated and compared with the objectives which the teacher had expected to achieve. "The Nervous System" was found to be good, in terms of concepts learned and objectives achieved. "Digestion of Foods" was successful in presenting the process, but not so in clarifying the chemical processes, nor in applying digestion to healthful habits.

Here is a U.S. OFFICE OF EDUCATION MOTION PICTURE THAT EVERY SCHOOL SHOULD OWN

**16-MM SOUND
ONLY \$19.00**

THE WOOD LATHE (Turning Taper Work)

The film "Turning Taper Work" shows and explains skills and procedures that are basic in the instruction of all classes in woodworking. It graphically illustrates the various steps in one of the most important wood lathe operations . . . centering cylindrical stock for spindle turning . . . rough-turning the stock . . . clearance cuts . . . establishing diameters of a taper . . . turning a single taper . . . turning two tapers on one piece of stock, etc. It offers every instructor the finest kind of help with the best of the modern tools of instruction. With the film you get a helpful and important Instructors' Manual. At slight extra cost you can obtain an important Filmstrip containing 42 frames for reviewing and clarifying parts of the motion picture.

Teacher! If your school is equipped with a 16-mm sound projector, obtain your copy of this complete visual aids catalog. **IT'S FREE!**

Gain the help in your peocetime instruction of these war-proven visual aids. They are especially effective for basic instruction in peocetime. Here is the most complete and ourhitative library of visual aids in science and vocational education yet produced. Many instructors are using them in science, physics, mothematics, vocational guidance and vaco-

tion instruction. They were made by the U. S. Office of Education with the fullest cooperation of the foremost authorities in the country. You too can make your teaching of difficult concepts and principles easier and mare effective through using these 16-mm sound motion pictures. Here are a few examples of the many subjects available:

- Your Driving Habits
- Care of the Newborn Baby
- The Supervisor as a Leader
- The Slide Rule
- Using a Portable Spray Gun
- Sawing with a Jig Saw

- The Electron
- Principles of Refrigeration
- The Airplane Mechanic
- Origin and Synthesis of Plastics
- Wiring Old Buildings with Armared Cable
- Rotary Magnetic Fields

**THE UNITED STATES
OFFICE OF EDUCATION**

UTILIZATION

- **How They Thought They Were Motivated**—Joe Park, Northwestern University—*Journal of Educational Research*, 39:193-200 November, 1945.

Report of a study made to find out what techniques pupils or former pupils of elementary and high school remembered as motivating techniques. Replies were received from 54 high school pupils and 93 Northwestern University students. They were given a mimeographed article to read on motivation, and were asked to write freely the technique or techniques that had caused them to want to learn to study.

The tabulated results showed that 18% were recalled as having been audio-visual devices; such as films, displays, field trips, radio, etc. Of 51 references to audio-visual aids, the distribution among the various types was even.

- **Assembly Film Programs**—Frances Norene Ahl, Glendale, California—*Social Studies*, 36:291 November, 1945.

A suggested number of titles that could be shown to a general high school assembly that would relate to current holidays or commemorations.

TRENDS

- **Visual Education Comes of Age**—R. H. Cash, Consultant, Visual Aids Dept., University of South Dakota—*School Executive*, 65:57 December, 1945.

The story of South Dakota's use of visual aids is summed up briefly: 1930, a few travel films and two small-lamp silent projectors; 1934, three sound projectors in the state; 1936 a film library established in the University Extension Division of the State University, and a course given. Later, film conferences were held, a few cooperative film libraries set up, a separate Department of Visual Aids organized under a director. Now that the war is over, this trend toward increased use is being continued.

PHOTOPLAY APPRECIATION

- **Dramatics and Motion Picture Appreciation**—Harold Turney—*Bulletin of the N.E.A. Dept. of Secondary-School Principals*, 29:86 November, 1945.

The article is included in a section on dramatics as fundamental speech activities. Students of the drama can learn to apply what they have learned to the art of the motion picture. The author suggests some of the ways in which they can use their knowledge of dramatics.

- **Film Appreciation in Adult Education**—Roger Manvell *Adult Education* (British), 18:16 September, 1945.

Since the motion picture is the only major art the people as a whole enjoy unselfconsciously, it should be studied for greater appreciation, but not to promote a "clique of superior film fanciers". It deals with national and international themes and has produced great classics from many lands. Film critics and serious movie goers will want to read the original article.

- **A Plea for the Movies**—Harry L. Marcus, Eastern District High School, N. Y. C.—*High Points* 27:65 November, 1945.

Outlines a course in photoplay appreciation given in the English Department. The students have learned to select films more carefully and they have especially learned to evaluate the treatment of social problems in movies. They have made silent films, have sponsored film revivals in their neighborhood theatres, have visited museums.

TEACHER TRAINING

- **Visual Program of Michigan Summer Workshop**—Mary Aceti—*Film and Radio Guide*, 12:16 December, 1945.

Describes the program at a one-week summer workshop on general curriculum problems of the Michigan Working Conference held each summer. At the beginning of the week (which included study from morning through evening), a mimeograph was distributed listing all visual aids to be used and seen. Individual and small group needs were met by the choice of suitable film subjects. Panel discussions in the evening were aided by the showing of such films as "Military Training" (introduced to discuss what we can learn from the GI methods); and "Watchtower Over Tomorrow" (to start discussion on education for peace.)

A meeting on conservation was anticipated by a field trip and the showing of appropriate films. Films for review were made available every day after the noon meal and before and after the evening session. In spite of the many other activities at these hours, attendance was very good.

An evaluation sheet given to 20 members of the group helped in judging the visual program and in making plans for the following year. The students enjoyed the variety and quantity, the opportunity to see the most recent films, the practical planning and flexibility of the schedule, and its gearing to group and individual interests.

The article concludes with a list of the titles and sources of all the films used in that program.

EQUIPMENT

- **Purchasing a Motion Picture Projector**—Maurice P. Hunt—*Social Studies*, 36:319 November, 1945.

A good review of standards.

RELIGIOUS EDUCATION

- **Visual Religious Education: A Symposium**—*Religious Education*, 40 November-December, 1945.

Trends in educational uses of audio-visual aids in various aspects of religious education are described in articles by leading educators. Among the articles and authors are: "Recent Developments" by Mary Leigh Palmer; "A New Day in Visual Religious Education" by Paul H. Vieth; "How to Use Films and Slides" by William L. Hockman; "Audio-Visual Aids in Jewish Religious Education" by Azrill Eisenberg; "Audio-Visual Aids in Catholic Religious Education" by George Nell.

William L. Rogers sums up new production and future plans in "Can We Count on the Availability of Films?" A bibliography of articles, magazines and sources concludes this excellent issue.

SOURCES OF INFORMATION

- **Teachers' Guide to Coronet Magazine**—Samuel Weingarten, Chicago City Junior College, editor.

A monthly bulletin that includes quizzes, discussion and composition topics, questions, visual aids and bibliography for use with the magazine. Mrs. Esther H. Berg, of the New York City school system edits the section on visual aids.

- **Educational Films in Sports**—compiled by Frederica Bernhard, Chairman of the Visual Aids Committee, National Section on Women's Athletics. Published by the American Film Center, New York, 1945. Price 50c, including supplements for the next five years.

A selected list of films consisting of (a) instructional motion picture films (including content and appraisal of each), (b) instructional films in process of production, and (c) promotional films.

The Educational Film Library Association of New York cooperated on this project. To order the catalogue, write either to E. F.L.A., 45 Rockefeller Plaza, New York 20, N. Y., or to N. S. W. A., 1201 16th street, N. W., Washington 6, D. C.

(Continued on page 100)

Film News Editors Resign

Mr. Thomas Baird and Miss Jeannette Samuelson announced on January 10th that they had resigned as editors of *Film News* and had severed their connections with the American Film Center, the publisher of the magazine.

audio-visual-educators are cordially invited to send for free copy of this BROCHURE

CONTAINING:

complete details on our February Educational Film release, "Junior Prom" also "Dinner Party" and catalog of Simmel-Meservey educational films and transcriptions.

HIGHLIGHTS OF "JUNIOR PROM"

... our February release

Two-reel, 16mm kodachrome, educational film of exceptional cultural value in the field of etiquette. Covers the major problems of "dating" encountered by young people.

"Junior Prom" has had the direction of qualified authorities in educational techniques ... as well as in motion picture dramatic treatment.

HIGHLIGHTS OF "DINNER PARTY"

Two-reel, 16mm kodachrome, educational film for training in table etiquette at the high school age level. The rules of etiquette presented in "Dinner Party" are based on widely accepted authorities on table manners. A 25-page Teaching Guide is supplied with "Dinner Party" ... of inestimable value to the teacher both during and after class presentation.

"DINNER PARTY" has already met with wide acceptance.

"JUNIOR PROM"

16mm educational film
(color & sound)
dealing with the etiquette of
"dating"

"DINNER PARTY"

16mm educational film

A Museum Continues Its Visual Aids Institute

ON January 11th and 12th, the Department of Education of the American Museum of Natural History held its Second Annual Audio-Visual Aids Institute at the Museum. The first Institute was held in January 1945, and the second Institute carried on the work started at that time. The theme of the 1946 Institute was "Methods and Techniques for the Utilization of Audio-Visual Materials in the Classroom."

"Audio-visual aids, or multi-sensory aids, belong to no specific grade or subject level, but should be used whenever and wherever they will do the most good in vitalizing any subject. In order to give all who attended this Institute an opportunity to hear about everything that was presented, there was no division into grade or topic panels. Only one panel was in session at any one time, and materials and techniques applicable to all grade levels were discussed.

The first session of the Institute on Friday afternoon was devoted to a showing of three new teaching films, *Dinner Party* (Simmel-Meservey), *Portage* (Canadian Film Bureau) and *Safety in the Home*, (Young America Films). On Friday evening the session was given over to entertainment, in the form of a preview of a new feature film shortly to be released by RKO Pictures *The Spiral Staircase* starring Ethel Barrymore, George Brent and Dorothy Maguire. The film is a psychological mystery melodrama, and those attending were particularly interested in seeing how Hollywood has utilized lighting, photography and skillful direction to produce a film of this type. The Saturday program is detailed below.

The Audio-Visual Aids Information Center—For many years teachers have come to the American Museum of Natural History seeking information on materials and sources. It was therefore decided to establish a Center where catalogs, bulletins, pamphlets and samples of these many types of teaching aids could be brought together for practical use by the teacher,

American Museum's Audio-Visual Aids Center

DR. IRENE F. CYPHER, Supervisor of Guest Services.
DR. GRACE F. RAMSEY, Curator of School Relations,
The American Museum of Natural History
New York, N. Y.

student, or research worker seeking to key them to the curriculum.

A large room on the second floor of the Education Wing of the Museum has been set aside for this Center. One section has been made into a small projection room. Here teachers may actually project motion pictures, lantern slides or filmstrips and thus preview them before using them in the classroom. The Museum has its own large collection of lantern slides and motion pictures available for school use, and many companies producing films and slides and filmstrips are depositing copies with the Center for teachers to view and study. Many types of projection and recording equipment are also available for inspection. Catalogs from many companies are in the file cabinets. Charts, maps, posters and flat prints are arranged on large display racks and in cabinets. Large work tables permit teachers and research students to examine materials and plan their programs.

The Center is designed and planned to serve as a practical workshop and source center. From time to time meetings will be devoted to new developments in the field of audio-visual aids. Teacher-training classes of the universities are invited to use the center. Inquiries by mail from all sections of the country will be answered. Under the immediate supervision of Dr. Grace F. Ramsey and Dr. Irene F. Cypher all the facilities of the Department of Education of the Museum will be utilized in carrying out the program. It is not a center for the distribution of materials, but a center to which all participating in educational activities may come for assistance in the selection and utilization of teaching aids.

Saturday Panel Programs

The panels presented effective methods and techniques for the utilization of audio-visual materials. Six teachers and twenty-one students participated. It was a graphic demonstration of the way films, slides and recording machines are used in classrooms and also of the extent of student participation in the making, use and care of these same materials.

An Experiment in Nature Science—Mr. Allan Burnham (Forest Hills High School, N. Y. C.) described field trips for elementary classes, review of the topic in a special nature room, and rousing desire for further experimentation at home. A mimeographed nature science newsletter is given to the children as a reference check sheet.

Integration of Visual Aids in the Elementary School—Mrs. Elizabeth L. Smith (Mt. Hebron School, Montclair, N. J.) utilized every medium available to make classroom lessons real. Children not ordinarily inter-

LET OUR ENGINEERING DEPARTMENT SOLVE YOUR INDIVIDUAL PROJECTOR PROBLEMS

ested in textbooks were encouraged to write their own accounts of the subjects and to find pictorial material to illustrate the lesson.

Handmade Lantern Slides and Their Use—Miss Ursula M. Moran (Board of Visual Instruction, N. Y. C.) showed lantern slides made by children in elementary schools, from simple black and white outlines to scenes beautifully tinted with lantern slide inks. The making of these slides is valuable because: (1) research and study are necessary to plan and lay out each picture; (2) art and craft skills and techniques are brought to bear upon the work; (3) the finished slides strongly appeal to the children. Slides are particularly valuable with elementary school classes because they may be arranged in optimum sequence and shown at the rate of speed determined by teacher and pupils.

Training A Student Visual Aids Squad—George A. Colclough (Jansen School, Hillsdale, N. Y.) described the procedure for training student visual aids or projection squads. The student squad, under the supervision of the teacher in charge of visual aids, handles all projection for the school. Selection for this squad is by mechanical aptitude tests, and both boys and girls have been found suitable. Students have a greater appreciation of the films used when they are responsible for the projection. Enough students are trained so that none needs miss any class-work periods.

Film Production in the New York City High Schools—A composite school-made film was made from films by Bay Ridge High School, the Bronx High School of Science, Haaren High School, Midwood High School, and George Washington High School. Students from these schools took turns at a microphone and served as "sound" to describe the scenes shown. Scenes were shown of field trips, experimenting in chemistry class, modeling clay, participating at commencement. Students also gave a demonstration of how a scene was planned, directed, and "shot", and then showed the actual film taken. This entire presentation was by Dr. Frank M. Wheat of the George Washington High School.

An Experiment in Producing School-Made Sound Films—Mr. David Schneider, assisted by student operators, showed a 900 ft. school-made sound film entitled, *Leaders of Tomorrow*, on student activities at Evander Childs High School. The cost of professional sound film was beyond the budget. One boy brought his home-built recorder to class. Blank records and recording needles were purchased; students with audiogenic voices were used as commentators and recordings made to accompany the film.

Close synchronization of records and film obtained by careful training of the student operators, produced a sound film that would do credit to many more professional producers.

Student Reaction to the Use of Visual Aids—Students from Montclair, New Jersey High School and Weequahic High School, Newark New Jersey gave critical evaluations both of the Institute program and the methods of using visual aids in their own schools. The consensus of opinion was that no matter how

excellent the visual aid its effectiveness depended upon how it was used by the teacher.

Museum "Oscar" for School-Made Motion Pictures—At the conclusion of the morning program, the chairman, Dr. Paul A. Kennedy, Assistant Superintendent of Schools of New York City made the following announcement for the Museum:

"To you who are moviemakers—the film that has just been shown is challenging and it has a purpose. The American Museum of Natural History is going to let school film makers compete for a special "Oscar" designed by artists at the Museum. The competition will be open to all schools. Your film must be 100 ft. long or less. It must be planned and produced by pupils. To enter the competition a film must be sent to Dr. Grace F. Ramsey at the Museum by December 15, 1946 and a selection of five will be made for the showing at the Institute meeting next January, 1947. The audience will make the choice of the winning film. The "Oscar" will be presented to the winner."

General Session—After an informal buffet luncheon held in the Museum cafeteria, the Institute reconvened for a general session under the chairmanship of Dr. Charles Russell, Chairman of the Department of Education of the Museum, on the two major topics of atomic energy. Col. Warren Wade, Television Division of N.B.C. and formerly in charge of Army pictorial services, presented a convincing case for educational possibilities of television. "Schools, I venture to say, will within the year use television as a means of creating a series of visual classroom experiences, wherever television is available."

The second speaker, Dr. Ralph V. Johnson of the General Electric Company research laboratories at Schenectady, New York, one of the scientists who worked on the atomic bomb project for the government than gave a most enlightening discussion of Atomic Power. After a description of atomic nuclei, the chain reaction, the separation of the isotope of uranium, and production of plutonium, Dr. Johnson sized up the problems to be solved before atomic power can be used for productive purposes. He suggested an even more exciting possibility that someone may find a chain reaction which will convert all the mass of some common nucleus into energy, producing a reaction about a thousand times as powerful as that in the present atomic bomb.

University Radio Stations

After canvassing 45 state universities as to their radio utilization and needs, Dr. Howard L. Bevis, President of Ohio State University, reports (in *Audio-Visual News*) that public supported colleges and universities need adequate broadcasting facilities. Of the twelve state universities that now have standard broadcasting stations, practically all are dissatisfied with coverage and hours of operation. Thirty-five of the 58 state universities are actively considering establishment of FM educational stations. Eight have already filed application to build FM outlets or have FM stations under construction.

Just Released—An Important New

Young America Visual Unit on Safety!

**To help your school do a better job of safety education!
(unit consists of two 16 mm. films and four slide films)**

Recognizing the need for elementary safety material, Young America Films, Inc., has produced a complete new visual unit on safety. This unit includes two 16-mm curriculum sound-films depicting safety principles on the streets and in the home; four 35-mm slidefilms covering all aspects of safe living; and a Teacher's Guide for each. This project embodies the best thinking of educators, safety experts, curriculum consultants, visual education specialists and experienced classroom teachers. Dr. Herbert J. Stack, Director, Center for Safety Education, New York University, served as educational advisor on this project.

"Safety to and From School"—For use in Primary Grades (1, 2, 3). Running time: 10 minutes. 16-mm. Sound-on-film. \$25.00. How, when, and where to cross a street is made clear in simple dialogue and illustrated in detail so that every child can understand it. Artfully combines action photography and animation.

"Safety Begins at Home"—For use in Middle Grades (4, 5, 6). Running time: 13 minutes. 16-mm. Sound-on-film. \$25.00. Shows the various safety hazards found in the home, how they can be recognized and avoided. Dramatizing the fun of living safely, the film expresses specific home safety principles.

"Living Safely"—Slidefilm Series—Four slidefilm lessons of the discussion type to complement the safety films. Designed for use in Middle and Upper Elementary Grades. \$2.50 each. **"LIVING IN A MACHINE AGE"**—Deals with safety hazards brought about by the machine age. **"SAFETY IN A MACHINE AGE"**—Shows principal causes of traffic accidents. **"SAFETY IN THE HOME"**—Accidents in the home, their causes and preventions. **"SAFETY AT HOME AND AT PLAY"**—Safety precautions in school gymnasium, corridors, playgrounds, etc.

NCTE! Each of the films and slidefilms is accompanied by a separate Teacher's Guide which is available **FREE OF CHARGE!**

HOW TO SEE THESE NEW FILMS QUICKLY AND EASILY!
Your Young America state distributor will arrange to preview for you any Young America Films you would like to see. For further details, write to your state distributor or Young America Films, Inc.

3 Other New Young America Releases You'll Want to See and Own!

"Our Shrinking World"—For use in junior and senior high schools. 16-mm. Sound-on-film. \$25.00. A documentary film specifically designed to motivate and introduce the study of the history of transportation and communication. (Running time: 10 minutes.) Accompanied by four slidefilms covering the history of land, water, and air transportation; and communication. Each slidefilm sells for \$2.50. A Teacher's Guide accompanies each.

"We, the Peoples"—For use in junior and senior high schools. Running time: 10 minutes. 16-mm. Sound-on-film. \$25.00. A provocative, documentary film presenting the story of the United Nations Charter. Outstanding for its clarity of presentation. Accompanied by two discussion slidefilms covering the needs for and purposes of the charter and the charter's organization. Each slidefilm sells for \$2.50. A Teacher's Guide also accompanies the unit.

Audubon Society Birds—40 beautifully colored 2" x 2" slides, invaluable to nature study classes for bird identification. Reproduced from the National Audubon Society's collection of famous bird portraits by the celebrated bird painter, Allan Brooks. Authentic in every detail and color. Packaged in sets of 20 slides each, selling at \$5.00. (Part of a series of 150 slides, only 40 of which are available at this time. The remainder are now in preparation.)

School Made Motion Pictures

QUESTION: We are contemplating the making of some 16 mm. sound motion pictures to portray the educational activities of the Indianapolis public schools. We have prepared some script and have ordered twelve 100 ft. rolls of Type A Kodachrome.

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

We are greatly in need of technical advice as to taking the pictures and getting the sound track dubbed onto the film. We are getting into something that we know very little about but we are eager to learn. We have had successful experience in making silent movies in both black-and-white and in colors. The film we want to make first will be taken indoors in Kodachrome and is to be a sound movie.

Any information you will send us as to these problems, or references as to where such information may be obtained, will be greatly appreciated.

ANSWER: I am assuming that you are planning to add commentary and background music after you have completed filming your various educational activities. I therefore suggest that you proceed in the following way:

1. Be sure that you have several copies of the shooting script, together with indications of footage for each distant, medium as well as close-up shot.
2. Remember to shoot at 24 frames per second. Use sufficient light so that you can have sharper definition at F 5.6, rather than at F 1.9.
3. Number each shot of your shooting script. In order to be able to match commentary with each scene at time of editing, it will be very helpful if you place the number of each scene on the blackboard or on a card, and photograph a few frames of each of these numbers, before shooting the appropriate scene.
4. As soon as you receive your processed Kodachrome rolls, have a black and white work or scratch print made. Do all the editing on the work print. *Do not touch the original Kodachrome until you are ready to make the sound print.*
5. After you have completely edited the work print, check the actual footage with that indicated on the shooting script. I'd like to suggest that you cut the footage down to two reels of about 390 feet each.
6. On one of the corrected copies of the shooting script, indicate next to each scene the commentary or music you are planning to add. If you have a scene running to about thirty feet, remember to allow no more than four words per foot at normal tempo.
7. If, for any part of the scene you wish to employ music, you can get an idea of the length of time it takes for a musical selection, by playing a recording of that number on an electrically turned phonograph. A single foot of film projected at sound speed takes exactly 1.7 seconds. If you are planning to use a school orchestra, make certain that the players have been trained to perform with precision.
8. Prepare a cue sheet so that the commentator or musical director will know exactly when and where to start as well as where to stop. Another copy of the shooting script properly organized, can serve the purpose.
9. You are now ready for rehearsals. Set up the projector with your work print in a sound proofed booth. Have your commentators, musicians and director stand or sit in front of the screen to familiarize them with all their cues, as well as the contents of all the scenes. Do not stint on the number of rehearsals. Errors caught in school rehearsals will save time and money at the recording studio.

As a result of this preliminary work, you may decide to do further cutting in the pictures or make necessary changes in the commentary. Occasionally a few retakes are necessary.

10. When you are satisfied with the completely re-edited work print you can start on your original Kodachrome to match it, scene by scene, frame by frame, taking great care not to scratch it or leave any fingerprints on it. The completely edited Kodachrome should be taken to a motion picture laboratory to have it vaporated or processed to harden its emulsion.

From this point on the motion picture sound recording laboratory takes over. You take your work print, the original, all the people who take part in the commentary, your shooting script and cue sheets, together with any other paraphernalia needed, to the laboratory. There, after one of two rehearsals, a complete recording of the commentary and the music will be made on a "wax" record. This can be played back immediately to give you an idea how the voices and music will sound. After a perfect recording has been made, the sound will be put on a separate film. The numbers left in front of each of the scenes will come in handy here for matching each scene with its appropriate commentary. The laboratory will then take your original Kodachrome and together with the sound track will make a combined print on raw Kodachrome stock. When this whole transaction is over you will get back your original Kodachrome, your work print, a sound film negative, a positive track print of the same, and the new combined Kodachrome sound print ready for projection on your sound machine.

A few more pointers in connection with sound recording are in order.

1. There is a royalty charge for certain music. If your budget can stand it, it may be worth investigating.
2. Some studios charge, in addition to royalty fees, about \$15.00 for each musical selection running from 2 to 5 minutes. There is also a charge of about \$3.00 per sound effect. One or two appropriately placed will enhance the value of the picture.
3. If you prefer a professional narrator, the studios can provide a top grade man for a fee from \$50.00 up.
4. Other necessary charges are: recording per reel about \$75.00 plus about \$25.00 per hour for extra studio time; sound film negative about \$10.00 per reel, plus another \$10.00 for its development; a positive track print about \$20.00 per reel; and the combined Kodachrome print at 13 cents per foot.

To sum it up I would say that in addition to your original investment in still film and lamps, you should be prepared to invest between \$400 and \$500 to get a sound Kodachrome print of about 750 feet. If you order 5 or more duplicates the cost of additional prints amount to 10½ cents per foot.

You realize, of course, that if you want synchronized sound, so that the lip movements of students in classes can actually be heard, such scenes will have to be acted and recorded in the film studio. Unless you are prepared to stand the additional cost, running into four or five figures, it's best to stick to post-recording.

There are two books you might wish to look into before you start on your project, *Talking Pictures* by Barrett C. Kiesling, and *How They Make Motion Pictures* by Ray Hoadley and Roman Fruehlich.

Play Volley Ball

(Y. M. C. A. Motion Picture Bureau, 347 Madison Avenue, New York City 17) 20 minutes, 16mm. sound. Apply to producer for purchase price and rental sources.

The film shows that volley ball is a game which may be enjoyed by people of all ages, indoors or out-of-doors, any season of the year and that it is a game which may be played skillfully and professionally.

The film begins by indicating and discussing the number of players on each side, the name of the position played by each member of the team, and the size of the court. Next it shows that a warming-up period is necessary. The rules of the game are discussed and demonstrated by shots of plays and players.

The three basic patterns of the game—receiving, setting up, and spiking—are each in turn given considerable treatment, both pictorially and in the commentary. By "freezing the action" the film shows players in the correct position to receive the ball, to set it up, and to spike it. The participants are shown playing, not as individuals, but as teams in which each member has a certain responsibility and supplements the responsibilities and contributions of the other members of the team.

As the closing portion of the film follows two professional teams playing volley ball, it emphasizes the fact that it is necessary for all players to learn the rules of the game and then to play accordingly.

Committee Appraisal:

The committee commended the film as an effective aid for stimulating an interest in volley ball, for teaching the rules of volley ball, and for developing skills necessary for effective playing. It was felt that the content of the film was logically and psychologically arranged, presented in an interesting manner, and appropriate for presentation to groups interested in volley ball as low as the junior high school level. The high school teachers felt that the emphasis on the development of a player's skill in one position applicable to adult and professional teams but not so on school levels because there the team members should be shifted or rotated from one position to another.

Paraguay

(U. S. Department of State, Motion Picture Project, Domestic Distribution, 35 W. 45th Street, New York City) 20 minutes, 16 mm. sound. Produced by Julien Bryan. Apply to distributor for terms governing purchase and rental sources.

Beginning with a map of South America and locating the country of Paraguay, the film shows the manners and

customs, the occupations and industries, the educational opportunities, and indications for future growth and development of the country of Paraguay.

Among the customs surviving from Indian rites and festivals is the Macar Indian dance, scenes of which begin the film. Also somewhat primitive and remaining from an earlier culture is the habit of cutting fresh meat into strips and curing it in the sun. Likewise, still found today in Paraguay are the almost universal arts of loom-weaving and lace-making. Such customs as the ones just described indicate the self-contained economy which has been developed by the Spaniards and native Indians.

The grand Chaco, or Great Plains, along with much of the other land in Paraguay is admirably adapted to cotton growing and farming. Many farmers operate small plots and grow sufficient crops for their own needs. The agricultural products along with dairy products have been successfully marketed in spite of almost insurmountable transportation difficulties. A great portion of these products are carried long distances by the narrow-gauge rail-ways or by the natives themselves.

The film emphasizes the great amount of attention that is being given to the problem of health and education. It indicates that Paraguay plans to educate all children from the ages of seven to fourteen. Teachers are being trained, schools are being improved, and education is enjoying the resulting impetus. Likewise, clinics are being established for the care of babies, nurses are being trained, standards of health are being raised, and medical care is being extended greatly.

Thus the film suggests that the future looks bright for this strong and vigorous people. Scenes show that air transportation will help solve many of Paraguay's problems and that with proper development and wise direction the country will expand.

Committee Appraisal:

It seemed to the committee that Julien Bryan, in this film, reflects the temperament of Paraguay along with its industries and progress. The film should be helpful to groups from junior high school through adulthood that are interested in or discussing the country of Paraguay. The content of the film is organized into major sequences which make it effective for discussion purposes.

Using the Classroom Film

(Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago, Illinois) 20 min., 16mm. sound. Sale price \$85 less 10% educational discount. Apply to producer for rental sources.

This subject deals with the necessity for and means of following three cardinal principles in the use of classroom films: (1) setting up purposes for the film's use which will be acceptable both to teachers and pupils; (2) presenting the film; (3) evaluating the film and planning follow-up activities in a discussion immediately following projection of the film. As a means of illustrating these ideas, the producers show a seventh grade class in the University of Chicago Laboratory School at work on the subject of feeding the world, and the film opens with a socialized discussion in this class on wheat growing. Pupils are not long in discovering how limited is their knowledge on the subject and teacher and class agree that a film like "The Wheat Farmer" is needed. They immediately set about listing things which they would like to learn from such an aid, and after class the teacher continues his preparation

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to the producer for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

by studying the teacher's handbook which accompanies the film.

Next day the pupils eagerly recall the detailed items of information mentioned the preceding day and with the teacher organize them into three general questions. These will serve as their outline for subsequent discussion of the film. Then they see without interruption and in its entirety "The Wheat Farmer," projected by a student operator in their own classroom setting. The film is followed immediately by spontaneous comments by the pupils, relative to how it answered their questions on weather and wheat growing, the first of their three discussion topics. Accompanying each pupil's reference to the picture is a flashback to the appropriate scene of the film. Next, apropos to the topic of how wheat is grown, several pupils speak of the many machines noted in the film. Finally there is discussion on life about a wheat farm, and at the teacher's suggestion pupils recall scenes from the film which describe things they would enjoy doing.

With the discussion of assigned questions completed, pupils are given an opportunity to suggest questions which arose in their minds as they saw the film, and as several pupils volunteer questions they also agree to engage in whatever further study is required to secure the desired information. Consequently the pupils set to work on consulting globes and atlases, reading library references, checking the market pages of the newspapers for wheat prices, contacting government agencies for specific information on crop raising, and visiting the bakery to study wheat in bread making. As these activities are culminated in scrapbooks, wall maps and displays, oral reports, and a group singing of "a familiar song with a new meaning" the commentator calls attention to how the use of "The Wheat Farmer" has served to provide (1) material and motivation for the development of study skills (2) to integrate content of different school subjects (3) to encourage pupil sharing of experiences, and (4) to capitalize on individual differences and interests in pupils.

Committee Appraisal:

The committee felt that the film is excellent for demonstrating a technique of pupil-teacher planning, advance planning and preparation on the part of the teacher, the advantage of showing the film in the classroom and the need for immediate discussion and follow-up activities. However, teachers will recognize that desirable teacher planning may extend over longer periods of time than here indicated, thus making it possible to schedule in advance films and other materials from a city, county, or educational film library. This will be especially true in those areas where several films are available for a unit of instruction and where the teacher will want to schedule in advance the film or films which contribute most to the achievement of unit aims. The committee recommends this subject for classes in teacher education, faculty meetings, and PTA groups.

War Where You Live

(Y. M. C. A. Motion Picture Bureau, 347 Madison Avenue, New York City 17) 8 minutes, 16mm. sound. Sale price \$30. Produced by Twentieth Century Fund. Apply to distributor for rental sources.

This is a plea by Jay Allen, newspaperman and war correspondent, for Americans to take action in their own communities against those post-war housing conditions which are sources of fire danger, racial conflict, and anti-democratic movements. He believes that by democratic methods we can accomplish what England and other countries, now rebuilding ruined cities, have been forced to undertake by the pressure of Nazi terror.

Speaking informally at his desk, Mr. Allen tells of first hand experiences in Europe during the war which cause him to characterize that conflict, more than any other in history, as a war against people where they live. The first sequence of newsreel shots which accompany Mr. Allen's commentary shows bombings of cities whose people, forced from their homes to the roads, find there only greater danger and even death. Then both commentary and picture shift to the show windows of Lisbon shops where in 1941 Germans displayed propaganda pictures intended to emphasize housing inequalities in democratic countries, in contrast to the supposedly widespread and Nazi-inspired housing developments of Germany. Admitting that this propaganda was "an awful swindle" but warning of its unfavorable effect on the cause of democracy, Mr. Allen documents his plea for more and better housing in America by reference to the Twentieth Century Fund study calling for one million new homes a year for the next ten years.

In addition to government-aided housing projects in our metropolitan center, there is need in every community for public-minded citizens to attack the problems immediately, thereby bolstering post-war employment as well as improving local housing standards. Only as American communities learn to combine with conventional methods and materials such pioneering construction as prefabricated housing, will we turn the results of the conflict now ended from war where we live to victory where we live.

Committee Appraisal:

This film's well organized and direct commentary, skillfully and sincerely spoken by Mr. Allen, combined with its well selected news shots, makes of it an unusually effective screen editorial. Limited in length and therefore in scope the film does not presume to survey the entire housing problem. But it is a forceful presentation of the need of individual and group action, should be useful among groups ranging from junior high school social studies classes to civic organizations concerned with housing as one of America's major post-war problems.

J. Edward Shugrue, Merriman Holtz, D. T. Davis, C. R. Reagan

Awards for War Loan Workers

Awards of merit were presented to three officials of the Treasury Department's War Finance Division who headed the 16mm film program in four war loan drives, at a luncheon of Washington Visual Workers, January 16.

J. Edward Shugrue, Director of the Division's Motion Pictures and Special Events Section, received a scroll citing him for his contribution to the development of 16mm films through the war bond showings witnessed by more than 100,000,000 people. Plaques were presented to Merriman H. Holtz of Portland, Oregon, and C. R. Reagan, Dallas, Texas, consultants to the Motion Pictures and Special Events Section. The awards were made by D. T. Davis of Lexington, Kentucky, chairman of the National 16mm Victory Film Committee, on behalf of the industry, the 16mm war bond State Chairmen, and the 450 distributors throughout the country who took part in the war loan 16mm campaigns.

News and

Film Council of America Formed

The Film Council of America, consisting of delegates from seven national organizations concerned with the production, distribution and use of informational and educational films, adopted a program of action for 1946 and elected officers at conferences held in Washington, D. C., January 15 and 16. The Film Council grew out of the National Advisory Film Committee of the Office of War Information which worked with Government agencies to coordinate and utilize film personnel and equipment in the field during World War II, with the result that millions of Americans used and saw films to help win the war.

C. R. Reagan of the National Association of Visual Education and former associate chief of the Bureau of Motion Pictures of the OWI, was elected president of the Council and will function from his office in Austin, Texas. Other officers are: David E. Strom, representing the National University Extension Association, first vice-president; I. C. Boerlin, the Educational Film Library Association, second vice-president; Vernon G. Dameron, the Department of Visual Instruction, National Education Association, secretary, and Merriman H. Holtz, the Allied Non-Theatrical Film Association, treasurer.

Other member associations are the American Library Association and Visual Equipment Manufacturers Council.

A delegation from the new council called upon Dr. John W. Studebaker, head of the U. S. Office of Education, to discuss the establishment of a permanent Department of Visual Instruction at the USOE.

Affiliation with the Film Council of America will be open to the General Federation of Women's Clubs, National Council of Parents and Teachers, American Legion, labor and industry groups, and farm, youth and other national organizations concerned with films in the public interest. The Council will serve such groups with needed data for more effective use of non-theatrical films.

During 1946, the Film Council will aid all local film groups in the formation of community meetings along the lines of the Washington Visual Workers' of the District of Columbia. The Council will coordinate nationwide efforts to achieve complete authentic documentation of the history of the production and use of motion pictures in World War II; and also will stimulate research and publication of findings in the necessary subject matter areas.

Temporary headquarters of the Film Council of America will be at the office of the secretary, Vernon G. Dameron, Department of Visual Instruction, National Education Association, 1201 16th Street, N. W., Washington, D. C., and at the office of the president, C. R. Reagan, 12th at Lamarr, Austin, Texas.

Notes

RKO 16mm Program for Far East

RKO Radio is the second major Hollywood producing company to inaugurate the foreign distribution of 16mm prints of their features and short subjects. They have announced that their project will be confined to China and India at first, whereas Loew's International is planning global service.

According to Mr. Phil Reisman, vice-President in charge of foreign sales, the program will get underway upon the completion of equipment tests now being conducted. It is indicated that mobile units of the heavier and more professional type of 16mm equipment being developed by manufacturers, will be used.

Mr. R. C. Maroney, who has been with the Motion Picture Division of the Office of Inter-American Affairs for the past five years, will head RKO's foreign film activities.

New Course at The Institute of Film Technique

A practical course on "The Film in the Classroom" is offered this semester by The Institute of Film Technique, The City College of New York. Designed to assist teachers in using films effectively, classroom films will be considered as integrated aids in the teaching process. Topics to be discussed include classification of films, Army and Navy methods, techniques of teaching with films, operation of projectors, evaluation and selection of classroom films, film sources, school production, film clubs, administration of film programs.

The instructor will be Louis S. Goodman, formerly Assistant to Director, Boston University Division of Teaching Aids, and recently with the Audio-Visual Aids Unit, Army Education Program. The class began February 19.

Latest Surplus Property Regulation

According to Regulation 14, latest issuance from the Surplus Property Administration, educational and public health institutions will be allowed to purchase surplus Government property at a 40 per cent discount from the "fair value", to be fixed by the Government. As surpluses in which these preferred agencies may be interested become available, they will be notified. The U. S. Office of Education is cooperating with the SPA in the disposal of equipment to educational institutions.

Few 16mm projection units, however, are expected to be declared surplus, as the number of machines in usable condition to be released by the Army and Navy is "negligible", Robert Haggerty of the Surplus Property Administration told a group meeting in Washington recently.

Responsibility is vested by Regulation 14 in the Federal Security Agency for preparing estimates of the types and quantities of surplus property to be reserved for education, for determining the eligibility of applicants, and for developing criteria by which to

judge the "legitimate" needs of applicants. "Educational Surplus Property Memorandum No. 1" of the U. S. Office of Education, FSA, invites each state to establish a State Educational Agency for Surplus Property to represent the public and private educational institutions within the state and to cooperate with the USOE in notifying applicants of surplus property available, appraising applications and certifying them. Pending the establishment of these state agencies, the Federal Security Agency has established an interim procedure set forth in "Policy and Procedure Memorandum No. 4". A copy of this can be secured upon writing to the Division of Surplus Property Utilization, U. S. Office of Education, Washington 25, D. C.

Film Use Rises in California County

Use of audio-visual materials by Kern County Schools (California) the past year has increased approximately 50 per cent over the use of these materials for the same period of the previous year, according to Dorothy Dickinson, audio-visual librarian in the office of Leo B. Hart, county superintendent of schools. The increase in the use of materials roughly corresponds to an increase of approximately 50 per cent in the supply of audio-visual materials available to county schools. At present, over 1200 reels of educational films and 790 filmstrips are available. Also, numerous recordings, transcriptions and 2x2 color slides have been added.—*School Bulletin*, January, 1946.

Outlook for Aerial Photography

Post-war aerial photography programs of government agencies and commercial users are far expanded over pre-war days, it was revealed at the annual meeting of the American Society of Photogrammetry, in Washington, January 16-18. Speakers pointed out that because 90 per cent of U. S. military intelligence during World War II was secured from aerial photos, photogrammetry—the science of using these photos to make maps and charts—has a bright future.

Gerald FitzGerald of the U. S. Coast and Geodetic Survey, was elected the new president of the Society. Vice President is Revere G. Sanders of the Fairchild Camera and Instrument Corporation, who was also honored with the Society's Abrams Award for a paper he had written on stereoscopy. J. E. King, of the Soil Conservation Service, was given the Sherman M. Fairchild award for his outstanding work in photogrammetry during 1945.

National Committee on Film Forums Organized

Representatives of the American Association for Adult Education, the American Library Association and the National Council of the Young Men's Christian Association, meeting at the Institute of Adult Education, Teachers College, Columbia University, on January 23, reorganized the National Committee on Film Forums (formerly the Joint Committee on Film Forums) for the purpose of determining educational standards applicable to the use of films for adult discussion groups.

The *Film Forum Review*, a quarterly journal sponsored jointly by the Committee and the Institute of Adult Education, will publish results of significant experiments both in the United States and abroad.

Officers of the National Committee on Film Forums are: (for the American Library Association) Glen Burch, Chairman; (for the National Council of the YMCA) J. R. Bingham, Vice-Chairman; (for the American Association for Adult Education) Mrs. Mildred Matthews, Secretary.

Cohocton School Film Library

The Cohocton Central School is the first central school in New York to establish its own educational film library. After renting educational films for several years the school administrators became convinced of the advantages of acquiring their own permanent film library. Principal of the school is Mr. Edgar A. King.

Regional Audio-Visual Meetings

• Out-of-state speakers on the program of a two-day Audio-Visual Institute for Educators at Ball State Teachers College, Muncie, Indiana, February 1-2 were: Edgar Dale, Ohio State University; Ford Lenler, University of Michigan; and Elmer R. Nelson, Milwaukee Public Museum. Talks by these men and local speakers emphasized the proper utilization of teaching materials, and needs in instructional materials. Attention was also given to the topic, "Building and Housing to Provide for Audio-Visual Aids," with which the Indiana State Audio-Visual Committee is concerned.

This subject was discussed further at a conference on School Building Planning and Related Problems at Indiana University, February 5-6. The Tuesday morning session of this meeting was devoted to "A Symposium on Audio-Visual Education Facilities."

• A series of Bureau of Teaching Materials conferences were conducted in ten Virginia cities January 7-17 by the State Department of Education to meet the demand from schools for assistance in getting under way a program for using audio-visual aids to instruction. This demand has arisen because hundreds of schools throughout the state, many of which have never used projected audio-visual materials before, will soon receive projection equipment, films and slides, purchased with funds allocated last summer by the Virginia General Assembly. Thousands of Virginia teachers must receive training in the use, operation and care of this material.

The primary purpose of these regional one-day "workshop" type meetings was to give a brief review course of instruction to a number of selected school personnel who, in turn, will organize and conduct their own programs of in-service training for teachers in their localities.

A Handbook, prepared by James W. Brown, State Supervisor, Bureau of Teaching Materials, and W. Henry Durr, Field Coordinator, outlines the present organization for the distribution of audio-visual instructional materials in Virginia on four different levels: 1) state, 2) regional, 3) county or city, and 4) the single school.

• Vancouver, Washington, played host February 15-16 to an audio-visual education conference sponsored by the State College of Washington. Other conferences scheduled include: Pasco, March 15-16; Chehalis, March 22-23; Bellingham, April 12-13.

Russians Develop Three-Dimension Process

The Soviet film industry has announced the achievement of three-dimensional images by the inventor Semeon Ivanov. In an interview in Moscow he said that Russians instinctively dodged when airplanes or birds were projected on the screen in pictures filmed by his process. "Robinson Crusoe" is now being produced in this manner by Mosfilm.

The Russian method is a variation of the grid process by which two images are projected on the screen simultaneously and are broken up into closely spaced bands by a grid or grating near the screen. This grating also serves as the selective viewing means.

Oh! What a Difference

between ordinary projection and the brilliant, surpassing motion picture projection afforded by Holmes Sound-on-Film machines.

See, hear and compare

the Holmes Projector and draw your own conclusions. Remember, the Holmes is the only 16mm. projector with large 10-tooth sprockets, making threading and operation easier.

The Literature in Visual Instruction

(Concluded from page 84)

- **The People of America**—compiled by Lili Heimers, Director, Teaching Aids Service of the Library, and Margaret G. Cook, Librarian, New Jersey State Teachers College, Montclair, 1945. 10p. mimeo. 25 cents.

A tentative list of teaching aids—charts, maps, exhibits films, slides, filmstrips, publications and recordings—on inter-cultural education for all ages. These materials are classified under five chapter headings: Our Origins, Our Beliefs, Contributions to American Culture, Toward Unity, Music and Festivals.

- **Films and Food**—Mary Losey—*New Movies*, 20:7 November, 1945 (National Board of Review Magazine).

At the recent international conference on food—Food and Agriculture Organization,—held in Quebec, a questionnaire answered by 30 nations revealed that 54% wanted more films on agricultural production, 27% wanted nutrition films, 12% wanted agricultural films on their respective nations, and 50% were already using some foreign films.

A suggested list of titles on food (and agriculture) is given in the article.

- **Library of Congress Photographs**—W. L. Hartley—*Social Education*, 9:374 December, 1945.

The extensive collection of documentary photographs produced under the direction of Roy E. Stryker and the Farm Security Administration are part of a collection available for examination and reproduction at the Library of Congress—Room 1405, Auditor's Building, 14 Street and Independence Avenue, Washington, D. C. Microfilm copies may be bought for 6c per foot; 8" x 10" prints for 50c each.

Fannie W. Dunn, Columbia Educator, Dies

Professor Emeritus Fannie W. Dunn of Teachers College, Columbia University died on January 17, 1946 at the age of 67, just two years after her retirement. Professor Dunn was in charge of audio-visual instruction at Teachers College from 1933 to 1939, during which time she was assisted by Eita Schneider (now Ress). Dr. Dunn was a source of inspiration to her students because of her own brilliant sensitivity to the problems of the classroom teacher. That is why, while teaching in a field that was remote from her real life's work (rural education, where she was an outstanding national figure), she was able to emphasize the broad curricular aspects rather than the more technical, mechanical details usually found in such courses.

In 1935 and 1936 Prof. Dunn, with her devoted associate, published two research articles in the *EDUCATIONAL SCREEN*, one on state administration of visual aids, another on city practices. She was co-author of the standard reference book, "Motion Pictures in Education: A Summary of the Literature" by Dale, Dunn, Hoban and Schneider (Wilson, 1937). As editor of the 8th Yearbook of the Department of Supervisors and Directors of Instruction, NEA, Professor Dunn has left a chef d'oeuvre on "Materials of Instruction," with a chapter on the use of the resources of the environment written by her. Most of Miss Dunn's professional writing and lecturing was devoted to rural curriculum development and improvement.

Current Film News

■ **Young America Films, Inc.**, 32 East 57th St., New York 22, announces the new subjects:

We, The People—1 reel— a documentary film presenting the story of the United Nations Charter. It shows how man's desire for peace and human rights and his abhorrence of war led to the need for and the formulation of the United Nations Charter. The aims of the Charter are discussed and explained in detail. Accompanying the motion picture are two slide-film lessons—"The Needs and Purposes of the Charter" and "The Charter's Organization." The motion picture and the slidefilm may be used separately or together.

Safety Begins at Home—1 reel— which employs the story form to present home safety principles. Preparation for a home party by three youngsters provides the background against which home safety hazards are emphasized and how they can be recognized and avoided.

Both subjects are accompanied by interpretive Teachers Guide.

■ **ENCYCLOPAEDIA BRITANNICA FILMS INC.**, 20 N. Wacker Drive, Chicago 6, have released the following new 16mm classroom films:

Milk—produced in collaboration with K. G. Weckel, Ph. D., University of Wisconsin—the dramatic story of milk from the dairy farm to the table. Depicted are the use of milk in the home, the dairy herd, milking and the care of cows, and the pasteurization and bottling of milk in a modern plant. The use of machines is emphasized without stressing technical details.

The Bus Driver— produced in collaboration with Paul R. Hanna, Ph. D., Stanford University. The work of long distance bus drivers is dramatized in the story of an eventful cross-country bus trip made by a small boy. The duties of a bus driver are depicted in scenes showing how he meets driving hazards, serves his passengers, and keeps his bus in operating condition. Attention is given to the principles of safe driving and the aids to safety and efficiency provided by modern highway construction. The activities of a bus terminal and service garage are pictured, along with typical experiences of a four-hundred-mile bus journey.

Bread—produced in collaboration with B. E. Proctor, Ph. D., Massachusetts Institute of Technology—story of bread from the wheat farm to the table. Sequences portray the use of flour in the home: the harvesting of wheat; flour milling; and the making of bread in a modern bakery. This film and the one on "Milk",

helps to acquaint children with our modern industrial society—and to develop appreciation of the contributions of technology to home life.

The Food Store—produced in collaboration with Marjorie D. Sharpe, Principal, Tenaere School, Wellesley, Mass. The film follows Jack and Ann, who help their mother with the Saturday marketing in the local self-service store. From the produce

counter they select fruits and vegetables. In the canned goods department, they note the variety of goods and advantages of self-service. When mother buys meat, they watch in fascination, as the butcher cuts the roast. They see that different wholesalers supply the local store with dairy products, baked goods, and prepared packaged foods. In conclusion, the children and other customers line up at the cashier's counter, observe the cashier at work, watch mother pay the itemized check and then they load the groceries in Jack's wagon to carry them home.

FILMS NEW 16mm SOUND from BRITAIN

UNITED STATES

5 reels—45 mins.

The chronicle of the USA, showing the growth of the nation from its humble origin at Plymouth Rock to the present day world power.

THE STORY OF DDT

3 reels—25 mins.

The development of the famous insecticide from its discovery in 1870 to large scale production in World War II, culminating in its spectacular success during a typhus epidemic.

AND FROM BRITISH CONSULATES AT

Boston • Detroit • Houston • Seattle

■ **FRITH FILMS**, Box 565, Hollywood 28, California, announce the completion of a 600-foot color film in 16mm sound on:

The Goat Dairy Farm - a phase of agriculture that is growing rapidly all over the United States. The film was produced at the Carr's large goat farm which is located at the foot of Mt. Adams in the State of Washington, the natural settings giving vistas of great beauty.

The sequences of the three Carr children and the part each one plays in the caring for the goats gives the film much appeal for young people.

■ **OFFICE OF PRICE ADMINISTRATION**, Washington 25, D. C., has deposited 16mm prints of a new documentary film on sugar with its regional and district offices and the 316 distributors formerly used by OWI. The film, which was produced for the OPA by Robert Flaherty, tells the story:

What's Happened to Sugar?-showing why there were shortages during the war, and why shortages will con-

tinue for many months after the war. It covers the growing of cane and beet sugar, harvesting of crops, refining and distribution. Battle sequences, factory and laboratory scenes point up the unsuspected uses of sugar in many manufacturing processes. Animation explains how war cut the worldwide supply of sugar drastically.

■ **THE AMERICAN LEGION**, National Headquarters, Indianapolis 6, Ind. urges the installation of a driving course in high schools through their new 16mm sound motion picture:

Teach Them to Drive—produced for the Legion by Pennsylvania State College in cooperation with the Automotive Safety Foundation. Shocked by the tragic death of their son in an automobile crash, two typically American parents cast grief aside to wage a campaign for the adoption of driver education and training in their community's schools.

Free rental prints have been deposited with all American Legion State Departments, highway patrols in 35 states, and many university extension film libraries.

■ **SIMMEL-MESERVEY**, 9533 Brighton Way, Beverly Hills, California, is currently releasing the new film:

Junior Prom—2 reels, Kodachrome—concerned with the etiquette of "dating". It presents in dramatic form a pattern of standard, positive behavior for young people of high school and college age. The same method of presentation has been employed in the production of this film as was used in its predecessor "Dinner Party", which deals with correct table etiquette. Through this approach the student is able to identify himself or herself with characters portrayed in the film.

■ **THE JAM HANDY ORGANIZATION**, 2900 E. Grand Blvd., Detroit, Mich., report three recently completed sound films:

Dateline Tomorrow—sponsored by The Aluminum Company of America—designed to show the qualities and characteristics of the various aluminum finishes over a wide range of applications.

Tell It with Television—sponsored by The American Central Manufacturing Company—recording the company's advertising television program and showing what it takes to put a television show on the air.

Something New in Sports—made for Remington Arms for dealer and salesman showings.

■ **ROCHESTER PUBLIC LIBRARY**, Rochester 4, New York, is selling prints of a Kodachrome film in 16mm sound produced for the library by Margaret Cussler and Mary L. de Give.

Not by Books Alone—title of the 2-reel documentary film—shows how the Rochester Public Library serves the citizens of its community.

After a brief series of flashes showing the diversity of specialists employed in a Library, the film takes up six primary concerns: work with children, education, enrichment and recreation, making better homes, earning a living and intelligent citizenship. In documenting its thesis that the modern library serves these functions "Not By Books Alone," the film depicts the divisional system, work of branches, work with children and young people, motion picture and radio programs, concerts, exhibits, art gallery, and special applications of community service. Also available for rent from the New York University Film Library, 26 Washington Place, New York 3, New York, and other film libraries.

■ **U. S. COAST GUARD**, Washington, D. C., presents a pictorial record of the Coast Guard's role in World War II in a two-part motion picture which includes a 15-minute film on the domestic phase and a 25-minute picture on overseas operations.

Along Our Shores—the title of Part I—depicts the varied activities of the

Coast Guard in continental United States and on off-shore defense and offensive operations. Highlights are: the training program, work of the SPARS, functions of the Merchant Marine Inspection service, the Port Security and Coast Guard Auxiliary, patrol and rescue activities.

On Foreign Shores—Part II—includes scenes from every major theatre of operations and from every major invasion, in chronological order.

Requests for bookings can be sent to any District Coast Guard Office or to U. S. Coast Guard, Public Information Division, Washington 25, D. C.

Entertainment Films in 16mm

■ **PLANET PICTURES, INC.**, 5746 Sunset Boulevard, Hollywood 28, Calif., has launched, in addition to its 16mm releases of entertainment features in color, the release of a series of first-run animated cartoons filmed in 16mm Kodachrome. The first series of amusing subjects introduces a whimsical, intellectual and absent-minded cat as Professor J. Waldo Purrington, who is devoted to the cause of pure science and proceeds to demonstrate the scientific truth—or falsehoods—of various familiar adages and accepted precepts. The first in this series to be released to Planet's national distributing organization is *Honesty is the Best Policy*. Subsequent subjects will clarify such old adages as *Haste Makes Waste*, *Finders Keepers—Losers Weepers* and *Barking Dogs Never Bite*.

Another series of cartoons will feature laugh-provoking characters known as "Diddits", invisible little men who busily run the affairs of the universe, utilizing the most ingenious inventions. Original theme music will be featured; the series is narrated by the many-voiced Frank Graham, tailored to appeal to all ages.

The current release in Planet's series of 16mm color features is *The People's Choice*, described as a rollicking satire on the production of radio programs and the building up of radio personalities.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have acquired three more Universal entertainment features, namely:

In Society—7 reels—Abbott and Costello as a pair of plumbers who go high-hat.

Moonlight and Cactus—6 reels—with Andrews Sisters, Leo Carrillo, Elyse Knox and Eddie Quillan. Returning serviceman has his trouble with women in war jobs—in this case in the running of a cattle ranch.

Allergic to Love—7 reels—romantic comedy with Noah Beery, Jr., and Martha O'Driscoll. Matrimonial and business merger between airplane and motor families periled by comic allergy, finally routed in a funny surprise ending.

Catalogs

Post

Many new releases are included in the Ninth Edition of its 16mm Sound Film Catalog just issued by Post Pictures Corporation, 723 Seventh Ave., New York 19. Altogether more than 100 features and 150 short subjects are listed and described. In conjunction with the issuance of the new catalog Post Pictures announces the release of the first two in a series of Hal Roach "streamlined" features—*Tanks a Million* and *Niagara Falls*—with more to follow soon. These streamlined features run less than an hour. Post Pictures has been named exclusive distributor of all latest Hal Roach productions. Two films in the Scattergood Baines series—*Cinderella Swings It* and *Scattergood Rides High* are also among Post's latest releases.

Castle

"Movies for Every Occasion" is the title of the new illustrated film catalog released by Castle Films, 30 Rockefeller Plaza, New York 20. While primarily directed to the home user of films, the catalog cannot fail to be of interest also to school film users, in the combination of entertainment, and informative subjects available. The 130 short subjects described include a great variety of cartoons—*Terrytoon*, *Puddy the Pup*, *Kiko the Kangaroo* and *Fairytale* series, the latter in color; the *Adventure Parade*, *Sport Parade*, *World Parade* and *News Parade* series. The latter series, comprised of concise, single reel reviews of each year's historic events since 1937, constitute an authentic motion picture record of World War II as it began and developed. All Castle films are available in 8mm, 16mm silent and 16mm sound from photographic dealers.

USDA

The new catalog of U. S. Department of Agriculture motion pictures and slidefilms, recently issued, lists 152 motion pictures and 125 slidefilms covering 70 different agriculture subjects. A helpful feature is the listing of slidefilms related to specific subjects with the motion pictures on those subjects, permitting a film user to choose from a correlated and unified group of visual aids. All of the motion pictures are indexed and cross-indexed by subject, and are listed alphabetically by title.

1945 Was Big-But-

Why? Because we are planning it that way. Here at Astor, we know that your number one need is continuous availability of MAJOR product. We are geared to offer our customers product insurance, not just for 1946, but for the years ahead. Since Astor is the largest independent film distributor in the theatre field, we are experts in the selection of high calibre programs.

In 1946 we will release over 26 features produced by Major companies and are still negotiating for more. Contracts have been closed for eighteen equally top flight features for release in both 1947 and 1948. We are constantly seeking bigger and better product for the 16mm market, pictures which can be shown anywhere in the non-theatrical field without the necessity of securing approvals.

Your best insurance for bigger, brighter tomorrows is being provided by Astor planning. Hitch your wagon to the Astor star, by securing the full line of Astor product.

ASTOR PICTURES CORPORATION

130 WEST 46th STREET

NEW YORK 19, N. Y.

AMONG THE PRODUCERS

Natco Projector

National Industries, Inc. (formerly the National Mineral Company), 2638 North Pulaski Road, Chicago 39, is now in full production on the new Natco 16mm sound projector. According to the firm's announcement, the new projector is basically an improved version of the original model manufactured to meet rigid Navy specifications for use in the Navy's training program, and advanced engineering principles have resulted in a projector simple to operate and easy to thread.

Natco 16mm Sound Projector

Functional highlights of the Natco are: direct sound scanning, and independent floating stabilizers, ensuring highest quality sound reproduction; a ventilating system which provides cool operation even with a 1,000 watt lamp, thereby increasing film life; precision designed mechanism which assures picture steadiness on the screen; triple claw shuttle movement allowing film to feed through the projector even when two consecutive sprocket holes are defective; film damage caused by film weave is eliminated due to the position of sprocket teeth in relation to the picture frame; all lamps readily accessible for changing and film gate components quickly removable for easy cleaning, without tools. The Natco is equipped with a coated 2 inch Fl. 6 lens, has a 12 inch permanent Magnet speaker and an 18-watt amplifier. Handles up to 2,000 foot reels; no belts to bother with or arms to attach; rewinding is accomplished by simply turning the rewind switch, without changing reels. The projector carries a two-year guarantee against defective material and workmanship. Two leatherette-covered cases house the equipment.

Kapit Buys General Film Library

Harry A. Kapit has purchased General Film Library, and General Film Productions Corp., 16mm and 35mm film organizations, and has resigned as active Vice-President of International Theatrical and Television Corporation.

Despite the fact that he will no longer be actively associated with ITTCO, he will still continue his duties in an advisory capacity and give that organization the opportunity to cooperate with him on the distribution of films which will be produced by his new company, of which he is president. His son, Elbert Kapit, will take over the management of General Film Library.

In addition to supplying "stock shot" material, the library will have a special department catering to industrial film producers as well as television.

S.V.E. Educational Director

The Society for Visual Education, Inc., Chicago, announces the appointment of Walter E. Johnson as Educational Director. Mr. Johnson's rich background in the field of visual education equips him well for this position in the ever-growing SVE organization.

For the past two and one-half years, he has served as Training Aids Officer for the Naval Training School (Lookout Recognition) at Ohio State University, Columbus, Ohio, and at the Naval Training Center, Gulfport, Mississippi. This naval school was basically an instructor training unit for the development of lookout-recognition officers for the U. S. fleet. Mr. Johnson

Walter E. Johnson

is credited with much of the pioneer thinking and work that went into the development and utilization of visual aids at this establishment. Mr. Johnson states that his great faith in the slidefilm and the 2" x 2" slide as fundamental instructional tools grows out of the fact that these two training aids comprised the heart of the excellent U.S. Navy plane and ship recognition program.

Before entering the naval service, Mr. Johnson was associated with the River Forest Public Schools as Coordinator of Instructional Material and later as elementary school principal. He has over seven years of

public school experience. He was also instructor of the course in Visual Aids and Radio in Education at the Northwestern University graduate school summer session in 1942.

The new SVE Educational Director holds a B. E. degree from Milwaukee State Teachers' College and an M. A. degree from Northwestern University. Additional graduate and naval training was obtained by him at Dartmouth College and Ohio State University. He is known in childrens' literature circles as the author of "Franka—A Guide Dog," published by Albert Whitman & Co.

NoVex Projector-Viewer

A new combination 2 x 2 slide viewer and projector is announced by the NoVex Division of Pruitt Office Machines, Inc., 425 N. LaSalle St., Chicago 10. A simple tilt of the top section of the machine controls the placement of the image. When tilted down the picture is projected on the viewing screen for individual or small group showing. When tilted up the image is projected direct to wall or projection screen for large group showings. An image of 3 feet wide can be projected from a distance of 8 feet. Housed in molded bakelite case, measuring 14" long by 12" high and 7½"

2 x 2 Slide Viewer and Projector

wide, with built-in ground glass viewing screen 7" x 7" wide; accommodates slides of vertical or horizontal composition in either glass or ready-mount form; employs Mazda 100-watt pre-focused bulb, and condenser system is protected with special heat-absorbing glass; projection lens is of F:2.9 aperture with focal length of 3 inches; ground and polished top surfaced mirror is employed in reflecting image to the viewing screen. Operates on AC or DC, and weighs less than 5 pounds.

ITTCO Offers Dealers and Libraries Films for Purchase

For the first time, George A. Hirliman, president of International Theatrical and Television Corp., is offering dealers and film libraries the opportunity to obtain ITTCO pictures on an outright purchase on long term lease basis.

This new plan permits the purchaser to carry ITTCO Major films on a depository basis at no cost and with no advance of funds. It will also enable the dealer to purchase films for his own permanent library on a deferred payment

plan. Features, shorts and serials in the entertainment, educational and religious fields are being offered. Likewise, on a depository basis, other independent releases which are the product of Major companies, but which do not require location approval, will be offered.

A great many of the productions available under this new arrangement have never before been offered to the 16mm. public. A twelve page brochure outlining the plan and listing and describing a number of the available films is now being prepared and will be sent to all persons interested in establishing or enlarging film libraries.

New Britannica Film Rental Plan

A new plan to make Encyclopaedia Britannica classroom films available to schools on a Rent-to-OWN basis will be initiated in a limited area in March, 1946. While the new distribution method will be launched first in the states of Indiana, Illinois, Michigan, Missouri, Wisconsin, Iowa, and Minnesota, it is anticipated that the plan may be extended to other sections of the country.

In making this announcement, H. R. Lissack, Vice-President of Encyclopaedia Britannica Films Inc., said that the new program will have all the advantages of film rental and many of the advantages of film ownership. The Rent-to-OWN plan, he added, is being introduced to extend existing services to the smaller schools whose budgets are not yet sufficiently large enough to purchase classroom films.

Approximately 9,500 prints of classroom films have been placed in the new Encyclopaedia Britannica film library in Chicago to serve schools in the first seven states exclusively. This is believed to be the largest exclusive classroom film library in the world. For the last fifteen years, these classroom films have been available through outright purchase or on a rental basis from a limited number of extension departments in universities and colleges. This new plan will augment the existing services to schools.

The Encyclopaedia Britannica Films' new plan makes it possible for each school to use each classroom film for a full school week as many times and in as many school buildings as it wishes during that period. When classroom films are used on this plan, the school builds an equity which can be used to purchase the basic or "most used" classroom films for its own teaching film library.

Canadian Firm Expands

Associated Screen News, Limited, Montreal, is preparing the groundwork for distribution services in Canada. A self-contained merchandising unit has been established for the distribution of photographic products and audio-visual aids.

Stuart S. Tait has been appointed General Manager of Benograph, a division of Associated Screen News, it is

announced by B. E. Norrish, President and Managing Director. Benograph will have branch offices in a number of key cities across Canada, and a network of retail dealers.

Mr. Tait has headed the merchandising division of Associated Screen News for the past twelve years, and is rounding out plans for a more comprehensive service in distribution of films and equipment operated by the company during the past fifteen years.

Pan American Kit of Visual Aids

An educational unit of visual aids on Latin America has been prepared by Pan

American World Airways System, 135 East 42nd Street, New York 17, and is offered without cost to Superintendents, Principals, Curriculum Directors and Visual Aid Chairmen. The kit is comprised of a color wall map of Latin America, showing air routes; 12 pictorial economies maps in color; 12 color photographs, a color film strip of 54 frames; 20 sets (50 pictures in each set) of small black and white pictures for student study; booklets, various supplementary materials and Teacher's Manual.

The first edition of this unit has been produced in limited quantity, hence its distribution is limited.

Spanish Language Course

Ideal Pictures Corporation, 28 E. Eighth St., Chicago 5, has obtained exclusive national sales rights to the set of recordings covering a course in conversational Spanish made by the Los Angeles School Board. The course consists of 32 double-face records. Albums and turntables are also available.

RCA Victor Extends Audio Visual Activities

Expansion of the Education and Training Division of RCA Victor, in line with the company's extended activities in the manufacture and sale of equipment for audio visual education and personnel training is announced by Frank M. Folsom, Executive Vice President in charge of RCA Victor.

At the same time, Mr. Folsom announced the appointment of Walter M. Norton, as Director of the expanded Division. Mr. Norton was for eighteen years engaged in merchandising and sales promotion activities for Montgomery, Ward and Company in Chicago and New York.

Dr. Forrest H. Kirkpatrick, Dean of Bethany College, who is recognized nationally for his work in the field of educational and personnel relations, will act in a consulting capacity as Director of School and College Relations. Paul R. Thornton, closely associated with the development of music programs in schools and colleges since he joined RCA Victor in 1940, will continue as Sales and Merchandising Manager. In each of the RCA Victor regional offices,

Walter M. Norton

educational field directors have been appointed to serve schools, colleges, and universities.

BIS Office in Los Angeles

The Hollywood office of British Information Services has been moved to 448 S. Hill St., Los Angeles 13. Miss Jane Mead is the Film Officer in charge.

Filmo Diplomat Returns

One of the first items of Bell & Howell's postwar movie equipment to appear on dealer's shelves is the Filmo Diplomat, 16mm silent motion picture projector. An outstanding feature of this machine is a new cooling system which permits the use of a 1000-watt lamp in addition to the standard 500- and 750-watt lamps used previously. Every mov-

B & H Silent Projector

ing part is gear driven, even to the feed and take-up spindles. There are no chains or belts, inside or outside. Gears are fully encased and silent.

The Diplomat is constructed to show not only silent film, but sound film as well. Although the sound is not heard, many fine motion pictures formerly restricted to sound-on-film projectors may now be shown on this machine.

A Bell & Howell 2-inch F 1.6 lens is standard equipment. However, it may be replaced instantly with other lenses. Safe-lock Sprockets, a patented device, make incorrect film threading an impossibility. They also materially lengthen the life of the film by exerting less strain and pull.

Further information may be obtained by writing the Bell & Howell Company, 7100 McCormick Road, Chicago 45, Illinois.

John W. Gunstream Directs New Audio Video Institute

John W. Gunstream, former Director of Radio and Visual Education of the Texas State Department of Education, has become director of the newly-organized Audio Video Institute. The new organization, whose home office will be located in Dallas, is designed to serve schools in the field of sound and visual education.

Mr. Gunstream, a national authority in the field of radio and visual education, was one of the organizers of the Texas School of the Air, and has served as Vice President of the Association for Education by radio. In the field of visual education, Mr. Gunstream organized the State Film Library Service for

the schools of Texas. He was one of the organizers of the Texas War Film Program, served as visual aids coordinator for the Texas State Guard, and state 16mm chairman for the War Finance Committee of Texas. He has also been active as a member of a special postwar committee to study the needs of schools in the field of sound and visual aids.

The new Audio Video Institute has been appointed educational dealer for RCA Victor in the Texas, Oklahoma, and New Mexico territory. In cooperation with RCA Victor, the Institute will provide complete facilities for sound and visual education, including all types of equipment and professional services in planning and utilizing scientific aids

John W. Gunstream

to learning in education and industrial training. Offices are located in Dallas, Houston, San Antonio, Lubbock, Albuquerque, and Oklahoma City.

Ampro in Canada

Announced jointly by Paul L. Nathanson and Ampro Corporation is the formation of Telephoto Industries Limited, 1195 Bay Street, Toronto, to handle distribution and servicing of Ampro 16mm. motion picture equipment and accessories in Canada and Newfoundland. Telephoto Industries Limited, which is wholly Canadian, will be the exclusive Canadian distributors of Ampro.

Paul L. Nathanson, partner of J. Arthur Rank of London, England, in Canadian theater operation and film distribution, also announced recently, in association with Mr. Rank, plans for motion picture production facilities in Canada. Equipping of the necessary studio and laboratories is reported nearing completion.

C. Ray Harnett is general manager of Telephoto Industries Limited. His past experience in the application of mo-

C. Ray Harnett

tion pictures to educational, instructional and sales development purposes, includes service with departments of education as well as commercial organizations. After working in the 16mm. field throughout Western Canada, he held executive posts as a visual education specialist both in Quebec and Ontario.

Victor Animatograph Scholarships

In a plan to further increase the emphasis on visual education, along with a desire to encourage youth betterment movements, the Victor Animatograph Corporation of Davenport, Iowa, one of the country's leading manufacturers of 16mm sound projectors and allied equipment, has provided funds for two 4-H Club scholarships in visual education to the National Committee on Boys and Girls Club Work. Contestants for the scholarships are required to show evidence of interest and experience in the operation of motion picture projection equipment, use of cameras, slide films, slides and other visual aids. According to the rules, the winners must include, as a minimum, at least one course in visual education.

In presenting the scholarship check to Guy L. Noble, managing director of the National Committee, Mr. S. G. Rose, executive-vice-president of Victor Animatograph Corporation stated: "I

have always had great admiration and respect for the work of the 4-H Clubs and I am sure the members will benefit materially from their acquaintance with and use of visual education techniques. At the same the visual teaching field as a whole will benefit from the impulse of this new and important force."

DeVry Honored

For the first time the Certificate of Merit of the New York Museum of Science and Industry has been awarded to a company engaged in the field of motion pictures. DeVry Corporation of Chicago, pioneer manufacturers of motion picture projectors, cameras and related equipment, is recipient of the Certificate in recognition of the company's outstanding achievement in the development of motion picture equipment for use in the training and enter-

William DeVry (left) accepts award from Museum Director Robert P. Shaw

tainment of Army and Navy personnel.

In his presentation of the award to William C. DeVry, the firm's president, Director of the Museum, Robert P. Shaw declared that it is "an honor to bestow the Museum Certificate of Merit to the 37-year old executive of the three-decade-old DeVry Corporation, under whose capable and far-sighted leadership his organization was awarded five consecutive Army-Navy "E" Flags and other significant honors." As background for the Certificate of Merit presentation, the Museum displayed DeVry theatre and 16mm portable sound projectors, 35mm and 16mm cameras as part of an historic exhibition of the evolution of motion pictures titled "Vision Unlimited." Pictured with Mr. DeVry (left) and Mr. Shaw is Conover model, Kyle MacDonnell.

Additional recognition of DeVry's contribution to the war effort is contained in the Certificate of Service award recently made by the Army Air Forces Training Command for meritorious assistance in the ground training program of the AAF. Provided here were not only movies for training, "briefing" and entertainment, but several heretofore secret devices, one of which is the Panoramic Gunnery Trainer by means of which gunners could shoot "electronic bullets" at motion pictures of enemy planes as preparation for actual combat.

"Association Films"—New Y.M.C.A. Production Unit

The National Council of Y.M.C.A.'s has recently established a film production unit, named "Association Films." *Play Volleyball*, a 16mm instructional sound film, was the first of the aids to be released by the new unit, followed by *Play Softball*, a 35mm slide film. Other subjects in the field of Health and Physical Education are in the planning stage.

In collaboration with Look Magazine, the Y.M.C.A. Motion Picture Bureau has conducted inquiries among students, community groups, and leading educators, to determine major interests and needs for 16mm films in schools and other groups using motion pictures. J. R. Bingham, Director of the "Y's" film bureau and of Association Films, and Albert R. Perkins, Film and Radio Director of Look Magazine, have announced that as a result of their studies, the two organizations have formed a producing-distributing team that will launch a special series of 16mm film productions to meet the needs of schools, colleges, churches, parent teacher groups, clubs and community organizations.

In a jointly produced series titled *The Art of Living*, two one-reel subjects, *You and Your Family* and *You and Your Friends* have already been filmed. Set for release in early Spring are *You and Your Personality* and *You and Your Health*. Future plans call for a second series of four films, including such titles as *You and Your Church*, *You and Your School*, *You and Your Community*, and *You and Your Country*. Plans are also being made for several films on leadership in clubs, camping, guidance and counselling, and discussion.

According to Mr. Bingham, the Y. M. C. A. is proceeding with production plans on the assumption that education in better living is not merely a function of the schools and colleges, but that learnings of importance are often acquired amid informal settings at home, in churches, clubs, and under circumstances involving leisure-time activities.

Members of the Y.M.C.A.'s Audio-Visual Education Advisory Committee include such prominent authorities as:

Paul D. Sheats, Ph. D., Educational Director of New York City's Town Hall, as chairman; Rome A. Betts, General Secretary of American Bible Society and Chairman of the Protestant Film Commission; M. R. Brunstetter, Ph. D., instructor in audio-visual aids, of Columbia University; Morse A. Cartwright, L.L.B., of the Institute of Adult Education, Columbia University; Frederick M. Thrasher, Ph. D., of New York University and President of Metropolitan Motion Picture Council; Paul H. Vieth, Ph. D., of the Yale Divinity School; and Dean McClusky, Ph. D., Consultant, Commission on Motion Pictures in Education of the American Council on Education.

THE NEW RCA 16mm SOUND FILM PROJECTOR

FOR BETTER SOUND — CLEARER PROJECTION — SIMPLER OPERATION

The new RCA 16mm Sound Film Projector, Model PG-201, is a de luxe equipment ideally suited for school use.

Readily portable, it's contained in two carrying cases—one for the projector and built-in sound amplifier, the other for the speaker and equipment accessories.

The silver-coated pyrex glass reflector, large "aspheric" condenser and fast F 1.6 "coated" projector lens mean more light on the screen—better picture definition. The powerful four-stage amplifier and precision-engineered mechanical filter provide high-fidelity sound reproduction at the originally recorded pitch.

Convenient to use, easy to operate, simple to maintain, the new RCA 16mm Projector is the logical choice for school use. Before you invest in any new projection equipment get the story on the new RCA machine. Write today to the Educational Department 27-C, RCA Victor Division, Radio Corporation of America, Camden, N. J.

OUTSTANDING FEATURES

- ★ Large "aspheric" condenser lens —for uniformly brilliant screen illumination.
- ★ Two-inch, F 1.6 "coated" projection lens—for better picture definition—contrast—clarity.
- ★ Completely removable film gate—for easy, rapid cleaning.
- ★ Powerful four-stage amplifier with inverse feed-back for high-fidelity sound reproduction.
- ★ Precision-engineered mechanical filter maintains sound at exact recorded pitch.

Perspective in Audio-Visual Education

A masterful exposition of the function of audio-visual materials and their proper integration with the whole structure of the learning process.

EDWARD G. OLSEN, Director
School and Community Relations
Washington State Office of Public
Instruction, Olympia, Washington

HOW THE SCHOOL PROMOTES LEARNING

PUBLIC education has always moved ahead by fits and starts. Memoriter recitation, the monitor system, object lesson teaching, demonstrations, supervised study, the project method, the problem method, ability groupings, audio-visual aids—these and many other such “methods” have had their enthusiastic advocates who have crusaded accordingly. Such proponents have thereby left their influence upon current school practice as well as their names in our histories of education.

Let us frankly admit that these professional crusades are both the strength and the weakness of modern education. They give it strength because only a crusader can expect to modify established thinking and practice. Unless someone comes along so intrigued with a new approach that he is willing to go “all out” for it, the very weight of opposing tradition will likely crush him before his voice can be heard. Yet, on the other hand, there is the undeniable fact that too often these valued crusaders themselves lose perspective upon the total educational problem, and hence tend to develop one-sided or unbalanced school programs. Observing that situation, the general public as well as the bulk of the profession itself soon begins to discredit even the real values inherent in the new approach or movement.

It is possible that both the strength and the weakness just mentioned are characteristic of the current audio-visual education movement. There is probably real danger that we who are enthusiastic for audio-visual materials and procedures may have our own blind spots. Let us, therefore, briefly review the whole problem of instructional approaches, sticking to fundamentals as we do so.

Function of Education

We shall doubtless all agree that the primary function of education is to transmit, create, interpret and

evaluate experience. We know that in the very process of learning specific personal experiences are organized by the learner into abstract generalizations, and that these generalizations themselves become more meaningful as the context of previous experience is progressively widened. That is how education proceeds, stimulating the student to an ever-broadening and more realistic understanding of himself within his world. Dewey put the point neatly when he remarked that “education is the reconstruction of experience.” The instructional problem, therefore, is basically that of choosing and utilizing those particular types of experience in the community, as well as within the classroom, which in each specific situation will most effectively help the pupil learn to live successfully in his varied personal, social, economic and civic relationships.

By way of illustration consider the newborn child. Here is an infant with no ideas, no skills, no attitudes, no viewpoints. He is just an egocentric organism utterly unable at this stage to deal adequately with his environment. Yet within a few short years this helpless child must learn at least minimum adjustment patterns of behavior. How will he learn to meet his needs? What approaches to environmental realities will he find worthwhile? What instructional procedures should we (his teachers) accordingly expect to use? Perhaps reference to the accompanying chart may help to clarify our own thinking about this central problem of effective learning and hence of desirable teaching method.

How We Learn

Avenues of learning experience—or types of instructional approach—may be grouped in three major categories or levels. Each level of experience is here classified according to the degree of reality it intrinsically represents. We should note that the primary learning

level is that of direct, first-hand experience through sensory contacts with the realities of the learners' own environment; that the secondary level offers vicarious mediated experience through audio-visual representation of reality; and that the third learning level, also vicarious, is composed fundamentally of talk about reality. Let us remember also that successful learning and hence effective teaching proceeds generally from the concrete to the abstract, and that the younger the learner the more concrete his learning experiences need to be.

Consider again the young child. One of life's realities which he needs to experience for his own protection is that of fire. How can he learn about fire? One way would be for his mother to tell him about it. She could say that there is in the world a yellow-reddish thing called fire which is hot and will hurt him if he touches it. Another approach would be to show the child some photographs of fire, perhaps technicolor motion pictures of leaping flames complete with sound effects. A third approach to the fire problem would be to let the child see an actual fire, to watch how quickly it can consume combustible materials, and perhaps even to thrust his own finger momentarily into the flames. Such are the three approaches to the reality of fire—through symbols, through representation, and through direct sensory contact. Is it not obvious that all three approaches are desirable if most effective learning is to occur?

As further illustration consider the urban adolescent. One of the realities of life about which he should be well informed is that of slum housing. The writer once took a New York college sociology class on a field trip to investigate slum housing in the great metropolis. That field trip had been preceded by several week's study of the housing problem in New York. Those students had already read books about slums and had seen pictures of slum conditions. Now they actually stood in an "old-law" tenement, officially condemned as unfit for human habitation nearly a half century previously, but typical of those still occupied by a third of all the people in New York. Suddenly two of the students turned to their trip leader and excitedly said, "We've read all about slums—we've seen plenty of pictures of slum housing—but we didn't dream it was anything like this! Why doesn't somebody do something about it?" . . . Through that one vital experience had come a sense of realism together with an emotionalized conviction of social need which was not achieved through either the symbols or the representations of slum housing conditions.

Many of us have rightly protested against verbalism in teaching, but let us not be content with our partial success. We still have far to go—not only quantitatively (in expanding and extending the use of audio-visual materials as commonly understood) but also qualitatively—to develop school programs based even more directly upon extensive first-hand sensory experience with physical and social reality. In terms of the learning chart, our own thinking and school practice needs to move both horizontally (within each chart category) and vertically (into other chart categories). If we have been concentrating unduly upon

the motion picture for example, we might well explore also the audio-visual possibilities inherent in flat pictures, filmstrips, radio transcriptions, and the like. Similarly, if we have been using field trips alone as a form of direct experience, we should examine the learning values in resource visitors to the classroom, student interviews in the field, surveys within the community, and so on. Finally, if we have been hitherto content with either audio-visual or first-hand experiences as learning approaches, let us henceforth make balanced use of all three avenues of learning experiences.

All Three Levels Needed

The point should be stressed that every type of learning material and experience is valuable under appropriate circumstances. There is no approach that is "best" under all conditions. In general, however, we must emphasize the fact that direct experience is foundational to all other, and that first-hand study, the starting point in education, nevertheless requires interpretation and evaluation through reading and discussion if valid concepts are to be formed by the learner. Personal experience without interpretation through words and other symbols is mere sensation, not education; mastery of words without experiential context to give them meaning is merely verbalization, not functional learning. Education that is meaningful, effective, and thus worthwhile always requires thoughtful, verbal expression of adequate personal experience.

That is why our professional conception of instructional materials and experiences has broadened enormously in recent years. Today we recognize the equal importance of first-hand, audio-visual and symbolic experiences in education, and we agree with our National Education Association when it asserts that "the community should be freely used as a laboratory for suitable pupil experiences under school supervision."¹ The need for greatly extended direct experience with community life is likewise emphasized by the Commission on Teacher Education of the American Council on Education. That influential commission reports that "the circumstances of our time make it imperative that the schools should offer children more than book learning in the classrooms. It must, indeed, make use of all the community's resources for providing children with direct and valuable contacts with environmental reality. Experimentation along this line has already begun in schools at every level but it needs to be extended with great rapidity."²

Accordingly, we now stress the appropriate school use of field trips, resource visitors, student interviews, service projects, camping activities, work experiences, radio programs, recordings, transcriptions, films, slides, objects, specimens, models, flat pictures and the like, as well as greatly increased use of books, periodicals,

newspapers, and other printed materials. Such instructional procedures—carefully planned, coordinated and evaluated—are the essential tools for learning and teaching in the modern school.

Avoid the Basic Error

Education cannot be wholly confined within the four walls of a classroom, no matter how replete that room may be with all the new books and all the latest equipment for presenting either symbolic or represented versions of reality. Words, however realistic, are only abstract symbols in the classroom. Audio-visual materials, however vivid, are still second-hand impressions of reality when presented to school pupils. So far as feasible we must also arrange direct experience; we must lead our pupils out of the classroom and into the

larger world, there for themselves to see, hear, touch, taste and smell the significant realities of life today. To do less than this is to fail in our full function as realistic teachers of modern youth. Traditional school people are often so preoccupied with the symbols of experience that they neglect both representations of reality and direct experience itself. Let us who have gone beyond their limited approach not make the same mistake in our turn! Let us not become so enamored of equipment and materials for representing reality that we minimize the learning significance of direct community experience under school guidance. Let us keep our professional perspective, remembering always that we learn what we live as we intelligently participate in living—and that life is truly lived in that real world across the classroom threshold.

Getting Our Front Yard in Order

Presenting some heartfelt and emphatic suggestions for uncluttering the audio-visual field.

AND NOW that we have definitely decided that Visual-Auditory Aids have made giant strides, due to this ghastly war, and that they are due for even more Seven League bootsteps when the boys are all home, let's get our front yards in order to do a more efficient job in this post-war world.

Catalogues

A thorough housecleaning of the Museum and Visual Education department recently inherited by the writer found ten waste baskets filled with catalogues of every description, shape, kind and form smiling at us. Fortunately we have a baler or they would have represented ten waste baskets filled with sheer waste. The pulper did eventually make more paper of them . . . probably to go out to the world as more catalogues . . . of various sizes, format and importance.

Why can't Visual Education Directors decide upon a definite form for all announcements of films etc? From those catalogues we saved at Radnor we have made a card index catalogue with easily found classifications which the teacher in need of films can use "when in a hurry". We used the 3" x 5" filing card because the most frequently purchased filing case accommodates that size. Many of the descriptions of films had to be cut down to fit the card or were cleverly overlapped by the pupils who were assisting in the job.

As a result of a little horse sense and efficiency our files have been consulted at least 300% more than they were in previous years, by admission of the file consultants themselves. To advertise to our eighty-seven teachers the advent of the new system of finding films we issued a bulletin listing all the classifications we had made. We did not use the Dewey Decimal System for it must be admitted that not all teachers understand the system and its mysteries . . . even those with their

ROBERT B. NIXON
Director of Visual Education
Radnor Public Schools, Wayne, Pa.

master's degree. We catalogued by subjects covered in the curriculum and those units or topics found under those subjects. With the exception of Chemistry, Physics, Geography and Economic Geography there was little need for cross-indexing.

Each card has printed on it the additional data following: source (in code), sound or silent, size film, subjects listed under, free or rental fees, color or black and white. The source is that which we use most frequently. There is no need to place on our cards the sources in far western United States or more than one thousand miles from "home". Rental fees are for one day and two days. With this information the teacher ordering films is armed with the material to copy on her order blanks (one for each film) made the same size 3" x 5". From her order blanks we can make the final order to go to distributors and file her blanks for future reference when film bookings are confirmed and films received.

Why can't all film catalogues be in card index form . . . sent us in such form by the producers, distributors and libraries of films? We spent hundreds of hours (pupils' and teachers') making this catalogue. It took two catalogues of each kind to make our catalogue on filing cards. Wouldn't it be more economical, for example, to receive from Y.M.C.A. a bundle of cards to be placed in our files with instructions to discard cards of films which have been discontinued? Visual Education Directors would be willing to pay for catalogues if produced in this form. They would mean order instead of chaos in cramped quarters and time-pressured atmosphere of carrying a regular classroom schedule plus visual education duties. EDUCATIONAL

(Photo courtesy Charles C. Smith)

(Left) Grace Filler of Radnor High patiently tries to find films for use in her English classes among a variety of catalogues. Both teacher and photographer got a little out of focus attempting to find the film desired. (Right) Once catalogued as a card index file, films are easily found, with resulting increase of orders from 300 to over 600.

SCREEN should wage a campaign to have all films offered schools announced in this form. Such announcements would be saved rather than tossed into a crowded drawer or waste basket . . . and forgotten.

Order Blanks

With the many duplications of old and current catalogues we also inherited Heinz's 57 varieties of order blanks. They measured from post card size to twelve inches in length! Imagine keeping such a bedlam of forms in order?

We thought we had the problem licked when we mimeographed 8½" x 11" letter-heads for our requests. Our greatest trouble came from the library of a very reputable scientific organization which insisted upon our using their twelve inch forms. Truthfully, half of the form is devoted to information concerning the borrower and the binding agreement relative to loans. Nobody among that worthy host of scientists has thought of printing all this important data in fine print on the back of the form and thus reduce its total size to that which will fit into the drawer of the Visual Education Director's desk. They seem to think orders are written in front of a filing cabinet rather than seated at a desk.

Our suggestion would be that EDUCATIONAL SCREEN draw up a standard order form for borrowing films from any library or organization and that form be mimeographed by borrowers on letter size paper and be accepted by all organizations. Then we would not have to bother with the red tape incidental to borrowing films from a certain company which tries to make one feel, from the appearance of their important forms, that their films are very outstanding, but which, once secured, are found to be quite ordinary.

More About Catalogues

Found in the welter of catalogues, tossed to the jaws of the pulper, were a host of screamer and high pressure announcements and catalogues. The screamer is generally an announcement which tries to worry the

teacher or Visual Education director into booking a film. What a waste of paper and talent! A little study of teacher psychology on the part of producers and distributors would perhaps unearth the information that our reactions to screamers and high pressure announcements are either cynical or "will read it later".

Then we have the seed catalogue type of film catalogue. Its purpose is to get you very excited and force you to want to order everything you see. Teachers are supposed to be like little boys in five and ten cent stores, who want to buy everything on the counter . . . with ten cents!! Generally mixed with the offerings in these catalogues are a goodly portion of pictures totally unsuited for any school, however moronic the populace. They are the cast-offs, blood and thunder, or never-been-booked films of the theatrical world. If such sources used a card index catalogue system we would winnow their chaff from the wheat, and, who knows, such sources *might* get a booking now and then. Now they get none. The chore is too great to wade through their lurid pages for that which is worthy of filing.

It might also be advantageous for film distributors to determine for themselves exactly when it becomes uneconomical for schools to order films at great distances from sources. We found catalogues from every point in the United States, many of them duplicates. Naturally we would not send to Iowa for pictures obtainable in New York City.

After a distributor has sent announcements of pictures, and he knows such information has been filed, he could spare both himself, and the sponsor, the additional expense and labor of sending forth additional announcements of the scream brand to public waste baskets. Some much misinformed publicity experts have decided that such material *must* be pumped into the mails at periodic intervals to jolt us into booking their products. Ah! And we must not forget the return order post cards . . . Two cents will be paid . . . if you ever use this card. From one company producing excellent, sponsored films we now have enough post cards to

keep us supplied for five years according to our current bookings. Only we don't use them for orders, but for holding dabs of paste in mounting pictures for our opaque projectors!

Centralized Libraries

To avoid confusion, and to eliminate duplication of effort in the non-theatrical film world, we should embark upon a system of full coverage, centralized libraries for free distribution of films, or low rentals for films. It is time the producers of sponsored films get together and create those distributed centers. It is imperative that it be recognized that many schools will never have in the near future, sufficient funds for many rentals unless those rentals are low . . . quite low. No single reel subject, color or black and white, should rent for more than 50 cents per day. Postage or express charges in addition puts this well over a dollar. This is also a good argument for more sponsored and "adapted" films.

When one hears war-boom-happy teachers talking of money for rental films in terms of, "Let them find the money", one begins to understand better why rental libraries charge all the traffic will bear. It is as silly as the teacher's attitude toward the Teaching Films Custodians project, "They're going to make a lot of money from those pictures." The sane reply was, *How? When? Where?* Patrons are not going to take food from their children's stomachs or shoes from their feet in order to provide talkies in poorly heated classrooms.

Coupled with centralized film libraries comes the recent growth of many film libraries. It seems Uncle Sam with his O.W.I. films and Co-ordinator of Inter-American Affairs products (some pretty poor product) sold every ambitious college on the idea of a film library. Probably it was these pictures which set them up in business. We blush when we admit we tossed out five waste baskets full of announcements and catalogues of such "libraries" when we cleaned our front yard recently. They were merely a two years' accumulation. Many were hurriedly mimeographed, and what mimeographing! One almost prays for a deep depression in which to bury these over-duplications, while rigorous retrenching is required of the colleges offering government films and what others they have gathered under their wings.

Teachers resent the "service charge" incidental to such films. They know it is a rental in disguise. An efficient system of handling films might not require as high a fee. If these libraries bought such prints then we are being charged for something to which every taxpayer is entitled, for are not these films produced with tax money? Educators should have the courage to avoid euphemisms and say bluntly, "there is a rental for these films".

Teacher Training

One is not a Director of Visual Education very long before he discovers, if he did not know it before, that many teachers are unable to operate the simplest projection machine. They are not the old teachers either. The fault lies with the courses offered teachers in Visual-Auditory Aids. The instructors in these courses seem to carefully avoid the teaching law, "one learns

by doing". If a Projection Club teacher in a high school can find time to teach twenty boys how to operate every type of visual education machine in a semester's time, then the same could be done with teachers in a teachers' college in less time. Not only do teachers not know how to operate, but they do not know the correct names for machines or materials projected. This is because they have much "book larnin'", but little practical.

They also do not know how to use films effectively. The causes seem to be (a) Manuals for teachers seem too involved, leaving the teacher in a muddle. (b) Manuals seem too long. (Who knows, the modern female teacher might have a date?) (c) They seem ignorant of a few simple rules which can apply to any film, and which will be effective. (d) Few colleges teach subject matter combined with a methods course. The writer knows of several subject matter professors who resented a suggestion that the teachers be told how to apply to a classroom situation the things they were learning. It can be done even with "fellow student teachers" as "pupils". Teachers then would enter classrooms armed for action, rather than having to feel their way cautiously, or never even venture into using visual aids. For not every teacher uses them. And she alone knows the reason.

Projection Equipment

Our post-war stillfilm projector should be at least 750 watts equipped with a fan. Then we could use it for auditoriums as well as classrooms. With a variety of focal lengths in lenses it could be adapted for use in school theatrical productions where "trick effects" and special scenes were desired. This is another story in itself.

Inexpensive, standard approved curtains or methods for darkening auditoriums and classrooms should be developed. The stiff fabric, black, bellying, shrinking shade is not the answer any more than the sagging soft cloth shade. Once they are installed they become the teachers' and the director of visual education's headache. Our schools need more powerful opaque projectors, which give a clean-cut focus of pictures on the screen. If necessary thousand watt bulbs should be used with more powerful fans.

Cleaning Up

Prior, then, to embarking on our stratospheric post-war plans for audio-visual education, let's get down out of the air. Let us first get our front yards in order. This cleaning job concerns many things: Efficiency in our office routine; right handling of mechanical procedures; systematic distribution and advertising of productions; training of teachers; better projection equipment; and general recognition of the need for closer collaboration between makers and users.

Next (and this will be for a second article) let us get our teaching material in order—films and slides that are right in form, content and quality. It is a matter of sharpening old tools preparatory to making and using new ones such as, for example, the alluring but still more or less unknown quantity . . . television!

Building from the Ground Up

A valuable example of proper, practical procedure for directors of "non-existent" audio-visual departments.

LAST fall, I returned from a summer's work in the Audio-Visual Workshop of the University of Southern California, to find myself director of a non-existent department of audio-visual education in our building. Like thousands of other schools over the country, we, too, are eagerly awaiting the arrival of our sound projector and other equipment. While we wait, we are building up our department of audio-visual materials and aids.

Our first problem was locating housing space for materials and equipment. The only available space in our crowded building was a narrow, dungeon-like runway back of the gymnasium. Rather than establish an audio-visual department in this uninviting place, we decided to use my own cloakroom (I teach a third grade) as a temporary workshop and housing center.

The first step in initiating a functional program was to start a picture file. A committee of teachers met and made plans. They decided to have a magazine-collecting campaign. Newspaper notices and school announcements brought in hundreds of fine magazines. Complete files of magazines for a year or more were placed in the library; the others were used for our files. A group of sixth grade girls met during a free period and cut out desirable pictures. Teachers worked from time to time, selecting and mounting pictures.

All of the pictures are to be mounted on appropriate colored paper, and re-mounted on a heavy tan or black mounting board. The pictures are temporarily filed, in large brown envelopes, under such unit or subject headings as: transportation, farm, animals, Indians, etc. These subject headings were chosen from lists submitted by the teachers. At present, a discarded sand table with a hinged top houses our picture file. As soon as a large steel file is available, the pictures will be transferred to it. We plan to buy, each year, pictures which the teachers need. The most valuable colored pictures will be protected with transparent mounting tissue or lumarith to preserve their colors. A mounting press is an essential piece of equipment for mounting pictures. We hope to have one soon.

Early in the fall, the teachers in our building gave me a list of their units or subject areas. I am using these in looking for audio-visual materials: stereographs, filmstrips, slides, unit portfolios, films, and museum models. There is much free and inexpensive material which is especially good. Some of the sources of this material are: *The Grade Teacher*, October, 1945—a page of coupons for mailing; *The Instructor*, November, 1945—Visual Education Materials III—Posters and Charts, Part I; *The Educational Screen* (frequent lists); *The American Federation of Railroads*—Transportation portfolio; *U. S. Office of Education*—pamphlet 80, "Sources of Visual Aids for Instructional Use in Schools" (fifteen cents).

MARIAN KATHLEEN WHITE
Director of Audio-Visual Education
Smith School, Deming, New Mexico

Our Smith School Museum was created when the third grade donated a mud dobber's nest they were studying. Soon other objects were donated. The gift of three types of Indian dolls was the beginning of our historical doll collection. At present, the museum is housed in a discarded old book case. When display cases are again on the market, we plan to have one for our museum models and specimens.

In the improvised audio-visual aids' nook, there is a bulletin board where letters, advertisements, announcements, and audio-visual news is posted. Once a month, I hectograph an Audio-Visual News Bulletin. This sheet tells of any new material available, or anything of interest in the audio-visual field.

A radio and record committee is working now on a

(Upper) A third grade group has just finished cutting a record, culminating a study unit on transportation.
(Lower) Transportation pictures used in the project.

plan for more efficient use of radio and records in our school. They are looking for radio programs and records adaptable to our course of study. We have an old victrola, a radio and record player. The high school has an excellent public address system with a voice recorder and transcription player. So far it has not been used much in our building. We hope it will be used more in creative work, remedial reading, and in making general informational records for classroom use.

Since we plan to use the sound projector in the classrooms, we are still reading and discussing methods of darkening the rooms. There seem to be several darkening methods which have been very successful: curtains on metallic tracks, roller shades, and other mechanical devices. We have found these books and pamphlets helpful in our study of efficient class-room darkening: *Motion Picture Projection in the Classroom*, Frances Noel; *Architects' Visual Equipment Handbook*, Bell and Howell Company; *Educational Screen* (several articles).

We dream of having, in the not-to-distant future, a large audio-visual auditorium. It should be acoustically good and well equipped with projectors, radio, victrola, maps, globes, rotating bulletin boards, working space, stage, steel files, film storage space, ample cupboards, and glass display cases. Such an auditorium would be for the occasional group showing of films. It would not take the educational film out of its rightful setting in the classroom where it is an integral part of the educational experience. This audio-visual auditorium may be added as a wing on our elementary school building. A definite building program is being planned, and a bond issue will be submitted to the voters this spring.

The funds for the purchasing of materials and equipment come from a supply and equipment fund which was provided for in the 1945-'46 budget. Also, there is a special Smith School fund accumulated from the gate receipts from entertainments. We already have a slidefilm projector. This year we can pay for a 16mm sound projector, a few stereoscopes, stereographs, viewers with films, kodachrome slides, filmstrips, pictures, and museum models. Next year we plan to purchase an opaque projector, a mounting press, a glass case museum, a picture file, and additional slides, filmstrips, and records. We will rent most of our sound films.

Since many of our teachers have not had courses in audio-visual education, we have decided to have discussion meetings and actual presentation of film lessons in our teachers' meetings. There is a possibility that an extension class in audio-visual education may be offered later in the year.

The delayed arrival of our equipment has been an asset rather than a detriment to our audio-visual program. It has given us an opportunity to collect and organize our materials, to gain a knowledge of the functions and purposes of aids, and to plan for their efficient use.

When our program of audio-visual education is properly functioning in all of our buildings, we hope to

accomplish these objectives:

1. To take as much verbalism as possible out of education and replace it with vicarious experience.
2. To encourage and stimulate student initiative through participation, in mental, manual, and physical forms of endeavor.
3. To provide greater knowledge, understanding, and appreciation of the world and its peoples.
4. To provide clarification of all subject matter.
5. To improve classroom instruction which will lead to better learning and, hence, to better living for the children.

A Reader Speaks

THOUGH you might be interested in knowing that the West is beginning some signs of life in the audio-visual field.

Recently the Pueblo Junior College Board voted to develop an audio-visual materials' center with resources amounting to \$10,000. With \$5000.00 worth of educational film already in its library, it decided to add an additional \$5000.00 worth of teaching materials.

For the past two years we have been developing a service for the educational institutions and adult organizations of this county. The Department of Visual Education served as a coordinating agency for all the schools and organizations and it secured the requested audio-visual materials from various libraries in the country for those requesting them. Now that the projection facilities have been doubled, the Junior College Board felt that additional resources should be made available on a local basis. It is an interesting pattern that has developed—a pattern that might be followed by other regional centers in the country.

An Advisory Committee is now being appointed to assist the Center in directing its activities in channels conducive to the best of those being served. This Committee will consist of the audio-visual coordinators of the various school districts in this city and representatives of adult organizations. The rural schools will also be represented by the county superintendent. It must be remembered that the Junior College operates as a separate educational unit, having its own board, its own assigned mill levy and serving the county and surrounding territory. It might further interest you to know that each educational unit has asked that the Junior College serve its audio-visual needs, especially its film needs.

In-service and pre-service training courses will be instituted. An annual regional workshop will be held and an annual conference sponsored.

The Center will not only organize projected teaching materials, but also plans to prepare non-projected picture materials for rural schools not having electrical current. It expects to prepare sets of teaching aids that will coordinate with units of instruction prepared for the schools of the county. The Center is strategically located to serve the interests of all educational groups in the County.

ERNEST TIEMANN, Director
Department of Visual Education

What Bird Is That?

Showing the "how" and the "why" of building films for effective teaching of a specific topic—bird identification.

DAVID SCHNEIDER
Evander Childs High School
Bronx, New York

WHENEVER any one is suddenly startled by the sight of a colorful bird in flight, or one about to perch, the first impulse is to ask, "What bird is that?"

The best pedagogical method of answering this question is the one suggested by Mr. William F. Kruse, manager of the Films Division of the Bell and Howell Company, namely, "... to build upon the knowledge and experience of the student body, rather than merely hand out an informational capsule that represents the superior wisdom of the teacher or the teaching film producer."

Heeding this excellent advice, I set out to re-edit several hundred feet of color film on birds, which I shot in the past few years in the backyards, woods, gardens and parks. Having seen the re-edited version, Mr. Kruse was very much impressed by the different approach used in this particular teaching film. Such presentation also seems to accord with the requirements for teaching films as formulated by Bruce Findlay in the EDUCATIONAL SCREEN for September, 1945. After such endorsement, the next step would seem to be—invite others to see it.

What is this different approach? In the first place, each reel is a complete film lesson—not merely a visual aid. Each reel on bird identification, following best pedagogical procedure, starts out to motivate the lesson.

"To those who don't know, anything in feathers is a 'bird'."

"But it's more fun to recognize each bird by his 'coat of arms.'"

Each bird is then introduced moving around in places familiar to the average student. Close-ups follow close-ups, as the film guides the students in observing such characteristics as size, color, particular identification traits, habits, etc. Each concept is introduced one at a time, before revealing the next one—even high school students prefer meeting new concepts one at a time, instead of having them lumped together. The name of the bird does not appear until the very end of each sequence. In this way the experience and the knowledge of the pupils—their apperceptive mass—are built upon and amplified.

As previously pointed out, since this film is not just another visual aid, the number of bird sequences presented in one class lesson can be made commensurate with the ability with which a class can absorb them. Thus this film actually invites the teacher to stop the projector—a good habit to cultivate in using educational movies—at any point, without fear of losing the continuity of

Safety With Fire:—In Hand-Made Lantern Slides

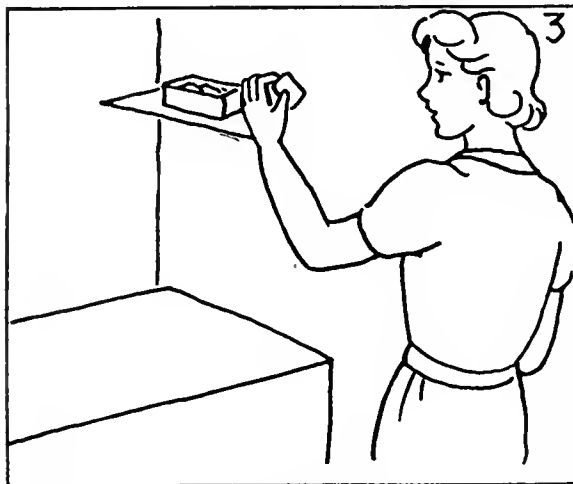

By ANN GALE

Roosevelt High School, Chicago

PRI-MARY children may be made conscious of the dangers of fire and of simple things to do when a fire occurs by means of a series of slides.

- 1.) Keep a good distance away from bon-fires. The wind may change suddenly and set fire to your clothing.
- 2.) Let your mother do the cooking. Fires in stoves and hot pans have caused many serious accidents.

- 3.) Be sure the adults in your home keep matches in a tin box out of reach of small children. Use "strike-on-the-box" matches.
- 4.) When a fire occurs, call the fire department and report the location of the fire, and the address of the house.
- 5.) Roll a rug, blanket or coat over a person whose clothing is on fire.
- 6.) Water, sand, or dirt will stop a small fire.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

The Curriculum Clinic

Improving the Audio-Visual Program

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

“WE WENT to a P. T. A. meeting at Joan’s school one evening last week. The meeting concerned visual education, how it is being introduced into the curriculum, its future use, etc. We saw about an hour of film, showing how films may be used and also several actual educational films for various grades. It was our first P. T. A. experience besides our introduction to a new form of education.”

So wrote a friend and former Washington neighbor who had returned to his home town in Illinois. And likely his experience is being repeated in school communities all over the country as visual education is being discovered by school after school, and as wise school administrators interpret to the parents what the school is doing. Administrators and parents alike are ready for the development of a visual program in their schools, and they’re doing something about it. This is a sharp contrast to the pre-war years when schoolmen and parents alike were dubious and skeptical. Even if they recognized the term “visual education”, it was difficult to convince them of the values of visual media.

One of the most encouraging signs I have noted since returning to my home town is the number of school people who are asking, “What can we do to improve the audio-visual program in our school?” This is not mere tolerance of an idea and casual interest; this is *acceptance*. They are taking the initiative. They believe in the use of visual materials. They want to know about all the materials they can use and how they can use them most effectively. They want to know how they can improve the audio-visual program in their schools? Well, how can they?

It seems to me there are three important areas demanding studied analysis and planning in any such improvement program. These same three areas are also components in the development of a new audio-visual program in a school. And they apply to an audio-visual program in a single school or in a school system. These three areas are: (1) **Materials, equipment, and facilities**; (2) **Organization and administration**; and (3) **In-service training for utilization**.

There is a tendency on the part of some administrators to want to put first emphasis on the third—assisting teachers in their use of visual materials; but if there must be a sequence, the order as listed seems most logical to me. There’s no use working with teachers on their plans and techniques for using visual materials, unless efficient organizational procedures have been set in motion for their getting the materials when they need them. There is no need for organization and administration until you have the materials, equipment, and facilities. Ideally, however, attention should be given to all three areas at the same time, and consistent advances must be made in all three if improvement is to take place.

At the present time, at the specific request of the principals, we are making intensive studies looking toward improvement in two of our largest high schools. We are also planning our improvement program for the whole school system with the same guiding outline. In the high schools we are studying the physical plant as it has never been studied before. We’re finding out where the needs are as well as where the electrical outlets are. And we are setting up higher minimum standards of projection room facilities in anticipation of an expanded use of projected visual materials.

In addition to merely inventorying the existing audio-visual materials and equipment, we’re checking against higher standards and making definite plans for acquisition. Provision will be made for expanding libraries of visual materials within the schools—especially those lower unit cost items such as filmstrips, records, and transcriptions, which too frequently have been circulated in the tradition established for films.

“Within any school system the audio-visual program should be organized in each school. An educationally qualified person with organizing ability should be named director or coordinator for each school and his teaching schedule adjusted to permit him to perform his functions.” This straight forward statement in the American Council on Education’s helpful pamphlet, “A Measure for Audio-Visual Programs in Schools”, is followed by a specific listing of functions for such a coordinator. Such responsibilities as “informing teachers about available materials”, “ordering audio-visual materials”, “scheduling aids and equipment within the building”, and “working with teachers in improving utilization” must be met by someone within each school if that school is to have any adequate audio-visual program. Whether or not someone is definitely assigned to such responsibilities will be determined by the size of the school, the financial support for such assistance, and the sincerity of the desire for an improved audio-visual program.

Much could be said and much is being said about an in-service training program to improve utilization of audio-visual materials. I want to say just one thing—now. There is too much reliance upon formalized teaching of teachers and too little recognition of the value and necessity for continuous informal helps. In-service training is involved in every phase and procedure of an audio-visual program from the selection of a film, to the way that film is listed in a catalog, to the procedures that have been set up for borrowing and using film. In-service courses have their place, but are not the final answer.

Recognizing the need for improvement is an indication of healthy dissatisfaction with things as they are. If things have been the way they are for too long a time, traditions may have developed which are difficult to change. “Mortal man dearly loves a tradition. It saves him from thinking.”

The ABC's of Audio-Visual Equipment

Edited by

ROBERT E. SCHREIBER

Projector Parade

THIS month the "ABC's Department" presents a pictorial, factual survey of currently available 16mm sound motion picture projectors adapted to classroom use—as a service to prospective purchasers and as a general informational feature. The models described and illustrated on these pages do not necessarily consti-

tute the only offerings of the manufacturers represented. Their splendid cooperation has made this presentation possible. This Department holds the philosophy that there is no "one best" projector for all situations; rather, specific situational adequacy should be the guiding criterion.

A. Ampro "Premier-10"

B. B&H Filmsound "179"

C. DeVry "16-1956"

F. Movie-Mite "63-L"

E. Mills "Sonovision"

D. Kodascope "FS-10-N"

I. Technical Service Inc.

H. RCA "DeLuxe PG-201"

G. Natco "G"

J. Victor Animatophone "40B"

TABLE OF CHARACTERISTICS OF THE 16MM SOUND MOTION PICTURE PROJECTORS ILLUSTRATED

Projectors	A	B	C	D	E	F	G	H	I	J
Approximate List Price	\$ 426	437	430	323	495	248	450	450	425	425
*Possible Lamp Size	1000	1000	1000	1000	1000	300	1000	1000	1000	1000
Lamp: standard or special	stan	spec.	stan	stan	stan	stan	stan	stan	stan	stan

Operating Speeds: sound and silent.	both	both	both	both	sound	sound	both	sound	sound	both
Reverse	yes	yes								yes
*Film takeup tension: uniform or variable	var	uni	var	var	var	var	uni	uni	var	var
Rewind: motor or hand	motor	motor	hand	motor	motor	motor	motor	motor	motor	motor
Belt and reel changes	belt lever	reel			belt lever				belt	belt
*Framer: standard or professional ..	yes	yes	yes	yes	none	yes	yes	yes	none	yes
*Tilting: set-screw or micrometer ..	yes	yes	yes	yes	none	yes	yes	yes	none	yes
Oiling: one-spot or several	one	one	one	sev.	one	sev.	one	one	one	sev.
*Amplifier: rated watt output	15	10	18	10	10	4	18	20	6	26
Inputs for mike and phone	one	one	two	one	none	none	one	one	none	one
*Speaker: Permanent or Electro Magnet	PM	PM	EM	PM	PM	PM	PM	PM	PM	PM
Rated capacity ..	25	13	20	10	10	4	12		8	15
Total weight of unit cased	74	81	85	72	184	27	73	85	43	65
Weight of Projector alone	32	51	45	41	one piece	19	55	57	one piece	47
Days Guaranteed .	unlim.	unlim.	365	unlim.	365	365	365	365	90	365

*Notes on the starred items in the Table above: Possible Lamp Size should be carefully investigated in terms of lamp voltage and rated hours of life; Film Takeup Tension—uniformity means here that provision is made for maintaining the same amount of tension on the film regardless of the amount of film on the takeup reel; Framer—the professional type framer frames the film without

changing its screen position; Tilting—the micrometer tilt affords changes in the angle of projection merely by turning a knob; Amplifier rated output and speaker rated capacity in watts are not an exact measure of useful power available, but indicate in a general way what performance may be expected. Performance under actual conditions of use is thus desirable in all cases.

ANFA 1946 Yearbook

The first "ANFA Yearbook and Audio-Visual Who's Who" (1946) has just come from the press. According to Horace O. Jones, President of the Allied Non-Theatrical Film Association, this "first yearbook of the Audio-Visual Division of American Photography" is designed "to help clarify and define the true nature, aims and services of the non-theatrical branch of the American motion picture industry."

In the Foreword, Wilfred L. Knighton, ANFA Executive Secretary and editor, states the book "offers a symposium of ideas as to current problems, trends, and aims in a transitional period between war and peace, and points the way to a greatly expanded industry."

Informative articles are offered by William F. Kruse, Bell & Howell Co.; William K. Hedwig, Nu-Art Films; Ben Kerner, DeMornay-Budd; Brigadier General Edward L. Munson, Jr., Army Pictorial Service, Signal Corps; Bertram Willoughby, Ideal Picture; C. R. Crakes, DeVry Corporation; L. Harry Strauss, YMCA Motion Picture Bureau; Thomas Baird, British Information Service; Chester A. Lindstrom, Motion Picture Bureau, USDA; V. C. Arnsperger, Encyclopaedia Britannica Films; E. A. Marquardt, OWI Bureau of Motion Picture, and others.

Valuable features are an Outline of a Course of Operator Instruction, and the 23-page "Who's Who" section which lists, both alphabetically and geographically, 16mm. industry personalities—educators, clergy, business executives, industry leaders and government officials.

Copies of the Yearbook may be purchased from the Allied NonTheatrical Film Association, 303 Lexington Avenue, New York 16, at \$1.00 per copy.

A Service for Science Teachers

Ward's Natural Science Establishment of Rochester, N. Y. has just announced the appointment of Miss Bertha E. Slye as director of its Science and Educational Research Department. Miss Slye will organize Ward's service for secondary and elementary science teaching, paying particular attention to audio-visual aids. Miss Slye has a rich background for this work. For the past two years she has been a consultant in the Westinghouse School Service Department. Previous to that she had wide educational experience as principal of a normal school, headmistress of an international school at Seoul, Korea, director of a children's laboratory at Grand Rapids, Michigan and just prior to her work at Westinghouse was a science teacher in the school, of Jackson, Michigan, where she pioneered in the school science club movement.

Classroom Films---What Are They?

TEACHERS and even specialists in the field of visual instruction are overwhelmed at the vast quantity of motion picture titles listed in the average educational film catalog. At first glance there seems to be a film for every classroom need and the teacher has merely to select the appropriate title and visual education begins.

Actually, when such material is critically evaluated in the same way we evaluate textbooks, it is amazing how little of it qualifies as classroom instructional material. While no one would think of using advertisements, propaganda handouts, and fiction as textbooks, it is not at all uncommon to find so-called visual education programs based entirely upon commercially sponsored or propaganda films or travelogs on the specious reasoning that they are very educational or very interesting or contain some excellent footage on this or that and are, incidentally, free.

Advertisers and propaganda agencies frequently design their films for use in the classroom, but their primary purpose is to promote interest in their products, services, or programs. True, a very skillful teacher may produce educationally desirable results from some of this material, but the results are likely to be uneven and unbalanced. It is like using buckshot instead of a high-powered rifle bullet to kill an elephant. The high-powered rifle bullet in this case is the instructional sound film.

A classroom film is designed specifically to utilize the facilities of the motion picture to assist teachers in imparting to students those attitudes, skills, and facts which are an important part of the educational curriculum. It is a teaching tool just as maps, globes, charts, laboratory apparatus, and textbooks are teaching tools. All of them enable the teacher to communicate with the learner with an efficiency beyond mere verbalism. The classroom film places at the teacher's disposal such facilities of the motion picture as animation to clarify abstract concepts, instant transportation to bring the world to the classroom, synchronized sight and sound, spoken rather than the less powerful written commentary, color and motion to simulate reality, time-lapse photography to speed up slow processes, slow-motion photography to slow down fast processes, telescopic and microscopic photography to give to all the benefit of these costly instruments, efficiency of time and space in recreating laboratory demonstration, and other techniques unique to the sound motion picture.

The instructional sound film uses the direct language of the motion picture medium to communicate information simply and effectively to the learner. It employs verbal commentary only to interpret and to clarify the projected picture. As in most learning it seems that sight rather than sound carries the load.

The instructional film does not carry a musical background to distract the learner from concentration on the picture and the commentary. Music is used as an

H. R. LISSACK, Vice-President
Encyclopaedia Britannica Films Inc.
Chicago, Illinois

integral part of the concept being presented. The instructional classroom film does not masquerade under a catchy title designed to intrigue a theatrical audience. It does not employ a rapid-fire and glib commentary designed to enthrall rather than instruct. It is not an illustrated lecture in which the pictorial material is merely incidental to the commentary.

It must be remembered that the instructional sound film is still in its infancy while the printed word has been an important medium of communication for five hundred years. Motion pictures that are only incidentally educational will be used by schools as general background educational material for their auditorium, club programs, and adult consumer education programs. In the classroom where every hour must be efficiently utilized, in order to reach the objectives of an ever-broadening curriculum, only the *classroom film*, designed specifically to assist teachers in accomplishing this teaching task more quickly and effectively, can properly claim a part of the classroom hour. True classroom films are professionally created to be used by teachers as an integral part of the regular school curriculum.

What Bird Is That?

(Concluded from page 127)

the film lesson or the interest of the students. The projectionist, even if he has to run the film back some distance, will find no difficulty in locating the particular concept that some student may have missed.

Finally, after all the birds of each reel have been thoroughly studied, pupils are challenged to take part in a game of trying to identify quickly, several of the specimens previously shown in the film.

Thus this film incorporates the essential principles of a good inductive lesson—motivation, presentation, comparison, generalization, (the latter two prove that no film lesson can be perfect without skillful teachers' guidance) and application. Good teaching technique calls for active pupil participation. This film does not permit passive reception on the part of the pupils. Instead it stimulates them to "take" so that in the end they can "give".

Part I of the series of "What Bird Is That?" is devoted to Brightly Colored Birds; Part II deals with Birds Chiefly Brown and Grey; Part III considers Shore and Water Birds. Bell and Howell Company are the distributors.

The Church Department

WILLIAM S. HOCKMAN, Editor

Play Fair With Your Visual Aids

PAUL R. KIDD, Director of Visual Aids
Christian Board of Publication. St. Louis, Mo.

“**H**AVE to be out of my pulpit next Sunday. Send my wife appropriate film to show,” read a telegram we received one Wednesday.

“We don’t like our slide projector. Our children are used to movies and slides bore them.” wrote a Sunday school superintendent in a letter of complaint.

“I want to buy a sound movie projector and run our Sunday night movie theatre out of business.” a minister recently told me at a church convention.

Last minute planning . . . trying to use visual aids as a substitute instead of a supplement . . . using films and slides to entertain rather than teach—is this “playing fair” with projected visual aids? No wonder some churches do not get the results they expect from using visual aids! No wonder they get discouraged after a few attempts and put their projector away in a closet to collect dust and cobwebs! No wonder some churches are saying, “Visual Aids? Sure, we tried them but they didn’t work.” Ministers preach about the virtues of honesty, and yet some of them are being dishonest in their use of visual aids.

Visual aids *can* be used “at the last minute,” they *can* be used as substitutes for teaching and preaching, they *can* be used to entertain, *but they will not produce their best results* when they are used in this manner. These uses are merely superficial. When visual aids have inherent possibilities for so many more valuable and more worthwhile uses, why waste them on trivialities?

The use of visual aids has to be carefully planned for well in advance. Using a movie or film strip or slides in a Sunday school class session is not an “easy way out.” The proper use of these teaching aids requires more planning and preparation than would be necessary if they were not used. Visual aids that relate to the lesson must be carefully selected and previewed. Plans have to be made for preparing the group to see the slides or film. Questions for discussion have to be framed and ready to use following the pictures so that points brought out in the film can be “nailed down.” Plans for projects, further study, and investigation have to be made. The projector has to be set up, focused, room darkened, chairs properly arranged, and all the mechanics of projection attended to (in advance of class session!).

If films or slides are being used in a church worship service, the same careful selection and preview of related material has to be made. The service has to be carefully planned in advance—appropriate music, hymns, Scripture, prayer. The film or slides being used have to be thought of as a part of the entire service, and placed in the worship service to provide the proper climax.

The only honest reason for using visual aids in the church is to help teach and inspire people to lead Christian lives. If churches use visual aids as a means to this end, attending to the necessary planning and preparation required, they will find that the use of projected visual aids pays big dividends.

Winning The Peace

WE won the victory. Now we must win the peace. It must be a unified structure, impregnable against future aggressions.

The education of the folk of all nations is a requisite to that peace structure. The mother of education, the church, must do her part and she must use the new as well as the old tools of education.

Preaching is not enough. It reaches too few, and reaches them too un-convincingly. The film must be used, and the wide-awake church will use the 20 minute *Now The Peace*.

It challenges and informs the mind.

It summarizes the basic UNO program for world security. It shows the importance of joint action in solving relief, food, money and other problems—the roots of war.

Young people will respond to it if they are involved in its use. Plan a film-forum. Use it in a meeting of the men’s brotherhood, or the missionary society.

Permanent peace will not come drifting in. It must be earned, worked for, educationally pursued. Inquire about and book this film through your regular film source.

Not Quite “Untouched”, But Nearly

HERE are two paragraphs from a recent letter which have in them some excellent insight and suggestions. Numerous must be the languishing junior classes which could profit by such activity.

“We had two classes recently, one class of boys and one class of girls, fifth and sixth grades in school. They seemed to be losing interest. Attendance was poor and things were dragging. I undertook to combine these two classes and teach them how to make lantern slides with a view to making up a series of slides on the Nativity for the Christmas celebration.

“I have been recommending, for use in the public schools, handmade lantern slides for many years and have seen splendid work done—but I never before realized how much such activity meant to the children themselves. It seems to me that here is a field untouched by the Church and Sunday School—a field that would pay rich returns for the investment involved.” (G.E. Hamilton, Keystone View Co., Meadville, Pa.)

Yes, Mr. Hamilton, activity does mean a great deal to Juniors. I know of a youth leader who revived a group of high school young people by challenging them

to make a set of good slides on the most commonly used Christian symbols, same to become the property of the church upon completion. Dr. G. W. Leman's one-reel silent film, *Hand Made Lantern Slides*, (Int'l. Theat. & Tel. Corp., N.Y.C.) would probably prove very useful in launching and motivating a slide making project in the church.

Beyond Showmanship

WHAT is the matter with the church's use of films? According to one denominational leader (Rev. Robert Jordan, Director of Promotion, National Council of the Episcopal Church, 281 Fourth Ave., N.Y.C.) it is a *lack of showmanship*. His observations to this effect are given in a film magazine (*FILM WORLD*, October, 1945). He cites a case, and gives the clergy some excellent advice.

It's true. The church lacks showmanship. But, it lacks more than showmanship, Mr. Jordan. Showmanship relates to entertainment. The church's main use of film is certainly not for entertainment. Therefore, the church lacks something else. What is it? What has been your observation?

Religious Films and The Film Library

IN its December 1945 issue *FILM NEWS* presents a list of educational and commercial film libraries across the country. Every state and the District of Columbia are covered. Here are well-scattered distribution centers, staffed by experienced personnel, and operating under well-established rules and policies. Can these distribution centers serve the church?

Without doubt the commercial film libraries will say "Yes." They will serve the church if such distribution will pay its way. That is fair enough. Now, what about the film library which is an integral part of a city or state university library? Can this library, operating on a budget derived from tax sources, buy, lease, or accept for circulation, religious films—films on or about religion, and of especial usefulness to the church?

This question was taken to the Curator of Films of the Cleveland Public Library, Mrs. Patricia Blair, and her reply is significant:

"Our policy with films is the same as with books. We buy, accept, and circulate books on all kinds of religions and faiths. Every point of view is represented in our books on economics, for example. Why not the same with films? All we ask is that the film be reasonably good technically, and that it will be of use to the borrowing public.

"One thing does bother me. We cannot get some of the best religious films. They are not for sale to us because we do not charge a rental fee. Our films are free. The church from the start has been one of our heaviest borrowers. These users tell me that our films, many of them, are used in furthering the educational and religious purposes of their churches."

Then I put another question to Mrs. Blair: "If the mission boards of the Protestant churches would produce good 30-minute sound films on medical missions, on evangelistic missions, on educational missions, and on agricultural and industrial missions, and gave you

prints for circulation, could you accept them and would they circulate?"

Her answer was immediate, and challenging: "Why not? We have constant inquiry now for such films. They would circulate intensely and reach a tremendous audience."

Visualizing Books For Small People

WHILE childrens' workers have always appreciated the value of pictures in religious education they have, with few exceptions, been shy of projected pictures for small people.

This educational caution, not to be deplored by any means, is evidenced by a sentence from the Report on Visual Aids of the Children's Work Professional Advisory Section of the International Council of Religious Education: "It seems . . . unfortunate if pictures, movies and slides prepared by the teacher and presented to the children ready-made should supplant the creation of pictures, scenes, models, by the children themselves."

The workers with small children have been asking about films and slides for children four to seven years of age. There are almost no films, and very few sets of slides.

The Visual Education Service of the Yale Divinity School has made miniature slides of the illustrations in two justly popular books for the small child: *Ah Fu: A Chinese River Boy* and *Kenbo: A Little Girl Of Africa*. Each set contains 31 slides and sells for \$9.75. These stories stay within the common experiences of the small child—home life, pets, toys, birthdays, laughter, fun, and food. They will help awaken interest and encourage attitudes of friendliness.

Slides are also being prepared on Bible story books written by Muriel Chalmers and Mary Entwistle, and illustrated by Elsie Anna Wood and Roberta F. C. Waudby. *Baby Moses*, *Isaac of The Tents*, *When Jesus Was a Boy* are three of the titles in this Thomas Nelson & Sons series for small people.

The enjoyment of flat pictures by the small child and his creation of pictures can be, and often is, a highly individualistic experience. Every worker with children will recognize the necessity of keeping them close to their pictures, of keeping their pictures simple and meaningful, and of avoiding practically every film now on the market.

We believe, however, that some childrens' workers rule out too easily the projected picture with children four to seven years of age. It is possible that these workers with small people have not appraised the educational potential of the projected still picture in relation to the socialization and group integration of children? We invite those interested to throw some light upon this picture.

Visual Aid Courses

■ Mr. Loren E. Anderson, Superintendent of the Millwood School, Spokane, Washington, completed early in March a six-session course, "The Use of Visual Aids in Christian Education," in the annual leadership training school sponsored by the Spokane

Council of Churches which enrolled more than 200 workers from fifty different churches. The course was planned to help leaders understand and appreciate more fully the value of the visual method in teaching and to help them achieve some skills in the effective use of visual aids.

■ A course on "Visual Aids In Religious Education" was included in the Charleston (West Virginia) Co-operative Leadership School. It was taught by Rev. John Roy Wolfe and Rev. Z. B. Edworthy and concerned itself with the value of the visual method, the kinds of visual aids, the integration of visual materials in the curriculum, and practice in the use of the various projectors.

■ Dr. Frederick R. Thorne, Secretary for Visual Aids of the Presbyterian (USA) Board of National Missions, 156 Fifth Avenue, N.Y. 10, is teaching a credit course on visual aids in the church in Biblical Seminary which trains professional workers for the church.

New Releases

● *In His Name And For Their Sakes*, sixty 2 x 2 slides, has been produced by the Missions Council of the Congregational Christian Churches, 287 Fourth Ave., N. Y. 10, to promote interest in the Postwar Emergency Program of that denomination. With the set is a script which is recorded on five sides of five-inch phonograph records. Mr. House Jameson, of the Henry Aldrich show, did the commentation, and William Meeder, network organist, played the organ background for the presentation. According to Alexander B. Ferguson, Director of Visual Aids for this denomination, keen appreciation has met this type of presentation.

● *Teaching Juniors*, a 54-frame film strip in black and white, is to be used with standard leadership training courses, according to Rev. Howard E. Tower, Director of Audio-Visual Education, Methodist Board of Education, Nashville, Tenn. With it will be a resource manual. Price \$2.00; rental to Methodists \$1.00. This material is available, also, in 2 x 2 double frame slides at a purchase price of \$15.00.

Another Methodist production, *Let The Children Come*, is designed to help pastors, parents and teachers see that in doing their job effectively they are doing evangelism. The selling price will be \$2.00 for film strip, and about \$15.00 for 2 x 2 slides.

● *The Vacation Church School*, a set of forty six kodachrome slides with a script, should be useful in interpreting the work of the vacation church school to church and community. It can be obtained from The Methodist Publishing House, Nashville 2, Tennessee, for the purchase price of \$20.15.

● The Methodists are also preparing two sets of kodachrome slides to interpret the Intermediate Church Camps. One will be for use with camp leaders; the other is designed to interpret camping to the church constituency. They were to be ready by March 1st this year.

In Production

● Square Deal Pictures Corporation, Ossining, N. Y. announces that *Religion In The Family*, one reel, sound, is ready for release. *Sons of God*, three reels or more in sound, should be ready by this time. It is the story of a girl who, upon the counsel of a pastor, finds a solution to her problems by relying more upon God and less upon herself. *Psalmody*, one reel, sound and color, is an inspirational film to be used in worship. *Pastorale*, one reel and in black and white, places emphasis upon God as the supplier of all good things, and upon the human race as one family. Quoting: "*Can Democracy Survive* gets into more of the social and economic questions and brings out the fact that if we are going to solve these problems and achieve a world of lasting peace it will be thru the application of the right sort of religion."

● According to FILM WORLD, Cathedral Films, Inc., Hollywood, has five religious pictures in production. *Blind Beggars of Jerusalem* (2 reels); *Voice in the Wilderness* (3 reels); and *Festival of Spring* (1 reel) are in the shooting stage, while another, *Strange Destiny* (3 reels) is being prepared. Incidentally, this latter film is a triple-threat movie, being checked as suitable for educational, entertainment and religious use. Encompassing such a spread of functions, like riding three horses at once, is a neat performance if it comes off. Usually it's the rider that comes off! *Hymns of The Church* (1 reel each) is marked available for release. All these are in black and white.

● A new production firm, Bond-Charteris Enterprises, Hollywood, have a film, *Nativity of Christ*, in production, but does not give the stage or notations on its character.

● Mr. H. H. Ragatz, Secretary of the Department of Visualization, American Bible Society (45 Astor Place, N. Y. 3) writes, "At the present time we have a script on the general subject, *How we Got Our Bible*, and hope to be in production shortly. It will be a sound (and we hope color) film and will run between thirty and forty minutes. We have several other scripts in preparation which deal with the story of the American Bible Society at work."

News Notes

■ Dr. Arthur O. Rinden, formerly Director of Visual Aids of the Missions Council of the Congregational-Christian Churches, now Director of Yale-In-China, New Haven, Conn., will return to China this summer. He will live in Nanking and be Visual Education Secretary of the National Christian Council. In his work he will cooperate with the Nanking University Department of Visual Education.

■ Mr. R. Russell Munn, Librarian, Akron (Ohio) Public Library, says, "We started the film library this fall and the first full month we circulated 252 films to a total audience of 36,000—a large number of them to churches".

■ A handbook on community film utilization, compiled and edited by a committee of the Educational Film Library Association, is to be ready for distribution by early spring. Here are some of the chapters: Planning Film Programs For Informal Groups; Hints On Film Forum Management; What Constitutes Quality In A Film?; Sources of Good Film; and, Care Of Equipment. These general chapters will be followed by shorter sections on the use of films with various groups and by various organizations, one of which will be, "The Use of Films by The Church". This book should prove valuable to all church leaders, and copies may be ordered from EFLA, 45 Rockefeller Plaza, N. Y. 20, N. Y.

■ Union Theological Seminary in New York City will offer a course on audio-visual education the second half of its summer school term, from July 29 to August 16th. It will be conducted by the editor of this department.

■ The General Board of Education of the Methodist Church (810 Broadway, Nashville, Tenn.) is planning a three-week seminar in visual education to be held at Emory University July 22 to August 9, 1946. The plan is to bring together some fifty persons to work on evaluations, standards, and production needs.

■ John Darling, assistant director of the Department of Religious Education, Reorganized Church of Jesus Christ of Latter Day Saints, Independence, Mo., writes that he hopes to conduct an institute on visual aids in connection with one of their general conferences which are held every two years.

■ The Department of Christian Community Administration in the College of The Pacific, Stockton, California, is planning a workshop on Visual Aids for the summer of 1946, according to Rev. Frank A. Lindhorst, Director.

■ The November-December issue, 1945, of the RELIGIOUS EDUCATION magazine, official organ of the Religious Education Association, is devoted to a symposium of ten articles on the various aspects of visual education in the Jewish, Catholic, and Protestant faiths. Those desiring to understand the thinking of the church in this field should not overlook this valuable issue.

Questions and Answers

Q. "Which is the best visual aid? A women spoke before our workers saying that the 'flannelgraph' had unlimited possibilities. Later another speaker almost 'sold' us on film strips."

A. All the visual aids are good for certain purposes. Don't solo with any aid. Use more than one. The good one for you is the one which does not overtax your ability or your budget. Start where you are. Use what you have—if it's only the blackboard. Learn to use it more skillfully. Find out about all the aids to learning—projected and non-projected. Inquire,

find out, evaluate, but don't let your church be "sold" on any one aid. Keep an eye on these columns. We hope to discuss the relative merits of the various aids in the work of the church.

Q. "After seeing some moving pictures, don't you think that children and young people will get restless looking at slides?"

A. Yes, if your use of films is a 'show', and double Yes if you expect slides to do the job unaided. If your objectives have been centering in entertainment, then the film will be more interesting to your children. Slides will not be unfavorably compared with films if you are *using* both to accomplish some definite learning outcomes and have not just been putting on *shows*. Young people like to work with slides. They are manageable. They can even make them. Again, try having the young people take part in the program—in its preparation as well as its execution. Send a stamped and addressed envelope for a copy of a slide program which did interest young people.

Q. "We bought a fine projector and we have had a few shows on Sunday night for the young people, but we are running out of good movies. Where can we find some?"

A. You're in church business; not the show business! Your job is primarily education—and this process is many-sided, of course. You wanted to get into 'visual education'. Other churches were doing it, and you joined the parade. No doubt you did spend time selecting a good projector and screen. Did you and your official board and pastor spend any time figuring out just *why* you wanted to use films, and just *what* you wanted to accomplish? You are not running out of films. The catalogue is full of them. You are running out of films which articulate with your nebulous ideas of what you are trying to do. You speak of "shows". You refer to "good" films. Films are good *for something*; not just good. Visual education is more than a "show" now and then.

Your trouble is deeper than finding a source of films. You need to re-study, re-think, re-orient your "shows" and make them a part of an on-going religious experience. But, this you can do: Get all the film catalogues you can. Study them; annotate them. Put down some things you would like to see your young people experience and learn. Now check over the films to see if there be a few which will help you teach these things.

"We Used . . ."

What did you use? What was your purpose? What was the group? What was your technique of utilization? How did things work out? Reach any of your goals?

This department will welcome such contributions. Make them brief and specific. In telling others you will improve your ability to plan and execute programs, and at the same time you will help other people. What did you use, and why and how, and what were the results?

(Write direct to the Editor of Church Department, William S. Hockman, 2043 Mars Ave., Lakewood 7, Ohio)

There is No Substitute for Experience

NOW available for rental

these latest instructional 16mm Sound Films

DINNER PARTY

2 reels — color

The problems of table manners are entertainingly developed in this story about a semi-formal dinner party arranged by teenage Betty, in honor of the birthday of her friend, Bob. Stimulates students with a desire to learn socially correct table etiquette by projecting them into a practical situation wherein they may identify themselves with the characters in the film. Rental \$10.00 (In series \$7.50)

JUNIOR PROM

2 reels — color

A companion film to "Dinner Party" employing the same method of presentation, and contributing with equal effectiveness to the cultural development of young people by dealing with the etiquette of "dating". The story is built around a junior prom, and against this setting is portrayed a pattern of standard, positive behavior for high school and college ages. Rental \$10.00 (In series \$7.50)

WE THE PEOPLES

1 reel — black and white

A documentary film presenting the story of the United Nations Charter. Recommended for its clarity of presentation. Shows how man's desire for peace and his abhorrence of war led to formulation of the Charter. The aims of the Charter are discussed and explained in detail. Accompanied by teachers guide. Rental \$2.00.

SAFETY BEGINS AT HOME

1 reel — black and white

Employs the story form to present home safety principles. Preparation for a home party by three small youngsters provides the background to emphasize the various safety hazards found in the home, and how they can be avoided. Accompanied by teachers guide. Rental \$2.00.

RIVER OF CANADA

2 reels — color

Industrial life and natural scenes along the great St. Lawrence. Shows Kingston, Queens University, Fort Frontenac, old Fort Henry, "The Thousand Islands", Montreal, Sorel, Trois Rivières, Quebec, the Ile d'Orleans, the villages of the lower St. Lawrence, Past the cliffs of Cap Eternal, down to Gaspe and the open sea the St. Lawrence provides access to great inland harbors of the world. Rental \$7.50.

TOMORROW'S TIMBER

2 reels — color

Canada's timber resources and lumber industry. Canadians have built their homes and their machinery from their land's vast timber resources. Now rayon and plastics are also made from timber. Forests with their rivers and streams give health to local agriculture. Forest fires must be guarded against to protect tomorrow's precious timber. Rental \$7.50.

PAINTERS OF QUEBEC

2 reels — color

For several hundred years French Canada's farms and woods and rivers have stirred to song and painting, the settlers whose ancestors came from Northern and Western France. Here are shown examples of the works of seven Quebec painters. Interspersed scenes of Quebec Province, the oldest settled territory in the Dominion, show that it is a land of great dignity and strength. Rental \$7.50.

PEOPLES OF THE POTLATCH

2 reels — color

Life and customs of the Indians of British Columbia. The area is called "Potlatch" after the winter feasts held there long ago. Intimate closeups are shown of the Indian's chief occupations—both of the men and the women. Ends with colorful scenes from "Sports Day" which has now taken the place of the old Potlatch festivities. Rental \$7.50.

PORTAGE

2 reels — color

Canada as the land of waterways and rapids. Her freshwater streams and rivers were replaced as the regular highways of commerce only by the coming of the motor car and railway. Early fur traders depended upon these routes and in turn on the light, swift canoe that alone could navigate them. Shows importance of fur trade to Canadian history, detailed building of a birch-bark canoe by Indian craftsmen. Rental \$7.50.

The Film and International Understanding

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

Straws in the Wind

THE extensive use of the film in international understanding was distinctly a war-time development. The great scope and rapidity of that development, as reported in this department from month to month, has been one of the most spectacular phenomena in the field of visual education. It involved educators and statesmen, departments of education and departments of state, schools and embassies, universities and national governments throughout the world, even the United Nations Organization itself!

What will happen to that development, now that peace has come? Will it be abandoned along with "surplus" war material? Will it continue to develop? Will it run into new channels? Or what will happen to it? Let us look at a few straws in the wind.

United Newsreel

How America is regarded abroad is in large part determined by the impact of newsreels on the 100,000,000 persons outside the United States who have been seeing events here as photographed and edited through that medium. It was recognition of this principle that caused the newsreel producers, during wartime, to place their facilities at the disposal of the Office of War Information. This wartime project, the United Newsreel Corporation, was dissolved in December of 1945, after tremendously effective work in psychological warfare.

The five newsreel companies now have pooled their resources as a peacetime overseas service. Financial aid from our government, through the Interim International Information Service of the State Department, was refused by the companies. Speaking on their behalf, Eric Johnston, President of the Motion Picture Association of America, said: "The heads of the newsreel companies acted in accordance with the principle and practice of free expression in deciding to continue the United Newsreel as an enterprise of private industry without Government supervision."

Report on Greece

The March of Time is acutely alert to the interests and trends of American interest and thought. It is significant to us that the current March of Time issue is the film *Report on Greece*.

The plight of Greece was highlighted by the dispute over British occupation which recently gave the UNO its first test. The world still remembers the heroic stand of Greece against the Axis; but few realize the distress which this sacrifice has brought her.

Report on Greece is a factual picture story, photographed on the spot, which reveals the situation in Greece today, ranging from the incredible inflation and the paralysis of transportation to the rise of new political parties and the efforts of the UNRRA to keep the Greeks alive.

It is a film such as Greek patriots themselves might have wished to make to arouse interest and under-

standing of their problems. But the March of Time feels that interest in such a problem of international understanding still is so strong among us that the production of such a picture for commercial purposes is a sound business enterprise.

War Activities Committee

Freedom and Famine, now being distributed at the request of the Secretary of State, the Secretary of War, the Secretary of Agriculture, and the Foreign Economic Administrator, is the 140th and final picture to be sent to theatres nationally by the War Activities Committee. This 12-minute picture is a factual portrayal of the day-by-day struggle of the average European family to fight off famine, pestilence and despair. It is the bitter fight to remain alive until another spring shall bring a measure of relief from weather and starvation. There are brief scenes of the flooded Netherlands, disrupted transportation in Belgium and France, worn-out and abandoned farms, the forelorn and frantic efforts of the French to rebuild their cities and restore their farms, without adequate tools and materials.

Closely allied to this film is the film *UNRRA Reports to the U. S.*, which shows how commodities and funds are used by this agency to alleviate the terrible suffering and starvation that presently exist in all the devastated countries of Europe and Asia.

Bilingual Films

Another important post-war development is the making of bilingual films. American film executives already have held conferences in Paris with Adrian Remague, managing director of Pathé, with whom pictures will be made on a bilingual basis, both versions being made simultaneously in French and in English.

Sponsorship of the first motion picture feature to be made in Mexico in both Spanish and English recently was announced. The film will be titled *The Pearl*, and will be based on John Steinbeck's "The Pearl of the World."

Film Group Formed for International Goodwill

Films of the Nations, Inc., recently formed in New York, is a non-profit organization whose members are composed of representatives of several nations. Its purpose is, among other things, to create better understanding and friendship between the nations of the world by means of films, to show with films, how people in other countries live, to promote, encourage and stimulate distribution of films of various nations in the United States and to have a central organization on behalf of these nations in order to act as liaison between them and the distribution channels.

One of the first objectives of the organization will be to try to adjust the prevailing uncertain conditions in the distribution field. It is generally realized by the Film Heads of many nations that uniformity of sales and rental prices and uniformity of policies will be

OF YOUNG AMERICA FILMS

"WHAT IS FOUR"

**it's an outstanding "first" in
the educational film field**

"What Is Four" is the first teaching film especially designed to help teachers build the vitally important basic understanding of number concepts at the primary grade level.

This 1½ reel, 16 mm film employs a scientifically balanced combination of action photography and animation to give children an understanding of the number "four" in concrete and abstract situations. Educational advisers for this unique film project were: Dr. William A. Brownell, Duke University and Laura Eads, New York City Board of Education. 1½ reels \$37.50 (black and white)—also available in color—price on request. (Film is accompanied by a Teacher's Guide.)

how to see this new film quickly and easily!

Your Young America State Distributor will arrange to preview for you any Young America Films you would like to see. For further details, write to your State Distributor or Young America Films, Inc.

**Other New Young America Films
to be Released in April**

"BETTER TYPING"
One reel curriculum film for the beginning typing student. Illustrates such basic points as: Posture and use of the machine—emphasizes rhythm and word patterns as means of improving speed and accuracy. \$25.00.

"FEDERAL GOVERNMENT"
Two reel curriculum film for high school students. Discusses functions and purposes of each of the three major branches of our Federal Government and illustrates interrelationships of each of these branches. \$50. Accompanied by a set of

twelve slide films dealing with specific branches and departments. \$2.50 each. (\$50.00 a set.)

"TOMMY'S DAY"
One reel curriculum film for primary grade health study. Traces one day in the life of a typical youngster and points out the basic health rules which he follows. \$25.

"HOW DO YOU DO"
One reel curriculum film for high school students illustrating basic principles of making introductions. Designed to promote poise and self confidence in social situations. \$25.00.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Materials and Equipment for School Buildings**—*School Executive*, 65:65 January, 1946.

The report on a building conference of school administrators, commercial companies and builders, included a discussion on the equipping of classrooms for audio-visual aids. It was agreed that the architect must plan for proper darkening, acoustics, ventilation, outlets and so on. There was disagreement as to the number of rooms that should be equipped. Flexibility and simplicity of handling must be the keynote in any program. A central room for storing, editing and previewing materials should be provided in each school. Science and social studies rooms might have greater provision for equipment than others. The auditorium should be equipped for film and picture projection, for radio and eventually television.

As for darkening, a curtain on a track was found best, since it also permits of ventilation.

- **Films Prove Value in Alexandria Schools**—*Virginia Journal of Education*—November, 1945 p.118.

More classroom showings of films were provided during 1944-5 by the Alexandria City School Film Library in its first year of operation than by any other one of the 15 city and county film libraries in Virginia. The service was organized as follows: Under the supervision of Mrs. Florence J. Perkinson, director of textbooks, and by the direction of the Supt. of Schools, an enlarged motion picture program was established. Mrs. Perkinson received special training for her work in the Bureau of Teaching Materials of the State Department of Education. Alexandria was the 10th school division of the state to begin the program of visual teaching.

Soon after the schools opened in the fall of 1944, a librarian or teacher in each school was designated to assist in the city-wide project. They were trained by the director, along the lines demonstrated in Richmond. These persons, in turn, brought information to their school faculties by individual conferences and by faculty meetings in which the director participated.

A list of the 150 films available was mimeographed and sent to all school workers. Films were loaned free for 4 days. Stress was placed upon showing films on lessons, instead of teaching lessons on films.

By the end of that year more than \$5,800 had been spent on new films and equipment, including \$1,500 of state aid.

Films used included those from the local library, some from the regional film library, and others from the State Board of Education.

Nearly all teachers have learned to operate projection equipment in their own classrooms. They have found the benefits of showing educational pictures at the right time, at the right place, and to the right group. The state has now allocated \$13,234 for audio-visual teaching aids for Alexandria for 1945-6.

- **A County Audio-Visual Center**—James McPherson, director, Kern County Film Library, Bakersfield, Cal.—*Film and Radio Guide*, 12:37 December, 1945.

There is a four-point program of audio-visual development:

1. Teachers and administrators have been taught the value in the use of audio-visual materials. This assures the support of all teachers in the program.
2. A wide selection of audio-visual materials has been attempted, and in sufficient quantity so that each teacher gets what he ordered when he wants it.

3. A guide to all materials is placed in the hands of every teacher.

4. Schools are assisted in keeping equipment in good order.

- **A Quarter of a Century of Visual Aids in the Geneseo Township High School**—Arthur L. White, director of visual aids—*Film and Radio Guide*, 12:33 December, 1945.

A method of film and filmstrip use in this school includes the training of student operators and teachers to handle machines. Teachers may examine film catalogs in the faculty lounge, and all films wanted are requisitioned by February 1st for the following year.

UTILIZATION

- **Films as Aids in Science Teaching**—Newman Rosenthal, Officer in Charge, R.A.A.F. Visual Training—*Progressive Education*, 23:156, February, 1946.

Successful use of training films in the armed forces developed three distinct types of films suitable for teaching:—

- a) *The lesson film*, usually a short film to be fitted into the teaching period. In science, it would usually be an explanation, in dynamic form, of scientific principles, as electrolysis, the working of a dynamo, etc. Also useful to demonstrate clearly skills in manipulation and experimental technique.
- b) *The "revision" (review) film*—for introducing or summarizing a unit of work. Emphasizes the whole, rather than the part.
- c) *The documentary film*—linking scientific principles to the outside world.

In a series of experiments conducted with 275 trainees, the use of a good educational film and a good instructor helped 90% of them achieve a passing grade. The analysis further showed that the films were especially helpful to the individuals at the lower level of achievement.

In the teaching of science, this experience of war time should be applied.

- **'G. I.' Method for Civilian Schools?** A symposium by three Michigan School Superintendents—*Michigan Education Journal*, 23:189 December, 1945.

Ralph E. Brant describes how he would apply what he saw and learned in the Army, and lists some of the things that made the program click. He quotes the Army researchers that 85% of what we learn reaches us through the sense of sight; 10% through sound or hearing; 2% through touch; 1.5% through smell; and 1.5% through taste. The Army, therefore, concentrated on the visual aids that would improve learning. Here is what the Army and Navy did to assure a good program: they selected only the best-trained personnel; they had unlimited funds; they allowed sufficient time for an instructor to prepare his lessons thoroughly; they provided continuous supervision; they had small classes, averaging 10-15 students. They regarded as their purposes in using training aids: 1. Learn more (as much as 35% more in a given time); 2. Remember longer (up to 55% longer); 3. Increase interest; 4. Make training uniform; 5. Build morale; 6. Save time.

The author points out that such a variety of devices were used to increase learning, that motion pictures, slides and filmstrips constituted only a small portion of the program. The blackboard and bulletin board, for example, were used in many ingenious ways.

Schools should designate a competent teacher as supervisor of the visual aids program with enough free time to assist teachers in developing aids for their particular classes.

(Concluded on page 142)

Don't be disappointed! Listed below are some of the most popular and most heavily booked feature length films for school auditorium showing. To be sure of the films you want on the dates you want them, you'll be wise to...

Book Next Year's School Films NOW!

We are glad of the opportunity to make our selection of preferred film titles and dates for the school year of 1946-47. We understand this is without obligation on our part and that we have the privilege of cancelling or changing any or all of them prior to shipping date.

films incorporated

330 W. 42nd St., New York (18)
 1709 W. 8th St., Los Angeles (14) 101 Marietta St., Atlanta (3) 64 E. Lake St., Chicago (1)
 68 Post St., San Francisco (4) 109 N. Akard St., Dallas (1) 314 S. W. 9th Ave., Portland (5)

Another writer in the group, C. E. MacDonald, considers the mastery of instructional techniques by the teacher as the first essential to classroom learning.

Supervision is here, too, regarded as very important in encouraging classroom technique.

RADIO

- **Radio's Role in Today's Schools**—William B. Levenson, Supervisor of Radio—*Nation's Schools*, 37:52 January, 1946.

Schools should be making greater use of radio for the classroom and for teacher-training, especially with the availability of new FM channels. The possible use of facsimile broadcasting (which is carried on through FM transmitters) will help to supplement broadcasts through teacher's guides, advance notes, etc. that are fed directly into the school.

- **Is Radio Educational**—I. Keith Tyler, Ohio State University—*Film & Radio Guide*, 12:32 January, 1946.

Radio can contribute much to international understanding in the future. It is important that representatives of education in the UNO and in national organizations recognize the importance of using radio. Other problems confronting international radio are: The conflict with paid broadcasts, danger of extremist propaganda, or of competitive nationalist propaganda

EVALUATION

- **Visual and Other Aids**—Maurice P. Hunt, Ohio State University—*Social Studies*, 37:33 January, 1946.

The best social studies films now used in schools, as well as the poorer ones—show a superficial approach to social problems. Too many films (like textbooks) deal with symptoms and fail to expose the causative trends or to point up basic issues.

POSTWAR ARMY TRAINING

- **And Pass the Education**—Beatrice Schwartz, Education Counselor, Camp Edwards, Mass.—*Progressive Education*, 23:86 January, 1946.

The U. S. Armed Forces Institute is concerned with the education of over 400,000 men and women now enrolled in correspondence courses, as well as with educational programs at each army post. The information and Education Office at each post gives individual guidance to the service man. Motion pictures, such as the orientation series, exhibits, filmstrips, and posters are used to encourage a will to learn more. Forums help, too. The War Department has stated that discussion is necessary to furnish information, to train men in democratic methods, adjustment of individual opinions and to strengthen morale by assisting men to recognize, analyze and understand problems that otherwise may trouble and confuse them.

PRODUCTION

- **Farewell, Hollywood!**—Edgar Dale—*News Letter*, January, 1946.

It took a war to demonstrate dramatically what the motion picture, divorced from the compulsion to entertain could do. The OWI, the United States Treasury, the United States Department of Agriculture, the Office of Inter-American Affairs, and the armed services were all successful in imparting information honestly.

*Now the 16mm. film is faced with a challenge, to make the information film an important factor in our national life. School films should be made that would fit into the current curriculum pattern, as well as those that are problem-centered.

Through the 16mm. film, the common interests of national organizations (as churches, schools, unions, granges, service clubs, etc.) might be linked. Films are needed for human relations education and citizenship.

Will non-theatrical films pay? Yes, in the sense that good books pay, good homes pay, and good churches pay . . . The typical Hollywood producer tries to make *good money*. Let us try to make *good films*.

- **Writing Script for Better Teaching Films**—Frederica Bernhard, University of California—*Journal of Health and Physical Education*, 16:492 November, 1945.

This is a unique article, since it gives vocational guidance to educators who would like to learn more about writing for films as a means of improving the quality of educational films. Information is based on the practice of one producer, and includes possible income and royalties.

PERIODICALS

- **Sight and Sound**, Vol. 14 No. 55 October, 1945—British Film Institute, 4 Great Russell Street, London.

A report on "British and Canadian Films in America's Middle West" by Marie Seton (p.94) is of interest to American readers. For example, the author found that the criticism of "accent difficulty" heard from some groups (as white collar workers) with respect to British films was completely ignored by school children and trade unionists whose concern was with the content. Miss Seton notes, too, that these British and Canadian information films are popular in the United States because there are at present no corresponding American-made films.

"Towards European Cooperation" by H. H. Wollenberg (p.91) is a summary of the newly-revived spirit of international cooperation in the film field. In September, 1945 an International Film week was held in Basle, Switzerland. The film theatres showed examples of great films from each of the countries. A congress of film artists, craftsmen, critics and others included lectures on various aspects of the cinema. One resolution passed at the meeting was a call for an International Film Conference; another moved for an International Federation of the Film Press.

Another significant article describes the methodical "Reich Institute for Film and Slides in Science and Education" (p.88) There were 45,048 silent 16 mm projectors in about 1,235 school districts. All German educational films were silent. There were 387 educational films, with 522,121 prints by 1943. The article gives further details on the organization and functions of the Institute.

SOURCES OF INFORMATION

- **Catalog of Business-Sponsored Educational Materials**—Committee on Consumer Relations in Advertising, Inc., 420 Lexington Ave., N. Y. C.

Separate section lists and describes over 160 films and slides on a number of topics, suitable for use in geography, general science, distribution, home economics and other subjects.

The entire catalog lists and describes a total of 792 aids issued by 214 firms.

- **Here's How It's Done**, A Popular Education Guide—Florence B. Widutis—published by the *Postwar Information Exchange* (now called The Program Information Exchange), 41 Maiden Lane, New York 7. 1945, 80 pp. Price \$1.00.

A handbook on methods of stimulating popular interest in national and international problems, based on a survey of national and local organizations throughout the nation which are carrying on programs dealing with these problems. The study presents the experiences of these agencies and methods developed for using films, recordings, posters, pamphlets, speakers, radio programs and other educational media. From this publication an active community leader or leader in the making can obtain a wealth of information about ways to give people facts and start them thinking.

A Directory of 280 national organizations which provide popular program and study materials is also included.

The Program Information Exchange also publishes the monthly Program Information Bulletin (\$2.00 a year for ten issues). The Bulletin contains articles on controversial public issues and descriptions of new pamphlets, films, recordings and radio programs.

Bring History to Life . . . with 16 mm. Talking Pictures

The re-creation of history in sound, motion and color is more than an unforgettable experience to the grow-

ing mind. It is the basis for building accurate concepts that words alone can never provide. That is why increasingly, 16 mm. sound films are becoming a necessary teaching aid in social as well as scientific studies. In this task of bringing history to life, the new Ampro 16 mm. sound projectors offer many advantages. For full details write for name of nearest Ampro specially trained educational representative.

Many Special Ampro Features—Ampro 16 mm. sound projectors are rugged, sturdy, compact, lightweight—and designed to give continuous efficient performance. Special Ampro features include: Simplified Threading System, Centralized Controls, Triple Claw Movement, Centralized Oiling System, Quick Set-up, Quiet Operation—and many other exclusive advantages. Write today for folder giving specifications, prices and full details.

School Made Motion Pictures

Preliminary Report on the National Questionnaire on School-Made Films

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

WE OWE it to our readers, especially to those who were kind enough to return their completed Questionnaires so promptly, to keep them posted on what other schools have been doing in the way of film production.

So far, we have heard from 17 States. Only a handful had more than one return to their credit. Two schools began producing films back in 1930. The fact that only a few were still turning out pictures in the last two or three years is a reflection of the critical shortage of photographic materials during the war years. There are also three distinct trends in evidence:

1. Production of real teaching films, after having cut "photographic eye teeth" on routine school events for the mere sake of recording school events.
2. The tendency to use more and more of the colored films in preference to black and white.
3. Attempts to add sound, first with records and microphones, then by placing it directly on the film.

These are very healthy signs that school-made films are growing up. In future issues of the EDUCATIONAL SCREEN we expect to continue to pass on to our readers accounts of some of the outstanding films (contents as well as techniques) brought to the attention of this department.

It's up to every one of us to keep the Questionnaires coming in. **To make our national file complete and up-to-date, we must have a separate Questionnaire for each and every school-made film.** Please send for your extra Questionnaire and prepaid return envelopes.

Question Box on Film Production

QUESTION: This has very little to do with school-made films. Nevertheless I'm sure you can help me. I occasionally help out with the school's visual aid program,—that is—when I'm not too busy with my other work. The results, to confess the truth, aren't very encouraging. Can you suggest some means of revitalizing our high school's use of audio-visual materials? We have a school population of 3,500 students and 127 teachers.

ANSWER: Your commentary on the results achieved in your school is typical of other schools whose audio-visual program is contingent upon the "spare" time some one can find for it. Other reasons for any school limping along in that department are:

1. Audio-visual equipment always hidden in closets. Many teachers not only do not see them, but don't even know that such equipment is owned by school or available for class room use.

2. There is no place set aside where a teacher can come in and preview films or slides.
3. There are too many details to be attended to, in order for any teacher to obtain the necessary audio-visual materials for the classroom.
4. Too much time is wasted in setting up and dismounting equipment (as much as ten to fifteen minutes out of every class period.)
5. Not enough students and teachers trained to administer audio-visual aids.
6. Equipment of all kinds not centralized.
7. Not all classrooms equipped with proper shades, screen, outlets, etc.

To bring about immediate improvements in your school's audio-visual program, you must make as many of the following changes as soon as possible:

1. Set aside one room on the main floor, preferably a room that teachers have to pass by as they check in or out of the building. This room should be provided with plenty of closet space to house all audio-visual equipment. Equip this room with screens, dark shades, outlets, etc. Several movable tables and chairs should be distributed about the room for teachers to use in connection with preparation or selection of slides, films, phonograph recordings, etc.

Add magazine racks to display periodicals and catalogues devoted to audio-visual material. An open book shelf containing references and other literature of the field would be an added asset. Do not omit an attractive bulletin board on which is to be posted pertinent up-to-date material of interest to teachers. A filing cabinet to house slides, film strips, films, recordings and opaque materials, together with an indexed list of all such material would complete most of the essentials for your revitalized program.

2. Have each of the heavier projection machines permanently anchored on separate tables. Place casters on the legs of these tables, so that they can be rolled out of the closets onto the floor of this room for open display. This will give teachers a chance to browse around and even "play" with the equipment. The mounted projectors can easily be rolled into other parts of the building. This will not only save time in setting up the machines. It will prolong their lives by reducing the amount of handling.
3. Assign one teacher to be entirely responsible for assembling planning, and administering the complete program for the whole school. The minimum time to be given exclusively to this project should be four periods of the school day, the

(Concluded on page 146)

"More Useful than Ever"

wrote a Director of Visual Education recently on receiving his copy of the new

21st EDITION

"1000 and ONE"

(1945-46)

The Blue Book of Non-Theatrical Films

He further stated that "1000 and One" has been "standard equipment in our Department for years, and we feel that we could not keep house efficiently without it."

This is typical of hundreds of comments in praise of the practical services of the annual film directory which reach us constantly.

This 21st Edition is the largest, most complete edition of "1000 and ONE" yet published—160 pages, 16 more than in last year's edition. The volume is so carefully and simply organized as to ensure easy and speedy location of all essential information needed on the 6238 classified motion picture titles described in the volume—number of reels, whether silent or sound, description of contents, distributor sources and prices charged by such distributors. Hundreds of subjects available without rental charge are included.

"1000 and ONE" answers YOUR questions about films.

first two of the morning and the last two of the afternoon. An ideal set-up is one in which the director of the program is on the job the entire school day.

4. Prepare printed or mimeographed order blanks for requisitioning audio-visual material. Under this plan all the classroom teacher will have to do is to fill in the information on the order blank. The director of the program will do the rest.
5. Organize regular class or squad to take care of entire audio-visual program, equipment, records, etc. for different periods of school day.
6. Give in-service course to teachers of your own as well as neighboring schools on preparation, utilization and administration of audio-visual materials.
7. Convert adjoining room to permanent projection studio. This room should be soundproofed. Rows of seats should be arranged on incline. Classes can be assigned to meet in that room whenever a lesson calls for audio-visual material that couldn't ordinarily be assembled in regular classroom.
8. Finally, a fund should be set aside for purchase, repair and maintenance of all necessary equipment to keep audio-visual program up-to-date.

QUESTION: I took some snow scenes on a day when I thought I could get some excellent shadow effects. When the processed film was projected the shadows appeared so thin that they looked almost invisible. In addition, too much glare was reflected from the screen. Please tell me what cinematographic sins omission and commission did I commit.

ANSWER: It's quite obvious, from the description of your film scenes that your pictures were very much over-exposed. Snow scenes are much brighter than the human eye is willing to concede. Therefore a reliable light meter must be used and its readings accurately interpreted. If your pictures were taken on black and white film, shadows are bound to be photographed thinner, no matter how dark they may appear to the human eye. This is due to the fact that black and white film photographs blue as a light color. The blue referred to is the actual color of shadows on the snow. (It's the blue light reflected from the sky.)

To darken these shadows, all you have to do is to add a deep yellow filter, which holds back some of the blue light, rendering the shadows a few degrees darker.

The only possible way to eliminate strong glare from any scene is through the use of a polaroid filter. Careful rotation of the filter to a certain position will reveal the scene relatively free from glare. When you get that position, be sure to slip the filter over your lens and shoot the scene from the same position you viewed it with your naked eye. Do not forget to increase your F stop to compensate for the loss of light when adding filters. The amount of increased F stop depends upon the filter factor given for each type of film. A polaroid obviates the use of the yellow filter.

Polaroid filters may be used with color as well as with black and white films.

The Film and International Understanding

(Concluded from page 138)

beneficial to both distributors and these nations. Present address of Films of the Nations, Inc., is 10 Rockefeller Plaza, N.Y. 20.

International Film Foundation

Establishment of the International Film Foundation, a non-profit organization dedicated to building better world understanding through production and distribution of documentary films, recently was announced. The foundation received an initial grant of \$300,000 from the Davella Mills Foundation of Montclair, N. J. Julian Bryan, producer of documentary pictures, is to be executive director of the organization. The foundation seeks to produce films which will "further understanding among peoples and permanent peace throughout the world."

It is understood that present plans call for the new organization to produce three pictures in 1946. These are to be shot on location in South America, Russia, and either China or India, and will seek to present problems, ideas and standards of those peoples to American audiences.

The films will be shot on 35mm stock for theatrical distribution, but will also be made available on 16mm for schools, churches, and other educational and civic groups. Instead of using professional actors in the foreign countries, plans are to go into the small towns and villages to film the "little people." Because of the philanthropic aims of the foundation, pictures will be strictly non-partisan and will take no sides in political issues. Mr. Edward F. Watts, the president, was formerly affiliated with Walt Disney.

We have considered only a few straws in the wind. But certainly they indicate that there still is great interest in films for international understanding, and that development in this field still is strong, healthy, and of high promise.

A Reader Speaks

I WISH to tell you that I have found the articles, "Art and the Small Color Slide",¹ and "A Reader Speaks",² especially the latter very helpful. My only regret is that Mr. Flanders did not give a detailed step-by-step account of the equipment and methods that he uses in copying and in producing a 2x2 slide.

I venture to suggest that there are some teachers like me who have become converted to the theory of audio-visual education through our teaching for the armed forces, but who do not know about the production of slides and slidefilms for class room work. We do not wish to compete with the commercial producers, but we do wish to experiment on our own. In particular I should like to see you print an article or two on copying and the production of the 35mm single frame, vertical slidefilm emphasizing, if possible, equipment and methods that may be used by amateurs.

CLAYTON S. ELLSWORTH, Ph.D.
The College of Wooster, Wooster, Ohio

First Post-War EFLA Convention at Detroit, April 23-26

THE Educational Film Library Association will hold its first full-scale, post-war convention on April 23—26 inclusive in Detroit, Michigan, it was announced by I. C. Boerlin, the Board Chairman. Registration headquarters and all sessions will be held in the University of Michigan Extension Division in Detroit, located in the Rackham Memorial Foundation Building.

EFLA's Convention will be federated with five other organizations meeting at the same time. The Department of Adult Education of N. E. A.; the American Association of Adult Education; the Education Division of the American Library Association; the National University Extension Association; and the Michigan Conference on Adult Education. There will be several general sessions of all of the participating groups, but for the majority of the time, individual associations will plan their own programs. EFLA has planned a program of great interest to all educators and users of educational films. Non-members of EFLA are cordially invited to attend all of the sessions except the business meeting. The Program Committee is under the Chairmanship of Dr. James S. Kinder of the Pennsylvania College for Women.

PROGRAM

Tuesday, April 23, Morning Meeting

- 9:00—10:00 Registration
10:30—12:15 Opening General Session
Welcome—Michigan Conference on Adult Education—Mrs. Loleta D. Fyan, Michigan State Library.
A. L. A.—Ralph A. Ulveling, Detroit Public Library.
N. U. E. A.—F. C. Lowry, Extension Division, University of Tennessee.
N. E. A.—Roben J. Maaske, Eastern Oregon College of Education, La Grande.
A. A. A. E.—Lyman D. Bryson, Columbia Broadcasting System, New York.
E. F. L. A.—I. C. Boerlin, Pennsylvania State College

Afternoon Meeting

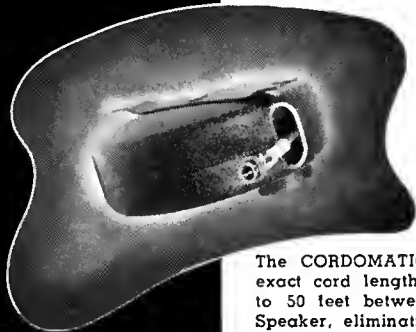

- 2:00—2:20 Opening EFLA Meeting.
Presiding, I. C. Boerlin, Chairman, Board of Directors, EFLA; Director of Audio-Visual Aids, Pennsylvania State College.
Program Explanations, James S. Kinder, Director of PCW Film Service, Pennsylvania College for Women.

2.20—4:00 SECTIONAL MEETINGS

- a. Panel—*Administering and Financing the School Film Library*
Leader, Edward B. Rogel, Acting Director of Visual Education, Central Washington College of Education.
Participants: Ford Lemler, Director of Audio-Visual Aids, University of Michigan; Lester Frye, Director, Division of Visual Education, Cleveland Public Schools; Arthur Stenius, Coordinator, Department of Visual Education, Detroit Public Schools; H. L. Kooser, Director, Visual Instruction Service, Iowa State College.
- b. Panel—*Community and Non-School Use of Films*
Leader, Mrs. Patricia O. Blair, Curator of Films, Cleveland Public Library.

Participants: Glen Burch, Associate Professor in Adult Education, Teachers College, Columbia University; Mrs. Aubry Lee Graham, Special Asst. to Librarian, Public Library of the District of Columbia; R. Russell Munn, Librarian, Akron Public Library; E. M. Benson, Chief of Education Division, Philadelphia Museum of Art; Mrs. Esther L. Berg, New York Public Schools, Curriculum and Audio-Visual Aids.

THE *Cordomatic* REEL

The first practical solution to your 16MM or 35MM portable projector speaker cord problem.

The CORDOMATIC REEL provides exact cord lengths needed from 5 to 50 feet between Projector and Speaker, eliminating once and for all the troublesome and unsightly tangled cord lengths lying about the floor when winding and unwinding your cord manually.

With CORDOMATIC you set up your Speaker and Projector in desired positions, then merely grasp the Speaker Cord Plug, and walk to your Projector and plug in. When finished you merely detach Speaker Cord Plug from your Projector, pull the cord slightly until the release mechanism "clicks." The entire cord length then automatically re-winds on to the Reel in a fraction of a second. No tuss, no bother, no knotting or tangling, no lost or misplaced cord — CORDOMATIC will maintain your Speaker Cord in perfect condition for the life of your equipment.

*News ar***Audio-Visual Groups to Convene in Detroit**

The first Michigan state-wide Audio-Visual Conference will be held in Detroit April 5-6, under the sponsorship of the State Department of Public Instruction, State Teacher Training Institutions, and the Department of Visual Instruction of the N. E. A.

The advance program states that "Practicality" will be the conference keynote. Such questions as "How can I use motion pictures in my classes," "What is an adequate learning aids program for my school," and "How do I start building an audio-visual program for my school system." will be considered. Sectional meetings will discuss the topics: "Projected Visuals in the Classroom," "Radio or Recordings, Which and When?", "The Audio-Visual Program in the Rural School," "Getting the School Ready for the Audio-Visual Program."

Speakers will include Floyde Brooker, U. S. Office of Education, Dr. Alice Keliher, New York University, and Vernon Dameron, Executive Secretary of the Department of Visual Instruction. At the beginning of each session a thirty-to-forty minute period has been scheduled for previews of unusual and recently-released educational films. Demonstrations will show actual classroom use of motion pictures and recordings.

Concurrent with the state conference, on April 4-5, there will be a closed meeting of audio-visual directors to consider what should be the policy of schools in regard to commercially sponsored teaching aids. Dr. Arthur Stenius, Coordinator of Visual, Radio and Safety Education for the Detroit Public Schools, and Chairman of the State Audio-Visual Aids Committee, has invited representatives of twenty of the largest cities east of the Mississippi and directors of certain University film libraries to participate. Three representative views of the problem will be presented—by an educator (Dr. S. A. Curtis), a representative of producers of non-sponsored teaching materials (Dennis Williams of Encyclopaedia Britannica Films), and a representative of the sponsors (an executive from General Motors). After a general policy is agreed upon by the participants, committees will be appointed to work out details of the statement of policy. Paul Reed (Rochester, New York, Public Schools) will give the final report on the policy formulated by the group at the closing session Saturday morning.

In addition to the above meetings, the steering committee of Zone 3 of the Department of Visual Instruction will hold a pre-conference get-together on April 4.

All groups will assemble in the Horace Rackham Educational Memorial at 60 Farnsworth Street, Detroit.

Connecticut Visual Educators Meet

progress of the Stamford Library project in audio-visual aids; Mr. Joseph T. Nerden, supervisor of Audio-Visual Aids, State Department of Education suggested some ideas for CAVEA and educators interested in audio-visual aids, and Dr. Herbert Landry of the New York City Board of Education demonstrated the use of recordings in the Teaching of literature. Hardy R. Finch of Greenwich High School, presided.

First Meeting of New York Film Council

John Grierson, pioneer film producer, delivered the main address on "The Place of the Film in the Present Social Scene" at the opening luncheon meeting of the newly organized New York Film Council at the Hotel Sheraton, February 13.

Over 250 producers, distributors, and visual education group leaders from the non-theatrical film world greeted Mr. Grierson who has just returned from a survey visit to the United Kingdom.

The meeting was opened by Thomas J. Brandon, of the Film Council of America, who ably summarized the background of the formation of the New York Film Council. Commander Orville Goldner, former head of the Training Film Motion Picture Branch, Navy Photographic Division, served as temporary chairman, and introduced Mr. Grierson.

In his speech Mr. Grierson outlined the history of the documentary film movement and stressed the fact that through its work in the war the film has finally come into fuller recognition as a powerful medium of public education. Because of its new recognition, it is important that the motion picture continue to do in peace the job it accomplished in the field of reporting and education during the war.

Mr. Grierson ended his speech with an outline of a six point working program to help bring order to production, distribution and the use of information films in the United States.

The New York Film Council will hold monthly luncheon meetings, based on the pattern established by the Washington Visual Workers during the war. The luncheon will feature a guest speaker who will talk on a subject of common interest to producers, distributors, and users of non-theatrical films. The formation of the Council was initiated by the Film Council of America.

Atlanta Group Organizes Film Council

Walter Bell, recently returned as director of the audio-visual program in the Atlanta, Georgia public schools, was elected chairman of the newly-organized Film Council of Atlanta. Mr. Bell served as a major in charge of the U. S. Marine Corps' training film program during the war.

Other officers elected by the group, composed of representatives of organizations interested in the distribution and use of 16mm motion pictures and other audio-visual aids to education are: John W. Fox of Films, Inc., co-chairman, and Miss Hazel Calhoun of the Calhoun Company, secretary-treasurer.

Expansion at University of Iowa

To provide increased service to Iowa schools and help them take advantage of the latest concepts and trends in audio-visual instruction, the Bureau of Visual Instruction of the Extension Division, University of Iowa, is expanding its staff and facilities.

Lieut. Lee W. Cochran, former Director of the Bureau—on leave with the Navy for the past three years—has returned to the University as Executive Assistant in the Extension Division. John R. Hedges, Acting Director of the Bureau of Visual Instruction for the past three years, has been promoted to Director.

A new Audio-Visual Aids Laboratory will be established to assist school administrators and teachers in the organization and operation of an audio-visual teaching program, and a \$250,000 unit of the new Communications Center will be devoted exclusively to the expanding program in audio-visual instruction.

Television Developments

In the Columbia Broadcasting System demonstration of ultra high frequency color television, held for the press in New York last month, motion pictures and slides were used to illustrate the educational, commercial and artistic advantages of color. According to Worthington Miner, manager of the CBS television department, the demonstration proved that all major obstacles to color television had been overcome and that, with proper support, it could be made available to the public early in 1947.

This statement is in contradiction to remarks made by E. W. Engstrom, vice-president in charge of research, RCA laboratories, at a meeting of the New York Electrical Society which followed closely the CBS color demonstration. Mr. Engstrom declared that the RCA black-and-white, all-electronic television system was ready for the home, but that color was one of the technical advances that belonged in the future. Several weeks previous to the CBS demonstration, color television was presented by RCA at which time it was emphasized that no system of transmitting and receiving colors electronically had been developed as yet and that it would be five years before a satisfactory electronic color system, equal in clarity to present black-and-white television, would be suitable for the public. RCA engineers are convinced that any mechanical color system is outmoded.

The CBS system utilizes mechanically rotating discs to inject the basic colors of red, green and blue which, Mr. Miner stated, have given less trouble than any of the electronic components of the system. It is his opinion that color television should not be delayed until it can be accomplished electronically.

It was estimated that color receivers for the home would be about 10 per cent more than black-and-white. RCA exhibited sets that will sell for about \$200.

Speaking of Fundamentals...

From "How to Study"—William H. Brink, Ph.D., Professor of Education, Northwestern University, collaborator.

From "How to Use a Library"—Miss Alice Lehrer, Asst. Professor of Library Science, University of Illinois, Urbana, collaborator.

CORONET Instructional Films provide essential basic training

The illustrations at the left are from two new CORONET Instructional Films — *How to Study* and *How to Use a Library*. There are others equally important — *We Discover the Dictionary*, *Soccer for Girls*, *Springboard Techniques*, *Batting Fundamentals*, *Catching*, *How Man Made Day* and *The Nature of Color* are a few of the latest ones. Dozens have been announced previously and many others are in production.

Nearly all CORONET Instructional Films offer the added advantages of full natural color. Some are also available in black-and-white, and a few which do not require color are black-and-white only. All are offered at moderate cost and on terms to suit budget plans.

For complete information concerning CORONET Films now available and new ones as released, write to —

Filming the Fearful

Details of how the U. S. Navy and Army will photograph the forthcoming Pacific atom bomb tests from every possible angle by remote-controlled, long-range aerial and motion picture cameras, have been revealed. The program was announced by the Fairchild Camera & Instrument Corporation of Jamaica, N. Y., which is supplying its facilities and experience in photography, radio and electronics toward the installation and operation of the scores of cameras involved.

Batteries of cameras are to be mounted atop heavy 100-foot steel towers on several islands five to 10 miles distant from the target, in the Bikini Atoll, Marshall Islands. The cameras must be shielded in tower rooms constructed of thick lead sheets. Inside the lead housing the cameras, additionally protected by airtight, waterproof boxes, will photograph through optically flat windows and thence through portholes in the lead housing, the portholes to close automatically after the pictures are taken, to prevent entrance of radio-active waves. Both the aircraft cameras, which range in size up to the 70-pound Fairchild navy type F-56 cameras with 40-inch telephoto lenses, and the movie cameras, in both 16- and 35-mm sizes, will point horizontally to the scene of the atom bomb explosions. The cameras will be operated by radio from a distant ship.

Because of the intense heat that will be generated by the atom bomb explosions, the cameras' lenses will be covered by heavy neutral density filters, which, operated by photo cells, will move away from the len-

ses to permit photography an instant after the flash. If the lenses were not protected they would let so much heat through to the cameras' magazines that the film, even though non-inflammable, might melt. It is estimated that it may be several weeks after a test before any human can approach the camera houses, as the surrounding water is likely to be so radio-activated.

In addition to the photography from the towers, the tests will be photographed thoroughly from the air. Navy and Army planes, manned by photographic crews, will fly at safe distances, and at all altitudes up to 30,000 feet, carrying batteries of long focal length aerial cameras. Radar cameras, recently developed by Fairchild, will also be used. Too, several planes operated by remote control and carrying radio-operated cameras, will fly closer than the manned planes to the scene of the atomic blast.

Film Maker Leaves Government Post

Jarvis B. Couillard, Yellow Springs, Ohio, is leaving government service after four years to go overseas with the International Film Foundation to head a group that will make documentary films about the people of Europe.

Couillard worked with the Signal Corps at Wright Field, Ohio, making training films. Later he transferred to the motion picture section, engineering division. He was responsible for the monthly newsreel, Engineering Division Staff Reports. This enabled offi-

cers to view the latest projects at Wright Field without making a personal trip to the laboratories. He also filmed "The Story of Wright Field," which covered the ten-year period before the war. The picture showed the part that Wright Field displayed in the development of the AAF.

A graduate of the University of Minnesota, he made motion pictures there and did photo features for the Minneapolis papers.

Program on Film's Role in Education for Democracy

On March 15 New York educators met at the Museum of Modern Art to discuss "The Role of the Film in Education for Democracy," under the auspices of the Visual Instruction Section of the New York Society for the Experimental Study of Education, of which Esther L. Berg is chairman.

Dr. V. C. Arnsperger demonstrated how the classroom film can teach democracy with the showing of two new Encyclopaedia Britannica films, *Democracy* and *Despotism. The Cummington Story* was used by Helen Grayson, director, to illustrate how the documentary film can teach democracy, by showing how effectively groups with different cultural backgrounds can learn to live together harmoniously. Julien Bryan illustrated his talk on how the film on international relations can teach democracy, with the O. I. A. A. film *The County Agent* which portrays small town rural life in America and the pattern of our democratic way of living.

A Reader Speaks

WHEN I finished reading the January SCREEN, I thought to myself, "I must write and tell them that it is the best issue that we have had for a long time," but got so very busy that no letter was sent. Then when I finished reading the February issue last night, I resolved not to let anything stand in my way of repeating the same thought. Really, the last two issues have been outstanding, it seems to me. Congratulations!

Mr. Dameron was in to see me last Saturday and he seems enthusiastic about the prospects of DVI. That, plus the "Diversitorials" in February, gives me great hopes for the future of the organization.

Again, congratulations on a really good magazine!

LELIA TROLINGER, Director
Bureau of Visual Instruction
University of Colorado, Boulder

Current Film News

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Avenue, Chicago 11, treat physical training, science and nature study in four new 16 mm educational motion pictures. All four pictures have been produced in color, but prints of the first two films described below are available in black and white.

Batting Fundamentals (1 reel) is the first in the Baseball Series and covers the selection of a bat, the stance, the grip, the stride, the swing and the followthru, and bunting. Proper form for each is demonstrated by players noted for their correct form. Produced under the supervision of James Smilgoff, Instructor at the Chicago Cubs Training Camp, and Coach of Baseball, Chicago Public Schools.

Sulfur and Its Compounds (1 reel) shows the preparation of three allotropic forms of sulfur . . . rhombic, monoclinic or prismatic, and amorphous or plastic . . . sulfuric acid and sulfur dioxide. It also presents various uses of sulfur compounds in industry, in the home, in medicine, and in the extermination of insect pests. Produced under the supervision of E. C. Waggoner, Director of Visual Education, Elgin (Ill.) Public Schools and with the collaboration of the Technological Institute and Northwestern University.

Camouflage In Nature By Pattern Making (¾ reel) presents numerous examples of birds, animals, insects, fish, reptiles and amphibians which depend upon the camouflage of pattern to protect them from their enemies. This film was prepared under the supervision of Miss Harriet M. Smith of the Chicago Academy of Science, with nature photography by C. J. Albrecht, formerly of the Chicago Natural History Museum; A. M. Bailey, Sc. D., Colorado Museum of Natural History, and O. S. Pettingill, Jr., Ph. D., Carleton College.

Camouflage In Nature By Form And Color Matching (1 reel), which includes many striking examples of nature photography, was produced under the supervision of Miss Harriet M. Smith, Chicago Academy of Science, with nature photography by A. M. Bailey, Sc. D., O. S. Pettingill, Jr. and A. L. Melander, Ph. D., formerly College of the City of New York.

Preview prints are available for the examination of those interested in purchasing prints for permanent use.

■ **SPERRY GYROSCOPE COMPANY, INC.**, Great Neck, New York is offering free of charge its new motion picture: **The Sperry Gyroscop Compass**—16mm sound, 25 minutes. This is a flight and navigation instrument which provides a stable

directional indication under all conditions of air turbulence. The film has three main parts: Flux Valve, Repeater, Gyrosyn.

■ **INTERNATIONAL THEATRICAL AND TELEVISION CORP.**, 25 West 45th St., New York 19, has acquired for 16mm distribution throughout the United States:

Atlantic Crossroads (1 reel) produced by the National Film Board of Canada. It relates Newfoundland's role in wartime, her physical and economical structure and her post-war prospects. From this island during the war, airmen took off to protect Atlantic convoys against the Nazi submarine menace, to check on weather and to ferry bombers to Europe from North American factories. The film surveys the barren hinterland and the busy outports of Newfoundland. It contrasts the depressions of the Thirties with the sudden feverish activity of war. Finally it looks to a future when on the new world maps, Newfoundland and Labrador will be key points on our global air routes and essential members of the community of nations. The film is available for sale or rental.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, announce two more films on child health, which are intended particularly for parents and teachers:

Your Children's Ears (2 reels), in which the physiology of the ear is explained in detail by animated drawings. The close relation of the nose and throat and the dangers of the common cold are shown. Often children who appear dull and unresponsive are suffering from hearing difficulties which can be easily cleared up with proper medical attention.

Your Children's Teeth (2 reels)—an explanation of the structure of first and second teeth and their growth. Stressed are the importance of prenatal care, a well balanced diet for the child, proper method of brushing the teeth and dental attention.

British Information Services have also released recently two films in a new series titled "Famous Scenes from Shakespeare", enacted by leading British actors.

Julius Caesar (2 reels) depicts the Forum scene which follows the assassination of Caesar.

MacBeth (2 reels) presents the Murder and Sleepwalking scenes from the famous play.

Other rental sources for these two excerpts from Shakespeare are Bell & Howell Co., 1801 Larchmont Ave., Chicago 13, and International Film Bureau, 84 E. Randolph St., Chicago.

■ **Y. M. C. A. MOTION PICTURE BUREAU**, 347 Madison Ave, New York 17, is distributing free of charge the newly-released 16mm color-film:

Fit and Fair (2 reels), produced for Richard Hudnut by Films for Industry, Inc. Good posture and good grooming form the theme of the picture. The basic rules of health and beauty, with the "do's" and "don'ts" of posture, poise, diet, and grooming are demonstrated by Ann Delafield, beauty authority. Designed for the teen-age girl, the film shows how to utilize routine motions of daily living to develop a sound and beautiful body, how to select the right foods, and how to apply make-up for natural effect.

■ **DEVRY FILMS**, 1111 Armitage Ave., Chicago 14, have acquired four new 16mm sound films on Social Studies, which may be rented from them. These subjects are:

The World in Which We Live (2 reels), which presents the changes that have taken place in animal and plant life during the past ages.

The Growth of Mankind (1 reel), the story of man's progress from savagery to modern civilization. The explorations of the late Dr. Breasted are pictured.

The Growth of America (1 reel), designed to develop an appreciation of America's past history, emphasizing how the present is interwoven with the past.

Today and Tomorrow (1½ reels), an explanation of the scientific and industrial background of today in contrast to the background of yesterday. The film surveys the use of power, man's conquest of the air, and the contribution made by machines.

Entertainment Films in 16mm

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Ave., New York 19, has obtained exclusive 16 mm distribution rights to the United Artists feature: **Hangmen Also Die**—a tense, suspense-filled drama based on

actual situations during Nazi occupation of Czechoslovakia. Portrays the fearless fighters of the Czech underground patriots against Nazi terrorism and oppression, culminating in the slaying of Reinhard Heydrich, the notorious Nazi hangman.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, is offering to approved non-theatrical audiences current 16mm film releases of:

The Merry Monahans (9 reels), a cavalcade of vaudeville leading from

the three-a-day to the Follies, featuring Donald O'Connor, Peggy Ryan and Jack Oakie.

Eastin Pictures Expansion

A new rental plan is announced in the Spring 1946 Guidebook to Instructional Films now being issued by Eastin Pictures Co., Davenport, Iowa. Under this plan, which was worked out with the assistance of several educators prominent in the field of visual instruction, schools may rent films for a full school week for about the same amount as formerly charged for one day's use. Speaking of this new development, Paul C. Reed, director of visual and radio education in the public schools of Rochester, N. Y., has commented that the "plan is unique in providing a distribution procedure in complete harmony with the best utilization practice."

Eastin's new Guidebook contains 48 pages of carefully selected instructional films, each described in some detail. While it offers numerous films of a general educational nature, the new list shows that the Eastin library is rapidly being expanded to include a good assortment of films meeting specific teaching needs. Other Eastin lists currently available are

San Diego, I Love You (8 reels) a family comedy involving an ambitious girl, four obstreperous kid brothers and a dreamy school teacher father who turns inventor. The cast includes Jon Hall, Louise Allbritton, Edward Horton, Eric Blore, Buster Keaton.

Mutiny on the Elsinore (7 reels), a super-feature based on Jack London's sea thriller. Author-hero, played by Paul Lukas, takes passage on a sailing ship in search of color for a novel and finds more adventure than he had bargained for.

Babes on Swing Street (7 reels), a typical Peggy Ryan vehicle. Kids open juvenile night club to support group of their members in music scholarships.

The Singing Sheriff (6 reels), a unique musical Western that kids itself in uproarious satire. The commentator's remarks help further to take it off the beaten path.

an 88-page catalog of entertainment films, an "Economy" list of 116 complete programs, and a special list of 49 new recreational short subjects. All these lists contain numerous pictures suitable for school use.

Eastin Pictures Co., which lost every male employee upon the outbreak of the war, is now welcoming its veterans home. During the past few weeks, six ex-service men, including Kent D. Eastin, head of the firm, have returned to executive positions with the company. A seventh received his discharge and returned to his desk several months ago. The firm takes considerable pride in the war record of these veterans. Of the seven, five saw extensive service overseas, four rose to commissioned rank and two were decorated for bravery under fire.

In addition to the old employees who have returned, other ex-service men have been added to the staff, and at present the company can boast that every man it employs is a veteran of World War II.

Back at their desks at Eastin Pictures Co. are these World War II veterans. Left to right, back row—T/5 Kenneth J. Olsen, Army Medical corps; *Electrician's Mate* (first class) Tom F. Smith, USNR; S/Sgt. Newell H. Dailey, Air Force weather service. Center—Lieut. Kent Eastin, USNR. Front Row—Major Robert K. Hieronymus, Army inspector general's department; Capt. W. Reid Wooldridge, Army field artillery; Capt. Edward H. Hieronymus, Army quartermaster corps.

AMONG THE PRODUCERS

New 16mm Producing Company in the Midwest

With wide experience in the making of instructional, training and public education films, a group of film makers has just formed a new producing company. This company, Sixteen Screen, Inc., has opened a large studio in Des Plaines, Illinois, where it has commenced work on a series of 16mm educational color and sound motion pictures.

President and Director of Photography is Robert J. Longini, lately a Captain in the U. S. Army. Mr. Longini, before the war, operated his own still and motion photography studio in Chicago. In 1940 he joined the Army, and in the Signal Corps Photographic Section covered the invasions of North Africa, Sicily, and Italy. He was in charge of the photographic group at the Casablanca meeting; and later was in charge of all combat camera crews of the U. S. Army in Italy. Captain Longini's unit, in addition to its regular combat coverage, was also engaged in the making of some outstanding documentaries, one of which is the famous *The Battle of San Pietro*. For his exemplary service, Captain Longini was awarded the Legion of Merit. During the last year of his service, he was assistant to the Executive Producer of the Signal Corps Photographic Center at Astoria. On leaving the service, Mr. Longini was Director of Photography at Coronet Instructional Films until he left to join in the formation of Sixteen Screen, Inc.

Robert J. Edmonds is in charge of script and direction. After some years of sales and advertising in Canada and Great Britain, Mr. Edmonds went into the service of the Canadian Government nearly ten years ago. First, in the Canadian Broadcasting Corporation, Mr. Edmonds was senior News Announcer to the network when Canada entered the war. He also wrote and produced radio programs. Later, Mr. Edmonds joined the staff of the National Film Board of Canada where he was a Director-Producer in charge of educational color films, afterwards devoting himself to industrial relations and industrial morale films. He worked closely with a number of well-known documentarians including Joris Ivens and Julian Roffman. Just prior to his association with Sixteen Screen, Inc., Mr. Edmonds was a writer-director with Chicago Film Laboratory, Inc., and with Coronet Instructional Films.

Harold Mishkin, now a cinematographer for Sixteen Screen, has been active in photography since 1933, making industrial relation stills and movies, first with Longini Studios and later operating

his own studio. In 1944 Mr. Mishkin joined the army as a cameraman in the Signal Corps, and spent two years in the Pacific and Japan, where among other assignments he covered the major Japanese cities from the beginning of the occupation until the end of 1945.

Also on the staff is Jacqueline Paul, who was until recently editor and assistant director at Coronet Instructional Films. Miss Paul was head of production for the Visual Education Department of the Methodist Church in New York and later worked on five OED films with Herbert Kerkow, of the Documentary Film Association. On their completion Miss Paul was director and unit manager for Julian Bryan's crew in the making of series of films of Mount Vernou, Ohio for the Office of the Co-ordinator of Inter-American Affairs.

Business manager of Sixteen Screen, Inc., is Stephen Barr who has wide commercial background in Continental Europe, Great Britain and the United States. He has recently been released from the U. S. Army where he served with O. S. S.

Electronic Firm in Production on New 16mm Sound Projector

DeMornay-Budd, Inc., 475 Grand Concourse, New York 51, a company which reports that it designed and engineered high-frequency equipment for 97% of all radar sets during the war, has entered the photographic field. Projects under way and nearing completion include 8mm and 16mm motion picture equipment. Major product is a 16mm sound projector, said to be revolutionary in design, function and engineering by reason of such features as an automatic film threading design, silent operation and the fact that the total weight of the projector will be far less than any large audience type of sound projector on the market.

President Richard DeMornay, who designed the projector, has an extensive photographic background. Prior to the war he was a successful commercial photographer, specializing in color work. Earlier he and Vice-President Edward Meyers were engaged in the design and manufacture of photographic equipment and accessories for the professional photographer. The projector is expected to be ready by summer.

Unsold Returns to Bell & Howell

Major Robert H. Unseld, recently returned from military service, has resumed his civilian activities as General Advertising Manager of Bell & Howell Co., a position he administered from 1939 to June of 1942 when

he was called to active duty with the Air Corps. Unseld's tour of military duty included service at Wright Field where he acted as Assistant Chief of the Air Technical Service Command's experimental Photographic Laboratory. In this capacity he was responsible, among other duties, for the preparation of the Air Corps' aerial photographic exhibits and displays.

Education Slidefilms Use New Technique

A new and unusual type of slidefilm series on the classics is being offered to the school field by Pictorial Films, Inc., 1270 Sixth Avenue, New York 20.

This company, headed by Milton J. Salzburg and Hal Baumstone, has had long experience in the production and distribution of educational films. Fletcher Smith has had equal experience in the field of animation. Together, they have applied these techniques to the new slidefilms. As a first venture three popular children's classics were selected, *Treasure Island*, *Ivanhoe*, and *The Three Musketeers*.

The stories were analyzed and

scripted as if for movie production. Realizing the value of using enough stills to make a good presentation, and the importance of timing, each sequence in the story was broken down into scenes, long shot, medium shot and close-up. The portion of the text to accompany each was carefully selected, synopsisized or abstracted where necessary, quoted direct when it suited.

An art staff experienced in film production prepared the rough sketches. These were scrutinized for story value, presentation and art value. New pictures were added, others broken up into close-ups where added emphasis could be secured at dramatic high-points. The drawings were then completed in full color and prepared for the camera. Every trick of the animator which could be utilized in still presentation was adopted.

Each frame contains a few lines of text, placed at the bottom. The lettering is large and easily read, even from the back of the room. The text and pictures combined present a fast-moving story, in fact, the audience soon forgets it is looking at still pictures.

These new slidefilms are the first three of a comprehensive series, at present in production. They will be grouped and will vary in subject matter to suit all age groups. They will be moderately priced to fit into the average school budget.

The films are available in full color and number over 100 frames, sufficient pictures being used in each case to present the story adequately. Exactly the same subjects were also prepared as 2 x 2" mounted slides, sold in 4 parts or full sets. In home movie version they will be available in black-and-white, 16mm sound, silent and 8mm version. All are available through visual education and photographic dealers.

Filmstrip Stresses Importance of Foreign Trade

Foreign Trade—It's Good Business is the title of a new filmstrip prepared by The Public Affairs Committee, Inc. The filmstrip is part of a complete packet of four related classroom units, which include also Speech Notes, a short, printed commentary numbered to match the frames of the filmstrip; a 4-color, 16-page Comicstrip Booklet "Out of the Past—A Clue to the Future," produced by the East and West Association, and the Public Affairs Committee, which treats in adventure story form some lessons of the past; a Pamphlet "What Foreign Trade Means to You," by Maxwell S. Stewart, upon which the Filmstrip and Comicstrip are based, and which explains why foreign trade is necessary, how it functions, and the relationship of world commerce and tariff walls to prosperity.

This Public Affairs Packet may be purchased from Brandon Films, 1600 Broadway, New York 19, N. Y., and from various visual equipment dealers throughout the country.

Albert Films Organized for 16mm Production

Eddie Albert, well-known motion picture actor recently released from the Navy, has announced the formation of a new 16 mm. film company, Albert Films, to engage in the production of educational and industrial subjects. Associated with Albert is John Fletcher, a fellow officer who was a prominent Washington, D. C. educator before the war.

The project is the outgrowth of a pact made between Albert and Fletcher at Tarawa during the height of the invasion, while the two were serving with the amphibious forces. Albert and Fletcher, who capped their battle experience by serving in the Navy's training film program, plan to make a series of motion pictures which will highlight the ideals for which America fought. An integrated program is now being developed involving cooperation of university and public school educators.

An adjunct of the firm's educational activities will be a special department devoted to commercial and industrial films. The company has established offices at the new Consolidated Studios, 5746 Sunset Blvd. Los Angeles 28, California.

Fletcher will act as executive manager. Harry J. Hutchens, for many years identified with the commercial film industry, has been named Sales Manager. Another war veteran, Robert Meade, has been appointed Production Manager. Meade was most recently associated with Raphael G. Wolff in an industrial film enterprise. Before entering the service, he was associated with Metro-Goldwyn-Mayer and the J. Walter Thompson Co.

Norman Vizents has been appointed head of the new film's research and analysis department. Vizents has been identified with 16 mm. educational and industrial film business for the past four years, having been associated as a writer and research specialist with George Pal Productions and the Raphael Wolff Studios. Prior to his coming to Hollywood in 1942, Vizents was associated with Batten, Barton, Durstine & Osborne in Chicago.

Projector Device to Protect Film

To prevent the excessive film wear by sprockets, rollers and guides, Bell & Howell Company, Chicago, has equipped their movie projectors with sprockets and rollers that do not permit the picture area or sound track of the film to touch any stationary metal parts as it passes through the machine. Thus, scratching of the emulsion is eliminated, providing longer lasting clarity of pictures.

This has been accomplished by placing on the sprockets, rollers, gate shoe, and guides, a thin land or ridge which is the only metal that contacts the film. This land is so located that it touches the film near the perforations, outside the picture area.

Frames from "Treasure Island" (top), "Ivanhoe" (center), "The Three Musketeers" (bottom).

Sprocket and guard especially designed by Bell & Howell to eliminate film wear.

The shuttle teeth, transporting the film past the aperture, move in a rectangular path. This action prevents the teeth from "sawing" on the edges of the film perforations. Sprockets and sprocket guards are designed to prevent incorrect film threading. The film is either properly threaded on the sprocket, or it is held clear of the sprocket teeth by the guard. There, no damage to the film can result even though the machine is started. When correctly threaded on the sprockets, the guard positively prevents the film from coming off.

Craig Expands Manufacturing Facilities

To meet the ever-growing demand for Craig products, the Craig Movie Supply Company has expanded its manufacturing facilities. A large four-story building located at 1823 South Hope Street, Los Angeles, has been acquired to house both the Craig Manufacturing Company, which manufactures the well-known Craig Senior and Junior film splicers and rewinds, Projecto-Editor, Enlarg-O-

Craig's Latest Acquisition.

Editor, film cement, Fotofade, B/I, Thalhammer tripods, and associated items; and the Craig Leather Company, which produces Craig camera cases, photographers' kits, and other leather photographic accessories.

The acquisition of the new plant marks another step in the firm's steady development since it was established by Talton Craig 17 years ago. Today, with offices in Los Angeles, San Francisco, and Seattle, Craig is also the exclusive West Coast representative for many leading manufacturers of photographic materials and supplies.

Veteran Application Bulletin Released by Radiant Mfg. Co.

In our September 1945 issue we made complete announcement of the Post-War Placement Plan inaugurated by Radiant Manufacturing Company, manufacturers of Radiant projection screens, designed to help service men and women find employment in the visual field. As a further important chapter in this endeavor, Radiant now has compiled a list of 115 names of men and women who have returned from Service, and who wish to re-establish themselves in this field. The information given in this "Application Bulletin" includes name and address of applicant, age, previous experience and qualifications for the type of work desired, also location preferred by applicant. Here are qualified men and women for work in production, distribution and sales, repair and maintenance, photography, laboratory practice; and as projectionists, film librarians, film catalog editors, etc.

Our readers in both the academic and commercial field, who have need for persons in these and related activities, are urged to write to Radiant Manufacturing Company, 1140 West Superior St., Chicago 22, for a copy of this list.

Beseler Projector

Said to provide greater screen illumination than ever before, the new Beseler Model OA2 projector is described by its manufacturers as the culmination of 75 years of engineering ingenuity and skill combined with recent advances of the optical, electrical and mechanical arts.

In addition to its projection of opaque objects, up to 6-1/4" by 6-1/4" in size—such as coins, stamps, book and magazine pages, pamphlets, postcards, snapshots, clippings, letters, advertisements, etc., it has an attachment for projecting standard size lantern slides and an adapter for projecting 35 mm film slides and 2 x 2 slides. A motor-driven blower keeps projector materials and lamp cool. By pulling a lever the operator instantly switches to the type of projection desired. A matched lens system eliminates the need to adjust the instrument for distance. Other features are accessible doors for easy servicing, concealed, self-contained elevating legs, two post card

Beseler Projector Model OA 2.

holders and double slide carrier, two handles to facilitate carrying.

Complete descriptive literature is available on request to the Charles Beseler Company, 243 East 23rd St., New York 10, N. Y.

Simmel-Meservey Appointments

Simmel-Meservey of Beverly Hills, California, producers and distributors of educational films and recordings, announce the addition to its executive staff of Stanley Simmel, son of Louis C. Simmel, co-founder and general manager of the company. Young Simmel who recently received his discharge after three and a half years of service with the Camouflage Section of the Army, takes charge of distribution of the Recordings Division. Simmel-Meservey's eastern representative and Export Department for all territories outside the United States, except Continental Europe, is H. Neuert & Associates, 32 West Randolph Street, Chicago, while its foreign distribution is handled by Animex, Haarlem, Holland.

Veteran Victor Executive Dies

E. L. Schroeder, widely known in the 16mm industry, and for more than 25 years with the Victor Animatograph Corporation, died in Davenport, Iowa on February 20th, after a year's illness. "Ernie", as he was known to thousands of dealers, distributors and users of 16mm equipment, suffered a general breakdown in health and was on leave of absence from Victor until his death.

High tribute was paid him by S. G. Rose, executive vice-president of the corporation, for outstanding contributions to the progress of the 16mm industry and visual education as a whole.

Born in Garnaville, Iowa, Mr. Schroeder began work for the Victor Animatograph Corporation in 1918, where he forged rapidly to the front. In his upward climb he was first made manager of the Lantern Slide and Stereopticon Department. Later, in 1923 he was appointed Director of all dealer sales, and in 1934 was made General Sales Manager.

PERFECTION *in* PROJECTION!

BESELER MODEL OA2 TRANSPARENT and OPAQUE PROJECTOR

*Specially designed for the
various needs of the classroom*

From this one machine — from this BESELER engineering triumph — you can obtain perfect opaque or transparent projection.

You can show a book page . . . or a biological specimen . . . in faithful detail and color — and then switch to film or slides simply by pulling a lever.

The BESELER Model OA2 provides unmatched *screen illumination* of Coins, Stamps or other Actual Objects . . . Book Pages . . . Slides . . . Pamphlets . . . Films . . . Postcards Snapshots . . . Clippings . . . Letters . . . Photographic negatives for making enlargements . . . Magazine Articles and Advertisements . . . Standard Slides and Opaque Material up to 6¼" x 6¼".

Dealers everywhere will be showing this amazing projector by mid-September. However — as delivery takes four weeks — you may wish to ORDER NOW.

BESELER MODEL OA2

Of all the BESELER projectors designed for both opaque and transparent projection, the OA2 is one of the most popular models. Some of its outstanding features are:

- More screen illumination in opaque and transparent projection.
- Self-contained elevating legs.
- Accessible doors for easy servicing.
- Modern in design.
- Readily convertible from opaque paper to standard lantern slide projector.
- Special film attachment accommodates single and double-width film and 2" x 2" Kodachrome slides.
- Totally enclosed air cooler.
- Two carrying handles.

LET OUR ENGINEERING DEPARTMENT SOLVE YOUR INDIVIDUAL PROJECTOR PROBLEMS

Diversitorials

The New Department Finds Favor

BEFORE our Church Department began appearance in the March issue, there had already been much favorable reaction from many quarters, and by no means from the church field alone. Here is an instance that surprised and pleased.

We have long known Ernest Tiemann as a leading figure in Colorado's educational field. In the March issue (page 126) was printed a communication from him summarizing his present important "school field" activities at the Pueblo Junior College. We had had no inkling of his equally extensive and significant activities in the "church field". But—promptly after our announcement of a forthcoming Church Department and before the March issue appeared—there came another communication from Dr. Tiemann revealing a like preoccupation with church education. It appears in May.

Evidently the addition of the Church Department will double the value of Educational Screen for Dr. Tiemann, and for others similarly engaged. Not all our present readers, obviously, can benefit *as much*, but definite added values are there for all. Many are already recognizing the fact and are reading the new department as attentively as the rest of the magazine, and logically so. For the school and church fields are but *aspects* of "Education". Fundamental truths are the same for each. They work side by side, close together, with the same human material. The two fields, of the same approximate size actually or potentially, function in every community. Cooperation in greater or less degree should be possible everywhere, and to the mutual advantage of both fields.

We venture a suggestion. Educational Screen, at present, is far better known to the school than to the church field. Our school readers will know one or more of their church colleagues in education in the same community. Let those colleagues know of our recent effort to serve both fields—show them copies of Educational Screen, or give us their names and let us send them a sample copy direct. A good suggestion?

Two Quite "Unusual" Articles

ONE of our great Presidents tried to compress the best thinking of the world on a world emergency into the famous "fourteen points". We incline to believe, though we have not tried it, that the total utterance to date on the visual idea could be reduced to somewhat similar dimensions. Endless reiteration and rephrasing, of perhaps fourteen specific and distinct ideas, have built up a sizable body of writings and speakings which constitute the literature of the field to date.

This magazine, we realize, has contributed its full share to this mass repetition. Many things carried in our pages today can be matched, almost verbatim, in our pages of years long past. This is due, in part, to the fact that Educational Screen has presented and

represented majority opinion in its articles, and majority opinions are always in agreement. It is also due, in part, to the fact that the field has developed an inordinate love of *dichés*. Why should there be such intense and universal satisfaction in repeating the obvious and familiar which readers, perforce, must approve *in toto*? Eternal agreement can become as monotonous as eternal differing. True, we cherish the fond idea that majority opinion determines truth, when it really determines only action. "The majority is always right" is a near-valid truism, yet every forward step in civilization was originated and inspired by an initial minority. Healthy disagreement, and the possibility of a grain of new truth, can always be had by letting the minority speak (in accordance with its absolute American right). Having suspected that readers, surfeited with forever "seeing eye to eye", might enjoy "seeing red" for a change, we decided to check up on our suspicion.

In March we offered an article quite off the beaten track, "Getting Our Front Yard in Order", by Robert B. Nixon of Wayne, Pa. There are directors of audio-visual instruction who inherited a fully developed department and find full satisfaction in mere maintenance of the *status quo*. There are others who started from scratch, struggled through the fundless years, achieved a department adequate to present needs, and now feel they have earned the right merely to mark time. But some directors are never satisfied, and Mr. Nixon is one. Plenty of things are still all wrong! And he does not hesitate to say so. However our readers may react to Mr. Nixon's dicta, let them get braced for a later article in which he will take his swing at more sacred matters—the content and form of present audio-visual teaching materials.

In this issue we offer an article much farther off the "straight and narrow". It runs counter to practically all majority opinion past and present—we almost added "and to come", but that borders upon prophecy which is not our province. The article is "Our Way of Doing It" by Virgil Whitehead of the Seattle Public Schools. Bear in mind that it is from a Director of Visual Instruction in an important high school in one of our large cities. A few years back, Mr. Whitehead sent us one of the most scathing cancellations of subscription we ever received, on the grounds that we furnished readers nothing but dry-as-dust tradition. Later he again subscribed, unavoidably, by joining the D. V. I. Then came this article which, we must assume, shows us what Educational Screen should be giving its readers if it wants to be of real service. As a vigorous piece of minority opinion we feel bound in all honesty to print it. It is more than a bit extraordinary as a serious pronouncement on educational procedure.

We are anticipating no epistolary stampede, in response to these two articles, either of total approbation or blanket condemnation. But if any reader feels that the authors of the two documents should be felicitated on their doctrine and confirmed in their faith, or should be "told a few things", let him not hesitate. Both the authors and the magazine will welcome all such communications.

N. L. G.

Production Patterns for Educational Films

F. DEAN McCLUSKY
School of Education
University of Michigan
Ann Arbor, Michigan

An overview of educational films with analyses and conclusions regarding their proper pattern and content.

THE production of educational motion pictures following World War I was characterized by a mushroom-like growth. Now, a quarter of a century later, history is repeating itself. Many producers are coming into the educational field believing that the pioneering days are over. And it is clear that the producer of today is in a strong position if he heeds the hard won lessons of experience. His likelihood of success is greater than that of the producers of twenty-five years ago for a number of reasons.

Following World War I producers had little experience to build on. Today they are backed by more than a quarter of a century of experience in production and utilization plus the vivid demonstration by the armed services. Then films were silent and in black and white. Now sound and color may be used to add to the attractiveness of the medium. Then school boards and educators were skeptical about the value of teaching films. Now they are in an attitude of acceptance. Then there was the fire hazard to contend with. Now safety film in 16mm width is an established medium for school use. Then there were few teachers trained in visual education. Now teacher training is on the move.

Despite the favorable outlook for the producers of school films today as compared with 1920 there are still hurdles which impede progress. One of these is the determination of the content to go into classroom films. Twenty-three years ago the late George Skinner, then President of Educational Films, said to me, "If educators would tell me what films to make I would make them." Producers are still searching for the answer to George Skinner's question. He tried diligently to find the answer. But educators have not known the answer themselves. They have not been trained to think motion picture wise. Perhaps the American Council on Education's Commission on Motion Pictures will come up with the answer, or at least part of it. But until the Commission or someone else does find the answer, producers will proceed to probe at the hurdle and some will try to jump it precipitously. Which brings us to the question: Are there any basic principles to be gleaned from past experience to guide the producer of today as to content? The answer is in the affirmative. It is the purpose of this article to discuss one of the frequently violated known rules of procedure.

The fundamental principle which should guide producers of educational films is that their chief educational value lies in their power to present concepts involving motion. In elaborating this point, let us begin with a bit of history.

Twenty-two years ago in February, the University of Chicago Press published *Visual Education*, by Frank Freeman and others. This book reported an extensive

series of experiments, financed by the Commonwealth Fund, as to the relative effectiveness of visual materials in teaching. Among the studies reported there were two¹ which dealt specifically with the motion content of educational films.

One hundred six films were analyzed, all silent, and they represented a cross section of the best educational motion pictures then in use. The first study of six films revealed that only 18.2 percent of the total footage in the films studied was devoted to action pictures. The second study of one hundred films showed that about half of the total film footage dealt with motion.

In his summary of the Commonwealth experiments Freeman stated the implications of these findings in no uncertain terms. To quote, "One might suppose motion pictures would be designed mainly to represent motion. . . . The obvious suggestion from these facts is that educational motion pictures have been made up to a considerable extent without due regard to their distinctive function."²

Did the producers of educational films all heed Freeman's pronouncement? The answer is, no. In 1942 Virgil O'Connor made a study at the University of Michigan of one hundred educational sound motion pictures.³ His method of analysis was patterned after that used by H. Y. McClusky in 1923. O'Connor reported that, "Eighteen years of ever increasing educational film production apparently have seen a negligible amount of progress in utilizing the inherent element of action that the motion picture film possesses."⁴

Why have many producers failed to make more extensive use of action in educational films? It is clear that the illustrated-lecture pattern has dominated the thinking of producers of teaching films. This pattern originated with the classroom and thus became academically respectable. In the popular lecture field, Burton Holmes applied the illustrated-lecture pattern to silent films and attained international fame. It is to be expected that the first silent educational films would imitate the established pattern. But O'Connor's study shows that a large number of sound teaching films

¹McClusky, F. Dean, *The Contents of Educational Films*. In Freeman, *Visual Education*, Chicago. The University of Chicago Press, 1924, pp. 160-3.

³O'Connor, Virgil J., *An Analytical Study of Motion and Sound Utility in One Hundred Instructional Sound Motion Picture Films*. Ann Arbor, Michigan; The University of Michigan, Master of Arts Thesis. p. 32.

⁴Ibid, p. 12.

have been produced in the same pattern. The sound track has served only to eliminate the personal appearance of the lecturer.

When one examines teaching pictures produced during the war period it is encouraging to find that some of the producers have broken with the illustrated-lecture pattern or have improved upon it. Walt Disney's *Defense Against Invasion* illustrates a break with the pattern, and his *Water, Friend or Enemy*, is an improvement of it. But in too many films made during the war the pattern persists with its faults.

One of the weaknesses of the illustrated lecture when applied to a film is its dependence upon commentary to spearhead and carry the story. This establishes a conflict between seeing and hearing, particularly if the meaning of the commentator's words is ahead of or behind the scene. Another weakness is the compulsion which it creates to cover too much subject matter. This results in an attempt to teach, for example, the geography of Central America in one twelve minute reel. If producers of educational films would let *motion* pictures tell their own story, then the commentary would be used, if at all, to supplement and to direct attention to significant points and relationships rather than to drag the pictures along with it. The use of pictures, music and commentary in *The City* is worth studying in this connection. In this film the commentary is distinctly secondary and the *pictures* are used to carry the theme.

It is obvious that the illustrated-lecture has persisted as a pattern for educational films because it is easy to follow, less expensive and safe academically. The production of action films that achieve desirable educational goals requires exceptional creative ability, imagination, and a willingness to break with tradition. New production formulas which lie between the dramatic film at one end of the scale and the illustrated-lecture at the other, must be created. The so-called documentary film is a step in this direction.

Perhaps it would be helpful to analyze the "presentation-of-motion" concept into educationally acceptable categories which could serve as guides in production. While Mark May has outlined a valuable functional classification of educational films under four headings, namely: demonstrative, informational, incentive and provocative, his grouping does not serve the specific purpose in mind. There are many demonstrative and informational films which contain a large percentage of still life.

The following analysis emphasizes the types of content suited to the presentation-of-motion function which the motion picture has the power to represent:

First; the observable movement of objects, singly and in relation to each other, essential to a clear understanding and analysis. For example: the movements of parts of a machine, the movement of corpuscles in the blood stream, the movements of animals, the movement of a water wheel in producing power, et cetera.

Second; the movement of objects too slow to be seen by an observer. For example: by means of time-lapse photography the motion of growing plants may be shown.

Third; the movement of objects too fast to be analytically observed. For example: by means of slow motion photography the swing of a golf club and the flight of a bullet may be seen.

Fourth; the motion involved in depicting the relationship of object and flow of events separated by intervals of time and space. For example: the life cycle of insects, the movements of parts along an assembly line, the historical events leading to the Civil War, et cetera.

Fifth; the motion of the unseen. For example: by using animated models and cartoons the motion of molecules can be depicted and the movement of elements inside the cylinder of an internal combustion gas engine may be seen.

Sixth; the motion of the imaginary and of abstractions. For example: by means of animation Donald Duck becomes a living personality and graphs may show movements.

Seventh; the motion of rhythm depicted by varying intensity of sounds, music, lighting, shades of gray or color and by varying the movements of objects and the flow of pictures. For example: the beating heart in the film, *The Tell Tale Heart*.

Eighth; the motion involved in the interaction and flow of ideas between people as expressed by words, gestures and other bodily movements. For example: the drama and the representation of human relationships.

In presenting this analysis the writer does not intend that it be final or the only one possible. Nor does it follow that a teaching film would be based on one type only. In most films a combination would be used. The purpose is to call attention to types of motion which the producer may use in planning an educational film in order that new production patterns may be created with respect to content.

Let us suppose that a group of science teachers have indicated the need for a film to teach peristalsis. They want to show their pupils the peculiar wormlike wave motion of the intestines. A producer agrees to undertake the task. The motion is observable and may be photographed thru a fluoroscope or it may be shown by animated cartoon. Now it is not necessary to pad the film into an illustrated-lecture on the subject. Indeed all that is necessary is a few feet of film showing the motion of the object. An abstraction using the animation technique might be added to make the nature of the movements crystal clear. If the tempo of the rhythm of the normal peristaltic motion is wanted, the use of percussive sound would serve to emphasize it. Commentary? None. Leave that to the teacher. Here is a pattern of film production that could be applied to a large number of subjects. The films would be short and would be relatively inexpensive to produce and to buy.

Let us take another topic which is more complex. Suppose geography teachers wanted visual aids to teach the phenomena of soil producing lush growing foliage on one side of a mountain range and of arid or desert terrain on the other. One might say off hand that this could be taught with still pictures for, where is motion involved in this concept? But there is motion which is

(Concluded on page 183)

Doing the Job with Non-Projected Visuals*

Packing materials in suitcases for circulation to the city schools.

ONE of the brightest outlooks for education is to be found today as we proceed to implement "Doing the Job." With the better devices now available, the traditional academic method is due for a rejuvenation. Many educators have maintained a perpetual improvement in order to realize pertinent harvests. However, in terms of outlook and method, improvement in the teaching field has not been commensurate with the increased scope of the educational needs of our people.

What are some of the signs of improved ways of "Doing the Job" in teaching? First of all, more appeal in and out of the classroom works wonders for effectiveness in holding students in school. Much that is taught could be replaced with a more potent curriculum. This should be offered in a more artful manner. This would exert an economy both in terms of time required and in terms of permanence of learning (behavior change). In addition to the matter of economy of time and higher coefficients of retention let us consider that the newer approaches bring within reach the most sought after goal—namely to generate a continuing yearning for learning.

Education has been spotted by the public among those forces retarded in the total picture of our advancing social fronts. This same public is growing more anxious about having schools that can "Do the Job." To fill this prescription better teachers and improved devices will no longer be considered extravagant.

Regarding the essential materials, we will confine considerations to realia and illustrative materials whether brought to the classroom or studied *insitu* by journey and field trips. However, this is an era of the sanctity of printing, when one can scarcely conceive of the structure of education *sans* print.

In considering all materials then, we grant that we are to examine the role of only certain ones which are to be added to the accepted verbal tools. The traditional academic professor has been mis-informed when he believes that we propose doing the job without our heritage of books. Though he is yet skeptical (and even resists) regarding these additions of non-verbal teaching tools—he may finally come face to face with that segment of our "learners" who are diagnosed vir-

tually as having verbal blindness. As George Henry¹ points out (he admits they exist) some 30% of rational minds are "non-verbal." And fortunately he thinks they too are capable of learning. Are we not consoled by the "ostrich in the sand" stunt—are there as few as 30% to be educated in spite of the textbook? A recent commission in England estimates that the non-verbal class is much larger. They, like George Henry, are expecting educators to include the entire group. What non-verbal devices are we going to use in training these people to arrive at stages of intellectual maturity? They progressively get ousted from diploma to diploma—or, are failures in school. Instead, we should have tools for educating them and appeals for holding them to and through the stage of adulthood.

We are to examine one group of teaching materials which will not only reach the non-verbal but improve the overall instruction. Assuming that we have superior instructors, our concern for making learning more pregnant is by means of participation experience. In such methods, Time, Materials and Space (Teaching Materials Service) are three essentials in the realm of method for student development.

No one denies that Time is a requirement for the best learning device of all—namely, participation. There looms the value of apprenticeship. Also consider medical competence in point of time spent in the training period.

Teachers do need assistance with materials in order to do the job. It seems logical to suppose that the librarian is equipped to collect and maintain such a center of non-book materials along with the book materials, especially where the size of the school unit is too small to justify an educational museum and like departments. At Ball State Teachers College we have provided a Teaching Materials Service whose function is to collect and maintain these non-book materials. Teaching Materials Service is now arranged in four compartments: lecture-classroom, office, workshop space, and exhibition gallery. Throughout are provided monks-cloth-covered upright screens, exhibit tables, and cases which are ideal means for the display of illustrative materials needed for demonstrations with visiting classes.

*Address given at the Michigan Audio-Visual Conference, Detroit, April 5.

A Teachers College develops a unique "non-book department" and workshop to produce, maintain and supply visual teaching materials.

By EVELYN HOKE

Ball State Teachers College

Muncie, Indiana

Student staff members in the Workshop of the Teaching Materials Service.

And when you visit this venerated library if you hear strange noises—echoes of a saw and hammer at work, you will find the TMS workshop in action. This is an open shop where the specialists can originate their own materials. The largest single workshop undertaking thus far was done by a class in Play Education 312 under Miss Grace Woody's direction. The class members came the first part of a term to build and assemble kits of manipulative games and toys suitable for rainy-day activity in grade schools. Near the close of the term, the accumulation was taken to a Muncie elementary school. This successful project merited recognition, so a motion picture was made of the children at play in the Riley Elementary School. The title is "Play Materials in the Elementary School." (See the 1945 H. W. Wilson Educational Film Catalog, page 362.)

Among workshop undertakings is a consumer education series, for which the Home Economics people provided materials and gave advice concerning the assembly. This series, in whole or in part, has served repeatedly on and off the campus, giving considerable satisfaction to those dealing with it.

TMS collections consist of (1) items created in the workshop, (2) items purchased or made on recommendation of the faculty and others, (3) daily clippings, (4) photographs, (5) children's work (when it is considered typical and is willingly donated), (6) gifts, and (7) long-term loans.

In the workshop is included a range of cabinets for the housing of textile wall hangings, glassware, basketry, taxidermy, toys, models, replicas, recordings, microfilm, and motion picture films. Permanently installed in the workshop is a tool board, a frigidaire for cold storage of birds and mammals, and for perishable supplies such as latex and paste; a twelve-foot carpenter's bench (which our preparator made); twin laundry tubs; ironing board; sewing machine; sign and poster work easels; map-mounting and picture-mounting tables; film inspection and rewind equipment; and racks for supplies and packing goods.

TMS service is of two kinds: in the department and away from the floor. The primary service is in the department doing reference work.

To further assist our teachers in doing the job, our work includes a loan of non-book materials, framed art pictures, doing demonstrations of techniques, offering

instruction in the operation of equipment and hours of consultation as to sources, organization, care and repair of teaching materials.

No small effort is involved in delivering suitcases packed with object materials, sending operators with lanterns and motion picture projectors for use in the classroom or by community groups. Our film service alone has afforded us numerous opportunities for serving adult education. In fact, this has settled down to become routine work in the short years the department has existed. Last year our films served approximately 300,000 persons off the campus.

In maintaining a central collection of non-book materials, unstinting consultation is often necessary on the part of those working with reference problems in order to determine specific illustrative material desired. The reference task is simple indeed when a student asks specifically to borrow, for instance the baby layette collection—simple when compared to the request of the student who phoned at ten o'clock asking to have an order ready for her at three o'clock the same day on the topic, "Life Among the People Who Live Along the Large Rivers of the World." A staff member confidently made the notation, omitting questions regarding vital details and hung up. Obviously, the reference clerk could not begin the assembly of materials without consultation with this student. The three o'clock interview revealed that the student wished to find illustrations of varieties of river craft, these to be used in a fourth grade lesson on water transportation. The materials selected included mounted pictures, a large framed print of Covarrubia's color mural, a wooden model of a Philippine outrigger, an American Indian canoe replica, and boat models. The plates were put into cellophane slip covers to keep them soil-proof while being handled by the children. The models were packed in small suitcases.

When materials cannot be taken to the student, we have adequate space provided for bringing students to the materials. Laboratory teachers and college professors alike soon developed this habit when they realized that their classrooms would not provide adequate space for the larger exhibitions of object and graphic materials. Our museum friends who have educational programs under way are forever bemoaning the lack of space sufficient to seat groups of students while studying exhibitions (learning processes aren't so easy

en foot it seems). Those who are building the schools for tomorrow are planning much more spacious classrooms with the accompanying utilization of every wall space for exhibition purposes. (We trust that you will be fortified with arguments for adequate space when you have an opportunity to consult with any building committees getting under way.)

To assist in doing the job, we have experimented in a teachers college library by having a non-book department. We find that having such a center does two things. It encourages teachers to suggest materials they have long dreamed of having and secondly, it conserves their budget expenditures of money and time in their respective departments. Moreover, we have found that our city teachers are stimulated by having student teachers supplement their classroom materials by drawing upon the loans from this teaching materials service center.

Teachers who pioneered in log cabin days were not expected to be able to teach "the life of the people of the rivers of the world." Tomorrow, however, they can and will be doing this, and much more, aided by the numerous aids for more effective means of getting across to all of our people the need to better understand our world, its cultures, its thoughts, and its emotions.

In conclusion, it seems that the ingenuity of educators is on trial as they accept an increasing share of the responsibility for making world citizenship secure. Surely there has never been such apprehension as to the role of education. The opportunity to harvest training for and through lifelong citizenship is what I should like to leave with you as "Doing the Job." That the need is crucial, no one will deny. Let us accept the challenge.

Our Way of Doing It

A unique description, full of enthusiasm and conviction, of visual policies and procedures probably rare in American schools.

THE purpose of this paper is to present the scheme for running an audio-visual program at Ballard High School, with a brief description of the evolution of the scheme. By answering some down-to-earth questions on the actual operation of an audio-visual program, we might have something to offer in the field.

The scheme actually started with the purchase of a sound projector about seven years ago. The operation and repair of this machine offered a lively project for a group of boys in the Radio Club, and the growth of the whole activity has centered around two groups in this club. One handles the microphones, turn-tables and amplifiers, i.e. the audio equipment. The other group handles the visual and optical equipment.

This latter crew is divided into three departments. The first is a repair department consisting of four or five boys who keep the motion picture machine in good condition. In the second department are ten to fifteen boys, trained to run various makes of projectors, who operate the equipment. In the third department we have about twelve girls who act as filing clerks, secretaries, auditors and treasurers. These girls really make the program click.

The first projection room was my own classroom. On the days when shows were scheduled I moved my classes to a room as close by as possible. Benches were brought in to provide sufficient seats for three classes. In less than a year we had outgrown our quarters but there was no other place to move so we kept on for two more years. Then in 1942 a decreasing enrollment gave us a break. A discarded study room was converted into a projection room; this had a seating capacity of about 120 and was easily equipped. For a year the picture was thrown on the front wall. Then the custodian transferred an unused screen from

another room. He also designed and had built a table for the sound projector that is well worth copying. Our school electricians installed conduits so that no cables run loose in the aisles. Outlets provide easy installation of radio receivers or amplifiers.

During the five years that we have been operating on a full scale we have always agreed to put the projector or the amplifiers in any classroom equipped for them. The classroom use of the projector has decreased; in the year 1944-45 we moved the projector to just two rooms. The amplifiers are used altogether in the teachers' room. Ballard High School is not a new school; hence there are very few rooms with outlets. Our operators take off an indirect lighting bowl and plug into the overhead light socket. Radio receivers are installed in a room at the request of the teacher. So far we have had few calls for receivers.

Our method of working out the details of a show is interesting. Attached to our radio library is an audio-visual library; here we file catalogues, books, pamphlets, mimeographed advertisements, and all bulletins from film companies and film libraries. We book films from colleges, universities and film companies all over the United States. Whenever a new film comes to our attention, one member of the movie crew contacts teachers who might be interested; hence teachers are kept posted on recent pictures.

A show is generally planned for the whole period minus whatever time is needed for roll and for giving the setting for the films. On some films, particularly those using study guides, a teacher may want to show that film only; in this case we often run the picture

VIRGIL WHITEHEAD
Ballard High School
Seattle, Washington

twice at this one setting and then once again for re-check some days later. In one full period the maximum is four reels. Let us say that the Chemistry teacher wants to show the Canadian documentary *Handle With Care*, a two-reeler; the boy or girl assigned to that show takes the catalogues on Chemistry to the teacher's room and helps him select two more reels to supplement. It now becomes the duty of the pupil assigned to this show to book the films, receive confirmation from the film company, to check their arrival, to make out reports demanded by the company and to see that the films are returned after the show. The job of splicing the reels for the show is done by the repair crew.

My main interest is to see that the teacher is satisfied. He is to have no details to look after as far as the films and the projection are concerned. He has nothing to do with the machine or the operators. One thing we ask the teachers to do is to make sure that one teacher is in the projection room during every show. Our operators are instructed to start no show unless a teacher is present; the operators are not responsible for discipline. This last requirement is important in the case of films booked by a department. For example, the head of the History Department may want all the World History classes to see a show built around Territorial Expansion; there may be two classes per period for a day of six periods. The head of the department would then ask one teacher to be in charge each period.

Although our system has been building up for a period of six years, it was not until about a year ago that I had an opportunity to talk to the fifty teachers in the building about the organization of a show. This proved very timely for two reasons. In the first place we never put any pressure on a teacher to bring his classes to a picture. In the example just mentioned above wherein the head of a department would schedule an educational picture there might be one teacher who

Three of the students who help to administer the audio-visual program.

would keep his classes out. We are now averaging almost 50,000 feet of film per month for a school year of 10 months. The teachers naturally raise the question, "Is that time worth while?" In the second place I had been given adverse criticism on some of the films selected by our teachers from the catalogues. On both these items I proceeded to defend myself along the following lines.

Visual Education has the same amount of nonsense and the same time-wasting possibilities as any other teaching method. Any one who has worked with educational films and film programs knows that the really conscientious teacher values his time to a point where he is jealous of any encroachment upon that time. Unless a show carries more punch than the teacher can put into one hour's time, that show is of dubious value. Here is a case in point. In my own Navigation class I could use a group of 20 to 25 slides of the 3x4 type on astronomy; how old they are no one knows; the last picture is a faded cut of Copernicus that no modern textbook would dare to consider. I can duplicate the theme of these slides in 20 minutes of lecture time. However, suppose that I try to match in lecture time the United States Department of Education films on Nautical Astronomy. There would be no comparison. The vivid description of the earth in its relation to the sky is so well pictured that no teacher of Navigation can afford to skip these films. Again, the films on South America can be used for comparison. There are still floating around in some film libraries faded yellow silents made 20 years ago. I have seen these used by a class in Modern Geography, and I know the reaction of the boys and girls to these pictures. To me such show time is wasted because the teacher did not put over what he thought the films would show. How much better it is to use the C. I. A. A. films on South America. Beautiful photography and

Home-made table for the sound projector, which permits easy transportation of the machine.

well-edited picture material make these films outstanding. The same criticism goes for some of the film strips used in Pre-Induction courses. My argument in this case is that time is wasted if the same pictures can be duplicated in a well lithographed text-book.

I am making several suggestions to teachers about subject material for shows. First, I have recommended industrials as educational films. Most industrials are very careful about their propaganda. In the case of one particular film I have advised debunking the propaganda because there are so many good points in the film. These industrials are made by established movie men with good equipment; they are professionals in producing the most interesting and attention-holding shots. One that we use regularly for Physics is a film on electronics, the Westinghouse film, *What Is Electricity?* It can be to the unit on electricity what the Erpi *Sound Waves and Their Sources* is to the unit on sound. We have a number of industrials that are on our regular schedule. The greatest number of compliments that have been received by our crew came from the History and English Departments for the showing of *Wheels Across India*, *Wheels Across Africa* and *East of Bombay*.

I have also recommended the use of Visual Guides to our teachers. In Health Education we have been using the Visual Guide E-31, handled by the Scholastic Press; this guide is a 4-page affair with 50 questions on pages 2 and 3. It is based upon the Erpi film *Body Defenses Against Disease*. This film is shown twice at one sitting; the questions are answered, the vocabulary of some 48 new words is used and the last page on 'Topics For Study' makes a basis for a lively discussion on an otherwise dead subject. Each pupil is given one copy of the guide. A week's time can be given to this topic, all based upon the one film. Study guides are available on about 25 films. Incidentally I look for this type of printed material to be widely used by industrials in the near future.

We have also offered to our teachers programs controlled by civic groups. The Seattle Art Museum has for a number of years employed the services of Mrs. Young in the field of visual education. Our teachers and pupils have enjoyed her talks on famous masterpieces of art; this is accomplished by colored slides on the paintings. Mrs. Young also made a very timely running account of the Eastman silent, *Grass*, that depicts a whole tribe of people who move annually from a mountain home to grassland. In addition to the Art Museum, we use the Red Cross films on First Aid and the Anti-tuberculosis Association films.

It is interesting to note that the program at Ballard has in no sense been handed down from above. I have been teaching a full load of five subjects per semester until this last year. I think that our boys and girls will admit that their grades are boosted because of their interest in program directing; and the teachers are satisfied because we do all the detail work. The weakest part of the scheme is probably the lack of sufficient equipment to go around. We are going to make three improvements in our work. First, we shall add recording next year; second, we shall continue to improve the quality of our equipment and third, we shall include full length educational features.

A Reader Speaks

ARE your visual aid materials accessible? Do your teachers, especially the new ones, know what materials you have? Do you have slides and strip films stored away in dust covered files unused and forgotten? These questions it seems to me should be ever present in the minds of Visual Education Directors.

Visual Aid supplies are worthless unless they are used. Teachers, old and new, should be reminded several times a year of the materials that are available. Don't give them a list of materials at the beginning of the year and expect them to refer to it. They won't.

An excellent method is to investigate frequently the unit of work the instructor is presently teaching and remind her of the specific material you have available on that topic. Strip films can be made very accessible by placing them in a glass covered box which can then be placed on the teacher's desk. Always in view they are there as a reminder and the titles can be seen at a glance thru the glass covered top.

These glass covered boxes, holding fifteen film strips, may be made very cheaply from old cigar boxes. Cut the center from the cigar box lid (a razor blade

Glass covered boxes for filing filmstrips.

in a special handle does a clean neat job) leaving one inch on each of the four sides to support the glass cover. Next place a glass pane slightly smaller than the box lid on this frame and secure it in place with scotch tape along all four sides. Next place two thin dividers in the box to separate the rows of film strips. These dividers may be easily made from an extra cigar box. Lastly enamel the entire box with a good one coat cover enamel. This not only makes a convenient container for the film strips for each teacher or department but keeps them always before their eyes. A small supply of visual aid materials used frequently is more valuable than a large supply which is seldom used. Let's put our film strips and slides to work.

JOHN H. GRIFFITH, Director
Visual Aids Department
Public Schools, Galesburg, Ill.

We Make Our Own Radio Recordings

Making selected radio offerings into workable form for practical classroom use.

THIS is a description of an attempt to overcome the disadvantage of school radio programs being broadcast at some other time than when the class meets that could best use the program. It is not claimed that the recording of a broadcast, to be played back later at a more suitable time, is original, although I know of few schools that are doing so. Rather, the aim is to offer a few suggestions to those schools already conducting such a program, or to those contemplating it, and to point out some of the advantages and disadvantages of the methods we are using.

Obviously, of the thousands of programs cluttering up the air waves of these United States each week, a very small proportion will help to further the educational aims of the classroom teacher, and these few, especially in the Junior and Senior High School, almost invariably come at some other time than the class period. The Columbia Broadcasting System's "American School of the Air" series appealing to many teachers of history, science, music, literature and current events, and unfortunately now being broadcast after school hours, is an example. Another, of many that might be mentioned, is the Saturday afternoon broadcast of the Boston Symphony orchestra.

To overcome this very obvious difficulty, and the classroom teacher's most frequent excuse for not taking advantage of the educational opportunities that radio has to offer, the Audio-Visual Aid Department of the West Springfield, Mass., High School, beginning in September, 1944, offered to record any broadcast that a teacher might request, so that it might be played back later when the class was in session. In the eighteen months that the plan has now been in operation, we have not been overwhelmed with requests, partly because of the fact that too few radio broadcasts have any educational implication, and partly because the large majority of our teachers are completely unaware of such programs as could be used to advantage in their classroom work.

From the teachers in our school system who have taken advantage of our offer, the response has been enthusiastic and the results from an educational standpoint have been decidedly worth while. Teachers report a greater awareness of the relationship between the classroom situation and life outside the classroom. Pupils frequently request that some particular program be recorded that they feel would be of interest to the rest of the class, these suggestions of course first being approved by the classroom teacher. Finally, and we have no way at present of proving this statement, teachers seem to feel that the recorded broadcasts have for many pupils resulted in a finer appreciation of the sciences, both physical and social, than could have been developed if the same classroom time had been spent in any other way.

The instrument we use for our recordings is known as the Soundcriber, and the recordings are made on flexible discs about eight inches in diameter. The re-

FRANCIS K. PIPER, Director
Audio-Visual Education
West Springfield, Mass.

productions from a listening point of view are excellent, both for musical recordings and for lectures or dramatic skits. The cost of each blank record is about five cents, and they can be used on both sides. There are many recording devices on the market, and it might be helpful in choosing one best fitted to the needs of a particular situation if I mention the advantages and disadvantages that we have discovered in the type that we use.

In the first place, the recording has to be played on the same machine, and cannot be used on the turntable which is a part of our Public Address system. To overcome this difficulty, many schools will prefer to buy a recording device that will use twelve or even sixteen inch discs, that may be played back on any standard turntable. One other type of recording device that might be mentioned is the recording made on magnetized wire, instead of a disc. This gives a very fine reproduction, but unfortunately may be preserved only until the wire is demagnetized for the next recording. An advantage is that the wire is usable for a lifetime. For the present, however, the spool of wire is much more expensive than a wax or plastic disc and some mechanical ingenuity and training are required to change spools (probably beyond many teachers who are often very unmechanically inclined), while to demagnetize the wire requires the mere turning of a switch. On the other, much recorded material in school work does not need to be kept permanently, such as numerous recordings of individual student voices in public speaking courses.

The main reasons for choosing the equipment that we use was the moderate cost of the recording machine, the extremely low cost of the discs, and the excellent reproduction of both music and voice. The entire equipment weighs less than twenty-five pounds, and its portability is one of the reasons why we are able to make a recording of any radio program that a teacher might request, no matter whether the broadcast occurs in daytime or evening. Incidentally, most of the actual work of recording is done by junior and senior high school boys who receive one point toward graduation for every two hundred hours of service in the Audio-Visual Aids department. Actually, most of these boys value even more the information and training they receive in the handling of all types of projectors, radio and sound equipment, and the recording devices here mentioned.

The permanence of these recordings gives them special significance in educational work for two reasons: first, as a permanent record of past events which will build up a valuable reference library for future classes. The announcement of President Roosevelt's death,

The Curriculum Clinic

Motion Pictures and Curriculum Change

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

SEVERAL years ago, in a report to the Superintendent, I included this statement as one of the guiding principles for the work of the Visual Department: "It has been assumed that the function of this department was not merely to find and make available to teachers illustrative visual and auditory materials for existing courses of study. It has been assumed that this department should attempt to provide leadership aiming to improve methods of instruction, and to make available visual and auditory materials that might even bring about changes in course of study content."

That was an idealistic and bold statement, and even though further experience forced me to modify it somewhat the following year, I still believe in its fundamental soundness. The modifying experience was an intensive effort to introduce into regular high school classroom use a group of excellent motion pictures that were not directly related to curriculum content. Their introduction was thoroughly and painstakingly worked out over a two-year period. A pilot group of teachers, working experimentally, had attested enthusiastically to the educational value attainable by using these films, even though their use did not contribute directly to the passing of final subject matter examinations. When the effort was made to extend the use of these films to a wider group of teachers, the response was not, to say the least, enthusiastic. In fact, it just didn't work out. What was the cause of the failure?

Well, the later report attempted to suggest some causes: "In secondary schools with a traditionally organized curriculum, with emphasis upon subject matter, and with achievement measured primarily on the basis of tests of factual knowledge, teachers cannot be expected to have lasting interest or time in their schedules for instructional activities that do not conform to that pattern. When instructional leadership within a high school is organized completely on a subject matter basis, without adequate provision for general instructional supervision, the introduction of new materials is extremely difficult unless they can be pigeon-holed into the subject matter compartments."

In a nut shell (or to coin a phrase, "in a film can"), the situation seemed to be about like this: there were many instructional motion pictures that had been produced to correlate directly with the existing curriculum, and these could be used and were used effectively; there also were other motion pictures of generally accepted technical and educational effectiveness. These latter pictures, however, were useful in achieving generalized teaching objectives, but they did not correlate with the specific objectives of accepted subject matter areas such as English, social studies, science, and mathematics. Efforts to encourage the use of this kind of picture met with obstacles of subject-matter-organized leadership, courses already filled with factual content, and demanding final examination.

All that was several years ago. That was way back before the war. But I'm not so sure that time has cleared away the problems and dilemmas. Several recently published statements have indicated that visual educators are giving some real thought to the kind of motion pictures that should be used. They are grappling with an important and complex problem.

In their provocative article, "Looking Ahead Twenty-Five Years in Audio-Visual Education", published in the February 1946 *EDUCATIONAL SCREEN*, Francis and Elizabeth Noel wrote: "If school people continue to insist on a strictly *academic* approach to the production and use of audio-visual materials to further fortify existing concepts and traditional patterns of education, they will miss the intrinsic values and full potentialities inherent within the materials themselves. If this happens, then agencies outside the schools that use such materials because of these values, will by sheer weight of their *extensive* use of them exercise more influence on the behavior of children than will the schools. This situation even now challenges institutionalized education." And there indeed is a challenge to all teachers and all educators not only to pause for thought, but to get set for action.

Edgar Dale, in his forward-looking article, "Farewell, Hollywood!" published in the January 1946 issue of *THE NEWS LETTER*, sees a continued need for films that fit into current curriculum patterns. *But* he sees a need also for another kind of film in which the use is *not* dependent "upon close integration with an existing curriculum." He calls for "problem-centered" films—more films like *World of Plenty*, *The City*, and *And So They Live*. He is not so specific in suggesting just when and how subject-minded teachers are going to use problem-centered films. He does, however, "see a possible linking of the common interests of churches, schools, unions, granges, service clubs, and the like" all of whom would make common use of such films in a program planned jointly.

Here is one more quotation from current thinking on what kind of films are needed by education. This is taken from the comprehensive study and report, "The Educational Motion Picture Field", recently released by the J. Walter Thompson Company. "One group of educators argues that the greatest present need is for the development of motion pictures closely tied to subject matter areas. For example—long division, square root, fractions might be more effectively taught if motion pictures defining the theories and describing the applications were available to aid teachers. Such 'text films' also would be used in the teaching of theoretical concepts in the physical and chemical sciences.

"Another school of thought holds that films are best used as aids in the teaching of broad concepts—that motion pictures are being used at their highest level of efficiency when aiding the orientation of students.

"The net of these friendly arguments among educators is no argument at all. The conclusion is simply that motion pictures must keep pace with the trend in educational thought. Motion pictures must become 'a hand-maiden of the curriculum'."

I wish I could agree that these are but "friendly arguments" and that there are simple conclusions. It seems to me, however, there are larger and more complex issues involved, and solutions are not going to be found until teachers and supervisors and administrators are aware of any concerned with the problem. It cannot be solved by visual educators alone.

Certainly we must face the reality of what we are now teaching and the way we are teaching. They are facts. And we can recognize the need, the possibility, and the probability of a changing curriculum. We can

seek for a greater understanding of the motion picture medium and other newer media of communication, so that they may be used most effectively in meeting the demands of such a changing curriculum.

Excellent motion pictures that cannot be correlated directly with existing courses of study are likely to become available in increasing numbers. Among these will be some of the most powerful pictures produced. They will correlate well with the generalized objectives of education, even though they may not fit into subject matter compartments. If school people are to meet fully their responsibilities in helping boys and girls develop to meet their responsibilities, they must find ways to make use of these tools in spite of a lag in curriculum change. In fact, in so doing, curriculum will have changed.

Production Patterns for Educational Films

(Concluded from page 175)

the crux of the matter. It is the prevailing motion of warm moisture laden air which flows toward the mountains, is forced upward by them, is cooled forming rain, which air now cooled and dry flows on past the mountains leaving the other side with little or no rain. How would a film be made to teach this phenomena? By animation? Yes, it would necessitate an abstraction in animated form plus some photography on location. Let us take Central America as an illustration. The easterly trade winds could be shown by animated arrows or a similar device flowing in from the sea on a relief map rising as they hit the mountains and depositing rain on the eastern slope. Motion pictures of rain falling midst the dense tropical foliage would be introduced. The animation would continue past the mountains and motion pictures of wind sweeping dry terrain with sparse foliage would be introduced. To clinch the application of the principle the process would be repeated for another area and pictures showing the typical behavior of people in relation to the contrasting climate would conclude the film. Commentary? Yes, just enough to direct attention to pertinent points. Other sound? Yes, the sound of the wind and of the rain. The resulting film would be longer than that outlined in the peristalsis example but would be short. The teacher's guide would direct the teacher and class to make further applications and study. The film could be constructed to be of an informative or incentive type.

In these two examples, one from biology and one from geography, the first step in determining the content of the film, after the educational objective had been indicated, was the establishment of the motion concept to be taught. This was followed by deciding the best action vehicle to depict it. Other examples showing the application of this formula could be cited. The fields of human relations and of rhythm offer great possibilities for the development of new production patterns. It is to be hoped that the next analytical study of the action content in teaching films will show that there has been less dependence upon the illustrated-lecture pattern and that better teaching films which make full use of action techniques will characterize the product.

We Make Our Own Radio Recordings

(Concluded from page 181)

Churchill's eulogy to President Roosevelt, Truman's inaugural message, Truman's and Churchill's announcements of Victory in Europe, Japan's surrender, Truman's Navy day speech on the future of the atomic bomb, etc., should be valuable reference material in social science classes for many years to come.

Further advantages of our recordings are that they may be played over and over again for several classes; they may be kept until later in the year when the material is more applicable to work that the class is doing; they may be played before, and again after a class discussion, and they may be interrupted at any time for class discussion. Finally, it gives the teacher using them a chance to become acquainted with the material before class time, so that she may know the points to emphasize, the best follow-up material to use, as well as to judge the quality of the recording, so that she may not subject a class to the wasteful experience of listening to a recording that lacks intelligibility. None of these advantages could be true of the original broadcast.

It should be mentioned here, that along with the many advantages of the recorded broadcast over the original broadcast, is the possible disadvantage that the recording may outlive its usefulness and become obsolete. But this happens with textbooks and with films, and may just as easily be true of recordings. The alert teacher will not let teaching objectives and procedures become dependent upon existing materials. As Edgar Dale said in the Phi Delta Kappan of May, 1940, "When such materials become canned and stereotyped, they should be thrown out—not immortalized on wax."

The educational values of a planned, systematic program of recording broadcasts benefit all concerned. They afford a certain type of technical training for those handling the production and reproduction, and educational and cultural values for those who listen to the transcriptions. Such recorded broadcasts are stimulating experiences which lead to clearer understandings, more desirable attitudes, greater total benefits from school activity.

The ABC's of Audio-Visual Equipment

Disc and Wire Recording Equipment for School Use

Edited by
ROBERT E. SCHREIBER

INTRIGUED by new, war-developed recording equipment, many educators, who never gave much thought to any type of recording device before, have become so enthusiastic concerning these newer, potentially educational gadgets that they have put down older devices as unquestionably obsolete in many instances. It is therefore desirable to review the characteristics of each of the recording media currently available and ascertain the contributions each may make to the instructional program in the future.

The Conventional Disc Recorder, producing phonograph-like, instantaneous recordings and transcriptions, has been with us for some time. Basically, its mechanism is similar to that used in the production of regular phonograph records. Speech or music is picked up by a microphone, which changes sound waves into electrical impulses. These impulses are strengthened in an amplifier and pass on to the cutting head of the recording machine. Here variations in electrical current create changes in an electro-magnetic field. These changes move an armature in the field, to which is attached the cutting needle. The cutting needle describes a circularly meandering groove in the soft surface of a recording blank. The lateral movement of the cutting needle is determined by the changing current coming originally from the microphone; hence, these lateral variations correspond directly with the sound waves that emanated from the person speaking into the microphone.

In the instantaneous recording process, blanks coated with a nitrate base compound are substituted for the soft wax discs basic to commercial record production. However, since the recording blanks used in the instantaneous process must be soft enough to be "en-grooved" by the cutting needle, it is obvious that recordings thus made do not have the wearing qualities of the end-product of the commercial recording processes, records made of shellac or vinylite. Nevertheless, using lightweight pickups (tone-arms) and shadowgraphed needles, instantaneous recordings may be played one hundred times or more.

Disc recorders for school use may be purchased for prices ranging to \$500.00 or higher. However, for the majority of school requirements, a good portable 78 R.P.M. machine retailing at \$250.00 or less, depending upon quality and refinements, may be procured. Prices for two-speed recorders begin around \$300.00. The two-speed recorder allows the production of larger, long-playing transcriptions—as well as conventional speed recordings from six to twelve inches in diameter.

Instructors in speech, drama, language, and music have long recognized the value of instantaneous recordings for comparative purposes. In addition to the immediate class or consultation room reference use, such recordings have a longer run value in that the student may take a recording home and play it a number of times—thus affording considerably more opportunity

to note strengths and weaknesses and so correct them.

In quantity lots, the school may secure the small six or eight inch blanks, used in speech classes for 20c each or less. Such blanks have an average playing time of one and one-half to three minutes per slide. Ten-inch blanks may be secured for approximately 45c each; twelve inch for 60c. Schools producing transcriptions or recording radio programs for class use may secure larger blanks for prices ranging from \$1.00 to \$3.00 each—having a playing time of up to eighteen minutes per slide.

The frequency response of the recording or transcription produced by the average portable school recorder is approximately 80 to 5,000 cycles, which is about that of the usual home radio receiver.

Operation of a school-type instantaneous recording machine is roughly comparable in ease to that of the usual 16mm sound projector. Speech recording is quite simple. Deriving high-fidelity recordings of vocal music or ensembles requires more practice, but it is not beyond the ken of any teacher with a little mechanical bent.

The Wire Recorder, developed for use by the armed forces during the war, operates on the same magnetic principle as the earlier tape recorder, with the exception that a fine carbon or stainless steel wire of sufficient length to record continuously for an hour is used. In these recorders, the electrical impulses, coming from the microphone and strengthened in transit by an amplifier, constitute electrical current passing through an electro-magnet. When a steel wire is passed through the changing magnetic field thus created, changes similar to the variations in the magnetic field are induced in the magnetic structure of the wire; i.e. the latter is magnetized to different degrees along its length, depending upon the original sound waves striking the microphone. When played back, this wire, thus variably magnetized, is passed through a coil of wire called a solenoid, and the magnetic variations in the wire induce a weak, fluctuating current in the solenoid. This weak current is strengthened by an amplifier and may then be used to operate a loud speaker.

The wire may be played back any number of times, removed from the machine and stored for an indefinite period, or reused simply by turning the switch on the recorder to "record." Thus, as a new recording is made on the wire, the previous recording is erased.

Eleven thousand feet of wire on a small spool allows the recording of radio programs up to an hour in length and is cited as a means of making radio more easily applicable to the classroom. The extreme portability of the wire recorder permits its use in any part of the school plant and consequently considerable versatility in its possible applications.

The wire recorders currently on the market cost approximately \$600.00 including a spool of wire and

a microphone. The fidelity of the wire recorder is between approximately 200 and 5,000 cycles.

Both types of recording devices described above have their advantages and their limitations. The disc recording is particularly advantageous for comparative usage; superior to the wire recorder with respect to the ease with which a recording may be played and immediately compared with another. Also, for home study, the disc recording has a considerable advantage in that the inclusion of wire reproducing equipment in homes will probably suffer a technological lag.

The wire recorder, due to its portability and easy operation, is particularly well suited to the production of longer recordings; speeches, radio programs, and the like—as well as a variety of uses which, due to its relative newness, may not be envisioned at this time.

Schools contemplating the purchase of recording equipment should consider carefully the advantages and applications of each type in terms of present and potential school uses. The well equipped school may do well to secure both types of equipment and apply each to the uses for which it is best fitted.

EQUIPMENT QUERIES

We have encountered difficulty in securing good sound and adequate volume when projecting color movies. Are these the common faults of color film, or should our equipment be adjusted differently for its use?

Since kodachrome film has three layers of emulsion on the base instead of the one layer encountered in black and white film, the density of the sound track is considerably greater and thus constitutes somewhat more of a barrier to the passage of light from the exciter lamp to the photo-electric cell. Hence, one can expect that it will be necessary to run such films with the volume control at a higher setting than with ordinary black and white prints. A kodachrome sound track—unless carefully recorded—is apt to emphasize bass tones considerably more than black and white. To secure more intelligible speech and reduce room reverberation occasioned by bass “boom” advance the tone control towards the treble position when projecting kodachrome motion pictures. R. E. S.

With some of the technicolor movies shown in our school, we have trouble getting a sharp focus, while with other colored movies we do not have this difficulty.

Kodachrome motion pictures—as well as black and white—may be expected to vary in the sharpness of focus obtainable. This is due to the quality of the originally photographed negative film and the care with which the positive prints are produced. Many of the feature length films released for 16mm use in color employ a cheap process known as multicolor instead of using the more precise duplication in kodachrome. In the multicolor process, instead of having the various color-sensitive emulsions all on one side of the film base, one emulsion is found on one side of the film and another on the other. Thus separated by the thickness of the film base, it is naturally impossible to secure sharp definition. Since it is undesirable to have either color appear in sharp focus at the expense of the other, about all that can be done is to compromise by obtaining a soft focus of each. R. E. S.

To Projector Manufacturers:

Why can't we have a simple lightweight projector? Any visual aids director will tell you it is easy to get teachers to use the aids if you can make it convenient enough for them. The weight and mechanical features of projectors are factors which must be considered when we talk of convenience. The setting up of the projector is another.

It takes fifteen or twenty minutes to remove a projector from its case, set it up, arrange the screen, and thread the machine. A class period is usually forty or forty-five minutes in length. The teacher has lost at least one-third of his time before he is ready to project. In the fifteen minutes of the “get set” process, he may be plagued with minor discipline problems which would never occur if he were at the front of the class, as usual.

The fifty or sixty pounds of the machine is also a problem. Even the most enthusiastic projector salesman will admit that all projectors are heavy. It is no joke for a woman teacher to juggle one of these machines around. Remember that in the armed services they had good strong young fellows setting up these machines and doing the projection. That is all they had to do. They were not responsible for teaching or discipline. The instructor in charge of the class did all the teaching.

It seems to me that part of the problem goes back to the projector manufacturers. We need a light machine which is very simple to operate. When I say very simple, I don't mean what the literature of some manufacturer tells you about simplicity, I mean, *simple*. Army projectionists went to school to learn the trick of projection. Teachers and twelve-year-old boys can't do that.

The projector should sell for one-half or one-third the price of present projectors. There are at least twenty companies that manufactured projection equipment for the Armed Services. It seems reasonable that one of them would find it profitable to attack this problem.

Some manufacturer has a chance to do a great deed in the field of education, and also to capture a vast market. We need a Henry Ford in the projector manufacturing business. We need a light serviceable machine that any school can buy. It must be simple to operate. It should be a kind of “Jeep” projector. It won't solve all of our problems, but it will eliminate the need of a teacher being a combination longshoreman and engineer in order to use the equipment.

PAUL V. MULLIGAN, Director Visual Education
Revere Public Schools, Revere, Mass.

READERS of EDUCATIONAL SCREEN are already familiar with the point of view of the Editor of the “A B C's Department”—as delineated in the January issue. Opportunity for readers to express their reaction to Mr. Mulligan's letter—as well as indicating their own particular thoughts on the over-all question of desirable 16mm sound equipment—is available through the survey form on the back of this page.

R. E. S.

Survey of 16mm Sound Projector Equipment, Present Use, and Future Needs

THIS questionnaire is the means of indicating the types of 16mm sound projectors now in use and the changes desirable for future audio-visual aids expansion. Here is your opportunity to give voice to your school's needs. Please be entirely frank. Neither your name nor that of your school will be given to any manufacturer. A summary of the answers received will appear in an early issue of EDUCATIONAL SCREEN. In the summary, projectors will be designated only as to type.

1. School now owns the following 16mm sound motion picture equipment:

Date Purchased:	Make:	Model Number
a.		
b.		
c.		
d.		

2. Check type of use made of each:

Projector:	Classroom Only	Auditorium Only	Both
a.	()	()	()
b.	()	()	()
c.	()	()	()
d.	()	()	()

3. Indicate type of personnel operating each projector and approximate hours of formal training given to the average individual in each type:

Projector:	Teachers	hours	Students	hours	Paid help	hours
a.	()	()	()	()	()	()
b.	()	()	()	()	()	()
c.	()	()	()	()	()	()
d.	()	()	()	()	()	()

4. Which type of operating personnel has proven most satisfactory in your school?

Teachers (), Students (), Paid Help ().

5. In the future do you intend to rely on the type of operating personnel checked?

Yes (): No. (). If not, what kind?.....

6. How is the movement and set-up of sound projectors handled in your school?

Teachers (), Students (), Janitors (), Other paid help ().

7. Which of the following characteristics would you definitely insist upon as ideal equipment?

Lamps: 1000 watt (), 750 watt (), 500 watts or less (). Reverse ().
 Speeds: Sound only (). Sound and silent (). Still picture device ().
 Volume sufficient for: classroom only (), classroom and auditorium ().
 Weight: 75-100 lbs. (), 50-75 (), 25-50 (), 25 or less ().
 Blimp case (). Mike plug (). Motor rewind (). Micrometer tilt ().
 Special film safety devices (). One case unit (); two case ().

8. If a projector conforming to your requirements—as checked in “7”—were immediately placed on the market at a cost of \$250.00, how many would your school purchase during the next 12 months? Indicate number.....(Honest?).

General Electric Introduces an Improved Training Method

JEAN DEJEN
Manager of Retail Development
and Sales Education

AFTER some four long years of all-out war, the merchandise department of General Electric at Bridgeport, like so many other manufacturing organizations, is faced with the problem of assisting its thousands of distributors in rebuilding their sales organizations. An army of some 25,000 appliance salesmen, spreading from coast to coast, must be recruited, selected and trained.

Never in its history has General Electric been faced with such a mass training job. The big problem has always been to provide the average sales manager or supervisor with a simple, easy, yet positive method for the personal teaching of salesmen. This method must meet all of the following requirements:

1. It must cover all of our many products, as well as provide basic training in the fundamentals of salesmanship.
2. It must do a positive training job, with a minimum waste of time on the part of the trainers and the trainees.
3. It must be simple for use by the thousands of supervisors and sales managers charged with the responsibility of training salesmen.
4. It must be equally effective in America's crossroad towns as in the cities.
5. It must be low in cost so that all retailers, both large and small, could and would use it.
6. It must also provide training for the trainers.

We have known for a long time that the quickest and most effective teaching methods are with visual aids such as slide films, charts, motion pictures, models or actual products. The U. S. Armed Services have proven the power of visual aids in training millions of men. We saw how highly mechanized forces were trained in complex tasks in an almost unbelievably short period of time, and how this training helped to achieve final and complete victory.

We made a careful study of the latest findings in training techniques. This was weighted with the experience which General Electric gained, just before the war, in conducting some 1,400 individual training meetings in all parts of the country under its direct supervision and with its own personnel. In conducting these 1,400 training meetings we tried out just about every method under the sun, from motion pictures to chart presentations, sound slide films, slides, speeches and skits. The effectiveness of each method was thoroughly tested throughout the country.

Out of all this wide experience, a new, faster, more efficient sales training method has been developed, which, although it may not be revolutionary, does represent the most forward step made in years for training our sales personnel on a nationwide basis. It is a new and improved type of visual presentation and sales education.

We discovered that the voice and personality of a

fresh and blood speaker or instructor were most important for teaching a group of salesmen and holding their interest. So a method was devised in which slide film pictures, with all their drama and interest, are used, but the oral presentation is made by an instructor instead of a sound record. He talks from a carefully prepared printed text while the pictures on the screen visualize or illustrate his story. There are no mechanical problems to detract from the effectiveness of the presentation.

By this method the speaker can stop at any time to develop an important point. He can dwell on one picture as long as he likes, and he can point out details in the picture on the screen. In a word, he can adjust the tempo of the meeting to suit each particular group. Perhaps even more important is the fact that the technique lends itself ideally to instructing both small and large groups. Still another advantage of the visual presentation is that it stimulates the speaker or instructor. It trains the trainer. The speaker has to instruct and inspire his audience—and he can do so easily and effectively by this method.

The Portable Pulpit

An important accessory for this visual presentation is a device known as the "portable pulpit."

This is a lightweight aluminum holder, equipped with clamps for holding the printed film text from which the speaker talks as the slide film is projected on the screen. A hooded lamp illuminates the printed text so that he can read it in the darkened room. It has a button switch which flashes the light on or off as he desires, which serves as a signal to the projector operator to turn the film to the next picture. The light also illuminates the speaker's face, thus focusing audience attention on the speaker. This is most important, because it enables him to inject his own personality even though the room is darkened. The portable pulpit is convenient and easy to hold. This new device has been tested with both large and small audiences. It adds drama to the presentation and is a necessary device in using this new method of training.

Audience Participation

This type of visual presentation encourages audience participation, which is of the utmost value in training and education. Knowing that he may be called upon for answers to the questions which are incorporated in the visual presentation, the listener stays alert and receptive, really trying to learn and to remember. At the conclusion of the presentation, questions are asked to bring out the important points in the presentation.

If the instructor does not get the correct answers, he can readily go over the troublesome points again and make sure that everybody understands them. If the correct answers are given, the question-and-answer

(Concluded on page 196)

The Film and International Understanding

UNO Security Council Meetings Reported by Films and Television

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

THE resources of the motion picture, radio, and television were utilized to bring the proceedings of the New York meetings of the United Nations Security Council to all the world and to make a historical record of them for ourselves and for posterity. The accomplishment of this task is a great contribution to international understanding.

The importance of this recording of sight and sound was recognized by the preparations which were made for it in the set-up of the meetings. A microphone was available for each member so that his voice and the entire proceedings could be transmitted to radio outlets and recording apparatus. Built-in flood lights illuminated the proceedings so that they could be picked up by television and motion picture apparatus. These lights were operated through special control apparatus which prevented them from being annoying to the delegates.

American newsreel companies took turns in filming the proceedings. Each day's crew consisted of two sound cameras and two silent cameras in booths and one roving hand camera-man. All pictures taken were pooled and made available for order by film companies of any of the United Nations through the Film Section.

A studio also was available for recording interviews or close-up condensed versions of delegates' speeches. Another unusual arrangement was the placing of ten television receiving sets in the delegates' private conference room. These receivers were connected with a television camera in the Council Chamber. Thus delegates who happened to be in the conference room still could follow the proceedings in the Council Chamber.

As a result of all of these arrangements, educators and others who are interested in international understanding should have available a very complete and accurate record in sight and sound of the proceedings of this most important conference.

Johnston for Film Unity and Understanding

ERIC JOHNSTON, who last September succeeded Will H. Hays as president of the Motion Picture Association of America, recently issued his first annual report. His report is significant because of its statement of the unity of interest of all who work with motion pictures and because of its emphasis on the use of the motion picture for better international understanding.

"It seems to me," says Mr. Johnston, "we must concentrate upon what is common to all uses of film and screen, if we are to find a common, unifying purpose for all the groups which ought to work side by side for the improvement of motion pictures. I, for one, am interested in motion pictures of every type and use. The war demonstrated the value of them all."

Speaking of the use of the film for international understanding, Mr. Johnston said, "The free interchange of ideas is even more important than the free interchange of goods. There must be no obstacle to the transit of the media of communication. There may be as yet no satisfactory monetary medium for world trade in goods, but the motion picture does provide an adequate medium for world trade in ideas. Not to use it as such is to squander one of the best resources for world peace."

If American films are to have their proper place in the world, Mr. Johnston feels that films exported should "give no reasonable offense to the nationals of foreign countries." Regarding the film portrayal of America itself, Mr. Johnston says that it must be "faithfully portrayed on the world's screens. That view need only be honest and fair in order to be attractive. Democracy needs no whitewashing."

Foreign Trade Packet

TO promote greater understanding of the interdependence of world economy and the problems involved in foreign trade, and to stimulate discussion of the subject, a new "Foreign Trade Packet" consisting of four related teaching aids has been prepared by The Public Affairs Committee, Inc.

The four units in the packet are: a 35mm black and white silent filmstrip, "Foreign Trade—It's Good Business", employing maps and cartoons; accompanying printed Speech Notes which suggest questions for discussion; a sixteen-page, four color comic strip booklet, "Out of the Past, A Clue to the Future", an adventure story which teaches some of the lessons of the past, published by the East and West Association and the Public Affairs Committee; and a 32-page illustrated pamphlet, "What Foreign Trade Means to You", written by Maxwell S. Stewart. The filmstrip and comic strip are based on this new pamphlet.

These four teaching aids explain in layman's terms why foreign trade is necessary, how it functions, and the relationship of international commerce and tariff walls to domestic prosperity and world peace.

It is suitable for junior and senior high schools in the study of economic geography, history, economics, and international cooperation, and for adult discussion groups concerned with current affairs, international relations, and world peace. (Brandon Films is the distributor.)

East and West Association Sponsors Film Forums

A NEW approach to mass education of adults through films is a feature of the East and West Association's Fourth Peoples Congress, a series of ten film forums being held weekly in Town Hall in New York in cooperation with Town Hall Workshops. Each meeting presents a commentary by a distinguished

Shall The Church Teach The G.I. Way?

HOWARD E. TOWER, Director.
Audio-Visual Education, Board of Education
of the Methodist Church, Nashville 3, Tenn.

MIRACLES have been claimed for visual materials in the Armed Service Training Program. Perhaps rightly so—perhaps not! This has been made clear: For many of the twelve million men who passed through the Armed Services, much of their public school education had not taken.

Perhaps the church has faced just as drastic a testing time. We have talked much about the multitudes not reached by the church. How about the multitudes that have been reached? Has the religious education process taken hold? Does the breakdown in public morality, in home life, in public honesty, etc., point to the fact that much of what we have sought to teach did not carry over? Shall the Church teach the G I way? The answer is: It should if by doing so it can make its teachings more effective. But, can it?

Some will say, "Of course it can"; others, "The church deals in values more than in facts or skills, and values are hard to visualize." Put another way, "The church is interested in motivation and commitment. These require the personal touch."

These and a dozen other answers can be heard on every side. They are not the answers. They are opinions. The church simply does not have a large enough body of experience upon which to give a functionally accurate answer. What is the first job of the church, then, in reference to the use of visual materials in its program of education?

First we need to gather and evaluate all the experience we have had. This project should be supervised by the International Council of Religious Education and carried on by the major denominations.

Even this is not enough. We need to do some rather extensive planning, and controlled experimentation. We need to use different media with different age groups for many purposes. Such use should be compared with groups in which only printed materials are used. This type of project should be supervised by the ICRE and prosecuted by the major denominations. The Department of Audio-Visual Education of the General Board of Education of the Methodist Church is setting up experimental projects in thirty-five local churches across the country. Many other denominations will need to carry out similar projects before we can begin to answer the question whether and to what extent the church can teach the G. I. way.

Suppose we answer the question in the affirmative: Churches should use visual media to make their teaching more effective. How can they go about it? What are some of the problems?

The first problem is that of materials. The skilled and resourceful leader can cull visual materials from many sources and then correlate, adapt, and get along with what there is. The hard truth is that there is little material which was created specifically for the church. There is a reason: Commercial producers have not dared produce religious teaching materials because the churches were neither equipped or "sold" on the uses of visual materials. On the other hand, the churches have been reluctant to buy expensive equipment so long as there are few materials to be used.

This bottleneck is now being broken. Churches are buying equipment. A number of producers are entering the religious field. Here we face some real dangers. Will a successful entertainment pattern, or successful G. I. pattern, *per se*, be effective in reaching the goals of religious education? The answer is: Maybe. But producers need more than a "maybe" answer before they invest money, and the church needs more than a "maybe" answer before it borrows freely patterns from other fields. Close collaboration is needed between religious educators and the producers of visual materials. The producers may be able to furnish the *know-how* but he will need to be close to the religious educator if he is to understand the *know what* well enough to turn out material with a high coefficient of usefulness.

While the producers and the religious teachers are getting ready to supply us with better materials, how shall we use the materials which we have? The traditional answer is, "As aids." That is a sound answer. The enthusiast is tempted to substitute the visual methods for the total program; the wise educator uses all kinds of materials and methods to achieve the outcomes he seeks.

It follows that a given film, set of slides, film strip, etc., is selected because it can accomplish a given purpose better than any other material. This means preview of visual materials, and selections based upon specific purposes and objectives which are correlated with the total learning experience.

Getting materials in advance is a difficult hurdle for the local user to clear. Too few units are in circulation to meet the demand. There will need to be greater availability if the church is to teach the G. I. way. Now it is harder to teach that way than any other. It requires a better teacher and a greater investment of time.

Our failures with the old way plague us, the necessity to succeed is great and critical, and a way must be found. Religious education must be made more effective. Visual means and media hold splendid promise. Dare we do less than try?

Straws in the Wind

IS there any danger that the church will overvalue, misunderstand and misuse visual aids and in disillusionment discard them before the principles of their utilization are understood and appreciated? Consider these three questions, typical of many that are being asked:

From a director of religious education: "I am going to a new church in a few weeks and they want to install the visual method of teaching. Can you tell me what I ought to know?"

From a layman in a church: "We have a thousand dollars to spend. Should we get a 35mm projector? Where can we buy films?"

And this one from a minister: "We would like to try having auditorium programs based on religious films and do away with our classes for young people. What do you think of this?"

Here *are* straws in the wind: What do they reveal? They reveal more than they ask, and they ask quite a bit. Will these three churches be on safe ground educationally just as soon as some one answers these three questions? I am afraid not. All three questions reveal enthusiasm. All three have sold themselves, or been sold, on visual education. There is danger in enthusiasm of this kind. Under it is no foundation of knowledge.

Take the first: No one can tell this director what she ought to know. What she ought to know should have been taught to her in the school which prepared her to be a director. Even a point of view cannot be picked up in transit from one position to another, to say nothing of minimal knowledge and experience with visual aids. On the face of it this church is expecting this new director to install visual teaching to displace other kinds of teaching, not to supplement and enrich a program already under way. Disillusionment may be just around the corner for both the church and the director.

The church with the thousand dollars has more money than knowledge. With this much money available they are more likely to get equipment than understanding. That is the danger here. This church has not come upon its confidence in visual methods and materials gradually after using many kinds on all levels in the church. If it had, it would have known that it needed 16mm equipment. And the buying of films! How can such plunging issue in anything but disappointment?

To use films in the curriculum of youth is wisdom, indeed. But, to use nothing except films is folly beyond understanding. What will happen? The youth department will be in the show business—it will be *showing* films, not *using* them. It will run out of interesting films—the dominant characteristic of *shown* films—and the attendance will drop. In disappointment they will say, "We tried visual education and it didn't work," and begin looking for another panacea. This church has forgotten that in morals and religion the most powerful force in the educative situation is the personality of the teacher. There is a way to use

films in the church experience of youth, but it is not the way this church has taken.

These straws taken together indicate that the church is looking for educational short-cuts. It wants easier methods. It wants fewer teachers because they are hard to enlist. It wants to get around the difficult job of training teachers, not knowing that the right use of visual materials presupposes trained leadership. How much money does the church with the thousand dollars for equipment spend annually on the training of its teachers?

Again, they indicate a disposition to solo in methodology. What is to happen to the old procedures in the church calling a new director? In the second church will money come easy for other educational materials and equipment, including a generous budget for leadership training? Or, has attention become focused upon visual education? It would seem that this church did not sit down in conference and formulate step by step the strengthening and enrichment of its present educational program by the introduction of visual materials and methods. It began on the money level; not on the educational level. It is headed for trouble. It is about to solo in method.

No wise director will *install* visual education in a church and no wise church will ask for it. Getting educational understanding—at least a modest amount of it—comes before the getting of equipment. The church must realize that visual education goes deeper than the budget.

Leadership Training

ACCORDING to The V E F (Visual Education Fellowship) Newsletter of the International Council of Religious Education, "a standard leadership course on the second series level in visual aids in religious education was taught interdenominationally *three times in the four years 1936 to 1939 inclusive*. Such a course was taught *fifty seven times in one and a half years* from September 1944 to December 1945."

One of the major purposes of the workshops held by the International Council has been to stimulate denominational and interdenominational groups and organizations to conduct regional and local conferences, institutes, and classes, and to include visual aids in the on-going activities of all such groups. This is good strategy. As the church multiplies the number of those who can help others to understand and use fruitfully the various visual aids, it will be improving its total program of religious education.

■ The first visual education workshop of the Washington (D.C.) Federation of Churches last fall was attended by 350 church leaders, lay and professional. It was held at American University on three consecutive evenings, and was planned by the subcommittee on visual aids of the Federation's department of religious education, several members of which attended the Second International Workshop in the summer of 1945. This subcommittee will encourage a number of local leaders to attend the Third International Workshop which will be held at Green Lake, Wisconsin, September 2 to 7 this year.

Among The Denominations

THE mission boards of the church were quick to see the potentialities of visual presentations, their interest going back to the days of the "magic lantern". The Board of National Missions of the Presbyterian Church (USA) was one of the pioneer promoters of visual aids in missionary education and remains today one of the most progressive of the church boards in the development of visual materials.

In preparation for next year's mission study theme in the national field this board is now in production on one two-reel silent film, and one 30-minute sound film on the American Negro. It is producing, also, one 15-minute film on the Negro for use with children. Each of these films is to be in color and will have something of the character of documentaries. It is not overlooking the usefulness of the miniature slide and has in preparation a 40-slide set on the Negro.

According to Dr. Frederick Thorne of the Board of National Missions of the Presbyterian Church, the scenario for a film on Presbyterian missions in New Mexico is now being written. This film will be photographed by professionals and will be documentary in character.

Since the mission study theme in 'home' missions next year is "The Christian And Race" these films should contribute greatly to the study of this important subject by churches throughout America. Other denominations will be producing, buying, leasing and making available films and other visual aids on both this and the "foreign" theme, *India: Her People and Problems*.

Sequence Maps of Bible Lands in Filmstrip

THE Wartburg Film Service, Inc., (Waverly, Iowa) announces in a recent issue of its Visual Aids Bulletin the production of *The Sequence Map of the Exodus*, the first in a series of "sequence maps" on filmstrip. The North Central Projection Service is employing a new process of map-making in the production of these interesting visual aids.

Concerning the need for, and advantages of, this type of map, we quote the Bulletin: "The use of maps in the study of the Bible is not new. The Bible abounds in geographical material which is both interesting and impressive. Yet most maps used in the classroom have one common shortcoming. Too much material is presented at one time on the same map. Too much information on one map is distracting.

"Sequence maps of Bible lands in filmstrip form provide a happy solution: for instance, in studying the conquest of Palestine, these maps provide a step-by-step presentation of the progress of Joshua's campaigns, and through the tracing of the routes taken by his forces and the shading of the area subdued, the individual viewing the Sequence Maps receives a lasting impression of what a great and successful undertaking this was. They will not be distracted by other material on the map irrelevant to their study."

These filmstrip sequence maps will include a teacher's manual and pupil's work sheets of black and white map outlines. The price of the filmstrip map is \$3.50 to members of the WFS. Those interested should write direct to the WFS.

We commend the WFS on the insight and courage involved in the production of this new form of map. Certainly their reasoning is sound, and the filmstrip is the ideal medium for a sequence map. This idea will be of interest to the producers and utilizors of maps in the school field, we venture to predict.

New Kodachrome Lectures

THE following new kodachrome slide (2x2) lectures are available for rental thru the Methodist depositories (150 Fifth Ave., N. Y. 11; 740 Rush St., Chicago 11; 125 E. Sunset Blvd., Los Angeles 12; etc.) at the service charge indicated, and a script comes with each:

- *Outreach of the Elizabethtville Church*, 58 slides by Bishop Booth showing how the church works on the mission field—in this case, Africa. Seventy-five cents. Useful in a study of the Africa books.

- *Jimmy, An Uprooted American*, 17 slides by Mabel Garrett Wagner etching strongly the story of a typical child transplanted by a war-working family to a highly congested area. Fifty cents. Useful in a study of the national missions theme.

- *Together We March*, 71 slides by H. C. Spencer illustrating the mission study book "Christ After Chaos", and surveying home missions from Alaska to Puerto Rico. Seventy-five cents.

- The film strip, *How to Conquer War* has been revised to include pictures of the atomic bombing of Japan and new prints are now available to churches and other organizations from Federalist Films, 391 Bleecker St., New York 14. The price is \$3.00. More than six hundred prints are now in circulation in 39 states. Youth and adult groups in the church can build strong peace-promoting programs around this excellent visual aid to understanding how to conquer war.

Something Should Be Done

AND done pretty soon about superimposing the producer's name or trademark on the initial or concluding picture sequence of certain films. Here is unmitigated bad taste. It is more. It is an insult to the picture itself.

A fine picture is coming to its end. The last picture sequence is on the screen. The cumulative effect of all the scenes is being felt by the group. Suddenly, superimposed upon these final scenes, the worshipper beholds "*Produced by Shortwit Company*," or "*Western Hemisphere Productions*". Imagine the shock to the sensibilities of the devout!

Is the producer afraid to let the picture speak for him? Apparently so. His reliance upon blurbs rather than upon production skill, cinematic artistry, and good taste ruins his film for the discriminating user.

Who can cure this "hollywoodism?" The producer? Certainly. Such advertising is questionable taste in the theatre. In the church and chapel it is downright bad taste. Of course, no reasonable person will object to the header and the trailer carrying the producer's name or trademark, but let them be separated *entirely* from the main body of the film.

News Notes

■ According to Dr. S. Franklin Mack, of the Board of Foreign Missions of the Presbyterian Church U. S. A., (156 Fifth Avenue, N. Y. 10), Mr. Mason Vaughn who is head of the engineering department at the Allahabad Agricultural Institute in India, has been commissioned by the Board to design and build three small audio-visual trailers and one large experimental trailer for use in India and as possible models for similar equipment elsewhere.

■ "The Eyes Have It" was the theme of a recent conference on visual aids in religious education for the Episcopal churches of Cincinnati and vicinity which was attended by ninety-three church leaders. Miss Flora Fender, of Calvary Church, who attended the International Workshop last summer, acted as chairman of the conference committee. The program began at 2:45 p. m. with two addresses, "The Use of Visual Aids", and, "What to See in a Picture". It continued through departmental sessions, supper and closed with a worship service developed around the sound film, *No Greater Power*. Slide sets, flat pictures, projectors and books were exhibited.

Book Review*

“VISUAL AIDS IN THE CHURCH,” by William L. Rogers and Paul H. Vieth, has come at the opportune time to help many. What other books have done in the public school field, this book has done for church leaders.

For some 48 years the church has been feeling its way in using visual materials to bring its message to the people. The first chapter of this book gives a fascinating account of the church's "ups and downs" in the development of policies and programs relative to the visual media. "The motion picture has put new power into our hands", and the book proceeds to show us how to use it in the work of the church.

But these writers do not deal with the motion picture alone, nor with projection materials alone. They give us help on many types of visual materials—three dimensional as well as flat pictures and non-projection as well as projection—and help to evaluate them for various purposes.

Practical ideas are suggested and materials are recommended in regard to improving worship experiences, the teaching of the Bible, missionary education and human relationships. Helps for the training of workers are also given. And, very valuable help is given on building the *total program of visual education* for the local church. The bibliography is good and the sources for motion pictures, slides and filmstrips is quite complete.

We bespeak for this book a wide use in training classes in the use of the visual method in the church, in college classes in visual education, and by pastors and other church leaders who wish to make the widest and most valuable use of these effective means of changing the thinking and feeling of people.

FRANK A. LINDHORST, Director
Christian Community Administration
College of The Pacific, Stockton 27, Calif.

*Published in February 1946 by The Christian Education Press, 1505 Race Street, Philadelphia 2, Pa.; 214 pages; \$2.00.

School and Church Leaders Cooperate

THE Religious Film Library of York County was established in April through the joint efforts of York (Pa.) School Film Library and the York County Ministerial Association. Mr. Jesse D. Brown, of the school system, will be the Secretary-Librarian of the new religious film library. The various participating churches are making contributions which will be used for the purchase of films and a considerable sum has already been raised from the churches and interested individuals for this purpose. At the April meeting of the Ministerial Association a demonstration was given and the circulation of films launched. These leaders are to be congratulated upon their vision and achievement. The church and school are separated in their source of support and in administration, but they are united in their devotion to enlightenment and character education. Both are determined to give to the future an intelligent citizen motivated to seek worthy ends in his personal and social living.

Films Recently Available

● *We Bear Witness*, a 16-minute sound film made by the special Protestant delegation to Japan—the first civilian delegation to visit this country after V-J Day. It includes pictures of Kagawa and other Christian leaders and shows the ruins of many institutions. The commentation is given by Dr. Walter W. Van Kirk, NBC radio commentator and member of the deputation. According to Rev. Harry C. Spencer, Secretary of the Department of Visual Education, the Methodist Board of Missions and Church Extension, this film rents for \$5.00, and prints sell for \$100.

● *That They Might Have Life*, another Methodist release, is a 20-minute sound film telling the story of the influence of a home missions church in a great city on one of the families living nearby. Rental is \$2.00 and prints sell for \$80.00.

Correspondence

Dear Mr. Hockman:

May I say how delighted I am to see and read of your new department in EDUCATIONAL SCREEN. I shall follow its course with interest and from it derive much benefit.

We are making slow-but-sure strides in Visual Aids. Our new M. S. C. C. (Missionary Society of the Church of England in Canada) venture is certainly the most up-to-date to appear yet in Canada. We are only at the start—but already we are too busy for our comfort and good. We have no time for research and must be content to carry out the plans already made. I feel, in a way, that our development is too fast. If we can survive and get new material and a good organization in motion, well and good. If we make a false step, I hate to think of the results. We serve the whole Dominion, and sent out through Lent more than 1,000 bookings. From a small office, that is a big job.

EDITH S. J. CRAIG
M.S.C.C. Visual Aids Service
604 Jarvis Street, Toronto 5, Ontario

STANDARD CHALLENGER

For years, the leading top quality tripod screen. Provides desired height adjustment without separate movements of fabric or case (exclusive Da-Lite feature).

DA-LITE MODEL B

Is ideally suited for mounting on wall or blackboard. Has protective metal case and spring-operated roller.

DA-LITE ELECTROL

For classrooms and auditoriums. Electrically operated by remote control. Motor, driving mechanism, and screen housed in one compact unit.

A job for

EXPERIENCED HANDS

In railroading, the safety and comfort of travelers are entrusted only to experienced, time-tested trainmen.

Experience also makes the big difference in screen manufacture. The long experience of Da-Lite designers and craftsmen, covering a period of more than 36 years, is your assurance of dependable equipment that will stand the test of hard, everyday use.

Preparation for showing visual aids is made speedier and more convenient with Da-Lite screens because all mechanisms are so simple and foolproof.

The very finest reproduction of visual aids is yours with Da-Lite Glass-Beaded Screens. This screen surface, with its millions of light-reflecting glass-beads, provides the utmost in clarity and brilliance for your educational slides and movies.

There is a type and size of Da-Lite screen to fit your particular need. Contact your school supply dealer or write for literature. Address Dept. ES-4

School Made Motion Pictures

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

WHEN the home begins to take an interest in the extracurricular activities of the school, it augurs well for the future of our educational system. When, the parents share the trials and tribulations of their offspring in solving their cinematographic problems, school made films need not fear an occasional brick-bat that they are a waste of time, effort, and money.

This is an account of how one boy, George Oliver Smith, turned a toy into an educational hobby, which he later put to good use, not only in his college, but also in the photographic division of the United States Signal Corps. George began filming with his 8mm camera when he was a student in Miss Fruhlhague's Latin class at the Weiser High School, Weiser, Idaho. According to his mother's report, he put life into the "dead language". To many a student a foreign language represents mere verbalism, principal parts of verbs, declensions, roots, prefixes and suffixes—but not for George. To him the mythology of Virgil as portrayed in his Aeneas and Dido was a challenge to his ambition to become a motion picture director. How he met the challenge—you'll have to read it for yourself, this most interesting letter from his mother, Mrs. Bess Foster Smith.

When I come across an account like this, I really feel sorry that I skipped the opportunity of taking Latin in my school days. Won't someone please do a film, now, to explain the mythological names in astronomy. It's a pity to waste so many beautiful constellations these clear nights. I'd like to know more about Pleiades—the Seven Sleepers; how Orion, the mighty hunter came to threaten Taurus, the Bull, with his club,—wouldn't you?

A Pioneer Project in Making a School Movie

YOUR questionnaire on school made films gives me the opportunity to re-tell one of my favorite stories. Every mother likes to talk about her own children, and this one is about my son, George Oliver, who is soon to be released from the Signal Corps Photographic Division, where he has been a motion picture camera operator for Uncle Sam for more than three years.

George Oliver Smith

But, the story of the school movie was when he was a Freshman in High School. He had a new 8mm. camera, and an ambition to be a Hollywood Director. He had tried it out on scenes and athletic events, and the home folks, but he craved to produce a real show, with a script and continuity.

His Latin teacher announced that she was planning a class party. She had the outline of a pantomime, and some costumes for a semi-burlesque and semi-serious presentation of Aeneas and Dido. But, George and his

cohorts prevailed upon her, to let them act this out, and take a movie of it, and show it at the party. She not only agreed, but cooperated by advancing the money for the film (\$20.00 worth), planning the costumes and enlarging her script.

The members of the class made up the cast. Nothing was too difficult, or too much work for these young actors. They stayed after school, and worked on Saturdays, making sets and shooting pictures. The Ghost of Hector walked again! (A rather healthy looking ghost). Neptune, Diana and a lovely sprite had an act. Dido appeared between great columns (made from linoleum rolls) to great Aeneas, and the waves rippled on the sand near Carthage (a Snake River Bank).

Dido immolating herself

Weiser's sand pit served as the cave where the principals took shelter, and Dido, after her lover had gone, and she had thrust herself through with a sword, was burned on a funeral pyre—built of matches on which was laid a tiny roll of cloth,—and photographed through an enlarger. The titles were brief messages hand printed in white ink on black paper, and enlarged in the same way.

If a picture can be judged by its ability to stretch the imagination, then this one could be classed as a real work of art. If it could be judged by box office receipts, it could also be called a success. There was a 10c admission charge for the school. Their expenses were all met after the premier showing, and a plaque was purchased for their room with the rest of the money. If it could be judged by audience appeal, it could be called a "wow"! Parents and Club groups

SIMMEL-MESERVEY

presents

THESE HIGHLY CULTURAL FILM SUBJECTS

for the

CLASS ROOMS OF AMERICA

"DINNER PARTY"

2-reel (20 min.) 16mm color and sound. Trains in table etiquette at high school age level. By associating the idea of correct etiquette with sociability, students are encouraged to learn the rules of good table manners. Provided with a comprehensive 25-page booklet of value to the teacher during and after class use.

Comment appearing in February issue SEE AND HEAR Magazine: "After a few days had elapsed (since the film showing) a librarian reported that the demand for Emily Post and The Vogue Book on Etiquette exceeded anything she had ever experienced in her long term of service as a school librarian."

"SKI THRILLS"

11 min. color and sound. Depicts all of the exhilarating movement, charms and rhythm of this popular and healthful sport, amidst the inspiring High Sierras.

"DEATH VALLEY NATIONAL MONUMENT"

(Paul Hoefler Production)

11 min. color and sound. A problem and thought-provoking treatment of fascinating Death Valley. Pictures the unique extremes that are found in this weird and silent region. An educational film that is rated the best of its type.

"PALOMINO—THE GOLDEN HORSE"

11 min. color and sound. For elementary grades. Helps students make the transition from their generalized love of horses toward a practical attitude regarding horse-raising, the history of the horse, and the fundamentals of horsemanship.

"THE MONARCH BUTTERFLY"

11 min. color and sound. The life cycle of the Monarch is followed minutely in richly-colored telephoto close-ups of developments in the caterpillar, chrysalis, and adult stages. Two editions are available. One with narration for auditorium or classroom use in the elementary grades, the other with a strictly scientific narration for high school and college use.

"JUNIOR PROM"

2-reel, (22 min.) 16mm color and sound. Of exceptional cultural value in the field of etiquette, covering the major problems of "dating" encountered by young people. Presents a high-standard pattern of positive behavior for high-school and college students at a semi-formal party. Directed by qualified authorities in educational techniques and motion picture dramatics.

Paul Hoefler Production

"YOSEMITE NATIONAL PARK"

11 min. color and sound. Designed for teaching, this film offers a variety of subjects for discussion. Gives accurate geological data and historic events. A comprehensive picture of this unique seven-mile long gorge where 3,000-ft. cliffs form towering walls, and waterfalls drop from dizzy heights. Scenes show: the Giant Sequoias, oldest of living things; the Half Dome; Glacier Point; Giant's Stairway; Nevada Fall; Vernal Fall; Merced River; Inspiration Point; Bridal Veil Fall; the 600-ft. granite monolith, El Capitan; California Mule Deer; Yosemite Falls.

"THE STORY OF A GREAT RIVER—THE AMAZON"

11 min. color and sound. One of the first films ever made of the Amazon headwaters. Shows the river's source in the Andes; raft building; flora and fauna, and life along the river; Iquitos, the port 2400 miles up-stream; Manaus, the rubber boom city. A compendium of historical and geographical facts about a region seldom discussed in existing texts.

Guy D. Haselton Productions

"THE BLOOMING DESERT"

11 min. color and sound. A film which has inspired the subtitle "Sweet Mystery of Life."

"THE CANADIAN ROCKIES"

11 min. color and sound. Emerald Lake, Lake Louise, Mt. Victoria, with its snowfields; enumerable other lakes and mountains; Tonquin Valley with its big game.

Paul Hoefler Productions

"PRIMARY READING SERIES"

5 min. each, color and sound. Builds fundamental word concepts in the young child's basic vocabulary. Employs a new technique in figure animation to enhance realism and arrest attention.

"CAPITAL CITIES SERIES"

200 ft., 6 min. each, color and sound. 49 subjects, one each of the 48 State Capitals, and one of the National Capital. Treated with genuine educational technique. Now ready: Salt Lake City, Santa Fe, Denver, Sacramento, Carson City, Salem, Phoenix, Olympia and Boise.

Paul Hoefler Production

"STORY OF NIAGARA FALLS"

11 min. color and sound. Complete story of Niagara Falls from its ancient beginnings. The student travels from Lake Erie to Lake Ontario as the picture unfolds the geological, historical and economic facts about this phenomenon called "Niagara Falls." Scenes of breath-taking beauty show Lake Erie, Upper Niagara River, Cascades, American Falls, Canadian Falls, Rainbow Bridge, Power Plants, Whirlpool, Lower River and Lake Ontario. This production introduces a new method of treatment for films of this type, based on teacher experiences.

Paul Hoefler Productions

"AFRICAN FAUNA"

12 min. color and sound. The wild beasts of the veldts, forests and rivers of Africa. Widely acclaimed by educators for its authenticity and close-up studies of waterbuck, impalla, cheetah, crocodile, elephant, zebra, giraffe, lion and hippopotamus. Filmed in Kenya Colony, Uganda and the Belgian Congo.

"AFRICAN TRIBES"

12 min. color and sound. Some of Africa's strangest tribes of forest and desert supply this study material for classes in ethnology and ethnology. Pictures the Bamburi of the Lake Albert district, the Manbettu of the Uele River district, the Ifi pygmies of the Ituri Forest in the Belgian Congo, and the Rendille of the Kaisut Desert, Kenya Colony.

were in stitches seeing their offspring—acting in the “Movies”.

But the greatest value of the picture lies in the fact that this generation of youngsters became our war heroes over night, and were scattered to the farthest ends of the earth. Some have tread the sands of Carthage and walked and walked the streets of Rome and taken flight over Mt. Olympus. So now, the picture is a most precious souvenir.

At the time this picture was made, back in 1936, it was a real pioneer project and considered just a whim, but now, we all know that even though all the scenes are crude and childish, the creating of it was of great educational value. That is one Latin class that will no longer think of the subject as a dead language. And as for my son, George Oliver, it was a stepping stone in achieving his life's ambition.

Question Box on Film Production

QUESTION: Pictures of student activities in many of our classrooms brought out just the opposite reactions of what we had anticipated. Quite a few parents remarked, “My, but you certainly have small classes.” Why can't our 16mm. camera show the entire class, instead of just a fraction in each room? How can we indicate not only full size, but even overcrowding as we have in some rooms?

ANSWER: The average one inch motion picture camera lens has a horizontal angle of view of about 21 degrees. This means that if you photograph all the students in their normal positions, only about one-fourth of the class will show up in the picture. However, there are several ways of conveying full size to any audience.

If you have a sign on the door indicating the kind of class holding session in that room, your first shot could show the door being opened by a hand. Following this, show students filing in. Get distance, medium as well as close up shots to avoid monotony. Toward the end of that scene, move your camera into the classroom, and shoot from there the last group filing in and closing the door. If the class activity involves the use of paraphernalia on each student's desk, a series of slow “pans” alternated with close-ups of varying stages of the activity will be in order. In panning, be sure to keep the camera on a tripod, and to “pan” always in one direction, preferably left to right—never “pan” back and forth. If only a few desks are provided with materials to manipulate, it is quite pedagogical to permit other students to crowd around and watch or take part in the activity.

A larger view of the classroom may be obtained by placing the camera as far back as possible. If the door is wide enough try placing the camera out in the hall and shoot through the doorway. Without any obstructions in the way a pleasing composition will result.

Finally, if you can get access to a 15mm. wide angle lens your shots will cover an area of almost 34 degrees. The effect with this lens is the same you get when you step back with your one-inch lens—the pictures are smaller.

General Electric Training Method

(Concluded from page 187)

period has served as a review, and has stressed the important points of the presentation.

Printed Film Text

Each visual presentation is accompanied by a printed film text. This is a pocket-sized booklet which duplicates the slide film, reproducing every picture in its pages and supplying the text as well. It is intended that one be given to each salesman who has witnessed the visual presentation, to serve as a permanent reference and to refresh his mind on what he has seen and learned in the class.

These highly illustrated booklets represent a new and improved departure in sales training literature. They make sales training casier and fascinating. In fact, these booklets can do a training job by themselves. However, while good, this literature alone can never be as effective as the visual presentation in which a speaker presents the film and talks from the printed text. Packed in a small film can, only 1½” in diameter, is the complete, self-contained and effective “canned” sales training presentation, with all the advantages of a personal presentation.

In using this new training method, the supervisor, instructor or sales manager learns as he teaches, and repetition will make him an authority on the subjects he presents, thereby increasing his values as a sales and training leader. He has an unequalled opportunity to develop his ability to address groups. It provides a unique way to learn the important art of effectively addressing a group of people.

This new type of visual presentation will not replace the experienced instructor or any of the other methods used for training salesmen. But for mass education purposes at a low cost, it is believed to be the most effective method yet devised.

A Reader Speaks

IN *The Curriculum Clinic* under the head, “Notes about Sponsored Films,” January issue, I agree with the general idea but I still hold to the view expressed in my article long since in your hands.* In addition to my comments there, let us consider the predicament of the school on a small budget. A good sponsored film on electricity, for sample, can be had for no charge. I cannot, by lecture, reading or by blackboard, teach sine wave alternating current effectively; this picture helps me to really “get it over.” The educational films I buy cost \$45 for a reel of nine or ten minutes. The freight on a sponsored film costs 75c. Many sponsored films have an eye appeal whereas too many of our educationals remind me of black and white textbooks with no lithographing.

I still say, use the sponsored film and debunk the propaganda if it is too bad; that is all in the education process.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

TRENDS

- **Motion Pictures for Instructional Use**—Stephen M. Corey—*The School Review*: 54:125 March, 1946.

The trend in the production of educational films is evaluated in an editorial. There is some hope in the efforts of companies that are dedicated to the informational film. But it is the trend toward sponsored films that is viewed critically. The author sees no reasonable objection to this practice if the pictures are appropriate. The educator must employ the same standards in judging sponsored pictures as in the use of any other type of instructional material. There are certain objections, however, which have applied to industrial sponsored films in the past:

- 1) They were designed for a very wide audience, and were therefore too broad and general for classroom use.
- 2) Their titles have tended to mislead: *Scrub Game*, *Jerry Pulls the Strings*, *America's Favorite*, etc.
- 3) They tend to deal with too many topics, or too many aspects of a given subject.
- 4) They have been unduly influenced by Hollywood technique, such as elaborate music, jokes, 'big name' radio commentators, etc.
- 5) They contain advertising that is either too long or otherwise objectionable.
- 6) They are too long: 2 to 5 reels in length.

In general, the prospect of "sponsored" educational materials is cause for alarm. Teachers have fought for years, and with success, against the use of teaching materials made to advertise commercial products. But this objection has been directed at printed materials.

Recently, a new producer of educational films made a bid for industrial sponsorship through a special folder. Reference is made to Young America Films and its appeal which promises: "Educational films, effectively distributed, can help build acceptance for your product or service both directly and because of the powerful way in which students influence the purchasing habits of their families." The appeal is to have commercial firms make use of Young America's sales organization.

- **Trends in Postwar Adult Education Films**—*Adult Education Journal*, 5:13 January, 1946.

An important summary of activities throughout the country with respect to the use of films in adult education. It includes many items, such as the forthcoming quarterly, *Film Forum Review*, of the Joint Committee on Film Forums; the project of the YMCA and Institute of Adult Education in publishing discussion guides; the Chicago Film Workshop; the Adult Education Council project in collaboration with the Cincinnati Public Library. The report is too concentrated for abstracting. It should be seen in the original.

ADMINISTRATION

- **Distribution the Army Way**—Arthur Rosenheimer, Jr.—*Film News*, Feb.-March, 1946.

From the author's experiences in overseas army distribution, he would recommend a similar organization somewhat as follows: There would be three types of libraries: three libraries, say in N.Y., Chicago and San Francisco. Then there would be regional libraries scattered around the country, each with a full line of projectors, a maintenance team, equipment and a screening room. Films would be distributed for all those producers who wanted maximum circulation.

This coordination of distribution would be of great help to the individual user, as he would be kept in touch with the newest and best releases and would deal only with one reliable distributor.

- **How Newark Organizes Its Program**—Marguerite Kirk and Roberta Bishop Freund—*Nation's Schools*, 37:55 March, 1946.

Description of one of the best audio-visual aids services for a city school system. The Department of Libraries and Audio-Visual Aids of the Newark school system serves 70 public schools and the various community agencies.

Films and other materials may be ordered within a week of use. Weekly deliveries are made by truck. Each high school and junior high school owns a sound projector, and the elementary schools are acquiring them. Those which do not have a sound projector are entitled to a weekly "sound program", sent around on a circuit basis.

The Department sends a projectionist and films to the community meetings, where requested. When the desired films for school use are not owned, the Department will rent them. The staff includes a projectionist and photographer, the latter being available to photograph class activities.

Films for purchase are previewed with a committee of teachers and supervisors. The Department issues a catalog in loose-leaf form, which is sent out 2 to each school. A newsletter, "Listen and Learn" keeps teachers up to date. The school librarian is the person in charge of audio-visual aids in each school.

As to radio, Newark has just acquired an FM station and has begun a public relations series of programs. The Department serves therefore to coordinate all materials of instruction for all the schools of Newark.

TEACHER - TRAINING

- **Looking Toward Competency in Audio-Visual Education**—Francis W. Noel—*California Schools*, 17:19 February, 1946.

The California State Board of Education has passed a regulation requiring the completion of a two semester-unit course in audio-visual education for teacher certification, effective July, 1947.

A group of qualified educators will prepare a statement of the nature and scope of such training, in cooperation with the American Council on Education.

UTILIZATION

- **Teaching Power in the Sound Film**—Joseph E. Dickman—*School Science and Mathematics*, 46:228 March, 1946.

The educational sound film has the following qualities:

- 1) The ability to speak with a picture language; greatly reducing the per cent of instructional time spent mastering the mechanics of communication;
- 2) animates the regular blackboard drawings;
- 3) annihilates space and brings science phenomena into the classroom;
- 4) enlarges demonstrations so that all may see them;
- 5) speeds up action, slows down fast action; and
- 6) conveys natural color impressions where needed.

- **Cinema Syndrome**—Max J. Herzberg—*English Journal*, 35:83 February, 1946.

There are five causes for the misunderstandings that have prevented the greater and better use of educational films in schools:

- 1) It is not clearly enough perceived that pictures, as a semantic device, speak louder than words.
- 2) Teachers do not yet realize that the art of the motion picture is an independent, almost incredibly vital art, and not literature art.
- 3) We have not recognized the place of comedy in the classroom so well represented in commercial films; nor have we adequately related movies and reading. Incidentally, the author hopes that textbooks of the future will

(Concluded on page 200)

Professional Quality Projection From 2" x 2" Slides

IN this outstanding 2" x 2" Slide Projector, Bausch & Lomb has utilized the experience gained in manufacturing motion picture optical systems to give the user screen images of professional quality from black and white or color slides.

Despite the exceptional brilliance of the screen images, slide temperature is kept within safe limits for all normal projection.

The Bausch & Lomb 2" x 2" Slide Projector is equipped with an f:3.8 projection lens and a large diameter triple lens condensing system, the back lens of which is of special heat absorbing glass. For complete description send for Bulletin E-116. Bausch & Lomb Optical Co., 688-4 St. Paul Street, Rochester 2, N. Y.

BAUSCH & LOMB

ESTABLISHED 1853

use sound films as an integral, not supplementary part of instruction.

4) We have no standards for appraising educational films and do not insist on high quality of product.

5) We have not helped students to be more critical of the out-of-school movies they see.

● **Filmstrip Utilization Survey**—David J. Goodman—*Film News*, 7:18 Feb.-March, 1946.

Results of an intensive survey to determine current practices and conditions of use of filmstrips, and to find ways of improving the different aspects of the filmstrip program.

More than 10% of all active Army Air Forces bases connected with training were visited: 43 in 21 states. Questionnaires from instructors (1,716) and from officers (38) were used in the final results.

The results should be read in the original article, as they reveal the extent to which service instructors used filmstrips which were especially made for their use, and the comparative interest in this medium when compared with 3-dimensional materials.

EQUIPMENT

● **The Problem of Quality in 16mm Sound**—Henry A. Morley—*Film and Radio Guide*, 12:46 February, 1946.

The quality of sound as reproduced on a film projector is determined by the extent to which the wave form of the reproduced sound signal is exactly the same as that of the signal when it was recorded. After sound is recorded it goes through processing, printing, print processing, and projection. Any single weak link in this chain of events will affect the quality of the sound.

Sound recording equipment is now at its peak of perfection. Recordings with less than 2% total harmonic distortion can be regularly produced. There follows a description of the steps in processing a sound recording on film.

With respect to reproduction, there must be similar conditions of perfection. A uniform rate of speed before the scanning beam; a very narrow scanning slit, and so on.

Film distributors now have every right to demand a high quality of sound recording for the films they receive, and thus raise the standard of 16mm. sound films.

BOOK REVIEWS

● **Radio and the School**—Norman Woelfel and I. Keith Tyler, ed.—World Book Co. 358p. 1945.

A basic reference book for teachers, based on the experiences of the staff of the Evaluation of School Broadcasts Project of 1937-43. It includes a discussion of radio as a social force, the problems of local, regional and national broadcasting for schools, and some of the findings of research. Practical information is given on application of radio to various subject matter fields; standards for sound equipment; and sources of educational recordings.

● **Teaching with Films**—George H. Fern and Eldon B. Robbins—Bruce Publishing Co., Milwaukee, Wis. 146 p. \$1.75, 1946.

A practical handbook in concise form, for those who have no previous experience with films. The term "film" in this instance includes standard slides, filmstrips (silent and sound), and motion pictures. After a general introduction to the importance of these tools for education, the book proceeds along this pattern: Equipment—Its Use and Abuse; the Characteristics of the International Film; techniques of Teaching with Films; Making Your Own Teaching Films; and Films and the Administrator (including a sequence of class sessions for teacher-training).

The illustrations should be useful to students of audiovisual education, but essentially this volume has little that is new or refreshing. The general format is simplified and each paragraph has a boldface heading, somewhat like a newspaper headline. This gives the effect of a book in outline form, with little flesh or meat in the context. The existing textbooks in the field are much more fundamental in their educational applications. *Teaching with Films* would be interesting supplementary reading.

PERIODICALS

● **Journal of the Association for Education by Radio**—(A.E.R.)—228 La Salle St., Chicago, Ill. Free to members of the Assn., dues \$2.00 year.

Up-to-date information on educational broadcasting and classroom use of radio, both in the U.S. and abroad.

● **Sight and Sound**—Winter, 1945-6. British Film Institute, 4 Great Russell St., London, W.C.1.

An unusually interesting issue, containing two important articles on photoplay appreciation, a report on the use of visual aids in German schools, the development of the Soviet cinema, and the review of a book on the film by an Irish producer—among other articles.

"The Use of Visual Aids in German Schools", by G. Buckland Smith, tells that 50% of all schools had film projectors, and practically every school had some kind of projection equipment. There was a film library in each town, and each school had a teacher in charge who kept materials on file and in repair. Then there were the regional centers, in each of 37 provinces, where teachers received training, and where materials were displayed and serviced. A "commercial" firm, the R.W.U. in Berlin was really an official agency of the Ministry of Education and produced educational films. Funds were raised by a tax on each school child. The money helped to pay for projection equipment and operating expenses, as well as film production. The educational films did not carry propaganda, chiefly because they were silent films and did not fall under the Ministry of Propaganda. Now, under occupation, the Control Commission uses visual aids to a large extent, especially because of the shortage of books. A new German Film Institute has been created to continue the work of R.W.U. German films are being sent to England for examination and storage.

A book review of "Invitation to the Film" (Liam O'Laoghaire, the Kerryman Ltd., 1945) is especially interesting for its ideas on the need for a film industry in Ireland. It reflects the trend in small countries throughout Europe toward the production of native feature and documentary films, and also surveys the possibility of educational films.

● **The 16mm. Reporter**, 545 Fifth Ave., New York 17. Weekly, \$10 year subscription. David Bader, publisher. vol. 1, no. 1 March 2, 1946.

A new 8-page newsletter giving a weekly digest of events in the 16mm. industry.

SOURCES OF INFORMATION

● **Fifty Facts About UNRA**—a thirty-five page pamphlet telling fifty important facts about the United Nations Relief and Rehabilitation Administration through pictures taken at the scenes of operations, through headlines, and through detailed commentary. Available by writing: United Nations Relief and Rehabilitation Administration, 1344 Connecticut Avenue, N. W., Washington 25, D. C. Free.

● **NAVED Reference Manual**—compiled by J. E. Foss—published by National Association of Visual Education Dealers, 1946. 28 pp. \$2.00.

A service manual listing lamps and parts for all makes of projectors, screens, splicers and other accessories all projector owners should own, plus valuable projection data such as magnification tables, picture sizes obtained with various projection lenses, etc.

● **Aids in the Teaching of Intercultural Understanding**—available from the Inter-Racial Commission of the State of Connecticut, State Office Building, Hartford, Conn. 48p. 30c.

An excellent compilation of films, slidefilms, and recordings for advanced study groups, film forums, etc.

(Concluded on page 219)

The method of exposing targets with the
KEYSTONE *Overhead Tachistoscope*
 has *Several Distinct Advantages*
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated.
 YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Tachistoscope *stands first*.

Just try a Keystone Overhead Tachistoscope—*its superiority will be evident*.

Julius Caesar

(Famous Scenes from Shakespeare #1)

(British Information Services, 30 Rockefeller Plaza, New York City) 19 min., 16 mm. sound. Sale price \$37.50. Produced by British Council, London, England. Apply to distributor for purchase and rental sources.

This film is a picturization of Act 3, Scene 2 of Shakespeare's "Julius Caesar." The setting is the Forum of Rome, 44 B.C. The commentary indicates that members of the autocratic republican party, fearing that Caesar means to set himself up as a dictator, have murdered him. The film shows the announcement of Caesar's death spreading like fire through the Forum and a mob assembling to be addressed by Brutus. The theme of Brutus' address to the mob is "Not that I loved Caesar less, but that I loved Rome more." When Caesar's body is brought from the Senate House, Brutus yields the speaker's platform to Mark Antony whom he instructs to deliver Caesar's funeral oration. Antony begins with the now famous words, "Friends, Romans, countrymen, lend me your ears." In the speech which he delivers, he convinces the crowd that Caesar was not an ambitious person, but that Caesar loved his countrymen more than himself. He indicated that Caesar's will, which he holds in his hand, shows Caesar's deep concern and interest for his countrymen. When the crowd demands that the will be read, Antony asks their permission to descend from the platform and to speak from the side of Caesar's coffin. The mob forms a circle around the coffin and at the sight of Caesar's wounded body is impelled to hurry away for revenge. Antony, however, wanting them to know the contents of Caesar's will, calls them back for the reading of it. When they learn that Caesar has left to every Roman seventy-five *drachmas* and to the citizens of Rome all of his walks and private orchards, they are highly incensed because of his murder and leave with rage and determination to seek revenge. The film closes with Antony standing alone and saying, "Mischief, thou art afoot. Take thou whatever course thou wilt."

Committee Appraisal:

The clear pictures of the Forum, the authentic costumes, the close correlation with the original text combined with the excellent photography and sound make the film very valuable. Latin classes will be interested in the film from the viewpoint of historical and cultural background. A particularly effective film for use in literature classes to assist in the interpretation of this Elizabethan drama which in the text is almost wholly in dialogue and seems to be lacking in action. Classes in speech should find the film interesting to study for several reasons: first, as an example of two speeches which are excellently constructed from

viewpoint of length, suspense, and purpose; secondly, for their method of presentation—one of which is delivered in a conciliatory and unimpassioned manner while the other is delivered in a straightforward, ardent manner; lastly, for the effect of the speeches as reflected on the faces of members of the crowd. It was also suggested the film would be useful in history and psychology classes.

Junior Prom

(Simmel-Meservey, 9538 Brighton Way, Beverly Hills, California) 20 min., 16 mm. sound-color. Purchase price \$187.50. Apply to producer for rental sources.

This film portrays the experiences of two couples attending a high school Junior Prom from the time the double date is arranged until the boys see their friends home.

The first scene takes place after class one day, when Helen and Margaret are approached by Frank and Jerry, respectively, for dates to the Prom. Frank asks for the company of Helen with hesitance, and only after prodding by Jerry, who, in contrast, approaches Margaret with confidence and sincerity. A few days later when the four are together for after-school refreshment, Margaret, at Jerry's suggestion, steers the conversation into corsage preferences, thus affording Frank, who has not dated Helen before, a chance to learn her likes and dislikes.

The next scene, concerned with proper dress for the Prom, shows Jerry criticizing Frank's socks and tie as being too loud for the semi-formal nature of the Prom. Likewise, Margaret and Helen are seen in a last-minute telephone exchange of ideas on proper make-up and hair ornamentation.

As the boys, driving Frank's car, call first for his date Jerry restrains him from blowing the horn for Helen, and later follows Frank into the house and gives him Helen's corsage which he had forgotten to take with him. Meanwhile, Frank has experienced a little difficulty in meeting Helen's parents, and he also mishandles the already bad corsage situation. Even while the three are on their way to Margaret's house Frank feels ill at ease, and while Jerry is talking pleasantly with Margaret's parents inside, Frank and Helen have a difficult time making conversation in the car.

Upon their arrival at the Country Club, Jerry sees to it that Frank waits patiently while the girls retire to arrange their corsages and to powder. But a little later Jerry is not at his best in handling the introductions to the evening's chaperones. Before they begin to dance, the couples agree on a rendezvous and work out their dance programs with a third couple. Once on the dance floor Frank demonstrates a tendency to talk too little, and Margaret too much, and while these two on the sidelines watch Helen and Jerry enjoying a dance, Margaret begins to display some jealousy. As the commentator discusses the relative faults of the persons involved in the situation, the Prom comes to a close and the two couples say goodnight to the chaperones.

It is not until a little later, however, when seated in a cafe for after-Prom eats, that Margaret, when confronted with a direct question from Jerry, abandons her sulky attitude, and harmony prevails once more among the four. Frank helps Helen by suggesting a dish she might like and properly places the order for her. As the group leaves the restaurant the commentator reviews some of the things learned during the evening, especially by Frank, and continues as each of the boys sees the girls to the door of their home. Since Jerry and Margaret have been dating for

(Concluded on page 204)

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to the producer for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

16mm sound films produced by the NATIONAL FILM BOARD OF CANADA

Black & White

Now—The Peace

Sketching the background of recent history, this film clarifies basic aspects of the structure and program of the U. N., and the world problems of food and security.

2 reels Rental \$2.50 Sale \$50.00

Food—Secret of the Peace

Hunger and starvation have replaced fascism as the scourge of Europe. Only by feeding the nations of Europe can the struggle for their liberation be completed and their friendship secured in the new world of peace and reconstruction. By rationing supplies at home, by lending men and equipment to re-establish distribution channels and replace damaged farm machinery, North America is helping Europe in its most vital need.

1 reel Rental \$1.25 Sale \$25.00

Library on Wheels

The story of how cooperative action among the communities in a large district of British Columbia has made available to all of them a large, up-to-date library of books for all ages. Organized around a central library is a 750-mile circuit of village, town and school libraries and country stop-off points, all served by a library van which brings needed and desired books to the many subscribers.

1½ reels Rental \$2.50 Sale \$37.50

After Work

Contrasting working conditions in our factories with the leisure-time activities available to workers, this film emphasizes means for extending these opportunities. Special attention is given to the Workers Educational Summer School, a Canadian cooperative workers' camp, where lectures by experts in such fields as labor legislation, history and political science round out a varied program of work, play and study.

1 reel Rental \$1.25 Sale \$25.00

Global Air Routes

The problems of postwar air control and the need for an international air code to prevent rivalry between nations, especially in view of the great expansion of this field.

2 reels Rental \$2.50 Sale \$50.00

Lessons in Living

How a school project revitalized a community by giving the children a part in community life. This British Columbian cosmopolitan town included farmers, fishermen, lumbermen and railroad workers. Doing the actual work themselves, children and parents built a new school with a broadened program and a community center.

2 reels Rental \$2.50 Sale \$50.00

Suffer Little Children

War has left 60 million children of Europe without proper food, clothing, shelter, schools or hospitals. Help for these citizens of tomorrow's world is coming from many individuals, but UNRRA is bearing the main burden. In UNRRA camps, children are given shelter, rest and food; they are taught to read and write, and many learn—for the first time—to play.

1 reel Rental \$1.25 Sale \$25.00

Color

Painters of Quebec

Scenes of Quebec Province, a land of deep and abiding dignity and strength. Examples of the work of seven of its painters serve to demonstrate the inspiration of this oldest settled territory of Canada.

2 reels Rental \$7.50 Sale \$150.00

Portage

Canada as the land of waterways and rapids. Not until the coming of the motor-car and railway were her freshwater streams and rivers replaced as the regular highways of commerce. The early fur trade depended on these water routes, and in turn on the light swift canoe that alone could navigate them. We see the importance of the fur trade to Canadian history, and in detail the building of a birch bark canoe by Indian craftsmen.

2 reels Rental \$7.50 Sale \$150.00

River of Canada

A panorama of Canada's river highway illustrating life and natural scenery along the great St. Lawrence which provides access to the greatest inland harbors of the world. We see Kingston, the Thousand Islands, Montreal, great metropolitan center of Canada, Sorel, a shipbuilding center, Quebec, and finally Ile d'Orleans.

some time, a goodnight kiss is considered proper, but Frank very wisely merely offers his hand to Helen. Imitating Jerry's example he does open the door for Helen, and leaves her happily with the promise of another date soon.

Committee Appraisal:

Members of the committee agreed that this film's production is a definite contribution in the fulfillment of a long-felt need by high school students, teachers and counsellors. It will undoubtedly be in great demand by high schools, not only for pre-Junior Prom guidance sessions, but the fundamental place in social adjustment of good taste, proper manners, and of a well-balanced personality. In a problem-raising rather than a preaching manner, the commentator calls attention at opportune moments during the action of the film to situations which show again and again that etiquette is merely a means of expressing respect and regard for others. Likewise, the commentary makes clear the importance of asking questions when in doubt, and offers refreshing and specific suggestions for handling situations common to high school social relationships. Some members of the committee felt that the setting was too sophisticated as reflected in the wealthy homes of the girls and the country club locale for the Prom. The problems raised by the film are very real in many adolescent minds, and careful planning for the film should make its use of great benefit.

Food Store

(Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago, Illinois) 11 min., 16mm, sound. Sale price \$50 less 10% educational discount. Apply to producer for rental sources.

The film shows Jack and Ann accompanied by their mother making a trip to an A&P super market, to buy the family provisions. The list which guides them in their buying has been printed by Ann. Since the store provides for self-service, Jack chooses a basket on wheels, and the tour through the store begins. First they visit the fruit and vegetable department where Mr. Scott, who is in charge, weighs and marks the price on the apples which mother has selected.

Next these three go to the frozen foods department where Jack chooses from the large assortment of frozen fruits, meats, and vegetables some green peas. They next visit the meat department. Mother studies the contents of the refrigerated display case and chooses a roast. The butcher is shown cutting the meat and shaping it.

Mother, Jack, and Ann next go to the canned foods department. Here Jack chooses soup, and Ann chooses a can of grapefruit juice. Mother, noticing a bargain on canned asparagus, buys three cans even though it was not on the list. The dairy department provides the party with its fresh milk, eggs and butter. When Ann has purchased oatmeal from the dry foods department, everything on the list has been selected except the bread. The bread, rolls and cake department is the last one visited by the group. Here, two loaves of whole wheat bread are selected.

The family group then steps in the line which has formed at one of the cash registers at the front of the store. When they reach the clerk, she removes the items from the basket and registers the price of each on her cash register. A boy helps put the purchases in a large paper bag. The film ends by showing Jack, Mother and Ann on their way home with Jack pulling his wagon in which their purchases have been placed.

Committee Appraisal:

The committee felt that this film, was good for showing that planning preceding a visit to the food store helps in buying those things which are needed, that such a family chore as purchasing the groceries may be shared by several members of the family, that some of the larger stores are self-service stores where large varieties are carefully arranged and attractively displayed, that employees of grocery stores are generally helpful and courteous to the

customers, and that in order to provide the family with a balanced diet one must choose groceries from the various departments. The film should be useful in primary and elementary classes reading stories dealing with grocery stores and discussing buying food, distributing food, cost of food, or family cooperation.

David Copperfield the Boy

(Teaching Film Custodians, 25 West 43rd St., New York City 18, N.Y.) 45 min., 16mm, sound. Produced by Metro-Goldwyn-Mayer. Lease price \$100 for three years. Apply to distributor for rental sources.

The film begins by showing Betsy Trotwood, David's stern paternal aunt, leaving the house of David and his mother when she learns a few minutes after David's birth that he is a boy rather than the girl she wanted. Later the atmosphere of their home and their relationships are completely changed when David's mother, Claire, after his father's death, marries Mr. Murdstone. To allow Claire and Mr. Murdstone a period of adjustment, Peggotty, the devoted servant, takes David to visit her brother, a sea-faring fisherman at Yarmouth. Here Mr. Peggotty is shown taking care of friends and relatives—all of whom he took in, because their nearest relatives had been drowned. David enjoys immensely his visit with these folk even though they have a meager existence and none of the luxuries of life. When he and Peggotty return home, he senses a change and fears that his mother has died. Figuratively speaking, she has; actually, however, she has only married Mr. Murdstone. It becomes immediately apparent that Mr. Murdstone and his sister are cruel, selfish people who rule with an iron hand the lives of David and his mother. Mr. Murdstone's jealousy and hatred toward David are revealed by his beating the boy.

After the death of David's mother, Peggotty leaves and the Murdstones, wanting to be relieved of the financial responsibility of David, send him to work in the wine cellars of Murdstone and Grinby. Here the only bright spot in David's otherwise sordid existence is Mr. Micawber with whom he lives. Finally the time arrives when Mr. Micawber, unable to pay his rent, is ejected. David, finding himself alone in the world, decides rather than to return to the cruelty of his stepfather, to choose the lesser of two evils and go to the home of Betsy Trotwood, who never cared to see David because he was a boy. The film follows little David through the misfortunes of a seventy-two mile trip on foot from London to his aunt's in Dover. He arrives dirty, ragged, hungry, and weary. Miss Trotwood is completely bewildered and turns to Mr. Dick, a member of the family who has been declared legally unaccountable but who is capable of clear thought in an emergency; so David is kept until the time that the stepfather and his sister come for him. Betsy, however, decides not to return David to them because she feels they caused the death of David's mother and she also feels they would not love David. In view of their driving their donkeys over her turf, she takes a keen delight in ordering them out of her house and firing accusations at them. The film ends by showing that David is sent to school where he does very well.

Committee Appraisal:

Following very closely the plot, characterizations, and style of Dickens "David Copperfield", this film, a skillfully cut version of the MGM theatrical production, brings to life the personalities of the novel. The pictorial medium is effectively used to depict such human emotions as love, hatred, unselfishness, selfishness, and sympathy. The companion film, "David Copperfield, the Man," follows the same style and treatment and completes the novel. It was suggested by the previewing committee that the two films were excellent for use in English classes for stimulating an interest in Dickens, for giving added meaning to a literary experience and for general enrichment. They were also recommended as films admirably suited to convocation and assembly programs.

Summer Scholarships

Thirty-two tuition scholarships at the Universities of Chicago and Wisconsin and at Indiana University have been established by Encyclopaedia Britannica Films. These scholarships will give teachers in schools and colleges an opportunity to study audio-visual motion picture teaching techniques.

Announcement of the scholarships was made by H. R. Lissack, Vice-President of the film company. The scholarships will be for the 1946 summer term, and all teachers or school administrators whose work gives them special responsibilities for audio-visual instruction, are eligible to apply.

"Our aim," Lissack said, "is to make it possible for capable and alert educators, who are interested in studying the techniques of audio-visual education, to receive these scholarships. The use of sound films in the classroom as an integral part of the school curriculum puts a dynamic teaching tool in the hands of the teacher. But to make the most of this new development, teachers must know and understand how it can be used most effectively."

Encyclopaedia Britannica Films will take no part in selecting the recipients of the scholarships. Officials at the three universities will make the decisions.

Twelve scholarships are to be awarded for the University of Chicago summer session, and interested teachers or administrators should apply, stating their qualifications, directly to Dr. Stephen M. Corey, University of Chicago Center for the Study of Audio-Visual Instructional Materials, 5835 Kimbark Avenue, Chicago 37, Illinois.

The University of Wisconsin will give out 10 scholarships. Dr. Walter A. Wittich, Director, Bureau of Visual Instruction, University Extension Division, Madison 6, Wisconsin, is in charge of selecting candidates.

The ten Encyclopaedia Britannica Films scholarship winners at Indiana University will be picked by L. C. Larson, consultant in audio-visual aids, Bureau of Audio-Visual Aids, Bloomington, Indiana.

ENTERTAINMENT and EDUCATION

go hand-in-hand on the screen

The world's finest music . . . played by symphonic orchestras . . . is presented by Walter Lantz in his new Cartune series, **Musical Miniatures**, an innovation in Technicolor, combining music and humor in popular form. The first in this series, featuring the Walter Lantz character, Andy Panda, was titled "Poet and Peasant", and the famous overture was played by a 50-piece symphonic orchestra. The second in the series, titled "Musical Moments", presenting a selection of Chopin numbers, will soon be in release.

In feature-length entertainment Universal Pictures company enlivens the screen with top-flight stars in fine stories. Following are current and coming attractions that you will not want to miss:

ABBOTT & COSTELLO the screen's top funny men in THE LITTLE GIANT Edw. G. Robinson, Joan Bennett, Dan Duryea in "SCARLET STREET" "NIGHT IN PARADISE" A story concerning Aesop of fable fame and Croesus of the golden touch IN TECHNICOLOR Myrna Loy, Don Ameche in "SO GOES MY LOVE"	Merle Oberon, Claude Rains, Charles Korvin in "THIS LOVE OF OURS" Yvonne De Carlo, Rod Cameron in "FRONTIER GAL" A TECHNICOLOR Pro- duction Deanna Durbin, Charles Laughton in "BECAUSE OF HIM" Maria Montez in "TANGIER"
--	--

Also Excellent Short Subjects

The world comes alive before your eyes . . . as ace commentators point up each interesting scene in **VARIETY VIEWS** (single reels); and interesting inventions and unusual things done by persons 'in the news' in **PERSON-ODDITIES** (single reels)

NAME-BAND MUSICALS (2 reels each) present excellent music and accomplished artists.

Library of Congress to Undertake Government Film Distribution

Establishment of a central clearing house of information on Government motion picture film and the necessary facilities for the distribution of such film is being undertaken by the Library of Congress. The film under consideration consists principally of 16mm motion pictures that have already served the original purpose for which they were created and that have been distributed administratively by the agencies of origin. It will consist also, but in a smaller degree, of film inherited from liquidated agencies or as the result of liquidated functions within continuing agencies. The distribution functions being assumed by the Library of Congress will broadly resemble those formerly performed by the Office of War Information.

Catalogs and listings of available film will be published by the Library of Congress as soon as possible and will be made available to film users throughout the country. Government agencies in Washington will be served directly by the Library, while distribution to schools, clubs, civic and industrial groups and the general public will be served through qualified film and book libraries.

In announcing the Library plans, Luther H. Evans, Librarian of Congress, stated, "Many Government agencies and educational and commercial associations worked together during the war to produce and distribute motion pictures as an aid to our war job. Many of these films have lasting educational and historical value. In order further to utilize them, the Library as a central film agency will perform the informational and distribution duties which have been discontinued by the former Office of War Information and the War Bond Division of the Treasury Department."

Decision by the Library to perform these functions was reached after the Bureau of the Budget had made a thorough study of the film distribution problem and reached the conclusion that the Library was the most logical agency of the Government to perform them.

The Library will not compete with nor attempt to regulate the motion picture programs of other Government agencies, either on a production or distribution basis, but will undertake to supplement such programs. It will seek as far as possible to utilize channels already available, such as those of the Office of Education and other agencies interested in secondary distribution. Perhaps the Library's greatest contribution in respect to these new activities will be the coordination and dissemination of information pertaining to motion picture film. Typical of the hundreds of titles that will become available eventually are such orientation and morale pictures as the *Why We Fight* Series, the *Physical Fitness* Series, *Identification of Aircraft* Series, and individual subjects like *The Autobiography of a Jeep*, *Capital Story*, *Cowboy*, *Freedom to Learn*, *Salute to France*, *Swedes in America*, and *The Valley of Tennessee*.

Notes

Dr. Evans emphasized that this proposed film program is in its formative stage and the new obligations it represents cannot be assumed until funds and personnel become available in July. He urged, therefore, that prospective film users withhold requests for such service pending a further announcement.

Grant for Study of Military Teaching Techniques

The Carnegie Corporation of New York and the General Education Board has made a grant of \$160,000 to the American Council on Education for a three-year study to determine what schools and colleges can learn from Army and Navy wartime educational techniques. The investigation, which is under the direction of Dr. Alonzo G. Gray, on leave of absence from his position as Commissioner of Education in Connecticut, will be started soon. Working with Dr. Gray is a committee of educators who will visit military installations over the country to observe training programs in operation. The use of audio-visual teaching materials will be studied particularly.

Rita Hochheimer Honored

The Metropolitan Branch, Department of Visual Instruction of the N. E. A., in cooperation with other local and national organizations, held its annual dinner meeting at the Commodore Hotel in New York, April 3, to honor Miss Rita Hochheimer, Assistant Director of Visual Instruction (In Charge), Board of Education of the City of New York, for her leadership, vision and tireless effort in fostering the cause of audio-visual instruction among the children, teachers, and schools of New York City.

John Begg, Acting Chief of the International Motion Picture Division of the Department of State, and Richard Griffiths, Executive Director of the National Board of Review of Motion Pictures, spoke on topics of current importance.

Educational Television Series

The first educational television course was inaugurated April 1 by the NBC University of the Air, in cooperation with the Board of Education of the City of New York. This course, called "Your World Tomorrow," will deal with some of the most vitally important discoveries in the world of physical sciences. The programs will be kept flexible; some may consist of laboratory demonstrations by leading scientists; others may combine demonstration with drama for historical background; some may accent special events or field pickups by mobile equipment; and extracts from educational motion pictures will be used from time to time to illustrate subject matter. For future programs it is planned to visit famous museums and laboratories as network facilities develop.

Students from the New York public schools will attend these weekly telecasts at 2:30-3:30 p. m. in the NBC viewing room at Radio City. They will record their reactions to the programs on questionnaires which will be used as a basis for improvement in program content and techniques.

Exceeds your expectations!

School executives have marveled at the unvarying brilliance and depth on the screen of the film reproduction, and the perfectly clear tonal qualities of the built-

in sound equipment found in Holmes Sound-on-Film Projectors.

The reason for this is obvious—no Holmes machine is released from the factory until it has been thoroughly checked and tested to render the same satisfactory and enduring service that has made Holmes equipment the universal choice. Write for full information.

Regional Audio-Visual Conferences

• **California.** On March 22 and 23 members of the Audio-Visual Education Association of Southern California assembled at their annual spring convention to hear Dr. Clarence A. Dykstra, Provost of U. C. L. A., speak on "The Educator Looks at Educational Films", and Kenneth MacGowan, noted writer and film producer, on "The Producer Looks at Educational Films." Francis W. Noel, Chief of Audio-Visual Education, State Department, reported on activities and plans of that division.

Another California regional conference was held February 8 at the San Francisco State College, over which Mr. Noel presided. The program included talks by Frank N. Freeman, Dean of the School of Education, University of California; Curtis E. Warren, City and County Superintendent of Schools, San Francisco; Lucien B. Kinney, Acting Dean of the School of Education, Stanford University; and Boyd B. Rakestraw, President of the D. V. I.

• **Indiana.** The Bureau of Audio-Visual Aids, Extension Division, and the School of Education, Indiana University, sponsored five "Regional Conferences on Audio-Visual Instructional Materials" this month, April 8-12, at Hammond, Richmond, Indianapolis, Fort Wayne and Vincennes. Guest speaker at each of the meetings was Dr. Lester Anderson, Director of the Laboratory School, University of Minnesota, and specialist in curriculum planning. He discussed the "Implications of the Use of Instructional Materials by Military Services", based on a survey he made two years ago for Minnesota's State Department of Education and the University. A "Report from Indiana State Committee on Audio-Visual Materials" was given to the five groups by L. C. Larson, Indiana University.

• **Iowa.** A series of "Audio-Visual Teaching Conferences" were conducted throughout Iowa March 15-21 under the direction of John R. Hedges and Lee W. Cochran of the Extension Division of the State University, at Sioux City, Fort Dodge, Mason City, Waterloo and Cedar Rapids. Addresses were delivered by Dennis R. Williams, Field Supervisor, Encyclopaedia Britannica Films; Roger Albright, Teaching Film Custodians, and Paul C. Packer, Dean, College of Education, S. U. I.

Eight Million See Bureau of Mines Films

Free educational motion picture films of the Bureau of Mines were shown on more than 82,000 occasions to approximately eight million people in the calendar year 1945, reports Dr. R. R. Sayers, Director of the Bureau.

One of the most popular subjects last year in the Bureau's film library—which consists of more than 10,000 reels—was *First Steps in First Aid*, a film distributed first in January, 1943. This picture was shown 2,989 times to nearly 332,000 people. Typifying the varied interests of those viewing Bureau educational films, the next most popular pictures last year were *Synthetic Rubber*; *Evolution of the Oil Industry*; *Help Wanted*, another first aid film; *The Power Within*, the story of the internal combustion engine; and *Sulphur*.

PICC Aids New Film Council

The Photographic Industry Coordinating Committee, comprising nine trade associations in the photographic industry, at its recent meeting in Buffalo assured the newly-formed Film Council of America of full cooperation in the latter's campaign to organize local consumer groups of photographic and film fans throughout the country.

The establishment of a network of local organizations, embracing every type of film and photographic fan, is the aim of this joint effort of PICC and of the Film Council of America. The latter includes such consumer groups as the American Library Association, National Education Association, National University Extension Association, and has the direct support of several of the groups also represented on PICC. Every teacher, club chairman, film review committee member, trade union or fraternal educational director, film-using physician or other professional man, and plain garden variety amateur photographer will be able to participate on an equal plane with professional and commercial photographers and motion picture producers on the local level through this project.

Museum Establishes Film Library

The Buffalo Museum of Science, Buffalo, New York, has made audio-visual materials available to educational institutions and groups in Buffalo and other communities throughout the Niagara Frontier with the establishment of a film library of over five hundred 16mm. sound films, to which additional subjects will be added as finances permit. Through generous benefactors some fifty thousand dollars was provided for this project, which has been undertaken on a three-year experimental basis. The films and equipment are offered free to all public, private and parochial schools within regional limitations.

U.A. Foreign 16mm Program

United Artists is the latest major producing company to set up a department for the foreign distribution of 16mm. versions of all its pictures. Dubbed versions will be prepared in the language of countries in which the 16mm films will be exhibited, namely those areas not serviced by 35mm. The new division will supplement U. A.'s present international distribution.

Du Mont Urges Movie-Television Partnership

Dr. Allen B. Du Mont, president of Allen B. Du Mont Laboratories, Inc., addressed the Society of Motion Picture Engineers on the subject of "Relation of Television to Motion Pictures". The meeting was held March 13th in the new Du Mont-John Wanamaker Television Studios in New York. Dr. Du Mont announced that the initial program for these new studios was scheduled for April 15, 1946.

An overflow crowd of more than 800 heard the speaker disclose that Du Mont engineers have devised a satisfactory technique for film recording television pictures. These images of a repetitive rate of 30 pictures per second on the Cathode-ray screen, can be filmed at 24 frames per second or any other rate re-

quired. Recordings by Du Mont Laboratories are made on a standard 16mm film with sound track included.

Dr. Du Mont called upon the motion picture producers to supply the need of the television broadcaster for better films. "As more and more telecasters take to the air," he stated, "the economies of special television film productions . . . can prove worth while for film producers."

The talk was followed by an actual off-the-air recording of several television programs which were broadcast by Station WABD, the Du Mont outlet in New York.

ANFA Convention May 9-11

The Allied Non-Theatrical Film Association is completing plans for its three-day annual convention scheduled for May 9 through May 11 at the New Yorker Hotel, New York. According to Horace O. Jones, president, there will be important speaking sessions and an exhibit of the very latest equipment. The final night will feature the annual banquet.

This will be ANFA's first national trade show. Some of the sixty-six firms exhibiting will display for the first time entirely new items of equipment.

Radio Education Institute

The sixteenth meeting of The Institute for Education by Radio is scheduled for May 3-6 at the Neil House and Deshler-Wallick Hotels in Columbus, Ohio. There will be thirteen work-study groups, special sessions to discuss such topics as "Television—Status and Prospects," "Radio and Inter-group Relations", besides the general sessions. For complete details of the program, write Dr. I. Keith Tyler, 105 Brown Hall, Ohio State University, Columbus 10, Ohio.

The Film and International Understanding

(Concluded from page 188)

representative of the country under discussion who has previewed the film. A committee of film experts have deliberately selected controversial film to stimulate lively audience discussions.

Pearl S. Buck, Nobel Prize winner and President of the East and West Association, opened the series with a forum on "The Rising Peoples"—the peoples of Indonesia, India, Africa, China, and the Near East. *Now the Peace* was the film used for this forum.

Other distinguished speakers to appear in the series include George Middleton of the British Embassy, Dr. N. A. C. Slotemaker de Bruine, Director of the Netherlands Information Bureau, Miss Adet Lin, Raymond Kennedy, Philip K. Hitti and Dr. S. Chandrasekhar.

Films to be used include *John Bull's Own Island*, United China's *Relief's Report from China*, March of Time's latest on India and the Philippines, the Netherlands Information Bureau's *The Dutch Tradition* and *High Stakes in the East*.

It is hoped that the experience of these forums at Town Hall in New York will stimulate the formation of similar film forums throughout the country.

Current Film News

■ **YOUNG AMERICA FILMS, Inc.**, 18 E. 41st St., New York 17, has these new subjects available:

What is Four—1½ reels, combining action photography and animation—designed to help teachers build basic understanding of number concepts at the primary grade level. Film is available in both black-and-white and color.

Our Shrinking World—1 reel—a documentary film for use in junior and senior high schools, designed to motivate and introduce the study of transportation and communication. Accompanied by four slidefilms, covering the history of land, water and air transportation, and communication.

Teacher's Guides accompany both films.

■ **KNOWLEDGE BUILDERS**, 625 Madison Ave., New York 22, has ready for distribution another subject in its "Practical Geometry" series of films in which most of the difficult phases of geometry are analyzed and clarified. The new film is:

Quadrilaterals—1 reel—which illustrates and explains the chief properties of important quadrilaterals, such as parallelograms, rectangle, rhombus, square, trapezoid and trapezium. The film is designed to enable students to distinguish readily each type of quadrilateral.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, offers a new collection of 16mm single reel musical films:

The **Music Album**, many of which are suitable for school auditorium use and provide the opportunity for injecting the element of variety in longer film programs. Although intended primarily for entertainment purposes, certain films in "The Music Album" series can be used to stimulate an interest in good music, in singing, and in dancing which may never be studied by the average pupil for professional goal but which has its values in self-development. With the exception of one reel entitled, *Great Symphonies*, which offers "The Beautiful Blue Danube" and "Romance" with full symphony orchestra and singers, all the other reels in the collection present three full musical numbers each. All are elaborately produced.

Photographic dealers are supplied with the entire series.

Two additional new Castle subjects are:

Daredevils on Ice—thrilling action on skis and skates, in speeding ice-boats and racing autos on the frozen surface of a lake; breath taking hobsled racers.

Three Little Bruins Make Mischief—another in the series featuring the three captivating little bear cubs. In

this one they emerge from their home in the woods to explore the haunts of man and find a world of astounding interest.

Other current releases include four subjects in the new *Farmer Al Falfa* Cartoon series, and four new *Terrytoot* cartoons.

All Castle releases are available from photographic dealers and film libraries in 8mm and 16mm silent and 16mm sound.

■ **YMCA MOTION PICTURE BUREAU**, 347 Madison Ave., New York 17, has taken on the free distribution of the *Armour* 2-reel 16mm sound subject:

Quicker Than You Think, which shows the busy housewife how to prepare attractive, appetizing and balanced meals quickly for numerous occasions and for any number of people. Shown and explained are methods of choosing the type of food, determining the quantity, and the best ways to serve it, while new and intriguing recipes and menus are introduced. Designed for use with Home Economics classes, P.T.A.'s and women's groups.

FILMS NEW 16mm SOUND from BRITAIN

UNITED STATES

5 reels—45 mins.

The chronicle of the USA, showing the growth of the nation from its humble origin at Plymouth Rock to the present day world power.

THE STORY OF DDT

BRITISH INFORMATION SERVICES

An Agency of the British Government

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, have released the following new 16mm films, each 2 reels:

Channel Islands—which were forced to endure Nazi occupation for five years. Reduced to a hole-in-the-corner existence, the islanders eked out a meagre living, made their own crystal radio sets in order to listen to Allied broadcasts and circulated their underground newspaper. With the day of liberation, they began the enormous task of reconstruction in order to regain their role as vacation hosts.

Achimota—showing that "darkest Africa" is not as dark as it used to be. Educational centers have sprung up throughout the Gold Coast, instructing students not only in booklearning but also in cooking, handicrafts, scientific farming, etc. The college at Achimota, built twenty years ago, offers its 500 students courses up to early university standard. Their foremost purpose is to train teachers.

Father and Son—another film on Africa which tells the story of a young Petty Officer who returns to his village on leave. At first, he distresses and alienates his father who is haunted by ancient fears and superstitions, but ultimately he is able to introduce his modern ideas on agriculture, medical treatment and navigation.

■ **OWENS-ILLINOIS GLASS COMPANY**, Film Division, Toledo 1, Ohio, has made a full color, sound motion picture dedicated to the drug industry, called:

Now for Tomorrow (17 min.) which reviews the history of the profession in different parts of the world, and developments which have led to the varied services offered by the modern drugstore. It presents merchandising techniques which will help the pharmacist of tomorrow to meet increasingly competitive conditions.

■ **BAUSCH & LOMB OPTICAL CO.**, Rochester 2, N. Y., has produced a new sound movie entitled:

To Greater Vision (3 reels), telling the story of light and glass. The first section of the film shows how such optical instruments as the microscope, bubble sextant, spectograph, and metallograph have contributed to progress, and reviews the part played by optics in many industries. Another sequence follows the intricate processes of optical glass production from the preparation of raw glass through manufacturing and processing operations. The course of an eye examination is shown step by step. Finally, the story behind the filling of a prescription shows the care and labor involved in the making of corrective eyewear.

The film can be obtained without charge, in either 16mm or 35mm, from the Film Distribution Service of Bausch & Lomb.

■ **OFFICIAL FILMS, INC.**, 25 West 45th St., New York 19, has released:

Stray Lamb—1 reel silent or sound—which employs real animal personalities in an amusing adventure tale starring Barnaby, a St. Bernard dog, and Letitia, a lamb. When Letitia strays off on an afternoon of adventure, she gets herself into serious difficulties, from which she is finally rescued by the devoted Barnaby. Andre Baruch provides the narration for the sound version. The subject is available from film dealers and libraries.

Entertainment Films in 16mm

■ **ASTOR PICTURES CORP.**, 130 West 46th St., New York 19, has secured 16mm distribution rights on many major company productions, which will be released during 1946. These include four Hal Roach productions, three of them featuring Laurel and Hardy in *The Bohemian Girl* (already released) *Pardon Us*, to be released during April, and *Our Relations*. There will also be six Dr. Christian features starring Jean Hersholt; 12 Hop-along Cassidy westerns, starring William Boyd. Jack London's action story, *Mutiny on the Elsinore*, was released last month. Another feature release to come is *Second Chorus*, a Paramount musical, starring Fred Astaire. The subjects will be available for rental from such film libraries as Bell and Howell and Ideal Pictures Corp. of Chicago.

■ **PICTORIAL FILMS, Inc.**, 1270 Sixth Ave., New York 20, announce their 1946 16mm release program which includes 39 full length features, ranging in content from drama to hilarious comedy, musicals, Westerns and mysteries. In addition to 38 releases produced by PRC, the United Artists comedy *Three is a Family* is being distributed by Pictorial on an exclusive basis. Among the many well-known stars presented in these releases are Charlie Ruggles, Fay Bainter, Helen Broderick, Frances Langford, Edward Everett Horton, Freddie Bartholomew, Stewart Erwin, Alan Mowbray and Warren William.

Reward for Lost Film

Post Pictures Corp., 723-7th Avenue, New York 19, N. Y., offers \$50.00 for information leading to the recovery of a print of the sound picture feature entitled *There Goes My Heart*, which was rented to Capt. George E. Miller, of the U.S. Maritime Commission on February 5, 1946 by Kunz Motion Picture Service, 1319 Vine Street, Philadelphia, Pa., and which was never returned. All efforts to locate Capt. Miller were unsuccessful.

Catalogs

Bell & Howell

To keep their new Educational Film Catalog up-to-date, Bell & Howell is issuing monthly sheets listing additional films as they are acquired by the Filmsound Library, with instructions as to the utilization of these addenda sheets. In this way their large Education Film Catalog remains a useful reference tool for the user. To receive copies of *New-Film News*, write to Bell & Howell Filmsound Library, 1801 Larchmont Avenue, Chicago 13.

British Information

Films from Britain is the title of the most recent compilation of films released by British Information Services, 30 Rockefeller Plaza, New York 20. Most of the films are grouped under such classified headings as Rehabilitation and Reconstruction, Medicine and Science, Health Education, Colonial Development, The Pattern of Rural Britain, The Farmer's Year, Science. In addition to these subjects, there are many others on various topics, such as *Famous Scenes from Shakespeare, United States, Lessons from the Air*, etc.

Castle

What is believed to be the largest single collection of government produced educational and teaching films now available to schools and industries, is fully described in a new catalog just published, and offered free to users of training films by Castle Films, Inc., distributors, 30 Rockefeller Plaza, New York City.

The catalog contains for the first time a complete list of all U. S. Government 16mm sound films and 35mm filmstrips, totalling 1,158. They include 466 motion pictures and 432 filmstrips of the United States Office of Education, and training films and other types of educational films produced by the Navy, War Department, Department of Agriculture and U. S. Public Health Service.

The library of films shows the completed production program of the Department of Visual Aids, United States Office of Education.

Hoffberg

Listing several hundred educational and entertainment shorts and short features, Hoffberg Productions, Inc. have published their new catalog and it is available free for the asking to libraries and dealers.

Official

Owners of sound projectors may secure Official's new catalog of Soundies 16mm musical film Revues. Presented in these 72 sound film shorts are the nation's top-flight bands, and stars of stage, screen and radio, such as Hoagy Carmichael, Vincent Lopez, Cab Calloway, Gene Krupa and many others.

AMONG THE PRODUCERS

Valette 16

Valette, Inc., 215 West Ohio St., Chicago 10, formerly the Litho Equipment and Supply Company, is in production on a new 16mm sound projector, known as Valette 16 which, according to the manufacturers, embodies many new features and improvements, including completely interchangeable streamlined assembly, with unit sub-assemblies, for easy servicing. Among other features emphasized by the manufacturers are light weight, brilliant screen image, muted mechanism,

New Valette Projector

double-cooled lamp house which permits using as high as a 1200-watt lamp without overheating, simplicity of operation, easy 2-sprocket threading and handsome design.

Oliver N. Wilton has joined Valette, Inc. as Vice-President in charge of sales of the projector, and other photographic products made by the firm. Mr. Wilton comes to Valette from Bell and Howell with which firm he had been associated for 18 years, most recently as assistant vice-president in charge of sales.

Oliver N. Wilton

Keystone Publication

A new 75-page manual, *Handmade Lantern Slide Copy for The Lower Grades* (by Helen Kitchell Evans), has been published by Keystone View Company, Meadville, Pa. Prepared as a service to teachers who feel the need for original visual material in the lower grades, the publication provides 192 black-and-white drawings for the making of hand-made lantern slides covering the various holidays usually celebrated in school activities, and the seasons; special sections on safety, health, and on manners; and a section covering the months of the school year.

The drawings by Grace Lacy are simple, ingenious and beautifully executed. The pictures were drawn with their reproduction on etched glass in mind. Short descriptive verses accompany each picture. These may be read by the teacher as the slides are projected, or reproduced on cellophane lantern slides.

Affiliated Film Producers, Inc.

The formation of a new film production company, to make motion pictures in the public interest, has been announced by John Ferno, Irving Jacoby, Henwar Rodakiewicz and Willard Van Dyke. The new firm is known as Affiliated Film Producers, Inc. with temporary headquarters at 164 East 38th Street, New York.

All of them pioneers in the field of Documentary Filmmaking, the four officers of the new firm have produced and directed such outstanding pictures as *The City*, *The Four Hundred Million*, *Valley Town*, and *The Pale Horseman*.

During the war John Ferno was in charge of the film program of the Netherlands Information Service and filmed the liberation of Holland. The other officers produced and directed many short subjects for the Overseas Branch of the Office of War Information.

A production unit is now preparing to leave for the Caribbean, where the first picture of the company is to be filmed.

B&H Buys Lincolnwood Plant

Purchased recently from the Reconstruction Finance Corp. by Bell & Howell Company, the 2¼ million dollar Lincolnwood plant at 7100 McCormick Rd., Chicago, now houses the company's optical, electronic, metallurgical, and mechanical engineering laboratories, in addition to assembly departments, optical production, and general offices. Completed by Defense Plant Corp. and occupied by Bell & Howell late in 1942, the modern air-conditioned plant was used throughout the war by the company for the manufacture of military radar training and fire-control equipment. An additional

Additions to Britannica Films Staff

Appointment of two associate directors and nine associates in research and production as staff members of Encyclopaedia Britannica Films to assist in an expanded production program has been announced by Dr. V. C. Arnsperger, executive vice president of the company. All of the new members have had long experience in the field of education.

The associate directors are Dr. Frank S. Cillie, associate director of research, and G. H. Griffiths, associate director of production. Dr. Cillie served as assistant chief of the Foreign Language Division, Radio Bureau, Office of War Information, during the war. Griffiths, who has had teaching experience both in the United States and in China, was associated with Erpi Classroom Films before the war and, from 1942 to 1945, produced training films both for the U. S. Navy and for the U. S. Office of Education.

Associates in research and production are: Dr. J. W. Page, formerly professor of science education at Ohio State and Syracuse Universities, and later director of the Maryland Academy of Science; J. S. McIntosh, who was visual aids specialist with the U. S. Office of Education during the war; Dr. S. F. Harby, formerly project supervisor and educational consultant in the production of training films for the U. S. Navy; Dr. Blake Cochran, who recently served as research associate in educational films with the American Council on Education, as film specialist with the U. S. Department of State, and U. S. Navy; J. H. Lewis, a research worker in mathematics in the Office of Scientific Research and Development during the war; Dr. Helen Rees Clifford, who served as a lieutenant in the WAVES at the U. S. Naval Photographic Science Laboratory; and John Bobbitt, formerly with the O. W. I. Dr. Kenneth Norberg was named associate in research in charge of curriculum and development for Britannica films. Dr. Adam Poruben, another associate in research, will devote full time to evaluation.

Calhoun Opens Columbia Office

The opening of a Bell & Howell factory-authorized sales and service station in Columbia, S. C., has been announced by Hazel Calhoun, owner and manager of the Calhoun Company of Atlanta, Ga. Miss Dorothy Bell, who has been handling the film department in Atlanta, will be in charge of the Columbia office, located at 1110½ Taylor Street.

New Wire Recorder in Production

The Radiotechnic Laboratory, 1328 Sherman Ave., Evanston, Ill., sends the following description of its new Model 55A Magnetic Wire Recorder: makes instantaneous recordings on wire with either a dynamic or crystal type microphone; continuous recording time

Radiotechnic Recorder

66 minutes; automatic timing device permits turning machine off at any time at user's discretion; recordings may be played back either through the speaker housed in the unit or through a pair of head phones which may be plugged into the unit. Plugging in the head phones automatically cuts out the speaker. Total physical size is indicated as .8 of a cubic foot; weight 28 pounds. Designed for 115 volts, 60 cycle operation.

History of Photography Presented in Slidefilm

Visual Sciences, Suffern, N. Y. has completed and offers for sale, a new 35-mm slidefilm, entitled *The Story of Photography*. It contains 51 hand-drawn pictures, commencing with the incident of the battered lens found in the ruins of Ninevah 1,000 years B.C. The contributors of Aristotle, Alhazen, Bacon, Leonardo Da Vinci, Magnus, Scheele, Wedgwood, Herschel, Daguerre, Fox-Talbot and many others constitute an accurate pictorial story of the more important milestones in the development of the basic physical and chemical principles of photography as we have it today.

Filmstrips on Social Problems

The Council Against Intolerance has produced a film-strip, *Forward—All Together*, of intolerance in the nation, giving the bad spots and the bright ones in the national scene and telling what can be done about the rising tide of prejudice. It can be borrowed from the Council, 17 E. 42nd St., New York 17, N. Y., or purchased from Film Publishers, Inc., 12 East 44th Street, New York.

Three more filmstrips are in preparation by the Council: *The Springfield Plan*; *The Negro in American Life* and *The Jew in American Life*. Speech notes accompany each film.

DeVry New Public Address Unit

DeVry has designed and is now manufacturing a 4 Position Mixer Unit to serve the need for the utilization of as many as four microphones. With four inputs, four microphones or a record turntable and three microphones may be used. With each input having its own volume control, the sound can be balanced from each microphone to any degree desired. If a record turntable is used, the music can be faded to permit announcements through the microphones.

The DeVry Mixer can be used with any make amplifier having input jacks for microphone and turntable.

The unit is economically priced and illustrated literature is available from DeVry Corporation, 1111 Armitage Avenue, Chicago 14, Illinois.

Non-Rewinding Reel Set

A non-rewinding reel set composed of two scientifically designed reels and specially constructed attachment to fit all 8mm and 16mm silent and sound projectors, is announced by Motion Picture Equipment Co., 112 West 42nd St., New York 18. The reel-set is designed to eliminate the need for rewinding films for reshowing, thus saving not only valuable time, but also much wear and tear on film. According to the manufacturer no friction of the film with any metallic part of the reel or attachment is possible, thus protecting the emulsion surfaces from scratches and injury. The two reels in the set may also be used in ordinary

New reel which eliminates rewinding

splicing, cleaning and other operations, just like ordinary reels. It is expected to have the new reel set available soon at leading stores throughout the country.

Cordomatic Reel

A practical solution to the troublesome problem of tangled and unsightly speaker cord lengths lying about the floor, which ensues from manual winding and rewinding of speaker cord when using portable projectors, is af-

forded in the new Cordomatic Reel made available by Hornstein Photo Sales, 320 West Ohio St., Chicago 10. It provides exact cord lengths needed, from 5 to 50 feet, between projector and speaker. The automatic unwinding and rewinding of the speaker cord by this simple device, avoids knotting and tangling and by thus eliminating wear and tear, insures keeping the cord in perfect condition.

Bell & Howell Complete Negotiations with Rank Group

Far-reaching long-term agreements have been finalized between Bell & Howell Company, Chicago, and British Acoustic Films, Ltd., of England (engineering and manufacturing facility of the J. Arthur Rank group), according to a statement just released by J. H. McNabb, president of Bell & Howell. Negotiations for the agreements just completed were initiated in June, 1945, in Chicago between Mr. Rank and Mr. McNabb.

As reported in our January issue, a complete interchange of research as well as manufacture and distribution of equipment is effected between the two firms. Technical "know-how" for this project will be afforded by E. C. Johnson, veteran Bell & Howell engineer, who will be located in England for the next several years.

Under separate but concurrent agreements, all substandard motion picture films owned or controlled by British Acoustic Films Ltd., will be distributed in the United States, its possessions, and throughout South America by Bell & Howell, thus augmenting considerably the Chicago concern's already enormous film library facilities. Likewise, British Acoustic will distribute, in their territory, films owned or controlled by the B & H Film-sound Library.

Audio-Visual Aids on Air Transportation

United Air Lines have prepared four slide films, nine recordings and a 16mm sound motion picture on air transportation, for use by junior and senior high schools. Titles of the slidefilms are *Coast to Coast Geography from the Air*; *Research Engineering, Aircraft Developments, Airports*; *Meteorology and Navigation*; *Global Concepts and The Age of Flight*. The series of recordings, together with student and teacher sheets, have been prepared on various phases of aviation to supplement the slide films or to use as separate units.

Of Men and Wings, an 18-minute movie, shows the development of air mail and passenger service in the United States from 1920-1945.

Schools may obtain this material on a free loan basis by writing to United Air Lines, School & College Service Dept. K. P., 23 E. Monroe St., Chicago 3.

RCA Equipment on Grace Liners

Complete RCA motion picture projection and sound equipment including special loudspeakers and screens for outdoor use, making possible movies "under the stars" on shipboard, will be installed on nine new combination passenger and cargo liners being built for the Grace Line, for service between New York and South America, it is announced by the Theatre Equipment Section of RCA Victor. Passengers will view the film programs from a semi-sheltered verandah cafe. The installations represent an idea borrowed from the wartime logs of troopships, battleships and flattops for whose crews the showing of movies on deck was a major form of entertainment.

Zehrung Joins Ganz

George J. Zehrung has resigned from the staff of International Theatrical and Television Corporation to join the William J. Ganz Company, producers and distributors of commercial and educational motion pictures. Mr. Zehrung will have charge of film distributing activities.

Prior to his association with ITTC, Mr. Zehrung was for 26 years director of the Motion Picture Bureau of the Y.M.C.A. Previous to that affiliation, he taught industrial and applied art in the New York City Schools and was a pioneer in the use of films in the classroom, his original experiments in this field having been made as early as 1913.

Fluids Slidefilms Augment Air Age Physics

The Jam Handy Organization, 2821 E. Grand Blvd., Detroit, announces the completion and availability of 1,042 pictures in the form of 13 discussional

Frames from "Fluids"

type slidefilms *Fluids*—a continuation of the Air Age Physics series which began with the Kit-set on Mechanics. Each film unit is divided into lessons. Each lesson is followed by review and quiz sections. The following subjects are covered in the Jam Handy Kit-set: Liquid Pressure, Transmitting Pressure Through Liquids, Buoyancy and Archimedes' Principle, Density And Specific Gravity—Flotation, Specific Gravity of Solids and Liquids, Atmospheric Pressure, Exploring the Atmosphere—Streamline Flow, Barometers And Weather, Gas Pressure, Measuring Fluid Pressure, Bernoulli's Principle, Reciprocating Pumps, Jet Pumps, Rotating Pumps.

National Industries, Inc. Expands

Plans for greatly increased production of the Nateco professional-type 16mm sound projectors have been advanced with the announcement of the acquisition of the large Bendix Aviation plant in Chicago by National Industries, Inc., manufacturers of Nateco.

Production of the projectors will be moved to the 600 foot assembly lines of the new plant as rapidly as the premise is cleared of machinery used by Bendix.

In the meantime orders are being handled on a priority basis.

A nation-wide sales organization for marketing the projector has been practically completed.

Capital Film Productions

To augment previous facilities for the production of motion pictures and film strips, Capital Film Service of East Lansing, Michigan, has organized Capital Film Productions, located at 224 Abbott Road, East Lansing, which is turning out productions in both black and white, and color. Documentary and educational productions for the Michigan Liquor Control Commission and the State Social Welfare Department are under way.

A series of color and sound filmstrips have been completed for the Norge Corporation, Division of Borg-Warner, Muskegon, Michigan, designed for use by Norge dealers in training maintenance and repair men in proper techniques to be used on various Norge products. The first strip in the series, *Basic Principles of Refrigeration*, is considered of interest, also, to school and college science classes.

Additional Midwest Offices Opened by ITTC

Operating under the overall title of International Theatrical and Television Corp. of Michigan, and headed by Albert Dezel, ITTC has opened three new offices—in Detroit, Cleveland and Cincinnati. They will be fully equipped with motion pictures, projectors and related supplies.

Color Slides on Food Production

Philip Photo Visual Service, 1954 Pasadena Ave., Long Beach, California, has produced a series of 2x2 color-slide subjects on the production of certain foods. They include *Potatoes*—54 slides, *Tomatoes*—40 slides, *Lettuce*—35 slides, *Cantaloupes*, 35 slides. Catalog covering this series and other subjects produced by this firm is available on request.

Film Audience Pre-tested

A motion picture for R. H. Macy & Co. of New York, to be produced immediately by The Princeton Film Center of Princeton, N. J., has been pre-tested by the producers before filming by the completion of two specially-conducted audience surveys. These tests, made to insure maximum audience acceptability for the film, are believed to mark the first use of audience studies in planning the production of an employee relations picture. They were conducted among groups of Macy employees by Dr. Hadley Cantril, Princeton University psychologist.

The initial test revealed, in the proper order of interest, the Macy operations which the intended audience most wanted to see portrayed on the screen. The second indicated the type of film presentation preferred by the majority of those participating in the survey. The findings were then incorporated in the script for the picture.

Gordon Knox, Film Center head, will produce the picture in 35mm. Its use will be launched by daily showings to all new employees to indoctrinate them in the salient aspects of Macy's widespread operations. Sixteen millimeter prints will also be made to facilitate other selective uses for the picture.

Ampro Twenty-five Year Club

A. Shapiro, Vice-President and Chief Engineer, and C. Schroeder, Shipping Room Foreman, were recently honored at a dinner tendered by their associates and held in the new Ampro Restaurant at the Chicago plant. Both men have seen uninterrupted service with Ampro for twenty-five years.

Axel Monson, President and Founder of the Ampro Corporation, presented Mr. Shapiro and Mr. Schroeder with beautiful watches as mementoes of their long and faithful service.

At the Ampro dinner: (left to right) A. Shapiro, Axel Monson, C. Schroeder, Harry Monson.

DeVry Dealers Meeting

National Sales Conference of DeVry Dealers

School Supply Distributors from all sections of the nation attended the Annual DeVry Sales Conference at Chicago held in conjunction with the School Supply Dealer's Convention, by DeVry Corporation, pioneer visual equipment manufacturer of Chicago.

In meetings presided over by DeVry sales manager, H. Bob Engel, DeVry dealers were given a rapid-fire preview of improved 16mm. portable motion picture sound equipment, slide and slide film projectors, projection screens and associated electronic teaching aids equipment. Particular attention was centered on the growing DeVry library of 16mm. Classroom Teaching Films.

NAVED Summer Convention

NAVED's first postwar Convention and Trade Show will meet at the Continental Hotel, Chicago, August 5-6, 1946, according to plans announced by NAVED's Board of Directors following a meeting at the Continental in Chicago, March 13.

First plans for the convention indicate that it will offer real benefit to visual education dealers, educators, film producers and manufacturers. The program will include two days of work on mutual problems, offering stimulating ideas for broadening the viewpoint and bettering the business practices of every participant. Practical discussions to help the visual dealer solve his own problems will be featured and other sessions will forecast the effects on the present visual education business of future developments such as television. Also planned are talks by top-flight educators and industry executives on audio-visual matters, and small-group forums in which every individual will participate.

A new feature of this year's convention will be the National Visual Edu-

Film Lexicon Offered By Britannica

The growing use of classroom films is bringing an entirely new vocabulary into the schools of America. Words like "blooping," "gate" "sync" and "unsync" are actually not jitterbug terms but part of the new language employed in using classroom films effectively.

So that teachers may become familiar with the necessary terms, Encyclopaedia Britannica Films offers a film lexicon for their study.

If a student suggests that you had better "bloop the film," he means nothing more incomprehensible than that the portion of the film which has been spliced must be lacquered to eliminate the queer whistling sound known as a "bloop" Similarly, "sync" and "unsync" are simply terms to indicate whether the sound is synchronized, or not, with the lip movement of the actors in the film.

cation Trade Show.

High point of the convention will be the annual NAVED banquet August 6, at which tentative plans call

The Literature in Visual Instruction

(Concluded from page 200)

- **Empic Movie Guide**, vol. 1. no. 2 February, 1946. Published by Electrical Manufacturers Public Information Center, 155 East 44th Street, New York 17. 30 p.

A new monthly film bulletin arranged to serve as a reference work and a point of departure for the study of present-day life on farms in the United States and in other parts of the world. The February Guide presents films that illustrate various aspects of farm life—health, preparation of food, distribution of product, youth guidance—and show the contributions of the electrical manufacturing industry.

- **Human Relations Films**. Five mimeographed articles on the use of films in Human Relations Series with Guidance, History, English, Home Economics and Psychology groups, are available without charge upon request to the College Film Center, 84 East Randolph Street, Chicago. There is also available an eight-page mimeographed article on the technique of using the Human Relations films in the classroom, stressing techniques of employing these films in the various subject matter areas.

Among the fifty-four subjects which can be rented from the College Film Center are: "Alice Adams," "Arrow-smith," "Big House," "Black Legion," "Broken Lullaby," "Dodsworth," "Four Daughters," "Fury," "Good Earth," "Hit and Run Driver," "I'm a Fugitive from a Chain Gang," "If I Had a Million," "The Informer," "Lives of a Bengal Lancer," "Men in White," "The Story of Louis Pasteur," "White Angel," "White Banners."

for the presentation of a "16mm Oscar" to the man who has contributed the most to audio-visual education during the year.

The method of exposing targets with the
KEYSTONE *Overhead Tachistoscope*
 has *Several Distinct Advantages*
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated. YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Tachistoscope *stands first*.

Just try a Keystone Overhead Tachistoscope—*its superiority will be evident*.

PROJECTOR** *made*

Ready for Delivery

NOW!

If you need a classroom projector now—**BESELER** can give you delivery *now*...and the **BESELER MODEL OA2** is the projector you should buy for *unmatched screen illumination*.

The **BESELER MODEL OA2** offers many advantages. You can obtain perfect opaque or transparent projection simply by pulling a lever and switching to the type of projection you require. It is not necessary to adjust the instrument for distance, as the lens system is perfectly matched. The **BESELER MODEL OA2** faithfully projects every detail and color of innumerable objects . . . Coins, Stamps, Book Pages, Slides, Pamphlets, Films, Postcards, Snapshots, Clippings, Magazine Articles and Advertisements, etc., etc. Takes Standard Slides and Opaque Material up to 6 1/4" x 6 1/4". Special film attachment accommodates 35 mm. film and 2" x 2" Kodachrome slides.

The **BESELER MODEL OA2** is enjoying unprecedented acceptance in schools throughout the country. Write for the name of the distributor of Beseler projectors nearest to you and our free descriptive booklet: E

Our Cover Picture

THIS May cover picture is unique in our history. Aside from its artistic quality as a photograph, it is the first picture ever submitted by an author, for illustration of an article, which was promoted from inside page to front cover. It has no teacher for centerpiece, or looning large in the background, dominating graciously or otherwise a self-conscious class. Instead, Stanley is here showing his fellow students why he thinks the Amazon valley is "mostly jungle, for", as he points out, "it is right at the equator and it gets over eighty inches of rainfall a year." Here is a class thoroughly on its own, intensely minding its own business—and the camera was none of it—which shows too how thoroughly the photographer knew *his* business. If perfect "attention" can itself be photographed, he did it here. We are indebted for the picture to Miss Mildred Sheppard of Montgomery, Alabama, author of "Fun with Maps and Globes" in this issue.

Two of Today's Problems

THE range of the audio-visual idea is so wide, its ultimate potentialities in total education so vast, that problems facing the field have multiplied enormously. They arise faster than they can be solved. A few are solved for the time being, some are partially solved, many are not even started toward a solution. We hope to survey and summarize these problems in a later issue, but only two concern us here. These two are immediate and pressing, their solutions are urgently needed but still out of reach. This issue, we believe, contributes something toward such solutions.

1. *How adapt and adopt the audio-visual experience and achievement of the Armed Forces for maximum benefit to civilian education?*

Our leading article in this issue—to be concluded in June—bears directly on this problem. The author, Gilbert C. Johnson, has behind him over ten years teaching experience, half in civilian schools, half in the military training field. The military period was exceptionally valuable, in the breadth of experience and outlook afforded, for he served the first half with the Army, the second half with the Navy, always in educational training areas. His duties covered the whole ground—teaching, administration, supervision, and the writing and production of specialized audio-visual materials for training. Based on this unusual experimental background, Lieutenant Johnson's ably written presentation makes interesting reading.

2. *The present and future status of the sponsored film in the educational field.*

The four-fold expansion of the Curriculum Clinic in this issue permits extended treatment of this problem. First, the departmental editor, Paul C. Reed, gives a comprehensive report and summary of a highly significant conference held in Detroit in April, a two-day-

and-night Committee session devoted earnestly and solely to this subject. Then follow two carefully written discussions, one on each side of this wide-open question. Speaking for the non-sponsored film is Dennis Williams, Field Supervisor of Encyclopedia Britannica Films, Inc., under the title "Who Should Pay for Instructional Materials?" Speaking for the sponsored film is Louis M. Stark, Manager of the Westinghouse School Service, under the title "Why Sponsored Films?". These three features of the Curriculum Clinic for May make a constructive contribution to the study of a problem long debated and still far from solved.

We All Have Our Troubles

THE world appears to have spent its first post-war year achieving near chaos. Key figures throughout the world have kept busy throwing monkey-wrenches into the political and economic machinery of progress, while the rest of the human race—in overwhelming majority but in abject docility—spends its time and effort in slowing down the wheels to pull out the wrenches and meekly keep pace with the retrogression. At this writing, the old planet seems to be on a stolid march to stagnation. All nations, great and small, war-torn and unscathed, are in the parade. Even great America is backtracking at top speed, its myriad factories drawing their fires, work stopping, production dropping, its cities doing the "brown-out" or "dim-out", everything seemingly getting ready for the "bow-out". A national chorus sings blame for the "government", whether is meant the labor government or the Washington government is the only question. In the past, millions of Americans have drawn huge comfort from the famous dictum, "and the government at Washington still lives". Today, they wonder! And even the EDUCATIONAL SCREEN (we were trying to get to that), just as this May issue was ready for the press *ahead of time*, hears the edict (from whatever powers there be) that its printer is limited to "three days work a week as of today"! And so, dear readers, when this May issue will reach you only you can tell, when you get it. *Sic transit gloria pacis!*

Summer Courses in Audio-Visual

OUR annual listings of Summer Courses for teachers in audio-visual instruction, including Workshops, have long appeared in the April, May and June issues. The total has increased steadily from year to year. A comparison of the April and May lists of last year with this year shows again some interesting evidence of growth:

*In 1945....in 32 States....107 Colleges....offered 139 Courses
In 1946....in 38 States....132 Colleges....offered 176 Courses*

Nine States absent from the lists last year—Georgia, Idaho, Louisiana, Mississippi, Missouri, New Jersey, South Carolina, Utah, Wyoming—appear this year. Three States previously appearing—Kentucky, Maine, Maryland, are not yet listed this year. There are always some announcements reaching us too late for April or May which appear in June. And so,—Kentucky, Maine, Maryland—last call for June!

The Application of Military Audio-Visual Techniques to Civilian Teaching

Part One of an able, thought-provoking discussion of a problem demanding prompt solution by the educational field. Part Two will appear in June.

THE phenomenal success of the audio-visual techniques achieved by the armed forces is the result of unprecedented advance and improvement along three distinct fronts. First, the mass and extent of the utilization have been on a scale far greater than was ever imagined possible in any educational program of the past. Second, the systematic planning of the production and utilization of audio-visual materials has developed improved materials of far superior quality as compared to those previously in existence. Third, the development of audio-visual teaching techniques and the training of teachers for the effective utilization of the materials have been carried to a high level of perfection from which all educational systems can profit immeasurably. True, the advance has been greater in some places than in others, but the forward strides have been simultaneous on all fronts. On all three fronts developments have passed far beyond the theoretical stages into practical usage. So emphatically has the nation's attention been focused on the necessity for these audio-visual techniques that educational leaders in civilian schools cannot ignore them and remain professionally sound in their future planning.

Mass and extent of utilization. In the organization of training programs the Army and Navy have systematically incorporated audio-visual materials into training methods in such a manner that their utilization has been mandatory. Practically all instruction has centered around audio-visual material. Few teaching situations have existed in these training programs for which a training film or a training device has not been specifically designed and utilized to good advantage. To teach without audio-visual material has become almost as unthinkable as to teach without students. Briefly stated, it can be said that the Army and Navy have practiced an audio-visual technique which can properly be labeled the *technique of extensive utilization*.

I. The Technique of Extensive Utilization

What has been done in civilian education about this technique? In comparison to the programs of the Army and Navy, civilian educational programs have been and are essentially lacking in the technique of extensive utilization. The use of audio-visual materials has usually been regarded as merely auxiliary in civilian education. Careful study of the curricula of most school systems, extending from the elementary grades through the college level, will reveal that the systematic incorporation of audio-visual material is the exception rather than the rule. In rare instances, individual teachers have achieved a technique of exten-

GILBERT C. JOHNSON, LT. (jg) USNR
Corpus Christi, Texas

sive utilization to a limited degree and in isolated cases. Usually instructional films and film strips have been used as an addition to rather than as an essential part of the lesson or lecture. They have been too frequently regarded as desirable only when time out from the regular routine of teaching could be spared. Rarely have they been used objectively, in a planned teaching setting, on the same level as textbooks and lecture notes. Large masses of subject areas commonly taught in the public schools remain essentially untouched by the audio-visual technique. The "hard" method of teaching still prevails in these subject areas while some of the most effective teaching tools remain unused.

Why has the technique of extensive utilization been essentially lacking in civilian education? The Army and Navy have practiced it because it proved to be the most effective method of accomplishing their instructional objectives—e. g., more learning in less time, longer retention, increased interest, similar results from different schools teaching the same subjects, increased confidence in ability to perform the job. They were able to exploit the audio-visual technique extensively because the following fortunate circumstances prevailed: (1) Practically unlimited funds were available. The question of cost did not apply. It was merely a question of how fast, how well, and how efficiently could the instructional objectives be accomplished. The answer, given repeatedly, was to produce and use training aids specifically designed for each instructional objective. Not only were the training aids supplied and used, but so were the buildings and equipment which were needed to make them effective. (2) The best qualified personnel for designing, manufacturing, and utilizing audio-visual materials were available for the asking. For the first time in our history, educational pursuits were permitted free access to the best talents and brain power without the keen competition usually offered by the better financial attractions of industry. (3) The designers of the training aids and the instructors were unhampered by conventions and traditions. Imagination and ingenuity were at a premium. For once it was both permissible and possible to break away from those precedents and conventions which frequently limit the classroom teacher to a routine which he knows is not the best.

The technique of extensive utilization has not been widely practiced in civilian education because the circumstances which enabled the Army and Navy to ex-

plot this technique have, unfortunately, never prevailed in the field of civilian education.

Obstacles in the Way

Educators in civilian life have usually been kept busy explaining how cheaply their job can be done and apologizing for their modest expenses. The question has rarely been how fast, how well, or how efficiently can youth be educated, but rather how can the cost be kept at a minimum. The answer, repeatedly given, has been to keep the purse strings tight. Because of this answer, instructionally objective films and other audio-visual materials have not been produced in any appreciable quantity in most subject areas. The construction of school buildings has generally been such that the most effective aids were unusable or, at best, relatively ineffective in these inadequate settings. The equipment for accommodating such audio-visual materials as have been produced has been so limited that to incorporate them into the instructional procedures has been impracticable. To put it bluntly, the instructional tools used in the average school have been crude and shoddy in comparison to the excellent tools that are now known to be attainable.

Civilian education has not had a fair chance in the selection of personnel. Too frequently the schools have been required to operate with those who remained after industry had selected, and lured away with more attractive salaries, many of the best qualified. The rapid turnover in teacher personnel throughout the country and the common practice of using the teaching profession as a stepping stone are applicable examples of this situation. This constant drain and reshuffling of personnel has robbed civilian education of the imagination and ingenuity so urgently needed in designing, producing, and properly using audio-visual materials on a scale sufficiently extensive to be effective.

Traditions and conventions prevailing in certain localities and among certain groups of educators have further hindered the development of the technique of extensive utilization of audio-visual materials in civilian schools. There are still those who recognize only the traditional methods of presenting subject matter and ideas—e. g., the verbal lecture, which supposedly is intended to educate via the medium of the student's notebook as a transfer agent. Evidence of the unfortunate extent to which this method prevails can be obtained by observing the deterioration in the handwriting of many students between the time they begin and the time they complete their college work. Other educators still seem to hold that the height of perfection in teaching is measured by the degree of difficulty with which subject matter can be learned; these educators merely make assignments, lecture verbally, and let the students worry about how and when to go about learning their subject. These educators no doubt consider themselves intellectual aristocrats, but their high self-evaluation is not usually borne out by a correspondingly high degree of learning on the part of their students. Then there still are numerous communities in which the local boards of education insist that the traditional methods of teaching were good enough for their generation and, therefore, must be sufficient for their children and grandchildren. Naturally, in com-

munities and classrooms where these educational philosophies prevail, the technique of extensive utilization of audio-visual materials remains unknown or at least ignored.

Overcoming the Obstacles

How can the technique of extensive utilization be achieved in civilian education? To implement this technique, the first prerequisite is the availability of audio-visual materials which have been tailor-made to satisfy the instructional objectives in all recognized subject areas. These materials must be made available in the same sense in which textbooks and blackboards are available in the classroom at present. Of course this cannot be done without an appreciable expenditure of funds. Necessary budgetary provisions must be made to finance the cost of a well-coordinated program of audio-visual education. The time is well past when emergency appropriations, P. T. A. gifts, service-club sponsorship, scrap-paper drives, and other uncertain means of financing are sufficient. Once the proper budgetary provisions are made, the problem of availability of audio-visual materials becomes a matter of production, planning, distribution, and effective utilization. (These aspects of the problem will be discussed in later paragraphs.)

Psychologically, there will never be a better time than the present for educators to arise in unison throughout the entire nation and demand solid budgetary provision for a stream-lined audio-visual educational program. The proof of the value and effectiveness of audio-visual materials has been crystallized in the minds of millions of servicemen. The entire populace has observed with approval the far-reaching results of these materials as demonstrated by their extensive utilization in the armed forces. A new era in teaching technique is due and expected in public education. To postpone the demand for budgetary support of audio-visual programs now is equivalent to disappointing the fondest expectations of public opinion, condemning education to the horse and buggy stage of development and neglecting an opportunity which has never been at the disposal of any previous generation. *The technique of extensive utilization of audio-visual materials in civilian education can be achieved by demanding solid budgetary support now when public opinion is best tempered for it.*

Technically, the time for educators to initiate budgetary provisions for a streamlined audio-visual educational program will never be riper or have a better chance of succeeding. Skilled workers trained in the preparation and manufacture of audio-visual materials are now being made available for civilian pursuits. Film makers have successfully completed their first venture in large-scale production of instructional films for the armed forces. This achievement can be transferred to civilian education by initiating budgetary support now, when skilled technicians and film producers are at their highest point of perfection and are most readily available for the job—before they become discouraged and enter other lines of work.

Professionally, the initiation of budgetary provisions for a streamlined audio-visual educational program

Fun with Maps and Globes

A delightful account of some real teaching with visual materials. Our cover picture for this issue is a third illustration for this article.

MILDRED SHEPPARD
Public Schools
Montgomery, Ala.

TEACHER was studying her list of social studies objectives thoughtfully, very thoughtfully. The unit in progress was coming to an end, and a decision had to be made as to what the next one would be. The children were already talking about it. In fact, they had already made up their minds. That happened without a dissenting voice the morning the new globe arrived. The children had selected and raised the money for a twenty-two inch slated, outline globe. It arrived unboxed shortly before opening time one morning with practically every fifth grader trailing the salesman, eyes and feet fairly dancing.

The morning work period had been ruined as far as previous plans were concerned. The children looked and talked and went back to look again. The discussion and study periods had merged, and for over one hour they had sat enthralled, questioning, pointing out, planning. "What are those numbers on there for?" "How far is it across that ocean?" "What are the names of the oceans?" "How are we going to know where to put things?" "Why is it leaning one-sided like that?" "Why aren't there any rivers on it?" "Where do we live?" "How will we put the things on it?" "How do you show cities on a globe?" The blackboard was full, and still the questions came.

At first the topic had been "how to use our new globe", but, as the discussion continued, it became evident that many, many maps would be needed. It was also quite clear that no one in the class knew how to use the maps. The unanimous decision was to make the next social studies unit "how to use maps and globes".

And it all fitted in beautifully with the objectives—to acquire the habit of seeking information from a variety of sources, to develop skills which will enable the individual to use sources of information effectively, to organize ideas and information in logical relationships, to use new information in a variety of ways, to develop critical thinking powers. The possibilities were endless, and the children would certainly be disappointed if they were switched to another topic.

Then why the hesitation? Why not go ahead with the plans that had already been made? Well, the method suggested by the children's plans seemed to be different from any that teacher had ever used, heard of, or read about. She had, of course, tried to teach the use of maps and globes every year, but it had come in incidentally with the historical and geographical units. The topic of study showed a need of the moment, and the map was brought in and explained fully enough to meet that need. True, the method had not been very successful. Only a few of the brighter pupils

Clay models of young, rugged mountains and old worn-down ones help to clarify map colors and give a good picture of the differences in the types of ranges.

even remembered that a map had a legend, fewer still had become skillful enough to work independently in getting information from it, and, so far as teacher knew, none had ever been able to interpret the facts, to draw conclusions, or to see relationships between the facts from the maps and the way people live.

Although former map work had not been entirely successful (to state the case mildly), there were other factors which must be given serious consideration. The interest was keen, but would it hold? The proposed work would require at least six weeks, possibly longer. It was geography in its purest form with no sugar coating. The children had no idea of the work required to answer their questions. It was also extremely difficult work. Teacher knew many adults who did not have the working knowledge of maps which was included in the outline. *Fifth graders* were supposed to settle the country, build log cabins, and learn how the pioneers made candles. Another obstacle was the scarcity of material. Much reading and pictorial material would be needed in addition to numerous maps. And not the least of all the handicaps was teacher's own lack of experience. She had searched diligently in professional books and courses of study, and she found almost no help. She felt badly in need of some suggestions as to organization, the scope of the content, even the daily procedures.

The outlook was not entirely dark, however. The children could raise the money to buy pictures and filmstrips needed. They had done it before. Text books and reference books had some related reading material, and more could be put on slides and charts. A variety of activities and types of materials usually sustained interest. Perhaps they would in this case. Teacher's

inexperience was serious, but she would never be more experienced until she made the first trial. And she did love to experiment.

How to begin? How to begin? How to begin? It was like a wheel going round and round, and it mustn't stop just anywhere. The right starting-point was tremendously important. Teacher had the questions grouped into main headings, and she had to decide which group should be presented first. Land forms, water bodies, zones, the graphic scale, kinds of maps, map symbols and colors, directions on a map—which was basic? Henry's and Mary's knowledge was so meager. It was necessary to choose the topic which would give the precise foundation on which further knowledge, skills, and concepts could best be built. Kinds of maps seemed to be a very logical beginning. Let Henry know the many different things that a map could do. Let him know that mountains, rivers, and cities are not the alpha and omega of map making. There were dozens and dozens of maps to discover. The weather on a map? It was amazing. Coal on a map? Robert's father worked in a coal mine. Why, he was trapped in a mine explosion. Robert could find the little black spot that showed the place where his father worked. Cows on a map? Jimmy said his father worked at the stockyards and he was always talking about carloads of cows and where they came from. These discoveries fostered ideas. More questions were raised, and the study went into the next phase quite easily and naturally.

It had been necessary to refer to the legend in determining kinds of maps. A detailed study followed, and Billy and Tom and Susie not only learned that a map has a legend, but they became quite proficient in using it. They learned different kinds of symbols that may be used, pictorial, line, dot, color. Just to make sure the symbols had concrete meanings for them teacher let them talk and talk about the river by which they live. They told experiences they had had on the river,

The mountains must be in the right latitude.

they talked about the bad currents, the sand bars, the trees and houses along the banks. Then they found the tiny little line which represented all these things on the map! Next came talk about the city on that river. They went to the window and looked out over hundreds of house tops, pointed out railroad tracks, a factory chimney, the street leading to the main business section. They talked about how many people live in their city, the different kinds of business concerns, the places where their mothers and fathers work, the parks, the theatres, the buses, the capitol, the museum. And then they found the tiny little dot which stands for all these things, the little dot which means "us"!

The tiny little dot which stood for so much brought up the next question. Why was everything on a map so little? How could anybody tell how big a thing really is?

The graphic scale proved to be fascinating. It was fun measuring the classroom and drawing it to scale on the blackboard. Interest increased as they learned to measure distances from city to city. However, the work was becoming more complicated. One of the world maps said "equatorial scale". What did that mean? Directions had already entered into some of the discussions. Now it became necessary to bring in different types of map projection and to explain latitude and longitude lines. Fortunately, there were maps available to show each type of projection. *Sky Highways* gave a simple explanation, and a filmstrip helped tremendously. It was the most difficult thing they had faced, and some of them just didn't understand. However, many of them did, and they spent every spare minute turning the globe round and round to rescue shipwrecked seamen at 40 degrees north latitude, 50 degrees west longitude (or at some other place on a long list). With this knowledge they could begin to carry out their plans for putting things on the globe.

Landforms, water bodies, and the zones were yet to be dealt with. Definitions were necessary, of course. Clay models, pictures, and pupil drawings helped to make the definitions clear. However, teacher had no intention of confining the work to definitions, names and locations. She intended that the sight of a mountain on a map should conjure up ideas as to its influence on climate, transportation, plant and animal life, density of population, and possible occupations. She also intended that once the suppositions were made, Henry should confirm or refute them by reference to books and other maps. Here was real work in organizing information in logical relationships and in the development of critical thinking.

They did it. From a political map they learned the main natural regions of the world. With the help of books and films they studied two or three typical regions extensively. Then they were ready to generalize and check information. It became necessary to build a map and put the outcome of their discussions on it. It was a wonderful summarizing activity involving the making and using of a legend, the use of directions and the graphic scale as well as the effects of zones, land forms, and water bodies.

It was all over. The main points on the outline were covered. The questions were answered, and to

the real satisfaction of the pupils. The plans for the globe were completed. The principal had seen and approved. The supervisor had visited and approved. The entire group of children had gone to Saturday teachers' meeting to hold an unrehearsed discussion, using maps and globes to prove their points. The children were happily satisfied. They were openly and

conscientiously proud of their work. About all teacher could do was to sit back and laugh at herself. She remembered those silly fears about interest, difficulty, lack of materials, and lack of experience. Henry had learned a lot but not half so much as teacher had learned. And the greatest of her learnings was that a map can be a fascinating object even to a ten-year-old!

How Akron Is Increasing Film Circulation and Classroom Utilization

A city school system believes that large-scale installation of projection equipment makes for faster teacher training and better classroom utilization

M. LINCOLN MILLER
Director of Visual Aids
Akron Public Schools

AKRON is a high wage town. The home of the greater part of the rubber industry of the United States, its factories have had a boom for several years. Money has been fairly easy to obtain for school activity funds, and as a result some of these funds have reached large totals. Visual aids equipment is a favorite expenditure of the schools, and by June, 1945, all 56 of Akron's public schools had, largely by the stimulation of Orval Sellers, former supervisor, acquired one or more sound motion picture projectors. In addition, schools had other visual aids machines, screens and accessories, purchased either from activity funds or by parent groups, without cost to the Board of Education. Some of the equipment was purchased with non-instructional purposes at least in the foreground of the background, although a great eagerness for visual education was professed by everyone.

An active public relations program through which community clubs, organizations, industries, churches, agencies, city departments, parochial schools, could borrow Board-owned films or sponsored films on deposit, and in some cases secure projection service, resulted in a rapid community-wide appreciation of the 16 mm film as a medium of communication. In one semester 70 such groups were borrowers and users of school-stocked films. One industry, a railroad, annoyed by damage by school children and others to its property, went so far as, with the advice and suggestions from the school, to plan and produce a silent film on safety and care of property, which was used in the schools with great success and excellent results. Another industry, through the Edison Electric Institute, is now planning an industry-wide sponsored film in sound and color showing pupils how swimming pools and other recreational facilities could be built if they refrained, especially during vacation periods, from damaging lamps, windows, lawns, shrubbery and other kinds of private and public property. The number of community film borrowers became so extensive that the Public Library was able to start a full-blown film service of a similar type without resulting in noticeable falling off of the community film service of the schools.

In Ohio, the State Slide and Film Exchange, B. A. Aughinbaugh, Supervisor, meets much of the film requirements for all schools except in some large cities.

The State Exchange is reported to be the largest in the United States, and as a result Ohio probably has more motion picture projectors in schools and has more films and slides used by schools than any other state. Since Akron is a large city, only 25 per cent of its film distribution comes from the State Exchange. Fifty-two per cent of films used come from the local depository and the remaining 23 per cent from commercial and governmental sources. These latter include some films that can hardly be classed as classroom teaching films, for example, the OWI films.

One of the advantages of growing up like Topsy, by stimulation and by initiative of individual schools, is that much equipment is purchased and a great many films are used. But the disadvantage is that not all the films are utilized profitably and some bad habits of utilization may be formed. As soon as sound motion picture equipment became available in all Akron schools, the opportunity presented itself for development of real educational utilization of visual aids. Several steps were taken immediately to attain this end. First, films such as "Using the Classroom Film" and "Teaching Methods of the AAF," which teach proper use of visual aids and improvement of general methods, were projected for teachers and principals. Second, talks to school faculties were scheduled, demonstrating various types of aids and projection equipment and presenting some basic ideas about the film as an educational medium. Third, a newsletter to principals was published by the visual aids department, containing contributions from teachers, routine information, and news about schools. Fourth, the type of film made available was gradually changed over to the classroom teaching type. Fifth, new films purchased were chiefly classroom teaching films or instructional auditorium films. Sixth, approximately one-hundred classroom teaching films were ordered for preview purposes and the previews were widely announced and shown. Seventh, teaching demonstrations were given employing the classroom type film and sample teaching guides were written that are brief enough to be practical.

In addition to the foregoing direct approaches to utilization, a number of indirect approaches were employed. Early in the year each principal was asked to appoint a coordinator for his school to assume such duties as requisitioning films, attending meetings, acting on film preview committees, etc. A start was made in listing in the printed courses of study available films and other aids which might correlate with each unit of instruction or enrich the content of the general curriculum. A number of new printed forms were devised to increase efficiency in booking, distributing, and servicing films. A list of 700 borrowed teaching films used by teachers during previous years was distributed in an effort to get repeat requests on good films. A step was made toward improved projection through issuing operators cards to qualified student-operators and stepping up the operator training program. A continuous study was made of film booking rates by schools, and by films, and the relative popularity of each type of aid and each source of supply was soon known. Film circuits, an agreement whereby certain films are routed to each of 46 elementary schools, were improved by careful selection of auditorium-type films on health, safety, good conduct, and similar general fields. Study guides were written by preview committees, a preview opportunity was given coordinators before starting the circuits, and more information was supplied schools about the films and about suggested uses. One of the high schools which projects approximately 40 films per week, has 18 trained student operators, and gives certificates of award and school letters for visual aids service, was publicized in the newsletter for its work, and other schools were urged to step up their visual aids programs along similar lines or in some other field of need.

One of the greatest recognized needs was to persuade more classroom teachers to request and use teaching films. In the past, the requests which came from schools were not particularly uniform, as might be expected when interest in visual aids may be strong in biology in one school, in social studies in another, and in physical education in the third, and so on, depending upon the personnel involved and their interests. In order to reach all 1,100 classroom teachers, small 3 x 5 cards were printed to serve as "request" cards, one card to be used for each aid desired and with spaces on the card for supplying essential information, an idea for which we are indebted to the Pittsburgh Schools. Another large form was devised, in triplicate, to be used as a requisition to be submitted by principals.

The results were somewhat unexpected. Since the request cards seemed to invite individual teachers to place orders, the number of films requested was in some schools several times as great as for the previous year. Ten thousand printed request forms were rapidly used up, and blank cards had to be used by several schools to finish the job. The requisition sheets came in from principals, in some cases two weeks ahead of the date set, typed in triplicate with all necessary information. September, which has always been a "slow" month for visual aids, had nine times as many bookings requested as films actually booked for the previous year during September.

This gigantic requisition from schools was tabulated by a unique method which placed each request within a certain calendar period and also identified the school making the request. Since the grade level was listed, a check with the course of study outlines indicated how well the films correlated with units of study, and incidentally, revealed some expected variations in units of study and courses offered among the various schools. Purchases of new films needed are based on the information revealed, and bookings from outside film libraries are being made months ahead. The results have been most heartening, and vastly increased use and effective utilization of visual aids seems to be in prospect for the months ahead. The current rate of 65 films distributed daily promises to be somewhat increased during the Fall months.

Akron experience with visual aids development seems to reveal the following:

a. When parent groups purchase a sound motion picture projector and other equipment for a school, their interest in visual education is vastly increased, although their information on the subject may be somewhat limited.

b. A visual education department which supplies films for clubs, churches, and other community organizations and groups as Akron does, attracts much favorable attention from the community, although such attention may not be reflected immediately by increased provision for the department.

c. Universal provision of sound projection equipment for schools results in a shift to more motion pictures and to sound films. Ninety-two per cent of visual aids booked from the central office in Akron are motion pictures, and a majority of these motion pictures are sound films.

d. Large film centers on a state or regional basis are valuable and instrumental, even for cities, in getting visual aids departments built up.

e. Volume distribution seems to be the quickest preparation for effective utilization of films. Better utilization can be developed after the mechanics of an optimum volume is achieved, by substitution of a better type of film and by improvement of instructional procedures.

f. If the problems of requesting and projecting films can be made simpler, and more helps can be provided teachers, more requests for film will result which, after equipment, is the next important requirement for a more effective visual aids program.

g. Although the greatest need is admittedly more effective use of the aids we have, the quickest way to get such utilization is through achievement of a certain optimum of materials, equipment, and organization. In Akron the motto is "You can't get up much steam with only 211 degrees." It didn't seem feasible to get enough tax supplied coal under the visual aids boiler, so we gathered up all kinds of fuel from the highways and byways through all manner of small sources of activity fund and Home and School League revenue, pushed up the boiler a few extra degrees, and now the steam is up and the engine is really running.

h. And we are beginning to get coal now! The 1946 supply and film budget allotment is more than doubled over 1945.

Portable Equipment or Portable Pupils

A concise argument in favor of a fully equipped projection room for use by all classes

RAYMOND WYMAN
Director, Teaching Aids
Westfield High School
Westfield, Massachusetts

Portable Pupils in a Permanent Projection Room.

THERE are two general methods by which I can get teaching aids into the curriculum of my high school. With either method the individual classroom teacher must prepare her class and arrange for the teaching aid so that they will come together at the desired moment. From this point the methods differ in that one considers that the equipment is portable and the other considers that the pupils are portable. The portable equipment method is the one most often used in schools today because the teacher has the alternative of using teaching aids in her room or not using them at all.

In Westfield High School I started seven years ago by moving equipment all over our thirty-classroom building and letting teachers use it as best they could with help from me before school and between periods. I found that classrooms had many disadvantages as a place for sound and projection equipment. The walls were hard and sound bounced from everything before it reached student ears. The windows were large and had to be fitted with dark curtains that were expensive, unreliable, and not efficient in darkening the room. The electric outlets were few in number, badly located, and on over-loaded lines. Desks often had to be moved into a special position. No table in the room was adequate for a heavy sound projector. Most teachers were not mechanically inclined and got into all kinds of trouble which soured them on teaching aids. It looked as though teaching aids could be successful only in a few rooms and by a few teachers.

Two years ago, with a new title and more time, I decided there must be a better way of serving my teachers and their classes. I managed to get a room about twenty by sixty feet made originally for a shop. I had a partition built across one end which divides it into an office and an audience room.

The office contains desks, work benches, darkroom, and projectors permanently set up behind ports which open into the audience room. The mechanics of teaching aids goes on here. Senior business girls do the typing and bookkeeping. Boys work on equipment, project films, or study their school work. Without these students giving their study hall time, I would accomplish much less. One sound projector, filmstrip projector, transcription player, and radio are constantly ready for use without special setting up. A spare of each is available for emergency use or for moving to other schools and our auditorium.

The audience room seats a hundred pupils which means that two or three class groups can meet at once if wanted. The windows are painted black so that the room is darkened simply by turning down the light dimmer to the desired degree. Heavy cloth drapes hung on the wall improve the acoustics. Having the noisy projector behind a partition, helps, too. An eight by ten foot beaded screen is always in place on the small stage in front.

I have found that this system, where only the pupils are portable, works very well. Any teacher can have what she wants without concerning herself with any mechanics of operation. She arranges for what she wants in advance, prepares her class, walks down with them at the scheduled time and then goes back with them. We often have three different classes during one sixty-minute period. The saving of my time and wear and tear on equipment is also important. The same crew of boys and girls operate all assembly programs which regularly have public address, lantern slides for songs, and about one film per week.

I also provide teaching aids service to six grade

Audio-Visual Aids and Jewish Education

JOSEPH GREENSTEIN, Executive Secretary
Zionist Organization of America
41 E. 42nd Street, N. Y. 17

IN the Teachers' Institute of Yeshiva University I teach a course which in Hebrew is called "Chinush Chusyoni"—in English, "Sensory Perception Education." This seems to me to tell comprehensively what audio-visual education is or should be.

The need for audio-visual education becomes greater the more complex life becomes, and the more interesting and richer we try to make it. It is a two-way street. We try to bring all our senses to bear upon the subject, the better and the quicker to learn it, understand it, experience, appreciate and enjoy it.

The more advances science and civilization make, the more we are victims of verbalism plus the newer and more intricate forms of communication and propaganda. One must learn how to read a book, a map, a chart, cartoon, newspaper, glass slide and filmstrip. One must learn how to listen—to the radio, phonograph, recital, to forums and lectures, to sound film and to nature herself. One must learn how to feel, taste, and experience many new things in an expanding way of life. In short, one must muster the senses in a joint all-out assault on the complexities of life to master them. On the other hand, one must sharpen the senses to withstand the constant barrage of sensory media and techniques employed by individuals, groups, and organizations in a highly competitive society.

Creative teaching must employ audio-visual experience. The more these aids are used the more important the role of the teacher. The film can bring into the classroom much of the outside world but, for creative experience, it can hardly match the movie which the children make on two rollers. One may get a set of beautiful slides on the story of the Purim, but can this match the learning gained by the children in *making* a set of slides on the same subject? Audio-visual aids must always remain aids. They become education when used by the children as media for expression and communication.

The average Jewish school may not be equipped with films and many Jewish teachers may not be able to conduct a film-forum, yet the Jewish school can hardly escape employing audio-visual experience. Judaism as a way of life has always employed such means. The teacher must understand visual media and employ them with some common sense. A glance at some of the subjects of the curriculum will suffice to illustrate the point.

Audio-visual education is underway (1) when the children keep a scrapbook and daily bring pictures to illustrate the words they learn, (2) in the playing of such games as "Simon Says". (3) when the children

read their Bible Comics, (4) when the children dramatize some incident from that most dramatic of all books, the Bible. Visual education continues as the ceremonies and customs surrounding the Jewish holidays are studied and observed in the home and the school. (Rosh Hashanah has the *Shofar*; Yom Kippur the *Kittle*; Succos the *Booth, Palm and Citron*, etc.) I believe that in the lower classes the children should build a Tabernacle which they should use for worship so that they will enter the Congregations better equipped in understanding and experience. And now for an example.

A certain group undertook the creation of an exhibit of Jewish ceremonial objects. The project had

Jewish ceremonial objects and ceremonies.

several objectives: (1) To learn through doing, (2) to correlate the subjects of the Jewish calendar, customs and ceremonies, and a functional Jewish vocabulary, (3) to build an active relationship between child, home and synagogue, (4) and to help foster correct study habits and library use, to introduce the Yiddish, Hebrew and Anglo-Jewish press, and to foster the use of the Bible as a functional source.

The class was divided into three groups—one to concern itself with the Jewish ceremonial objects in the home, another with the ceremonial objects of the synagogue, and the third to study miscellaneous objects. Each group elected a chairman and a secretary. The broad plan of action was to draw up a list of objectives to pave the way for group discussion. The first group (home) listed *Mezuzah, Candlesticks, Challah, Havdolah* (Spices and Taper) *Tefillin, Talis, Bible, Sedar Plate*, and many other objects. The second group (synagogue) made a long list which included *Mizroh*,

Film and Radio in the Andes

CLARENCE W. JONES, Co-Director
Radio Station "The Voice of The Andes"*

THE modern counterpart of the early circuit-rider is the Gospel Sound Bus. It does the same job but covers its territory with more speed and convenience. As conceived and carried out by Radio Station HCJB, the pioneer missionary broadcaster operating since 1931 in Quito, Ecuador, the Gospel Sound Bus becomes an efficient audio-visual machine to aid the missionary in his task. Dubbed "Radio Rodante" (literally "Rolling Radio") the HCJB Sound Bus combines the science and art of electronics with motion pictures to present attractively the Gospel of Christ to thousands of people in the towns and villages of Ecuador's mountains and coast.

With its special body built in Quito over a standard one-ton American truck chassis, the Radio Rodante was a one-room workshop-on-wheels. It could become a transmitter shack, a radio studio, and a movie projection booth on demand. Sometimes it served all three purposes at once, but so compact and functional was the layout of equipment that two missionaries could operate everything easily. A 100-watt broadcast transmitter fully equipped with turntable and receiver was used to broadcast programs over a portable antenna system which could be installed quickly whenever the truck stopped. Parts of the transmitter served as the public address system with its two loudspeakers installed in the car's roof. For flexibility the radio and public address system could be operated independently or simultaneously.

A 16 mm movie projector could be operated from the rear end of the Gospel Sound Bus, using travelogue and other films as a medium of educational and spiritual instruction. To accommodate the usual crowds of several hundred which attended the night services conducted by the HCJB workers, a large size beaded screen was used. Where the audience of one provincial capital mounted to nearly 2,000, it was necessary to use a very large sheet which proved transparent enough so the crowds could watch the picture from both sides of the improvised screen. That the titles and the action were in reverse for half the audience never fazed them a bit!

Much of the success of the Gospel Sound Bus on the foreign field depends on how its advantages are exploited. A special government permit was secured allowing the Radio Rodante to operate in any part of Ecuador it could get to. That took care of the opposition when it attempted to stop the missionaries in their work. The proper approach was always attempted in each village with respect to the local authorities. The town "jefe politico" (mayor) was invited to be the first to speak in the program of the Rodante. The best musicians and military bands were requested to take part. Enthusiasm rose as assurance was given that not only the loudspeakers would carry the speeches and the music, but the transmitter would actually broadcast the proceedings to all of Ecuador. (Where the

occasion warranted it, these local "remote" programs would be picked up in Quito and put over the main stations of the HCJB system—now six in number).

After the local talent had been amply displayed, the missionaries gradually turned the tide of the program toward spiritual objectives. Through the pictures on the screen, and explained over the P. A. system, a full-fledged Gospel sermon could easily and naturally be introduced in villages that would scarcely suffer an evangelical worker to set foot in their midst. Distribution of tracts and Testaments followed the programs which was usually conducted in the main plaza of the town. The net results could be counted in some professions of faith, and also in stimulating the native believers and workers resident in that area. Perhaps the greatest fruit came in breaking down, thru this audio-visual approach, the prejudices against evangelical Christianity, making easier and more fruitful the later follow-up work of Bible colporters and missionaries.

Gospel Sound Bus—"Radio Rodante"

An added ministry of the Radio Rodante was that of helping to service the radio receivers which had been judiciously placed at strategic points to tune in programs of HCJB for a given neighborhood. This "radio circle" idea brought into play the individual Christians of selected villages who were recruited to use of radios loaned to them by HCJB to evangelize their neighbors.

The first Rodante, now enjoying old-age retirement while serving as a school bus for missionaries' children, has been replaced by a mobile radio unit developed by the U. S. Army Signal Corps during World War II. This truck and trailer unit comprises a 300-watt phone (450 watt C. W.) transmitter with two excellent receivers and all associated equipment. A 10KW gasoline-electric generator mounted in the trailer can be operated even while the truck is in motion. When stationary, the power plant can be placed 100 feet from the truck. Whip type antennas for transmission and reception extend from the truck's top. All the equipment is shock-mounted in rubber—ideal for the rough roads of the mission fields. The truck is an extra rugged Army type, able to ford water up to 32 inches. The front wheel drive enables it to climb slopes of 65 degrees. Everything about the unit is ideally suited for the mission field.

Two outside cabinets are attached to the truck. HCJB plans to use one of these for books and the other for first aid and clinical supplies. These truck

*Casilla 691, Quito, Ecuador; or 156 Fifth Avenue, N. Y. 10

trailer mobile units can be purchased as war-surplus equipment. They sell for \$4,500 complete to drive away (Chicago) and are reputed to have cost around \$18,000 each. Oil and exploration companies are buying them up fast. The Chinese government alone purchased 33 of these units from an RFC agent recently. Any interested missionary society will need to act quickly. Inquiries can be addressed to the Hallicrafter Radio Corporation, 3025 West 65th Street, Chicago, Ill.

Observations of a Schoolman and Churchman

ERNEST TIEMANN, Director of Visual Education
Pueblo Junior College, Pueblo, Colorado

I Am serving as director of visual education for Pueblo Junior College. We are very busy now setting up a regional center of teaching materials. By September 1st we should have about ten thousand dollars worth of teaching materials at the center ready for use by the schools and organizations of this region.

From my home I operate the Religious Film Center. For about 16 years I was Director of Religious Education for the Lutheran Church. It was about 1937 that I began to use visual aids in my educational work in the church. I saw the tremendous role that visual aids could play in furthering the education of church members, old and young. At that time I worked with silent films and slidefilms. Later I became interested in sound films, especially the St. Paul Series.

When I joined the college faculty three years ago I decided to develop a program for the churches of this region. I gathered my own library of religious teaching materials which includes all the Cathedral Films and slides as well as other selected materials. I knew most of the church leaders. I discussed with them the problems that confronted the church's educational program. I tried to find out what their needs were and made an effort to discover how they could be met.

For two years I have provided projection equipment for the churches in order that they might begin to use visual aids and thereby create an interest in their use. I developed a rental service of religious teaching materials. Pastors and directors of religious education were invited to my house to discuss how best to utilize these materials and develop a permanent program in the church. This service was welcomed by pastors and laymen.

Now we have about six "chairmen of visual education committees" functioning among the churches. It is my plan to call them together periodically to serve as a previewing panel for the new material I hope to make available to the churches thru rental library. This panel will soon make plans for a visual aids institute. This pattern of action should help in selecting better teaching materials and it should assist in securing better utilization of materials.

I hope that I might help our church leaders and encourage them to carry on research activities in this field. More literature is coming from the presses month by month. I feel we are making headway. The road ahead is challenging. We are going to meet that challenge.

Worthy of His Hire

"TOMORROW afternoon we are having a movie as a part of our ladies aid society program and we can't find any one to show the picture for us. Will you bring your machine and come over? It is only a thirty-minute picture."

There it was—an invitation to do a neighborly act!

Before I answered I made several inquiries: Did you call Mr. Blank, over on your side of town, who projects pictures as part of his business as an equipment dealer? Do you expect to pay for this service?

"We asked Mr. Blank. His charge is fifteen dollars, but he said that he would cut it to ten because we were a church group. Don't you think that is too high? It's only a short picture."

My reply was immediate, and positive and it was "No."

"How do you figure it?"

Then I explained that this group wanted competent projection. I pointed out that they wanted the projectionist to be there and all set up before the luncheon began. He would be asked to start the film about 2 o'clock and finish at about 2:30, and that he would need to remain until the rest of the program was finished before he could pack up and leave. In all these suppositions I was right.

Then I called her attention to the fact that the operator would need to leave his place of business by eleven o'clock to get to the church by 12 noon, and that it would be very close to four o'clock before he could get back to his establishment and unpacked. This would add up to about five hours of time.

My interlocutor gasped. "Five hours? I never thought of that!"

While she was *thinking*, I asked her if her husband would lug several hundred pounds of equipment worth seven or eight hundred dollars around for five hours for ten dollars. I asked, further, if she thought that it was fair to expect Mr. Blank to work for the church for nothing. There was a long silence. It was broken by a question.

"Would you happen to have the telephone number of Mr. Blank?"

I gave her the number, and reflected, as I turned to other things, that the professional projectionist is generally competent, eager to accommodate, and certainly worthy of his hire.

Visual education must be paid for by some one. It is only fair that the church should pay for what it receives. After all, it is *our* Scripture which says "a laborer is worthy of his hire".

New Release

• *The God of Creation (A Sermon From Science)*, is the second in a series of natural color sound films produced by Irwin A. Moon and sponsored by the Moody Bible Institute, 153 Institute Place, Chicago 10. Animation, time-lapse photography, and ingenious photomicrography are employed to present the celestial and the mundane. It is 16mm and runs 42 minutes. Film, projector, and projectionist are available to local churches and organizations on an offering basis. Write direct to the Institute for further information.

We Used . . .

Recently our Intermediates had two lessons on the question, "What is God like?". During the worship period on the first Sunday the kodachrome slide set, *The Prodigal Son*, was shown during the reading of this story. Then there followed the general discussion of the lesson topic. On the second Sunday a list of questions concerning the film was placed on the blackboard and briefly explained, and after a short worship service, the film *The Prodigal Son* was shown. In the lesson period which followed the film, the slides were again shown and the questions raised by the film were discussed as they were suggested by each slide.

To a long list of visual materials used through many years in the church has been added the motion picture. While it is, perhaps, the most valuable visual aid to date, it does not make other aids obsolete. Rather, it creates a greater demand for other visual materials and at the same time increases their value. I believe in visual aids—plural!

CHARLES W. TYRRELL, D.R.E.
First Presbyterian Church, Evansville, Indiana

Pictures and Preaching

TOO many pastors believe that visual education in the church begins with motion pictures. Not so. Flat pictures skillfully used can enrich and vitalize worship and preaching. During six Sundays in Lent Rev. R. L. Krepps, Pastor, First Methodist Church, Millersburg, Ohio, used miniature color prints in what he calls "picture inspired worship". The prints were artistically mounted on the fronts of the church bulletin for each Sunday. They harmonized with the theme of worship, and became the central idea for a three-point sermon: a) the picture and the artist, b) interpretation of the picture, c) the idea of the picture in present day situations.

Here is a technique for picture utilization which others can use. Pastor Krepps says that his congregations expressed appreciation for this type of service. Two typical programs, omitting the other elements of the service, are as follows:

- (A) The Picture: *Go Forth And Preach*
by Burnand
The Sermon Theme: "Commissioned"
The Hymns: "Jesus Calls Us O'er
The Tumult"
"Hark! The Voice of
Jesus Calling"
The Scripture: Matt. 28: 19-20
- (B) The Picture: *Christ Before Pilate*
by Munkacsy
The Sermon Theme: "Quiet Courage"
The Hymns: "God Is My Strong
Salvation"
"Christ's Life Our Code"
The Scripture: Mark 15: 1-14

For the outlines for the other services, and for additional information about these services, write direct to the Rev. Krepps.

(The editor would be pleased to receive and report other types of utilization.)

Visual Aids and Jewish Education

(Concluded from page 241)

Bivroh, Parkhet, Torah, Menorah, Esrog, etc. The third group listed *Chuppah* (Bridal Canopy), *Mikvah* (Ritualarium), *Flag, Ten Commandments, Mogen David*, and others.

After the listing came the discussions which revolved around three general questions: What is a Jewish ceremonial object, what is its function, and what is its purpose? A description of each object was drawn up which told what it was, when it was used, and what it stood for and taught. Stories and articles were collected about the various objects.

After this came the exhibit itself. Cases were constructed and the lay-out for the objects decided. A catalogue in the nature of a newspaper was made about the exhibit and a dramatic review of the exhibit entitled, "Jewish Ceremonial Objects On Parade", was presented at the closing assembly of the school year. A slide lecture, "A Jewish Boy Reviews His Ceremonial Objects", was made and the continuity narrative written by the pupils. In addition to all benefits of such a project was the creation of a piece of curriculum material to be used by succeeding classes.

News Notes

■ Church School Pictures, Inc. (Old Arcade, Cleveland, Ohio) has announced the initiation of a series of previews for Monday noon of each week. Mr. Wilbur Laganke, proprietor, believes that ministers and interested laymen will welcome a chance to see-before-they-use. An announcement goes out each week of what is to be shown and those who are interested can plan to attend these noontime showings. Up to forty interested and enthusiastic previewers have shown up each Monday.

■ Early in April the second issue of a Bulletin for workers in religious education was sent out by the Department of Religious Education of The Church of England In Canada (604 Jarvis Street, Toronto 5, Ont.). The editor of the Bulletin is The Rev. A. Harding Priest, associate secretary of the department. Because of the growing interest in the use of visual aids in church school teaching, considerable attention was given to this subject in this issue.

■ An afternoon demonstration of projected visual aids was recently conducted by Mr. Joseph Mosca, of the Visual Education Committee of the Council of Churches of Allegheny County (Pa.), for the students and ministers of the Pittsburgh-Xenia United Presbyterian Seminary. Purpose in selection, careful planning, and maximum participation were the principles most stressed.

■ The congregation of St. Paul's Lutheran Church of Massillon, Ohio, had visually aided Lenten services this year. The pastor, Rev. Paul L. Baumgartner, writes: "We had almost five hundred people out for the first Lenten mid-week service. Preaching and singing from the screen is new here and every one was enthusiastic with the first venture."

The Film and International Understanding

Community Use of Films for International Understanding

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

RUTH MACLEECH*

SHIRLEY, Massachusetts, is a small town near Fort Devens. It is a town with healthy interests in its own welfare and the relationship of that welfare to events in the world at large. This article describes a project in which films for international understanding were used to promote both of those interests. Although carried on in connection with the Shirley USO Club, the project illustrates certain principles equally applicable to various types of organizations and communities.

A community film committee met to discuss the use of so-called "educational" films in our Club. At that meeting the committee made the following suggestions for a series of film programs: (1) That the series be called United Nations Programs. (2) That various "nationality" groups from the town be called in to sponsor individual programs. (3) That a feature length film, a comedy, and a short related topic be the pictorial content of the program. These suggestions were followed, and a series of six United Nations Friday nights were tentatively drawn up. Actually, when each sponsoring agency was contacted, the plans were not only accepted but so expanded that the series turned out to be a series of six United Nations Film "Festivals". The festival nature of the programs can be seen from the description which follows.

Each sponsoring group decided upon the films they wished to see. Each group helped in the publicizing of the event, and sent a committee to help welcome and seat the guests, who were service people from Fort Devens and adult members of the community of Shirley. Finally, the group usually suggested other ideas that helped round out the evening.

*Formerly program director of the USO Club in Shirley, Mass. Now Visual Education Director, The Samuel Adams School for Social Studies, Boston, Mass.

Polish Program—There is a large group of Polish origin in Shirley. The Polish-American Society sent a committee to plan with the USO Film Committee. In addition to assuming the responsibilities mentioned above, they suggested that they bring refreshments. The President of the Society agreed to be chairman of the meeting.

The feature of this program was the War Department's film, *The Nazis Strike*, showing the entry of the Nazis into Poland. Instead of shorts, the committee chose the film *Silent Village* to accompany the feature. *Silent Village* is the Welsh miners' tribute to the people of Lidice. The introduction to the films was given in English and in Polish by a school teacher of the community. The evening was rounded out with the dancing of polkas to old fashioned Polish music.

French Program—The Shirley group of French origin sponsored this next program. The film portion of the program was to be made up of a set of films from the Boston "French Press Information" group, and was to include the film *The Liberation of Paris*, but the films arrived too late. An emergency set of shorts was substituted. This is a contingency which any sponsor of a film program must be prepared to meet at any time. A very interesting portion of the program was the leading of the group in French singing by a young man of French background. This was thoroughly enjoyed by the group. Some attempt was made at dancing French quadrilles.

United States Program—The next program centered about the United States, and was based on the theme "America, the Land." The local Grange was the sponsor of this program, and the local Master of the Grange conducted the program.

This group brought a new idea. Before the films got under way, they had arranged for a complete entertainment program with talent recruited from local

Two of the exhibits on the United Nations in the USO club in Shirley.

communities. They opened with the national anthem, followed it with Western singing, readings, and humorous recitations. During the film program, while the reels were being rewound or changed, they conducted group singing of American songs.

The film program consisted of a cartoon, *Barnyard* film, *The Battle of Britain*. The Board of Selectmen *Whoopee*, a Department of Agriculture technicolor short, *Farm Garden*, and the feature, which was that outstanding American documentary, *The River*. A local citizen sent the Club a copy of the text of the poetry of the film a week before the program, so that people could become familiar with it. Following the film program, sandwiches and coffee were served, after which the group rounded out the evening with community singing.

The sponsorship of the three remaining programs of the series was undertaken by the town of Shirley itself, as it was felt that there were no local groups of Russian, Chinese or British origin to sponsor such programs.

Russian Program—The Russian program was sponsored by the Shirley Recreation Committee. The evening was opened with the playing of recordings of Soviet songs. The film program consisted of a short film, *Soviet School Child*, put out by the British Information Ministry, and the second part of the War Department's *Battle of Russia*. Since there was no specifically Russian entertainment available, the Chairman of the Board of Selectmen hit upon the idea of serving some refreshments that would be appropriate. So real Russian flavor was added to the evening when the group gathered downstairs to partake of Borscht. This concoction made a big hit, and second and third helpings were called for.

Chinese Program—The Shirley Board of Education sponsored the Chinese program, starting the evening with the playing of recordings of Chinese songs. The two films, *Inside Fighting China* and *China Strikes Back*, were shown. By the time the films were over, steaming chow mein, served in Chinese style, was waiting for the group.

British Program—The last program in the series was sponsored by the Board of Selectmen of the Town of Shirley, and was concerned with Great Britain. The USO Film Committee Chairman wound up his chairmanship of the series and introduced the Chairman of the Board of Selectmen. This latter gentleman said a few words in appreciation of the series and tied up the significance of the programs with what was happening in world affairs.

The film portion of the program consisted of a cartoon, a short called *Village School*, put out by the British Information Ministry, and the War Department film, *The Battle of Britain*. The Board of Selectmen brought the program to a dramatic conclusion by serving, in English style, plum pudding soaked in brandy and lit to burn with a blue flame.

Unsolicited requests were made for a similar series of film programs to be conducted in the future. These requests were backed up by a formal vote of approval by the audience.

The Application of Military Audio-Visual Techniques To Civilian Teaching

(Continued from page 235)

now would assure a momentous start in the direction of complete and effective usage. Thousands of professional teachers are in the process of returning to their jobs enriched in the training and experience of using effectively audio-visual materials in Army or Navy training programs. They are in the habit of teaching with these materials and will form an appreciable nucleus of professional teachers who will assure a successful beginning in both planning and utilization, the sure road to maximum educational achievement.

With the Obstacles Overcome

Civilian education can profit immeasurably from this technique once proper audio-visual materials are made available and can be correctly utilized on a sufficiently extensive scale. The mental processes of learning are the same in peacetime as they are in wartime. Teaching techniques found to be successful in the armed forces will be at least equally successful in civilian education. Civilian students have more choice of subjects and may anticipate permanent use of the knowledge and skills they learn, while soldiers and sailors were, by necessity, frequently required to pursue subjects in which they had little or no natural interest and in which they saw no permanent value. The idea that men in the armed forces learned new subjects rapidly because they were commanded to do so or were under pressure does not hold. The normal human elements of weakness and difficulty were present even more than in civilian education, for added to these were the elements of excitement, dislocation, and mental confusion associated with a nation at war. Since audio-visual techniques were overwhelmingly successful in motivating, simplifying, standardizing, and speeding up learning even under these adverse conditions, can their extensive utilization under the more favorable circumstances of civilian life be anything but more profitable? Civilian education can have this benefit immediately; it is merely a matter of adopting and practicing this proven technique immediately.

(TO BE CONCLUDED IN JUNE)

It is our feeling that these programs accomplished a number of fine things. They drew the soldier and the community together on a rich cultural basis. They drew the various nationality groups in the community together. They contributed definitely to better understanding of world affairs and our community's relationship to them. All of the programs were well attended, bringing into the work many new volunteers. Many people who came said they never had been in the building before. New sources for volunteer help for future community activities of various sorts were made available. It is only reasonable to expect that films will continue to play an important part in these activities and will continue to provide a focus for community solidarity and worth-while projects in future community life.

The ABC's of Audio-Visual Equipment

Projector Parade II

Edited by
ROBERT E. SCHREIBER

READER enthusiasm for the first "Projector Parade" appearing in the March issue has indicated the desirability of following a similar presentation this month, dealing with standard and miniature slide, film strip, and opaque projection equipment. Although the listing is rather extensive, the equipment illustrated

does not necessarily indicate the complete line of any one manufacturer. Prospective purchasers may secure more detailed information direct from the manufacturers or distributors whose helpful cooperation has made the following account possible.

35 mm SLIDE FILM AND MINIATURE SLIDE PROJECTORS

A. American Optical De-lineascope MK

C. Bausch & Lomb 2x2 Slide Projector

D. Bell & Howell Filmo SlideMaster

E. Eastman Kodaslide 2A

F. GoldE Nu-Manumatic

G. GoldE Filmatic

I. SVE Model AK

H. SVE Picturol F

J. SVE Tri-Purpose AAA

We Believe **TEACH-O-DISCS** are Remarkable Achievements *Of Great Significance*

TEACH-O-DISCS for use in elementary, junior and senior high schools are one of the most exciting and rewarding developments in the important field of Audio-Visual Education! These professionally re-enacted scenes from the immortal works of the masters of literature create an amazing student response.

They greatly stimulate interest in English Literature and U. S. History and are responsible for vastly improved reading and speaking habits. English, Speech Training and Public Speaking classes and courses in Dramatics and Radio Technique will also find great value in their use.

TEACH-O-DISCS bring you a carefully selected library of the great classics of English Literature by Dickens, Shakespeare, Tennyson, Scott, Browning, Goldsmith, Longfellow and others; as well as dramatizations of momentous events in American History, written by Marquis James, the noted Pulitzer Prize winner.

The subjects have been selected from the syllabi of the various states, with the advice and assistance of teachers and school administrators, who also helped to choose the scenes and passages that should be dramatized from the longer works. These discs complement the books used in the course; they are not a substitute.

TEACH-O-DISCS are 12-inch, double-faced records of 78 r.p.m. prepared especially as a teaching medium for school use. They may be played on any standard phonograph.

Made of Vinylite

Yesterday—Vinylite made military planes tougher.

Today—Vinylite makes TEACH-O-DISCS practically unbreakable under normal usage. Vinylite is the amazing new plastic that weathered all kinds of wartime abuse in V-discs. These non-breakable records were produced during the war for the Office of War Information. Vinylite is a new plastic, which, in addition to its toughness, has these advantages in TEACH-O-DISCS: (1) Has far superior tonal quality to old type record; (2) Provides longer playing time per Disc; (3) Provides for safer handling on part of children and for transportation carriers; (4) Does not easily warp.

Guarantee

If, after making actual classroom tests with the TEACH-O-DISCS for seven school days, you are not fully convinced that they arouse interest, illuminate and interpret what is read, and stimulate good reading and speaking habits—then simply return the TEACH-O-DISCS and we will promptly refund your money.

Introductory Offer—Limited Time Only!

Readers of this magazine are especially privileged to be offered One FREE TEACH-O-DISC with each ten purchased at the School Price of \$2.50 each! You may select from the complete list whichever one you desire for your FREE record. This offer will expire September 30, 1946. Orders for quantities less than ten will be accepted at the regular School Price of \$2.50 each.

Popular Science presents 74 New TEACH-O-DISCS (134 Titles) in Vinylite!

New titles are constantly being added to the English Literature and American History Series. In addition, other series will be added in the future, dealing with such subjects as Geography, Chemistry, Foreign Languages, etc. Teaching Guides accompanying these recordings will suggest their use in the classroom.

The Rembrandt Portable Electric Phonograph

The Rembrandt Phonograph is designed especially for school use. It has independent tone and volume controls, 5" speaker, 3-tube amplifier, built-in compartment to hold 12 records; operates on alternating current only. Available for immediate delivery at \$48.90, f.o.b., N. Y. (incl. Fed. taxes).

TEACH-O-FILMSTRIPS To Be Audio-Visual Education

Schools

THE TEACH-O-FILMSTRIP is a visual-aid and teaching tool having the following advantages: (a) It presents a carefully organized pictorial story along a planned continuity; (b) It is a "still" story, the use and presentation of which is controlled by the teacher, thus providing great flexibility; (c) It is excellent for detailed study and observation by pupils. Each frame can be held upon the screen during as long a period as necessary to permit pupils to absorb and understand subject presented; (d) It has such practical advantages as ease in handling, easy storage, low cost and readiness for use.

The TEACH-O-FILMSTRIP complements the textbook and should be used in connection with textual materials. Each TEACH-O-FILMSTRIP is organized as a self-contained teaching unit and includes the basic elements of good teaching lessons. The principles of motivation, concept teaching, summarization and provocative questioning are employed. By combining words with meaningful pictures, they provide direct word-picture associations so essential in teaching children.

TEACH-O-FILMSTRIPS are accompanied by teacher's guides which outline in detail their use as integrated classroom aids.

Now Available. FOUR TEACH-O-FILMSTRIPS, 35mm., and in color are now available. They are designed specifically for use in primary classes in reading, story telling, social studies and nature study.

1. HEIDI describes two adventures of Heidi and her friend Peter. In the first adventure they spend a lovely summer day together; in the second they visit Peter's grandmother during a winter day. 44 Frames. Price: \$5.00

2. FUN WITH MITZIE depicts the story of Mitzie, a black and white kitten. It shows how a neighbor gives Betty Smith, a little girl of seven, a kitten called "Mitzie." Betty takes the kitten home and gives her good care. Three months later, we see Mitzie as a full-grown cat and Betty playing with her, feeding her and loving her. 41 Frames. Price: \$5.00.

3. THE LOST DOG depicts the story of Tommy and his dog "Inky." It shows Tommy losing Inky one day. Jimmy, a small boy of five, and his mother find the dog and take him home. At this point the TEACH-O-FILMSTRIP shows the proper care of dogs. On the following day, Tommy finds where Inky is and goes to get him. The TEACH-O-FILMSTRIP ends with the provocative problem, "What will Inky do?—Will he stay with Jimmy or will he go back to Tommy?" 40 Frames. Price: \$5.00.

4. LET'S MAKE A POST OFFICE shows how our postal system works, illustrates the need for stamps, the role of the postman, where and how different types of mail pieces may be mailed, and the purpose of mail trucks. It suggests student activities, and it develops cooperation by showing several children working together to make their own post office. 38 Frames. Price: \$5.00.

EIGHT TEACH-O-FILMSTRIPS in black and white, 35mm., form a series designed primarily for use in social studies classes in the middle grades (4, 5, 6). This series is entitled Living Together In The United States.

5. THE WORKERS IN OUR COUNTRY.

Depicts the variety of workers in the United States, all working together to provide the goods and services that we need. Approximately 45 frames—Black and White—Price \$2.50.

The Story of Our Food

6. Part I—WHERE OUR FOOD COMES FROM

Explains the reasons why the United States produces much food, and shows the sections of the country from which various foods come. Approximately 45 frames—Black and White—Price \$2.50.

7. Part II—HOW OUR FOOD IS PRODUCED

Shows the many people who work together to provide our food; the people who grow our food; the people who process our food; the people who bring us our food; and the people who sell us our food. Approximately 45 frames—Black and White—Price \$2.50.

8. HOW WE ARE CLOTHED

Illustrates how cotton, woolen and rayon clothes are made, and shows the workers who produce these clothes. Approximately 45 frames—Black and White—Price \$2.50.

9. OUR HOMES AND OUR COMMUNITIES

Points out and illustrates the various types of homes and communities in the United States, explains the reasons why there are so many, and shows examples of each. Approximately 45 frames—Black and White—Price \$2.50

10. COMMUNICATING WITH OUR NEIGHBORS

Depicts the many ways we have of communicating with our friends, by telephone, telegraph, mail, newspaper, radio and television. Approximately 45 frames—Black and White—Price \$2.50.

11. TRANSPORTATION IN OUR COUNTRY

Shows the varied ways we have of traveling in our country, by automobile, bus, boat, railroad and airplane. Approximately 45 frames—Black and White—Price \$2.50.

12. OPPORTUNITIES FOR PLAY AND RECREATION IN OUR COUNTRY

Points out and illustrates that our homes, schools and communities offer opportunities for play and recreation. Approximately 45 frames—Black and White—Price \$2.50

Tri-Purpose Projector

For single- or double-frame 35mm. filmstrips and 2" x 2" slides. Excellent for schools, colleges and large audiences. Complete with 5" focal-length Anastigmat lens, rewind take-up, semi-automatic vertical slide changer, leatherette carrying case. Available for immediate delivery at \$76.75 f.o.b., N. Y.

The Curriculum Clinic

The Detroit Meeting on Sponsored Films

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

EVEN more significant than the suggested policy statement prepared by the group of educators who met in Detroit last month, is the fact that twenty-three people seriously concerned with the use of audio-visual materials in the classroom met for the sole purpose of considering the problems related to the use of sponsored teaching materials.

The following explanatory statement was prepared by Arthur Stenius of the Detroit Public Schools whose initiative made the meeting possible, and whose able chairmanship made the meeting so profitable for all who participated.

In Explanation

School use of sponsored instructional materials creates significant problems, yet group thought and expression on the matter has been very limited. To achieve some unity of opinion and action on these problems as they relate to audio-visual materials, numerous leaders in the field were invited to Detroit in conjunction with the Michigan Audio-Visual Conference held April 4-6. Of those invited, the following twenty-three were in attendance:

Howard Allen, West Virginia University
Gerald Bench, Chicago, Illinois
Floyde Brooker, United States Office of Education
Lester Doerr, Grand Rapids, Michigan
Mark Flanders, Waterloo, Iowa
Leslie Frye, Cleveland, Ohio
William Hart, Dearborn, Michigan
Rita Hochheimer, New York, New York
Carl Horn, Michigan State Dept. of Public Instruction
Ford Lemler, University of Michigan
Doris Lynn, Indianapolis, Indiana
Harley Lyons, Cincinnati, Ohio
Lillian McNulty, Louisville, Kentucky
M. Lincoln Miller, Akron, Ohio
Marvin Perkins, South Bend, Indiana
Paul Reed, Rochester, New York
Merlin Richard, South Bend, Indiana
Roy Robinson, Highland Park, Michigan
Carolyn L. Schoeffler, University of Kentucky
L. Merle Smuck, Baltimore, Maryland
Arthur Stenius, Detroit, Michigan
C. H. Tabler, Massillon, Ohio
Cyril Woolcock, Royal Oak, Michigan

Although those present represented direction of school audio-visual programs in areas having a total population of approximately seventeen million people, all realized that leadership in the field was only represented in part. It was not the thought of the group that their deliberations and discussions should carry finality. In order to gain benefits from the reactions of others, the statement issued by the group is to be sent to selected individuals and organizations throughout the country, as well as to any others who may request it, for their comments.

The group spent the better part of three days in working toward the statements hereafter given. Only the first session on April 4 was open to the press and to representatives of industrial sponsors and film producers. At this session, three distinct views were formally presented by the following individuals: Dr. S. A. Curtis, Professor Emeritus of Education, University of Michigan; Dennis Williams, Field Supervisor, Encyclopaedia Britannica Films, Inc.; and Allen Orth, Director of Educational Service, Department of Public Relations, General Motors Corporation. General discussion followed these presentations.

In releasing the results of their deliberations, the group expressed the hope that their action might have two results:

1. That the statement would serve to focus attention on the significance of problems springing from school use of sponsored instructional materials.
2. That the statement would act as a basis for more comprehensive and detailed study of these problems.

Just as the members of the group evaluated carefully each proposal placed before them, just so they expect others to evaluate the statements which follow. The result of wider examination, challenge, and criticism may be a re-emphasis of what is here stated or the development of a different pattern of suggested action. Growth will be indicated by either course, and those who joined to suggest the following policy will be completely satisfied. The group held no higher aim than that of providing a basis for further consideration.

Suggested Policy

Public schools should serve the interest of all the people. Therefore, instructional materials used should be free of the influence of special interests.

Audio-visual materials, particularly films, subsidized by special interest groups, are being offered to the schools in increasing quantities. Some of these materials do have significant instructional values and do offer experiences not otherwise available. The use of the best of these, however, involves furthering the sponsor's interest in some degree.

Schools cannot develop adequate audio-visual programs based solely on sponsored materials. Indeed, too great an acceptance of sponsored films will retard the development of non-sponsored educational film enterprise.

The use of a sponsored film can be justified only in terms of bringing to the learner a valuable experience that would otherwise be denied to him. Constant care must be exercised in weighing the educational value of a film against the furthering of the sponsor's special interest.

The final determination of whether or not sponsored

audio-visual materials shall be used and the conditions under which they shall be used is a matter for local decision. Each school system has a responsibility for developing its own criteria and policy with regard to such materials.

Considerations for determining educational value of sponsored audio-visual materials:

1. To what degree do the objectives of the material harmonize with the educational objectives of the school?
2. Is the material:
 - a. Accurate and authentic in fact?
 - b. Representative in its selection of fact?
 - c. Truthful and sincere in treatment?
3. Does the material present general understanding, facts, processes or methods, or does it present a particular point of view or promote a specific brand?
4. To what extent is the material sound in terms of educational philosophy?
5. To what extent is the material significant in the sense that it promotes an educational program better than any other material generally available at the time?
6. Is the material adapted to the needs, interests, and the maturity level of the students who will use it?
7. To what extent is the sponsor's relationship to the materials clearly known and acceptably stated?

Suggested scale for rating audio-visual materials with respect to the emphasis on the sponsor's special interest:

1. Materials dealing with a general field of accepted educational value, without reference to any specific make or product, with a single statement of sponsorship.
2. Materials where the sponsor's interest is shown as an integral part of the material, without emphasis on a specific brand or trade name.
3. Materials dealing with a product exclusive to one company, but without reference to a trade name or slogans.
4. Materials making direct reference, either pictorial or in text, to a specific product.
5. Materials making repeated reference to a specific product, to a point where the product is the focal point of the material.
6. Materials employing distortion of facts.
7. Materials with purposeful misdirection of conclusions.

A realistic view must recognize that sponsors will continue to produce instructional materials for school use. To those sponsors who wish to be of most assistance to the schools, the suggestions presented here to show gradations in benefits and detriments which sponsored materials hold, should be of value.

Finally, it should be recognized that a desirable form of cooperation between sponsors and education would consist of making financial contributions to established or new foundations or to educational institutions for research and development in the field of audio-visual materials.

Who Should Pay for Instructional Materials?

DENNIS R. WILLIAMS
Encyclopaedia Britannica Films

UP to the present time, the school pattern of acceptance for educational materials has followed closely the basic philosophy of compulsory education in our democratic society of freedom-loving people. Truth without any trace of prejudice or bias for special interest or group has always been the first requirement for a course of study, instructional materials, or the instructors. If any of these failed to meet this requirement, they have been discouraged from entering the door to American classrooms—where impressionable young minds and bodies were growing into citizens of tomorrow with power to vote. Those who founded and have maintained our public school system even said "no" to such groups with as noble and unselfish motives as the churches when they offered to sponsor the educational system in a democracy. Those who founded and developed the democratic system of government and the plan for universal education of our citizens decreed that our educational system should be supported by taxing the rich, the poor, the capitalist and the laborer, in order that all could participate and pay alike based on their ability to pay. Taxes would build our schoolhouses, pay and train our teachers, and pay for educational materials planned and constructed in every detail to meet only the needs of those who teach and those who learn.

I will admit that, at times, little enough has been provided for a task so important, but as we seek better buildings, better instructional materials and better paid teachers, let us not forget the objectives and purposes of universal education.

Far be it from me, you, or any American to question the freedom of the screen or question the right or ability of those making our *material* goods to use the dynamic media of the motion picture to advertise its products, train its workers, or carry its personal message to its potential buyers. But, if we are considering at this time asking and encouraging our great industries and special interests to prepare our classroom films, textbooks, and other teaching materials, sponsor our teachers and determine our curricula, then we'd better re-examine the purposes and objectives of our schools and what constitutes teaching as a profession.

One of our large associations of educators has recently joined hands with a better business organization in sending out a letter to the industries of America asking them to donate \$100,000 to do some research and determine what kind of films the schools need. If educators approve this method of raising funds to carry on professional educational activities of research and evaluation of educational materials, then we no longer need to maintain our great universities and foundations with their research departments, constantly searching for new truths and techniques to improve our educational system. If this method of raising funds to improve the educational materials to be used by our teachers is approved, then we might use a similar solution in dealing with a still greater problem now seriously affecting the efficiency of our whole educational system.

In the state from which I come, our greatest problem is not better materials of instruction but better instructors. Teachers with Master's degrees are offered only \$75.00 per month—consequently many capable, well-qualified members of the profession have left the schools where they are needed so badly, because our people have not as yet provided adequate funds to pay teachers. It might be well then to adopt the formula as outlined by the educational association for getting better instructional materials. It might be well to ask many industries to donate \$1,000 each in order to make a study of the type and kind of teachers we need in the schools of the South. When this survey has been completed we could ask them to send us a \$5,000 teacher, paid for and sponsored by the industry as a part of their public spirited public relations

program. If we were to follow such a course, you could soon pass up and down the corridors of American school buildings and hear this announcement coming from the classrooms—"now we will leave the American Revolution for a few moments while I read a message from my sponsor." If we are to seek sponsors to pay for our films, our textbooks and other instructional materials, it is as logical to use this same formula in solving the problem of better teachers and better *paid* teachers. If the American people and the public spirited industries are unwilling to pay the cost of education through adequate taxes, then it may be necessary to operate the school as a self-supporting pay as you go advertising agency. We will have to ask one of our soft drink companies to make or purchase our teaching films, and to pay them back for the money expended, we will at the end of the film, in a darkened classroom where all attention is centered on the screen, use a trailer and ask the children to go immediately to the cafeteria for the "pause that refreshes" in order to give proper and justified returns to our benefactor.

Many of our blackboards are not very good and the public has neglected to pay for their replacement, so using the advertising agency formula we go to the local undertaker and ask him to purchase blackboards for our schools. To remunerate him for this gift, we should place a large sign over the blackboard reminding the children whom to call in case the grim reaper should visit their home.

In some recent meetings I have heard a few educators explain their use of advertising materials in the classroom by saying that magazines, the radio, and other of our communication media have advertising in them. This is true, but there is certainly a great difference as to how we use these media and the nature of their contents and effects. The part that is advertising and the part that is pure unbiased news are definitely separated. This is not true of most sponsored films, and it is absolutely impossible for adults—let alone children in the classroom—to differentiate between the part of the film which is advertising and that which is not.

Another viewpoint often expressed of sponsored films is this: "I simply say to the boys and girls in the classroom, 'Today we are going to see a film and in it there is a lot of advertising but don't pay any attention to that—you just look at this.'" This is like me taking my boy down to a saloon every Sunday afternoon and telling him not to pay attention to the undesirable things, but to look over at the nice gentleman sitting in the far corner.

If you depend upon the industries of our country to supply you with sponsored instructional materials, let me call your attention to some other implications and problems with which you will be faced. Recently there have been produced five films on the "Care of a Tractor" by various manufacturers. All of them have teaching values. In your community you have local citizens who are taxpayers of your school representing these five tractor agencies. How will you decide which film to use in your school? You could not run one without being unfair to the four other dealers and patrons. If you run all five, you will be running the "care of the tractor" films for five consecutive days—not because the students don't know how to care for a tractor but because you are trying to be fair to the business men of your community. But after you have run all five films, you still have been unfair to the small blacksmith on the same street as your school who makes ploughs with his own hands for the farmers of your community but his operation is so small that he cannot afford to sponsor any films. Can you afford to disregard his interests just because he is unable to sponsor some educational films for your use and your promotion of his interest?

Due to the great impetus given the use of films by the Armed Services, many prophets have arisen. One group supposedly organized for the purpose of making pure unbiased films for your schools, recently wrote a letter to industry asking them not to overlook the thirty-three million school children and one million teachers in American schools as a potential market for their products. They

state, "We will show you how to get into the classroom and advertise your products by going the curricula way and for our "know-how" we must charge you so much a head for the children seeing your films." This plan is no different from the announced educational association plan except one wants to collect the money in advance in order to show industry the way to advertise their products in the schools successfully.

Still another prophet has arisen in the eastern part of our country and cried out through the press another magic formula for providing classroom films and other instructional materials to American schools at a lower cost. This is the formula: When they hear that one of our companies wants to make a film on "clocks" or "watches", to advertise their products to the buyers of this country they cry out, "Wait a minute, wait a minute—don't produce this film yet, but let us go out to the schools of America in order to determine what kind of films they want on study of 'time.'" They find high school physics classes want to study the clock as a simple machine, and the college people want a film on the astronomical basis for time. So they then go back to the clock company to tell them what kind of films the schools of America need. The film company is engaged to produce these films for the school. At the beginning or ending of the film they will give credit or advertise the name of the manufacturer in order to compensate him for this production. The schools, then, in turn can buy the film for only the printing cost, and the manufacturer absorbs the cost of production by charging it off to the advertising benefits received.

Here is still another formula. Advertising agencies and other special groups in our country are recommending that our great industries cease preparing films which legitimately advertise their products and now turn to the production of unbiased, unprejudiced and authentic *truth* films based upon the objectives of the curriculum. When films of this type have been produced then the schools will repay the sponsors by permitting them to run an ad at the end or beginning of the film. What you must now decide is whether the schools can afford to pay for the kind and type of instructional materials they need by thus acting as an advertising agency.

Some have said, "Why should we object to an industrial concern placing its name on the end of a classroom film any more than we do to McGraw-Hill or Encyclopaedia Britannica putting their name on a textbook or at the end of a film? If you will think this matter through thoroughly, you will easily see that there is a great deal of difference. McGraw-Hill and Encyclopaedia Britannica Films are in the "truth" business. They search for outstanding educational authorities, pay them to produce authentic unbiased classroom films and textbooks that will be accepted and useful in their curriculum. These companies have no other interest, and their product is measured by how well it presents the truth. This is a lot different from a company primarily interested in selling toothpaste who produces films or books to make its major products and its name known.

I realize that in supplying our instructional materials in the past, we have had to produce and procure them the hard way. Textbook publishers, map makers, and producers of unbiased, unprejudiced classroom teaching films made to fit the curriculum of American schools have had a rough road to travel along with the schools. The producers of these materials have had to study carefully the curriculum and the teaching problems of the instructor in order to develop films and other materials that will be accepted and paid for by the schools when they meet the teaching needs. This is in accordance with the free enterprise system on which American business has been built.

Now one of our national educational associations has made this statement: "We carefully want our industries to be public spirited and assist with the concerted national effort to enlighten our people, educate our children and raise our standard of living." As educators, however, proud of your profession, I would think that the way you would want industry to contribute to this great ideal is to

Scene from Coronet film, "How Man Made Day"

SOUND FILMS

bring the whole world to your classroom

GEOGRAPHY, history, social studies, art and a host of other subjects, on sound film, truly bring the world to your classroom. Properly presented, these new tools for teaching help stimulate interest and student activity, both in and beyond the classroom.

The new RCA Sound Film Projector enables you to get the most from these valuable teaching aids. The silvered pyrex reflector, large condenser lens and $f/1.6$ "coated" projector lens provide brilliant illumination over the entire screen and unequalled contrast and clarity. The

powerful four-stage amplifier and precision engineered mechanical filter provide sound reproduction with all the fidelity of the original.

Simple to operate, easy to maintain, the new RCA Projector is ideally suited for school use—backed by an organization responsible for development of the finest in professional recording and reproduction apparatus.

• • •

For detailed information on the new RCA 16mm Sound Film Projector write Educational Department 27-E, Radio Corporation of America, RCA Victor Division, Camden, N. J.

put up less resistance when tax programs for education are advocated, to set up foundations for American colleges and universities, and to leave it to unbiased professional educators to evaluate the needs and interpret what and how our youths shall be taught for the equal good of the rich, the poor, the farmer, the clergymen, the laborers, and other components of our democracy and free educational system.

Do not think for one moment that I have intended in any way to criticize our great American industries or belittle their efforts in manufacturing the greatest products in the world or in developing the greatest mass production and sales promotion techniques. We are as proud of our industries and their efforts as we are our system of public education. If we can keep the *purpose* and the *relations* of these two great American institutions well defined, I have no doubts about the future of our democratic way of life and of the contribution America can make to the building of a better world.

With the ever increasing use of films in the classroom, it will only be through eternal vigilance and carefully considered decisions that we can hope to safeguard our schools against misguided forces which can in the end undermine and uproot the truth. Twenty years ago by courage and belief in the basic philosophy behind the purposes of our free educational system, educators stood up and protected their textbooks and other materials from pressure groups and special interests that tried to control their content. Personally I am confident that as soon as you review your own broad experiences in the use of this new medium of communication, the motion picture, that you will demand the same standards and sources that you have for your other teaching materials.

Why Sponsored Films?

LOUIS M. STARK, Manager, Westinghouse School Service

ALTHOUGH sponsored films enjoy increasing acceptance in the schools, many educators still view them with considerable suspicion. Feeling, perhaps, that nobody gives anything away for nothing and that industries which produce films are basically profit-making institutions, they look for sales motives and often imply that industries producing films for school use have even subversive purposes beyond name or product advertising.

The most commonly launched criticism of sponsored films is against "objectionable advertising". This comes about largely because some films which were produced by industry primarily for sales purposes have been offered to and accepted by the schools for want of better material. Now that industries are preparing films specifically for the schools, this objection is becoming more and more out-of-date, because we who are in industry know that sales advertising in school films defeats the real purpose of the films.

Speaking for Westinghouse alone and yet voicing, I am sure, at least some of the attitude of other industries which sponsor films for school use, I can state that our purpose in producing motion pictures and other teaching aids for students and teachers is *not* product sales. Plainly, few of the students who view our films will ever buy marine turbine drives, gas turbine locomotives, traction motors, water-wheel generators or any of the heavy industrial products Westinghouse manufactures. They may buy electric appliances someday, but dollar for dollar we would indeed be carrying on a weak sales campaign for these through films offered to the schools. Even if we tried to do this we could never measure the results of our effort. Our school activity would have no justification as a sales promotion venture.

Our purpose is not sales, nor is it anything subtle which we are trying to hide. Our purpose is to create good will towards Westinghouse and to identify the company as prominent in the fields in which it operates, and at the same time to show the important role our company and the entire electrical industry plays in the modern world. Our method of achieving this in the schools is to share our knowledge and experience and attitudes by presenting

them to the schools through the most authentic, authoritative, and educationally well-designed materials we can produce. Our School Service Department is staffed with people trained and experienced in teaching and constantly in touch with the activities of the company. Throughout the year they mix with educational supervisors and front-line teachers, sharing ideas and seeking advice and guidance. Materials prepared by the department are meant to meet the most rigorous standards there are, because anything short of the best removes us from our objective.

The profit we hope to gain, then, is good will. Good will may someday help sales; it may attract employees—and since Westinghouse employs 100,000 people this is an important consideration; it may help to perpetuate a congenial national atmosphere in which to conduct our business. The creation of good will is part and parcel with sound business policy and its dividends are so rich that it needs no further justification. At any rate, we *believe* the dividends are rich—for we would certainly be hard put to calculate the actual returns.

And the fine thing about this business of creating good will is that it benefits the wooed as well as the wooer. To achieve our purpose in the schools, we provide all sorts of up-to-date teaching aids—booklets, charts, transcriptions as well as motion pictures. We offer many scholarships—almost \$40,000 worth every year—not one of which has any strings attached to it regarding future employment with the company. These materials and activities go far to promote interest in and information about science, home and farm management, nutrition, industrial methods, and many other fields. The films we produce specifically for the schools, and the general interest films we produce—which also have a place in the schools—are part of this program. Through their use in the schools we hope to gain good will; in exchange for the opportunity they offer us to reach a young public, the schools receive expertly produced and well authenticated educational motion pictures which would be difficult and often impossible to obtain from any other source.

The question has been asked whether it is right for us, a manufacturing concern, to assume responsibility for furnishing motion pictures for school instruction, or for that matter, any materials. The same question might also be asked with reference to any source of instructional materials, whether it be a textbook publisher, a manufacturer of laboratory equipment, the United States Government, a magazine publisher, a radio network, or a commercial film producer. The fact that we hope to maintain a good name for ourselves through our efforts does not exempt us from joining the multitude who believe they have something worthwhile to offer the schools. Our answer to the question is much the same that all the others would give: that we have splendid resources right in our own back yard for producing first-rate educational materials. If our finished educational products for the schools do not prove this, we would expect the schools to reject them just as they would the finished material of any firm even if it is specifically and wholly devoted to producing instructional materials.

In the final analysis, the criteria applied to sponsored films will be their educational value. Schools will, I believe, find less and less to object to in the way of advertising, especially from large concerns, for that is a poor way to obtain good will. With the cooperation of school people, industrial film producers are advancing their techniques of presentation and adding polish to their methods of identification. Of course, when they portray a product, it will be their product if they manufacture it, but, like all film producers, they will show as well other products manufactured by other concerns. The films will express their point of view, just as any creation expresses the point of view of its creator, and this, too, must be judged in the light of whether or not the point of view is reasonable and good. But essentially they will attempt to produce high-quality educational films, because only in this way can they effectively do the job in the schools of creating good will.

Ready this Summer:

HOME COOKERY OF FISH

A new Encyclopaedia Britannica Classroom Film

Produced in Collaboration with

ROSE G. KERR
Division of Commercial Fisheries
U. S. Fish and Wildlife Service

WHAT THE FILM DOES: Shows three basic methods of cooking fish in the home: Boiling, broiling and baking. Fish used demonstrate the various ways in which fish are marketed: Fillets, steaks and whole fish. The fish selected represent types from three great fish-producing areas: The Atlantic, the Pacific and the Great Lakes. Methods for wider distribution over all parts of the United States, such as refrigerated transportation and quick freezing, are depicted. The boiling sequence shows how to keep a cod fillet from falling apart. In the broiling sequence the importance of basting a lean fish is discussed. The baking sequence shows how to prepare an entire meal with a single heat unit. Nutritional values and ways to enhance eye appeal are considered. Use of sauces and garnishes are included. Emphasis is laid upon a variety of materials and kitchen equipment to inform students of what is available and to stimulate classroom discussion.

SCOPE OF THE FILM'S USE: Designed for foods, nutrition and cooking classes, the film may be used on the level of junior high school, senior high school, college and adult education.

LENGTH: One reel; safety stock; 16mm, sound.

PRICE: \$50. Discount 10% to educational institutions. State and other taxes extra.

TERMS: Net 30 days. Transportation prepaid. This film can be obtained on the Lease-to-OWN Plan or the Cooperative Film Library Program. Write for details.

School Made Motion Pictures

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

Making a poster to exhibit samples of wheat and products.

At the Bakery.

The students' bake shop.

MR. GEORGE McINTIRE, director of Audio-Visual Aids of the Michigan City Schools, Michigan City, Indiana, believes that third grade isn't too early for children to get into the motion picture production business. That the entire project followed the pattern set by professional producers is just another indication that school is not merely a preparation for life, but rather a part of life itself.

The film *Learning by Doing* is worth emulating. A careful reading of the Synopsis as well as the Production Notes will suggest other areas of learning that film makers have not yet explored. Those wishing to make a more detailed study of the scenario as well as of the film, may avail themselves of the opportunity by applying directly to Mr. McIntire for a loan of both materials.

D. S.

Learning By Doing

A Teacher Training Film Produced by
Michigan City (Indiana) Public Schools

*Synopsis of the Film**. The children of the third grade decided to make a study of food as a part of their social studies work. The teacher outlined the possible avenues of interest.

A food studied most extensively was bread. The pupils surveyed books and magazines in the library obtaining information on the subject. Pictures were used when available, thus stimulating further interest. After the students had been given ample time to read extensively they prepared a list of interesting things to do. Pictures were then collected for the individual student note-books.

At this stage one of the pupils telephoned the local baker and made arrangements for a visit to the bakery. Details such as safety, time involved in making the trip, and what to look for at the bakery were carefully made out before the date set for the field trip. When the day arrived the baker was kept busy answering questions and putting on demonstrations. The children even had samples of the finished product!

The pupils returned from the bakery filled with enthusiasm and they were ready to share with their classmates the information gained on the trip. The material obtained proved to be stimulating for class discussion during the week.

While the children were working together they decided to build a bakery for their school room. Orange crates, nails, paint, cellophane, and colorful paper were either salvaged or purchased to make the structure attractive.

The fundamental processes in arithmetic were much used during this time. Occasionally books had to be referred to in figuring dimensions. When the place

*The synopsis of the film is condensed from the handbook prepared by Miss Alma Koza, teacher of the third grade room selected for this movie.

There Is No Substitute for Experience

A COMPREHENSIVE COURSE IN CONVERSATIONAL SPANISH

Contained in
32 Double-Face 12-Inch Records

This course was prepared and copyrighted by the LOS ANGELES SCHOOL BOARD, and is designed to give conversational knowledge of the Spanish language in the shortest possible time. Its highly successful use in the LOS ANGELES PUBLIC SCHOOLS has resulted in requests for it from schools in all parts of the country.

The student-participation feature of this course makes it of unique instructional value. This feature provides for actual class participation in the lessons as they are presented in the recordings. By means of this technique the student is effectively aided in acquiring correct pronunciation from the start.

PRICE only \$64.00 for Complete Course of 32 Records (64 Faces)

THIS COURSE IS OBTAINABLE THROUGH

of business was completed a name was chosen and various pupils brought in bread and cake as well as improvised bakery products for their store. At the same time other pupils were writing letters of thanks to the baker. They also wrote letters to the persons who provided transportation for them on the field trip.

The entire classroom was again brought into active service when the bakery products were arranged on the shelves and prices were exhibited. A few pupils were chosen as sales persons. The customers were very critical. They were aware of prices and made sure they received proper change. The shopping period was thoroughly enjoyed by all.

On another day the pupils reviewed cookie recipes and made a variety of cookies in the P. T. A. kitchen. However, these were not for sale in their bakery. Instead, they were prepared for an afternoon meeting to which they had invited their parents. At the meeting the children reviewed the story of bread in picture, song, and story. What fun! Then came the time for refreshments. Imagine punch and cookies for parents!

Production Notes. In producing the film, "Learning by Doing," we were filming a definite section of school life and not merely having students pose for another movie. The various scenes were photographed as the pupils were doing their regular work. They soon became accustomed to the lights, the camera, and the personnel. One of the unusual shots was made from directly overhead while students were busily engaged in clipping pictures from magazines for use in notebooks and large posters. The camera and lights were mounted on tall step ladders. The pupils were working around a large table. The results were excellent. We were fortunate in having a local photographer, The Bodine Studio, provide a good camera and auxiliary lighting material. They even provided an operator for the movie camera.

A well known make of camera equipped with a three lens turret head was used. Three large photofloods provided adequate lighting. The filming was spread over a period of six weeks. One half hour per day was considered enough to devote to shooting scenes. One hour was the absolute maximum. We were very critical in editing but fortunately there was negligible loss from cutting. The addition of a title and descriptive introduction completed the subject. We were able to reduce the film to 1,175 feet or approximately forty minutes projection time.

Utilization. The subject was designed for in-service training. It has been used extensively in this respect. Schools in Michigan, Indiana and Illinois have been on the booking list for this film. The film takes the teacher through an entire unit of purposeful activity in forty minutes. The subject has some value in selling the schools to the community. The script affords running comments for a narrator with a microphone. The unit contributes to the learning process in Reading, Writing, Arithmetic, and Citizenship. Many times we were in need of stills from the movie. We had to make them from the 16mm. print which is an unsatisfactory method. Hereafter, a good still camera will be provided at any time movie film is being used.

GEORGE MCINTIRE.

'A Reader Speaks:

SOMETIME ago I joined a couple of Correspondence Clubs with members in many countries of the world. There are 50 members from Holland, for example, but of course not all countries have that many. These two clubs have more than repaid me the cost of membership, which is only a dollar a year. Since joining, I have collected a legion of visual materials, for use in my geography and social studies classes, which are really professional enrichment for a wide-awake teacher. Now that the war is over, the memberships in these clubs should increase rapidly for it seems that teachers and people the world over at the present time are keenly interested in correspondence with American teachers.

Of course, it takes much time, effort and reciprocity to build up good collections, but over a period of years I have collected a multiplicity of materials to use in my classes. To mention a few: I have now over 4,000 colored view cards from 67 different countries of the world, many of which views are not found in textbooks and are very useful with our opaque projector; a teacher in India sent me samples of Indian grains, like *javari* from which the people of India make bread; a pen friend in the Gold Coast of Africa sent me an ostrich feather fan; large picture books in color from Ireland, India and so on; geography books, especially two fine atlases from Denmark and Holland; art drawings made by pupils, such as 50 bird pictures painted by boys and girls in Holland schools; coins, stamps, flags, photographs, calendars with native scenes and customs; plus an exchange of ideas and often valuable information through the medium of correspondence. (If anyone is interested in clubs of this kind the writer will gladly give further information.)

Portable Equipment or Portable Pupils

(Concluded from page 240)

schools in town for one hour each week. This amounts to an assembly program for them of films or other teaching aids that fit in with their work.

Like most teaching aids supervisors, I am given only part time for the job. I teach science about half of the day. I do not have a homeroom or study halls. The teaching aids room seems to run as well when I am in class or another school, as when I am in it. The teachers who use it are pleased and continually want more until I now find difficulty in scheduling everyone. Approximately eighty class groups came to the room during last October, for example, to use films, slides, transcriptions, radio broadcasts and filmstrips. Most of them used sound films. Some used more than one when they were there.

It seems to me that during these times of small enrollment many schools could provide a room to be used exclusively for teaching aids and give a teacher a small amount of time to get the program and room working. After that, I have no doubt that more schools will be better schools with a teaching aids program for all to use.

Support The World Campaign Against Starvation!

The magic moment of liberation has long since passed for the people of Europe, and left in its wake is the menace of starvation. Europe's hunger is our problem too, a threat as dangerous as the Nazi tyranny itself.

FOOD — SECRET OF THE PEACE — shows the conditions of extreme distress in the cities and rural districts, and tells what has happened to the normal sources of food for this area. Flooded farmlands, dead cattle, gasoline shortages, disrupted transportation, and drought in other lands have all contributed.

Hunger has led to violence, food riots, and thriving black markets which deprive most people of what little food there is. **FOOD — SECRET OF THE PEACE —** drives home the fact that only by helping to feed the nations of Europe can their liberation be fully won and our own peaceful future be secured.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Building Facilities for Visual Education**—D. F. Schutte, Red Wing, Minn.—*N. E. A. Journal*, 35:209 April, 1946.

Ten points to consider in planning school buildings are:

1. Each classroom should permit the use of visual aids.
2. Acoustical provision for best results would include the use of draperies for darkening, or of acoustical blocks in the ceiling. Room dimensions should bear a relationship of 2-3-4, or 2-3-5.
3. Seating arrangements should fit in with standard focal length of projector lenses, and projection distance to yield the best size image.
4. Use a beaded type screen if the viewing angle is less than 22°; a mattee type where angle is up to 45°.
5. Place an electrical outlet at the front and rear walls, with light switch near the projector outlet.
6. Ventilation by the unit ventilator is most satisfactory. Good ventilation is more important than total darkness.
7. Darkening by sliding drapes is most satisfactory.
8. Adequate storage space in the classroom for visual equipment.
9. Sufficient blackboard and bulletin-board space and museum display cases.
10. Rooms where students can use films as part of their study program, just as they now use the school library.

Further details in the original article.

- **Blueprint for Visual Education**—Donald J. MacDonald, Negaunee, Mich.—*Michigan Education Journal*, 23:379 March, 1946.

The findings of a survey made on the public schools of the Upper Peninsula of Michigan to determine what equipment was available, and the extent of teacher training in visual education.

Although about 85% of the schools owned a sound projector, and only 10 of about 60 schools had no films in school, there was not one person listed as director of visual education, and only ½ of 1% of the teachers had had some formal training in the use of visual aids.

The author recommends for in-service teacher training: formal extension courses; county institute workshops; and a state department of visual aids for Michigan.

- **16mm. Exchange Practices: Free Films**—B. A. Aughinbaugh—*Film and Radio Guide*—12:9 January, 1946.

Arguments against the use of "free" or sponsored films in schools by an administrator whose state bars such films from its service. The undesirable films include advertising films with direct or indirect advertising, and public relations films. Theaters long ago banned advertising films on the ground that their patrons paid their way to be amused and not to be "sold". Similarly, the school child has come to be educated, not to be "sold".

- **The Battle of "Free" Films**—J. D. Knight, San Diego, Calif.—and Mr. Aughinbaugh's Rebuttal—*Film and Radio Guide*, 12:7-8 April, 1946.

An exchange of views arising out of the article in the January issue of "Film and Radio Guide". Mr. Knight's opinion is that teachers should use well whatever materials they bring into the classroom, and that all points of view be honestly presented. "Free" films would, therefore, have a place in the school. Mr. Aughinbaugh's strong rebuttal maintains that even good free materials must be "paid for" in one way or another by the schools, and that we had best refuse to accept these gifts and thereby promote the regular commercial production and distribution of educational films.

The series of articles is recommended in their original form.

As a guidepost in deciding the merits, if any, of "free" films, the position taken at the Michigan Audio-Visual Conference on April 6, 1946 is recommended. (see p. 252)

(See also the editorial article by Stephen M. Corey (p. 12) which has already been reviewed here from the March issue of *School Review*.)

DOCUMENTARY FILMS

- **Apprentice to Films: I**—Joris Ivens—*Theatre Arts*, 30:179-86 March, 1946.

The first of two articles, both of which will be part of the author's autobiography, soon to be published by Harcourt, Brace and Co.

Joris Ivens in his personal recollections and experiences offers a veritable history of the documentary film movement. Producer of many classics, Ivens has achieved international recognition for his talent. Recently, he resigned as Film Commissioner for the Netherlands Indies because he did not follow his government's policy with respect to independence for Indonesia.

Joris Ivens was born to a family of photographers for three generations, in Holland. He studied and worked for four years in postwar Berlin and this period greatly influenced his outlook. It helped him to understand the social and economic forces which were taking root throughout Europe. Ivens' contacts with the European avant-garde film pioneers are especially interesting to those of us who have only seen these names in the history books. No digest can do justice to the style and content of the original, which, after all, is itself an abstract.

- **They Make Documentaries: Robert J. Flaherty**—Arthur Rosenheimer, Jr.—*Film News*, 7:1 April, 1946

An interesting account of the creative film career of one of the pioneers in the documentary film movement, Robert J. Flaherty, creator of "Nanook of the North", "Moana", "Elephant Boy" and others.

TRENDS

- **Address by John Grierson**—*New Movies*, 21:17 March, 1946.

This address was given at the New York City luncheon meeting of the newly-established Film Council of America, on February 13th.

The educational and documentary film have come to a stage where the power of the medium as a means of public information has come to be understood. It has done good work in reporting war; in promoting good relations during wartime between rural and industrial workers, between labor and management, and between fighting men and the people at home. Latterly it has been used to arouse interest in the world problems of food and economic rehabilitation. The use of the film in teaching techniques, has also made great progress. The Army and Navy and industry used films for training.

This progress in documentary film production has been supported by the newspapers, and recently by the film industry itself. At least the industry has shown itself to be aware of the duty which the medium owes in creating understanding of current problems.

In Great Britain, the work of the wartime Ministry of Information is to be carried on by a new central information service which will serve all departments of the government. It is hoped that a similar central agency for the total development of the documentary and educational use of films will be established in the U.S. The Canadian method of centralizing film production and distribution will

ENTERTAINMENT and EDUCATION

go hand-in-hand on the screen

Motion Pictures have become the world's greatest medium of expression! In the language of motion and action peoples of the world may come to better understanding of each other through the medium of the screen.

Universal Pictures company provides for education and entertainment both feature-length and short subject films, bringing to the screen the world's finest artists in fine plays and stories. Listed herewith are some attractions, either released or about to be, that you will want to watch for:—

ABBOTT & COSTELLO
the screen's top funny men
in

"THE GHOST STEPS OUT"

**MYRNA LOY and
DON AMECHE**

in

"SO GOES MY LOVE"
a story of Hiram Maxim, the
inventor.

"THE SEVENTH VEIL"
starring

**JAMES MASON and
ANN TODD**

one of the screen's most interesting adventures in psychiatry.

"CANYON PASSAGE"
from the Ernest Haycox
novel and Saturday Evening
Post serial.

IN TECHNICOLOR

"THE MAN IN GREY"
with
Margaret Lockwood, James
Mason, Phyllis Calvert,
Stewart Granger.

"NIGHT IN PARADISE"
A story concerning the days
of Aesop and Croesus of the
golden touch.

IN TECHNICOLOR

Also Excellent Short Subjects

The world comes alive before your eyes . . . as ace commentators point up each interesting scene in **VARIETY VIEWS** (single reels); and interesting inventions and unusual things done by persons 'in the news' in **PERSON-ODDITIES** (single reels)

NAME-BAND MUSICALS (2 reels each) present excellent music and accomplished artists.

TECHNICOLOR CARTUNES (1 reel each) entertain with good music and clean, sparkling comedy.

Watch for "Poet and Peasant", featuring music of 50-piece symphonic orchestra.

UNIVERSAL "world-events" NEWSREEL is issued twice weekly.

probably be followed by other European nations. But in the United States there is a gentle sense of being mixed up at the present moment. You have not yet arrived at clear definition of the relationship between private enterprise and public responsibility in the mass communications media; nor have you yet defined where the government's information needs and the interest of the film industry coincide. It appears to the outsider that with so much in the way of technical skill and brightness of ideas and trained personnel, so relatively little in the totality should emerge so far as the directive use of the film is concerned.

Some central organization of the documentary and education effort is now vitally necessary. I am thinking of a highly ordered federation of units comprising all the production, distribution and equipment interests involved in the wise and responsible development of our medium in the public interest.

What we need above all is a unified and orderly system of approach to our common problems . . . great measures of unity were developed elsewhere in a common spirit of endeavor and a common spirit of sacrifice . . . I think it possible that we can make all allowance for the differences of view which make for a vital society and still achieve that common organization amongst us which would make something nationally and internationally significant of the medium which we have in our hands.

FIELD TRIPS

- **What About Field Trips?**—Leona Weier, Gross Pointe, Mich.—*See and Hear*, 1:59 March, 1946.

Practical ideas on the preparation and conduct of a group of primary children on a field trip.

UTILIZATION

- **Applying Armed Forces' Visual Aids Experience**—Godfrey Elliott—*Social Education*, 10:167 April, 1946.

An address delivered before the National Council for the Social Studies in November, 1945.

The great progress made by the armed forces in the use of visual materials is not always applicable to schools. However, a major portion of the experiences in the armed forces' programs came because visual techniques had been conceived, developed and tested in the school field.

One of the first facts emerging from our wartime experiences is the conviction that the visual aid is not a *supplementary* aid, but a *complementary* aid. Each experience in the classroom reinforces and complements the other. Another fact is that the motion picture cannot replace the teacher in the classroom: that careful planning, use and follow-up by the wartime instructor was necessary if full value was to be realized from the film.

The armed forces program made significant progress in the development and testing of the ability of the film to develop and mold attitudes. This has great implications for the teachers of social studies.

In conclusion, as to the claim that the educational process can be shortened by film use, this does not apply in the school. But we can claim that, if given the proper visual teaching aids and the wisdom to use them properly, teachers can give to students a deeper and more meaningful experience during the school years.

- **How to Make Audio-Visual Aids "Click"**—Irving C. Boerlin, supervisor of audio-visual aids, Penn. State College—*School Executive*, 65:52 March, 1946.

A concise, snappy review of the factors underlying the better use of audio-visual aids: the attitude of the adminis-

trator, adequate budget, a trained director, better films and other aids adequate equipment, better distributing systems, and training of teachers.

BUSINESS EDUCATION

- **Audio-Visual Notes**—E. Dana Gibson, New Mexico Highlands University, Las Vegas, N.M.—*The News Letter*, monthly.

In addition to his pertinent information about new aids in the field of business education, the author includes a detailed study guide for use with a recommended aid, as, for example: an SVE filmstrip on "Mail," or "the Coast-to-Coast Flight," etc. The study outline includes content, pre-discussion questions, post-discussion questions, tests and other follow-up.

The News Letter carries, also, a monthly cartoon illustrating office practice—good and otherwise. These put over important attitudes in striking fashion.

RADIO

- **Three R's Over the Air**—Margaret Lawrence—*Parents Magazine*, 21:101 February, 1946.

The Australian Broadcasting Commission has started a nationwide program at 9:30 every morning called Kindergarten of the Air, a 20-minute broadcast under a trained teacher. The session includes songs, nursery rhymes, a story, followed by rhythms for skipping, walking, etc. Points about hygiene or behavior are brought in. There is always careful alternation of activity and rest. At the end, the program suggests things the children can do during the day.

On Sundays, there is a special session for parents to enable mothers to follow up the broadcaster's suggestions. Estimated "attendance" is 80,000 children.

PERIODICALS

- **Film Forum Review**—Institute of Adult Education, Teachers College, Columbia University, in cooperation with National Committee on Film Forums—Quarterly. \$1.00 year, vol. 1, no. 1 Spring, 1946.

The appearance of a new publication, specializing in the problems of film use in adult education, is a welcome event. Since 1942, the Joint Committee on Film Forums (now known as the National Committee on Film Forums), has been exploring the possibilities of films for discussion, especially in adult education. This journal will serve as a clearing house for the findings of the Committee in its work throughout the country, and will also enable those active in the field to exchange ideas and experiences.

The first issue contains fundamental information: the principles of conducting film forums, by Thomas R. Adam of the Institute of Adult Education's film forum project; an interesting description of the Chicago Film Workshop, sponsored by the Adult Education Council, written by L. Harry Strauss; an account of EFLA's work in adult education by Patricia Blair; and other valuable articles based on actual experience.

The magazine also contains a sample discussion guide, and the films and topics included in the Institute's experimental film forum series, "Our Attitudes for Peace."

- **Machinery for Foreign Relations**—*Building America*, 2 West 45th St., New York.

Best single source of information on the United States State Department and its influence on our foreign relations; and the United Nations Organization.

- **Film World**—Ver Halen Publications, Hollywood, Cal. April, 1946.

News items concerning the educational field include an article by Harry A. Norton of the University of Montana, describing the growth of that film library; a description of the program with 30 student operators at St. Louis Park, Minn. by Erwin C. Welke, and various conferences held at St. Louis, Mo.; in six sections of Colorado, in California and Idaho.

EFLA group pose after Wednesday luncheon session.

EFLA Detroit Meeting

THE Educational Film Library Association held its third annual meeting in Detroit April 23-26 in conjunction with the National Conference on Adult Education, in which four other national organizations participated. They were the American Association for Adult Education, the American Library Association, the National University Extension Association, and the Department of Adult Education of the N. E. A. The conference attracted a large attendance of top-flight people from all over the United States.

The EFLA program committee, under the chairmanship of James S. Kinder of the Pennsylvania College for Women, provided a varied fare of stimulating talks, vigorous panel discussions, and film screenings. Problems considered included problems of needed films, distribution, production, utilization, teacher training, administration, financing, and research.

In his speech opening EFLA's meeting Tuesday afternoon, I. C. Boerlin, president, reminded the group that it was just three years ago this month that the Association was formed under the able leadership of L. C. Larson of Indiana University. He credited the war training program with having given impetus to the growth of the organization and the field in general, but added that the accomplishment of the ultimate in the utilization of the educational film lies ahead. "Educational films are not for the classroom alone. New vistas are in sight, most of them in the avenues of informal instruction—worker education, film forums, library programs, informal study groups, etc."

The conference emphasis on the use of films as a mass medium of education provoked a discussion as to which type of distributing center was best qualified to administer the distribution and utilization of films. In this connection, L. C. Larson, leader of the panel on "The Functions of a Center of Audio-Visual Aids," said: "Educational film centers are immeasurably aided and reinforced in their capacity for effective service by the existence in their area of a well-managed commercial film library." Larson set his sights higher than many of his colleagues would endorse, but the scope of activities that he foresees should certainly encourage those who make a business of supplying this market.

He recommended that each center should have at least 5,000 prints representing 3,000 titles, representing a \$200,000 investment with a ten-year life. Another \$10,000 a year should be allowed for equipment, filmstrips, slides, etc., and \$25,000 a year for staff and administration. In all about a \$60,000 a year budget, with perhaps half to two-thirds coming back in fees, the rest covered by subsidy. To get necessary finances to secure proper materials, he said it was necessary to bring pressure on educational leaders, superintendents, state education departments, college president and other school administrators.

Mr. Ernest Tiemann, a member of Larson's panel, told of the library at Pueblo, Colorado, that serves fifty local groups and maintained that all income from distribution should be spent for more film, the administration costs to be covered from regular school funds. It was the opinion of Glenn Jones, Washington State College, that the greatest needs in audio-visual centers were not materials, but utilization and personnel. David Strom, University of Connecticut, forecast that one of the problems of film centers will be to keep up with the demand for films.

Following the panel and audience discussion of this topic, Luther H. Evans, Librarian of Congress, described the film program of the Library of Congress, with respect to the accession, cataloging and limited distribution of motion picture films, on the same basis henceforth as governs books and other graphics. Temporary storage space accommodates eighty million feet of film, but this is being vastly expanded by accessions from various war-born sources. It will be some months before actual services can be extended but it is the Library's intention to catalog adequately, provide access to reference copies, possibly loan out some materials, and facilitate commercial arrangements that will give access to government films and possibly other films on which rights have been cleared, on a purchase basis.

Gardner Hart, Director, Commission on Motion Pictures in Education, addressed the Conference group the first day on "Undeveloped Areas in School Films," and outlined the activities that are being carried on by the Commission. A research project has been instituted to determine what techniques are needed for different types of films: the how-to-do-it film, general in-

Some of the EFLA visitors to the Jam Handy plant, watching operations performed in the cutting room.

Speaking of Fundamentals...

From "How to Study"—William H. Brink, Ph.D., Professor of Education, Northwestern University, collaborator.

From "How to Use a Library"—Miss Alice Lehrer, Asst. Professor of Library Science, University of Illinois, Urbana, collaborator.

CORONET Instructional Films provide essential basic training

The illustrations at the left are from two new CORONET Instructional Films — *How to Study* and *How to Use a Library*. There are others equally important — *We Discover the Dictionary*, *Soccer for Girls*, *Springboard Techniques*, *Batting Fundamentals*, *Catching*, *How Man Made Day* and *The Nature of Color* are a few of the latest ones. Dozens have been announced previously and many others are in production.

Nearly all CORONET Instructional Films offer the added advantages of full natural color. Some are also available in black-and-white, and a few which do not require color are black-and-white only. All are offered at moderate cost and on terms to suit budget plans.

For complete information concerning CORONET Films now available and new ones as released, write to —

CORONET INSTRUCTIONAL FILMS
919 NORTH MICHIGAN AVE., CHICAGO II, ILL.

formation, attitude-developing, and provocative film.

A highlight of the meeting was Julien Bryan's dynamic speech at the Wednesday luncheon at the Wardell-Sheraton Hotel, presided over by J. C. Wardlaw, University System of Georgia. Bryan urged that film producers be given more latitude by educators and not be confined to a definite script prepared by someone who does not have first-hand knowledge of the subject in production. Accenting the important role and need for documentary films to show a true picture of life in America, as well as in foreign countries, he lamented the limited use which schools had made to date of films on international understanding.

Wednesday afternoon was devoted to reports from the sectional groups which met the preceding day. Roy Wenger, Indiana University, summarized suggestions advanced by those in session on "Administering and Financing the School Film Library," which was led by Edward Rogel, Central Washington College of Education. Mrs. John Flory, EFLA Secretary, reported on "Community and Non-School Use of Films," pointing out that the use of films on the community level was brought out for the first time in a meeting of this type. Robert W. Wagner, Ohio State Department of Public Welfare, reviewed the discussion of "Educational Production of Films." In her report on "Utilization of Recordings and Transcriptions," Carolyn Guss of Indiana University enumerated the obstacles to the use of these materials: lack of equipment, service and directions on operation; lack of information on available aids of this type, and experiences related to their utilization.

At the Thursday luncheon, Mr. C. R. Reagan outlined the functions of the Film Council of America, of which he is president. The Film Council at a meeting of its governing council later in the afternoon gave its attention to the need for public action in support of the President's Famine Emergency Program. Mr. Reagan stated his belief that the U. S. Department of Agriculture's request for cooperation, presented by Mr. Chester W. Lindstrom at the noon meeting, would result in the establishment of a special national committee to help promote effective use of the two films selected for the 16mm. campaign—*Suffer Little Children*, produced for the government by Pathe, and *Freedom and Famine*, produced by the Canadian Film Board. (These films were projected at the end of the Wednesday afternoon meeting.) Mr. Reagan indicated that the same type of support would be rendered to this campaign as was given to the showing of the 16mm. War Bond films.

The Friday morning session opened with an address on "Intercultural Relations Through Films" by Thomas Baird, Director, Film Division, British Information Services. His statement that documentary films would be the main responsibility of government served as a springboard for group discussion as to who should produce documentary films. The new BIS film, *Man One Family*, was screened.

At the EFLA business Thursday morning, the office of Chairman-of-the-Board was changed to President, and the types of memberships revised. Among the important decisions announced and heartily approved was

(Concluded on page 271)

 Visual Education Workshop (3 qr.)

The increasing interest on the part of state departments of education, state universities and state educational associations in a better understanding of the availability and proper use of audio-visual teaching aids, is evidenced in figures released recently by W. C. DeVry, president, DeVry Corporation, Chicago. These figures reveal that during the current school year DeVry Educational Department staff members have appeared before a total of 11,000 educators, in 113 cities in 18 states.

At Memphis, Tenn., for instance, during the week of January 21st, 1,200 teachers attended visual aids conferences. As the result of conferences in Eastern Michigan, under the direction of Vern Stockman, director of audio-visual aids, Central Michigan College of Education, Mt. Pleasant, plans are being completed for a state-wide series of meetings during the fall term.

Other state visual aids meetings at which Mr. Crakes and Miss Barts of DeVry appeared, include a series of conferences in Mississippi, Utah, South Dakota, and Colorado, sponsored by the State Universities and Departments of Education.

Techniques of Using Films in Classroom Teaching

NORMA A. BARTS

Educational Dept., DeVry Corporation

MERELY showing a film in a classroom is not enough. Films will be ineffective unless the teacher in charge uses as much if not greater skill than she would use with other teaching devices. Here is a composite of widely accepted suggestions to help the classroom teacher use films in teaching situations.

General Suggestions:

1. Use films to supplement, not to substitute for the teacher.
2. Teach the material portrayed in the film; do not use the film for mere display or to pass the time.
3. Don't use a film to arouse interest, and then neglect the interest aroused.
4. Don't use films for saving time and thought and work. They won't.
5. Employ the film as your servant, not your master.
6. There is no one method for using a film. A film may be used at different times for entirely different purposes.
7. Maintain a normal classroom atmosphere. Dispel the idea that films are a "treat" or that you are putting on a "show." Employ quick and simple, unobtrusive procedures to prepare for showing the film.
8. Present the film to one class only with the regular classroom teacher in charge.

Choosing the Film

1. Contents of film must correlate with the subject matter being taught.
2. Film content must match the age and maturity levels of the students.
3. The younger the students, the less complex and the shorter should be the film. Limit the presentation to one reel.
4. Evaluate a film according to its effectiveness in a specific situation. Do not compare films. The question is not whether a film is good, but is it a good film for a particular purpose or a particular group?

Planning the Lesson

1. Preview the film, to know what it does and does not contain.
2. Determine your purpose in showing the film. Then plan the lesson as you would plan any other good lesson.
3. Don't include too many visual aids in one lesson plan.
4. Read any material that may accompany the film. It may be helpful.

Pre-Showing Preparation of the Class

1. Pupils must be prepared in advance for what they will see and why they are seeing it.
2. This can be done in any number of ways, including (a) group discussion, (b) questions and answers, (c) blackboard outlines or notations, (d) vocabulary enrichment exercises, (e) lecture, (f) reference to past experiences, (g) utilization of other teaching aids—books and visual materials.

3. Plan an introduction to the lesson that will challenge the students to THINK.

Post-Showing Activities

1. After projecting the film, lead the class back to a review and reconsideration of the film by (a) questions and answers, (b) discussion, (c) oral reports, (d) reading from reference materials, (e) use of blackboard, (f) written reviews, (g) notes or outlines, (h) dramatizations, (i) creative writing, or drawing or modeling, (j) use of other audio-visual aids.
2. Avoid aimless discussions or activities.
3. The film may well be shown a second time, to point out, explain, or emphasize particular parts.

Coordinating the Lesson with the Unit

1. Raise new problems, alter old ones or set new purposes by discussions. Let these discussions be teacher-dominated.
2. Evaluate the film in its relation to the whole learning situation. Encourage free and spontaneous student reactions. Use these reactions to plan the next lesson with a film even more effectively.
3. Guide, supervise and stimulate individual students to continue their study activities into any field of interest brought about by the film lesson.

EFLA Detroit Meeting

(Concluded from page 267)

EFLA's withdrawal from the buying and selling of films for and to their member libraries except in the case of worthwhile school-made films for which commercial demand is inadequate. It was also decided to expand the EFLA Film Evaluation Project, the features and functioning of which were described by Mrs. Flory, who asked for suggestions as to future form and procedure. Attention was called to the need to "evaluate the evaluators."

A series of pamphlets is another EFLA undertaking. The first of these, "Making Films Work for Your Community," is now off the press. It was compiled under the direction of Patricia O. Blair, Curator of Films, Cleveland Public Library. Two more publications planned are one on utilization of recordings and transcriptions, and a "Handbook on Films for International Relations," which will be published in the early fall under the joint sponsorship of EFLA and the Curriculum Service Bureau for International Studies, Inc. (Columbia University). Mrs. Esther L. Berg is chairman of the Committee working on this pamphlet, which will include dramatic, documentary and didactic films.

Congratulations are due Mr. Boerlin, Mrs. Flory, James Kinder, and others responsible for making this the liveliest and biggest of all EFLA conventions, and affording producers and educators the opportunity to exchange ideas. To quote Mr. Boerlin, "producers, distributors, teachers, and researchers feel that they are standing on the threshold of a tremendous development . . . to which they are all anxious to contribute."

Blower Cooled

... AND LIGHT WEIGHT, TOO

TRIPLE-PURPOSE

FILMATIC

Slide and Film Strip

PROJECTOR

3-WAY USE...

- For Single Frame Slidefilm
- For Double Frame Slidefilm
- For 2x2 (35mm) Kodachrome or Black and White Slides

- Motor-Driven Forced Air Cooled
- No Rewinding Necessary
- Anastigmat Projection Lens
- Easily Adjustable for Either Horizontal or Vertical Pictures

- Smooth, Sharp Focusing
- Instant Focusing
- Manumatic Slide Carrier
- Professional Efficiency
- Rugged—Stable—Portable

The GoldE Filmatic enables you to make the most effective use of *all three* types of still projection material. Can be changed from film to slide showing in a jiffy! Permits use of 300 as well as 200 or 100 watt lamp for more brilliant projection . . . yet safeguards precious slides or film against heat damage. Cooler handling. Complete with carrying case.

AIR-FLO STEREOPTON

LAMP CAPACITY UP TO 1000 WATTS

FEATURES

- Forced Air Cooled
- More Illumination Per Watt
- Precision Optical System
- Smooth Focusing
- Adjustable Bellows
- Easy-Tilt Adjustment
- Silent Slide Carrier
- All-Steel-Welded

Get brilliant screen images at longer projection distances. Blower cooling plus heat filter protects precious slides, lengthens life of lamp, insures cooler handling. Shows standard 3 1/4" x 4" stereopticon slides. Choice of projection lenses. 3 ground and polished condenser lenses furnished. Very sturdy and stable.

News and

Rocky Mountain Audio-Visual Institute

The first full-scale postwar Rocky Mountain Audio-Visual Institute will be held June 5-7 at the Pueblo Junior College, Pueblo, Colorado. Experienced and well-qualified speakers and leaders in the audio-visual field have been secured to headline the program.

Morning, afternoon and evening sessions will be held. Evening programs will feature previews of new films, special entertainment and panel discussions by outstanding national leaders.

The Institute will devote itself primarily to the discussion of basic problems facing the administrator and the classroom teacher in instituting and organizing an adequate learning aids program for the classroom. Problems to be discussed include, "What Constitutes an Adequate Learning Aids Program for the Classroom," "How to Use the Classroom Teaching Film Effectively," "The Contribution and Place of the Slidefilm in the Classroom," "New Developments in the Areas of Charts, Globes, Maps, etc.," "Radio and Recordings as Educational Aids," "Using Audio-Visual Teaching Materials in the Rural School," "The Place of the Documentary Film in Education," "How to Start Building an Audio-Visual Program for a School System," and "Patterns of Classroom Film Production."

Miss Carolyn Guss, assistant in administration at the Bureau of Audio-Visual Aids at the University of Indiana, will be in charge of all demonstrations during the entire Institute program.

For detailed information about the Institute, write to Ernest Tiemann, director of the Department of Visual Education, Pueblo Junior College, 412 West 7th Street, Pueblo, Colorado.

Education Committee on Television

Television Broadcasters Association, Inc. has organized an education committee to "foster television as an educational medium and to act as a clearing house for general television information". Wallace S. Moreland, assistant to the president of Rutgers University, has been named chairman of the committee. Other members are Kenneth Bartlett of Syracuse University, Barclay Leathem of Western Reserve University, Nathan Rudich, New School, and E. H. Rietzke of the Capitol Radio Engineering Institute.

Chicago Plans Film Council Chapter

Organization is under way of a Chicago chapter of the Film Council of America, recently set up in Washington at the summary meeting of the National 16mm. Advisory Committee. This committee, composed of representatives of eight commercial and educational groups, collaborated with the OWI, Treasury and other government departments in securing an audience of over 30,000,000 for 16mm. prints of Victory Loan films. On a national scale the Council will continue to promote and guide the broader use of 16mm. films and other audio-visual materials for community

Notes

and educational purposes; locally, its chapters will provide a common meeting ground for everyone interested in the use of projected materials in education, industry, church, club or home. The provisional local committee includes a chairman, Mr. William F. Kruse, (Bell & Howell Filmosound Library), Mildred Batchelder (American Library Association), L. Harry Strauss (National Council of Y. M. C. A.'s), George Allen (Soundies, Inc.), and Wesley Greene (Secretary) of the College Film Center, 84 East Randolph Street. Inquiries should be addressed to the secretary.

MPA Finances Production of Teaching Films

Eric Johnston, president of the Motion Picture Association of America, has announced the appropriation of \$100,000 by the Association for the production of seven experimental classroom films which will be designed to serve as models for producers of classroom films. Dr. Mark A. May, director of the Institute of Human Relations of Yale University, and head of a group of educators who recommended this enterprise, stated that new techniques in the making of teaching films would be attempted.

The seven sample films, which will be shot in 35mm and reduced to 16mm, will be distributed on a non-profit basis to schools through Teaching Films Custodians, Inc. They will be 10 to 20 minutes long. Production will begin as soon as the Board of Directors' Sub-Committee on Education, in cooperation with the Commission on Motion Pictures in Education, agree as to the film subjects most needed. Arthur Mayer, film consultant to the Secretary of War, will be in charge of production. No decision has been made on where the films will be produced.

Earlier this year, \$50,000 was allocated by the MPAA for the research program being conducted by Gardner Hart at Yale to determine how the best educational films that now exist can be improved in teaching effectiveness and in technical quality.

Institute Held by Chicago Film Workshop

The Chicago Film Workshop sponsored a Visual Institute for Adult Group Leaders in the Woodrow Wilson Meeting Room of the International Relations Center on April 12th and 13th. Libraries, social agencies, general education groups, clubs, churches and industries were represented by the leaders whose responsibility it is to plan educational programs for their organizations.

Sessions the first day were devoted to sources of audio-visual materials. "Great Britain's Informational Film Program" was presented by Neville Gardiner, British Information Services, Washington, D. C. Mildred L. Batchelder, Audio Visual Committee, American Library Association, gave an illustrated talk on "Sources of Instructional Films for Adult Audiences."

"Canada's Nation-Wide Film Program" was discussed by Jack Ralph, National Film Board, Ottawa, Canada. Leslie Brown, Director, Department of

Public Discussion and Debate, University of Wisconsin, brought the afternoon session to a close with a resume of "Wisconsin's State-Wide Film Program".

The evening session was a film forum demonstration on "India". The discussion following the showing of the film was moderated by E. W. Puttkammer, Law School, University of Chicago. On the resource panel which led the discussion was John Duncan Miller, British Information Services, Mr. Dat a-Majumder, a native of India, and Robert Fleming, American Instructor at Woodstock School, India.

The final session was on "Selection and Utilization of Materials" with emphasis on slides, filmstrips, charts, etc. L. Harry Strauss, National Council of YMCA's led the discussion, assisted by Richard B. Sealock, Librarian, Gary Public Library, Reverend Edwin T. Buehrer, Third Unitarian Church, and E. C. Waggoner, Supervisor, Visual Education, Public Schools, Elgin.

NAVED's Chicago Office

NAVED will move into its new headquarters at 430 S. Dearborn Street, Chicago 5, Illinois, on June 1, with Don White in charge as Executive Secretary of the organization. Mr. White has had many years' prewar experience as head of the Educational Film Library of the University System of Georgia, and has served with the Army overseas as a photographic officer.

A full-time staff and permanent offices will enable NAVED to carry on a real program of activity.

**University of Cincinnati to Hold Business
Education Institute on Visual Aids**

The department of business education of the University of Cincinnati, Cincinnati, Ohio, will hold a one-week Business Education Institute, June 10-15. The Institute will be devoted to the subject, "Audio-Visual Aids in Business Education." The course will survey the purposes and the uses, technical problems, and available materials for the use of audio-visual aids in the teaching of business subjects. A critical evaluation of the various types of aids will be made. Numerous demonstrations will be included of various types of equipment and various materials. These will include materials which can be prepared by classroom teachers. Included in the course will be demonstrations and a study of such teaching helps as were used extensively in military instruction during World War II.

The entire program will be under the direction of Ray G. Price, head of the department of business education, University of Cincinnati.

D.V.I. Election in Zone VI

New officers for Zone VI of the N. E. A. Department of Visual Instruction are: Chet Ullin, Kitsap County Audio-Visual Director, President; Claude Simpson, State College of Washington, 1st Vice-President; Glenn Satchwell, Northern Idaho State Teachers College, Vice-President; Curtis Reid, Oregon State System of Higher Education, Vice-President; Delmar Harris, Vancouver (Wash.) Audio-Visual Director, Vice-President.

Current Film News

■ **BRANDON FILMS**, 1600 Broadway, New York 19, reports the following new releases:

The Pale Horseman—19 min., produced in cooperation with UNRRA. A public health film which shows the perils of disease facing survivors of the war in the midst of destruction in the liberated countries, and explains that conditions inviting epidemic in those lands constitute a threat to all

of us. The work of healing and prevention has been started by the Allied Armies and UNRRA, but the danger of epidemic can only be overcome by continued aid to the stricken countries and continued international cooperation of public health specialists. *Discussion guide available.*

Food-Secret of the Peace—10 min., produced by the National Film Board of Canada, approaches the subject of food from the point of view of its economic and political significance in the world today. Food is shown as an important factor in promoting the international goodwill which can pave the way for an increased foreign trade without which prosperity at home cannot be assured. It is shown as the key to stable economies, to the establishment of democracy in those lands so recently under dictatorial occupation, and to the preservation of law and order. The combined political effects of scarcity and inflation are pictured with scenes of unrest and violence to which men are driven by hunger. A discussion trailer—*Getting the Most Out of a Film* (7 min.) accompanies this subject.

Warsaw Rebuilds, 11 min., showing the unconquerable spirit of the Polish people. Nazi ruthlessness and precision are epitomized by scenes of Warsaw as the Germans left it. Once a thriving city of 1,500,000 inhabitants with historic landmarks and modern buildings, on its liberation in January 1945, 90% of Warsaw was in ruins, 300,000 civilians and partisans had been killed, and the rest of the population deported. The returning Poles found their capital a silent levelled wasteland, but the work of reconstruc-

tion began at once. Without trucks, or cranes, or bulldozers, work brigades started to dig out the ruins. All sections of the population are helping, using primitive tools and their bare hands. Warsaw lives again, and plans have been drawn for a new city to rise on the ruins of the old.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20 offers the new release:

A Defeated People (20 min.)—The first official film on occupied Germany. It explains the many and complex problems of government in the British zone—transportation facilities are completely disrupted, there is no material for repair work, there are few schools and fewer teachers, suspected Nazis have to be screened and isolated and the ever present danger of mass malnutrition and disease must be combatted. The film constantly stresses the importance of occupation by the Allies at this time when new life is beginning to flow in the German veins—new life which must be carefully controlled and directed.

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Ave., Chicago 11, announce the availability of four new sound films in color, as well as black-and-white. These are:

We Discover the Dictionary—based on a careful study of dictionary problems by Viola Theman, Ph.D., Northwestern University. Important points regarding dictionary usage are developed by means of a simple story—such as use of the guide words, finding the spelling of words, definitions, reading diacritical marks, and kinds of dictionaries.

Ancient World Inheritance—a film which motivates and vitalizes the study of ancient history by relating the achievements of ancient civilizations to institutions of the modern world. It shows how many every-day articles and institutions like writing and organized law are inherited from the cultures of the ancient peoples. Produced with the cooperation of the Oriental Institute of the University of Chicago.

How to Study—motivates better study habits and gives practical hints on study technique. The material is developed around the experiences of a ninth grade student who is preparing a report for a class in civics. This film, produced under the supervision of Dr. William G. Brink, Northwestern University, shows in practical terms how study is made more pleasant and profitable through cultivation of proper techniques.

Know Your Library—designed to aid students to whom a library is a bewildering place. Like Betty of the story, they will learn something of the over-all organization of a typical

Young America Films
brings you this great
AWARD WINNER

Here's your chance to own one of the finest one-reel features ever produced!

Frank Sinatra
starring in R.K.O.'s
"The House I Live In"

ONCE you see and hear this magnificent 16 mm. film, we think you will be quick to agree that no school film-library should be without it.

It is a powerful emotional appeal for racial and democratic tolerance—and your students will be just as enthusiastic over the lesson it teaches as they are about Frank Sinatra, its star. The famous song of democratic thought by Earl Robinson which gives this film its title, and its force, is beautifully sung by Sinatra to the group of youngsters who appear with him in the film. Produced by Frank Ross, directed by Mervyn LeRoy, and released by RKO, the picture is not only something new in entertainment, but something extraordinary as a force for good.

Young America Films is indeed proud to be able to bring you this great 1-reel feature in 16 mm. print. The price has been made as low as possible to insure maximum distribution. 1-reel: running time—10 minutes.

(Orders placed now will not be filled before September) **\$27⁵⁰**

high school library, how to use the card catalogue, the principles of the Dewey Decimal System, arrangement of the books on the shelves, and how to use supplementary materials such as the encyclopedia, Reader's Guide and the vertical file.

Produced in collaboration with Miss Alice Lohrer, Assistant Professor of Library Science, University of Illinois.

■ UNITED SPECIALISTS, Inc., 159 East 35th St., New York 16, announce the release of

Training You to Train Your Dog—3 reels (32 min.)—available for sale or rental, in color or black and white. It is the first of a series of four films based on the book of the same title by Blanche Saunders, published by Doubleday & Co. In simple, clear language and pictures, the film shows how dogs can be trained without punishment in the 14 steps of Basic Obedience Instruction. This includes heeling and sitting, coming when called, lying down, staying upon command, dropping in the distance and jumping. This training is desirable for all dogs—from the pet in the home to the dogs used for highly specialized work, as well as those entered in Obedience

Trials to gain the title C. D. (Companion Dog) offered by the American Kennel Club. An actual training class is shown with many different breeds, handled by both children and adults.

■ YMCA MOTION PICTURE BUREAU, 347 Madison Ave., New York 17, has released the first two pictures in "The Art of Living" series of 16mm forum-films, produced jointly by Association Films (YMCA) and Look Magazine. These one-reel films are specifically designed to provoke thinking, stimulate discussion, and motivate action:

You and Your Family—showing a typical American family involved in situations common to every family group. The problems connected with social engagements, housework, and late hours are pictured, with alternate courses of behavior indicated. Spectators are invited to join in the discussion.

You and Your Friends—another participation-film, centered around a teen-age party. The audience is asked to listen to the dialogue and evaluate

different types of behavior at the party. A summary stimulates the audience to a discussion of the problems involved in friendship.

A comprehensive discussion guide for use by teachers and group leaders accompanies the films.

The production schedule of Look and YMCA calls for the making of six more films, using similar techniques, to be ready in the fall.

■ TEACHING AIDS EXCHANGE, P. O. Box 1127, Modesto, Calif., a cooperative organization of teachers of business subjects have produced and offer for sale or rental, two new instructional films:

Penmanship Improver (10 min.)—designed to help students make substantial progress in penmanship improvement without taking a complete course in penmanship. The system presented is the innovation of Maude Collins Genocchio, a successful west-coast penmanship instructor. The film teaches students to make skilfully three simple strokes which constitute more than 90% of all the longhand letters. The producers do not recommend the film for elementary school use or for students who have time to take complete courses in penmanship.

Speeding Your Reading (10 min.)—brings the findings of famous "reading clinic" research into the classroom. Designed to improve the reading speed of high school and adult classroom audiences by giving an understanding of correct reading habits, the film concentrates on developing correct eye movements. The start and stop motion of the eyes, the point of focus, and the span of recognition, long understood by teachers as basic concepts in the development of good reading habits, are presented in a simple and meaningful way. The most common reasons for slow reading are illustrated, and suggestions are made for correction of reading faults. The problems of focalizing while reading, spelling out words, and excessive regressions are clearly illustrated.

■ OFFICE OF PRICE ADMINISTRATION, Washington 25, D. C., has just produced a new 16mm film on inflation entitled:

Which Way This Time? (1 reel)—depicting how disastrous inflation after World War II has thus far been prevented by government controls. It points out that serious inflation still threatens the economy of the United States, and asks the public not to pay over-ceiling rents and prices as a contribution toward the defeat of inflation. The film draws lessons from history to highlight the depressions and misery caused by postwar inflations. Animation and symbols are employed throughout.

OPA regional and district offices and former OWI 16mm distributors have 16mm prints of this subject.

Entertainment Films in 16mm

■ **BELL & HOWELL CO.**, 1801 Larchmont Ave., Chicago 13, offers the following current 16mm Universal releases:

Reckless Age (6 reels)—poor little rich girl runs away to become sales-

girl in one of her own chain stores, with business and romantic complications ensuing. Cast includes Gloria Jean, Henry Stephenson, Franklin Pangborn, Judy Clark.

Bowery to Broadway (9 reels)—two rival Irish showmen battle from the Bowery to Times Square. "Show business" amusingly shown by Jack Oakie, Susanna Foster, Turhan Bey, Ann Blyth, Maria Montez, Donald O'Connor, Lonise Allbritton.

Enter **Arsene Lupin** (7)—another romantic adventure of the Robin Hood crook, featuring Charles Korvin, Ella Raines, J. Carroll Naish.

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Ave., New York 19, has obtained exclusive 16mm. distribution rights to

The Jungle Menace, a chapter play in 15 episodes, released theatrically by Columbia Pictures. Frank Buck batters his way through countless perils with the aid of Sasha Siemel, the Tiger Man in a pulse-tingling drama set in the Malay Peninsula jungles of Asia.

French Documentaries Distributed by A.F. Films

A new commercial company handling French documentary educational and informational shorts has been formed in New York under the name of A. F. Films, Inc. The new company is one of several branch offices planned by the parent organization in Paris, Les Actualités Francaises, and will serve as distribution outlet for the United States and Canada. Shorts depicting French cultural, economic, and social life, will be adapted for American use and distributed here in both 16mm and 35mm with either French or English commentaries.

Les Actualités Francaises has more than twenty one and two reel films planned for the year. The films cover such diverse topics as the history of ceramics, life in present day Paris, the primitive culture of the Negroes

of French Equatorial Africa, and the historic city of Rouen. Preparation of films for school use will be carried out with the assistance of experts in the visual education field. All films distributed with English commentary will be adapted for American audiences. Original French versions of films will also be used for advanced French language students.

The films now in preparation are the beginning of a much more extensive program of cultural and informational shorts by A. F. FILMS, INC.

Rosalind Kossoff, formerly with the National Film Board of Canada, is in charge of the New York office at 1600 Broadway.

Catalog

Simmel - Meservey, 9538 Brighton Way, Beverly Hills, California, has issued a new catalog of its productions, titled "Your Junior Prom Program", which features its latest release "Junior Prom," a 2-reel color and sound film on the etiquette of dating by young people, and gives information also on its many other educational productions, both 16 mm motion pictures, and recordings. Edward Simmel, who recently returned from a three-months survey of conditions in the middle East as they affect film distribution, has resumed his duties as manager of film production for the Simmel-Meservey organization.

what it is like in Germany today?

DO YOU KNOW—
the reasons for the Allied Control Commission being there?

DO YOU KNOW—
what the Allied government departments are doing?

A DEFEATED PEOPLE

the first official film on occupied Germany, gives the answer to these and other questions you have been asking.

Health Films
YOUR CHILDREN'S EARS • YOUR CHILDREN'S EYES
YOUR CHILDREN'S TEETH

These films are particularly suitable for parents and teachers. Amusing animated diagrams explain the physiology of the organs treated and the films stress the advantages of simple, common-sense health precautions which can easily be taught to children.

Educational Films
ACHIMOTA • FATHER AND SON
A MAMPRUSI VILLAGE

During recent years, the people of Africa have made such great strides forward, that it has become a major undertaking to record their rapid progress. These films are the first to show the development of social, educational and administrative standards in the native villages.

These films are on loan from the following offices of

AMONG THE PRODUCERS

Publishing Firm Establishes Audio-Visual Aids Division

Popular Science Publishing Company, 353 Fourth Ave., New York 10, has entered the Audio-Visual Field through the creation of an Audio-Visual Division, with the purpose of promoting the development and sale to schools and colleges of audio-visual teaching aids on a nation-wide basis. The program, it is stated, will be one of gradual expansion, and is expected in time to include all major types of audio-visual materials, involving all levels of education. Already available are a number of recordings and a number of filmstrip subjects for classroom use. The former, under the trade name of *Teach-O-Discs*, are recordings by professional artists, of selected excerpts from the great classics of English literature by Shakespeare, Dickens, Tennyson, Scott, Browning, Longfellow and others; also dramatizations of momentous events in American history, written by Marquis James, a Pulitzer Prize winner. The subjects were selected from the syllabi of various states, with the advice and assistance of school administrators and teachers. A teaching guide accompanies each *Teach-O-Disc* which are 12 inch double-face records made of unbreakable Vinylite, and running at 78 r.p.m.

Teach-O-Filmstrips now ready, include four subjects in color, designed for use in primary classes in reading, story-telling, social studies and nature study. They are composed of original color drawings, described as self-contained teaching units, and employing the principles of motivation, concept teaching, summarization and provocative questioning. The subjects are *Heidi*, about the adventures of Heidi and her friend, Peter; *Fun With Mitzie*, about a little girl and her kitten; *The Lost Dog*, about a little boy and his dog; *Let's Make a Post-Office*, explaining the services of our postal system.

A series of eight *Teach-O-Filmstrips* in black and white are available, under the general title of "Living Together in the United States." Designed primarily for use in social studies classes in the middle grades (4,5,6) the titles are *Workers in Our Country*, *Where Our Food Comes From*, *How Our Food Is Produced*, *How We are Clothed*, *Our Homes and Our Communities*, *Communicating with our Neighbors*, *Transportation in Our Country*, *Opportunities for Play and Recreation in Our Country*. All subjects are accompanied by teaching guide.

Editor-in-Chief of the new Division is Dr. David J. Goodman, who brings to his new post a background of nine years experience in the audio-visual field. His Doctor's thesis at New York University where he majored in Administration and Supervision of Audio-Visual Education,

was entitled "Comparative Effectiveness of Pictorial Teaching Materials." Dr. Goodman was active in public school work in the preparation of audio-visual curricula and the direction of audio-visual instruction, and has had extensive experience in editorial work, still and motion picture photography and recording. His background includes position as Editor for Young America Films, Inc., Department Editor for EDUCATIONAL SCREEN, Educational Specialist for two years in the Training Aids Division of the Army Air Forces in charge of preparation of Instructors' Guides to accompany films and filmstrips. He has contributed articles to many educational journals.

Sound Slide Film on Job Training

The business magazine, *Syndicate Store Merchandiser*, 79 Madison Ave., New York 16, announces a new sound slidefilm, *How to Teach a Job*, a ten-minute subject which applies the pattern used in military and industrial training, to fit the needs of retailing.

Frame from "How to Teach a Job".

It is designed to help businessmen, and especially retailers to eliminate waste in time, money and talent that results from poor job instruction.

Recordings of Radio Science Programs Available

Revere Copper and Brass Inc., sponsors of *Exploring the Unknown*, series of weekly broadcasts designed to tell the story of a scientific research and its practical application, has made available for school use, recordings of nine selected programs from the series. They are being distributed through the Recordings Division of New York University Library, New York City. Titles are *The Lie Detector*, *The Flying Blowtorch* (Rockets and Jet Propulsion), *Cancer—Cause for Hope*, *Plastics—Nature Gone Modern*, *What Is the Atom*, *Hidden Hunger* (Vitamins), *Pneumonia*, *The Battle That Never Ends* (Pests), and *Eyes—Windows on the World*. Each program is recorded on both sides of three 12-inch Vinylite discs, operating at 78 r.p.m.

New Repeating Flash Bulb

Wabash Corporation, 335 Carroll St., Brooklyn, N. Y., announced a repeating flash bulb that can be used for several thousand individual flashes of brilliant daylight quality photographic illumination. Developed in the electronic laboratories of Sylvania Electric Products Inc., the new flash bulb provides a light output of 12,000,000 peak lumens in an instantaneous flash the equivalent of 1/5000th sec-

Wabash flash bulb

ond—fifty times faster than the fastest flash bulb they now manufacture. Preliminary color tests indicate that the color quality of the light is already corrected to approximate that of normal daylight so that no filters will be required for indoor use with daylight type color films.

This is the first of several bulbs of its type which Wabash will make available with their new Electroflash units soon to be announced.

2 x 2 Color Slides on Birds

The National Audubon Society, 1000 Fifth Ave., New York 28, N. Y., has added a series of 2x2 full color slides to its Film and Slide Library. These are made from the bird paintings by Major Allan Brooks. The slides, 150 in all, are available in seven sets of twenty each, and one of ten. A listing of the various birds in each set, and prices, may be secured by writing to the National Audubon Society.

Filmstrip on Radar

Opening with a picture of dog-fights of planes over London during the Blitz, a new filmstrip on Radar tells the story of "Little Sir Echo", as the RAF pilots called this silent partner of theirs.

Designed for high school use in assembly, science or history classes, the filmstrip, *Introducing Radar*, touches on the history and development of Radar, and explains the theory and functioning of a Radar set. Produced by Federalist Films, who also produced the filmstrip on world government, *How to Conquer War*. For further information write the producer, 391 Bleecker Street, New York 14, N. Y.

Curriculum Films, Inc. Formed

Monroe B. David, President of American Services, has announced the formation of Curriculum Films, Inc. The new organization will perform an educational, research and distribution service for independent producers of educational films.

Mr. David, in discussing the basic plans of the new company, said, "After carefully determining specific classroom needs, through research, we will have subject matter specialists prepare script material for producers. From this material the producers will create packages of full color film-strips, each package consisting of a number of individual strips of logical teaching length. Where they will serve the purpose best, 16mm. motion pictures will be included. The complete package will be designed to cover the visual needs of an entire course. We are not producers, but our educational research and development staff will work with selected producers through all phases of production. The completed packages will be sold direct to schools".

Offices of the company are in the R.K.O. Building, Radio City, New York.

Eastin Reopens Colorado Office

Eastin Pictures Inc., has reopened its office at Colorado Springs, Colo., under the management of Major Robert K. Hieronymus, and is now ready to serve old and new customers in fifteen Western states, including the Rocky Mountain region, the Pacific Coast area and Texas. The Eastin concern, which has its headquarters in Davenport, Iowa, carries on a nation-wide business in the rental and sale of 16mm. sound motion picture films for educational and recreational purposes, and sale of 16mm projectors.

Major Hieronymus was recently discharged from the army after serving for fifty-three months with the infantry, tank destroyers and inspector general's department. The Eastin office in Colorado Springs was originally opened by Major Hieronymus in August 1938. He served as manager until August, 1941, when he left to join the armed forces. In June 1942, it became necessary for the branch to close on account of the wartime shortage of trained personnel.

"TRAINING YOU TO TRAIN YOUR DOG"

(Basic Obedience Instruction)

A 16 MM COLOR SOUND FILM

From the book of the same title published by Doubleday & Company
(Running Time 32 Minutes)

Approved and Highly Recommended by
The American Kennel Club and The American Humane Association

A film everyone will want to see, both young and old, for its sheer entertainment as well as its educational values. Narrated by Lowell Thomas. Supervised by Blanche Saunders. Photographed by Louise Branch. This film can be used to advantage by all schools, community centers, welfare groups, dog clubs and obedience classes.

Radiant Adds to Executive Staff

Radiant Mfg. Company of Chicago, manufacturers of a complete line of projection screens, has increased its executive staff by the appointment of Harry Millar, 230 West 46th Street, New York City as Eastern District Manager and Mr. Jack Newman, Box 2, Centerville, California, as Western District Manager.

Filmosound Library Study Course

A systematic study course in library principles and practices is pursued by all members of the Chicago headquarters branch of the Bell & Howell Filmosound Library. Directed by W. F. Kruse, general manager of the library, or, alternately, by W. H. Eyles, deputy manager in charge of rentals, regular weekly classes are held here in discussion meeting style. The entire clerical and editorial staff takes part. Films like "How Motion Pictures Move and Talk," "A B C A," "Evolution of the Motion Picture," "Use and Care of the Filmosound" are shown, and school curricula and film catalogs and descriptive literature of all kinds are lesson materials.

Victory Films Award to Bell & Howell

For wholehearted cooperation with the Treasury Department during the Victory Loan Drive in the latter part of 1945, Bell & Howell Company, Chicago, recently received the National 16mm Victory Film Committee's Award of Merit, it was announced recently by O. H. Coelln, secretary of the committee. W. H. Kruse, manager of Bell & Howell's Film Division, headed up his company's efforts in this connection, and in addition served as midwestern regional chairman for the national committee. The circulation of government-sponsored sound films was credited by Secretary of the Treasury Fred M. Vinson with having been a considerable factor in putting the 1945 Victory Loan Drive across. Future activities of a similar nature will be furthered by the newly formed Film Council of America.

Visual Art Moves

Visual Art Films, Pittsburgh, Pennsylvania, have moved from 422 Empire Building to larger quarters at 118 Ninth Street, where they will occupy three floors. At this new location, the film library will be enlarged and a large screening room will enable customers to preview films. A photographic store will occupy part of the 6,000 square feet in the new store.

Demonstrations that ALL Can See

More clearly than if they were right beside you, your pupils can see and understand without moving from their seats—when you perform a demonstration from your desk with a Spencer Model B Delineascope.

From a convenient horizontal projection platform, it throws a clear cut image onto an overhead screen. Science experiments, drawings, contours of spec-

imens, lantern slides—all are projected in vivid detail.

For further information about this and other instruments for visual instruction, write dept. F12.

Inter-Americanism at Home

A concrete, finely detailed description of procedure in a specific unit-subject, using all types of audio-visual material.

“INTER-AMERICANISM AT HOME” is an educational venture. It is an educational experiment that is being conducted on all levels of learning to establish good will and understanding among the nations of the Western Hemisphere.

Today we are beginning to see the fruits of a few years of concentrated study of Latin-American countries and peoples. We are beginning to understand that folks between the Rio Grande and Cape Horn are Americans too. The student of our public schools has actually “visited” the coffee plantations, the rubber plantations, the markets and cities of Latin America. He has seen the giant mahogany felled, sawed and loaded on ships carrying flags of every major nation in the world. He has been conducted through the modern newspaper plant at Sao Paulo. He has viewed the ruins of the great Inca Civilization. He has journeyed from the source to the mouth of the great Amazon River. He has lived a day with a typical South American family. He has attended Brazil’s Fishing School. He has seen much of the culture and beauty of Mexico. He has helped fight disease in the tropics.

All this has given our American student further insight into the problems of “good neighbors” and international cooperation. But these films that bring these vicarious experiences to the classrooms in themselves will not and cannot furnish a complete educational program of Inter-American Relations. It is not the writer’s purpose to popularize the subject by introducing a mechanized educational program. It is rather that of attempting to point out how unified education provides the opportunity to weave into the educative process teaching materials and resources of all types which will result in spiraled educative experiences that will be meaningful to the learner.

The value of using aids of various types of classroom teaching has been proven and accepted as a means of enhancing learning situations. But all too often aids are accepted as experiences unto themselves. If a real learning experience is to be conducted for the benefit of learner it must be planned, organized and developed on the basis of unifying all aspects of an educative experience.

A student who has had his curiosity aroused by an aid of some type and is not permitted to express himself mentally, emotionally or physically has not experienced a true learning situation. Through the process of unified education it is hoped that situations will be created whereby all students will have a chance to express themselves in a life-like situation that adequately meets the needs of human beings—that of having lived through an experience, real or vicarious.

Books are exciting to the average reader who has sufficient background to assimilate the information so obtained. Printed material is a definite motivating force and has a lasting effect on attitudes. Films, too, as well as other aids, have a lasting effect on the social

CLAUDE L. SIMPSON
State College of Washington
Pullman, Washington

attitudes of human beings. And like more books, more instructional aids pertaining to the same issue may have a cumulative effect on attitude. This cumulative effect is the result of a unification of a total teaching-learning situation.

Education is an integration and a synthesis. The more ways an idea comes to a student, the surer he is of getting it. If he hears it, sees it, reads it, talks it over, and reflects on it, he is pretty sure of getting it. The using of any one instructional aid is only a fraction of a total teaching-learning situation. Learning results from thinking, feeling, and doing. So unless the sensory impression received from the use of a teaching aid “is seized upon vigorously by questioning, application, and pupil expression, it will have little or no effect on the pupil’s memory or character.”¹

In developing the theme of unified education, it is necessary to weave a body of teaching materials and resources into the objectives set up for a particular topic or unit. The purpose being that of providing life-like experiences which adequately meet the needs of human beings in relation to the objectives set forth for the unit. The following proposal, which will result in unified education, is in no way limited to the study of the “Good Neighbor Policy” but may be readily adapted to any teaching-learning situation.

The general aim of social science as taught in the writer’s home state is “to assist the pupil in achieving

¹Hollis, A. P. *Motion Pictures for Instruction*. The Century Company, New York City, New York. p. 171.

Middle-class Latin American family scene.
(From “Good Neighbor Family”, a Julien Bryan production)

An Argentina middle-class family visits the zoo.
(From "Good Neighbor Family")

the ability to adjust and contribute to an ever-expanding social group ranging in size from the immediate family to a society of nations."

Each year time is set aside to concentrate study on the "Good Neighbor Policy," usually culminating on Pan-American Day. In carrying out this general aim in our school, the social science teachers have organized a workshop to discuss and work on common problems. To assist the teachers in preparing their units and projects, specialists are called into the workshop—namely, the directors of curriculum, instruction, and audio-visual education. The director of curriculum with his committee draws up the aims and objectives for study of Pan-Americanism. The director of instruction with his committee arranges for demonstration lessons. The audio-visual education director with his committee assembles all the available materials on Latin America.

A general meeting of the workshop is called and it was found that many of the items collected for instruction involved art, music and science. The members of these three departments were invited into the workshop to discuss their place in the Pan-American picture. The head of the Music department explains how appropriate recorded music brings another avenue of learning into play. He discusses his plan for the study of music appreciation of Latin American contributions to the field of music. He plans for songs and selections to be learned by his pupils. The Art department explains the tremendous area of study in the field of Latin-American art. The Science teacher discusses the implications of weather, geology, botany, levers, machinery, and many other science aspects of the "Good Neighbor Policy."

During the discussion, clothes and costumes were mentioned and it was the unanimous opinion that home economics played a part in our aims. Someone mentioned the dancing of our neighbors and immediately it was suggested that the physical education department, too, had something very definite to contribute to the "Good Neighbor" study. The school and city librarians were called in to explain their contribution

of books, magazines, pamphlets, poems, stories, clipping files, to the study of Pan-Americanism.

The audio-visual education director, in discussing his material on Latin America, gave a comprehensive lecture on picture appreciation—what is in a picture. He explained the value of the 2x2 slide, the stereograph, the opaque projector, films, both silent and sound, recordings, flat picture collections, maps, charts, posters, private collections, the museum, displays, exhibits, bulletin boards, and the blackboard.

He warned the group that no complete guides are available for selection of materials for Inter-American Education. The only method of selecting materials for classroom use is previewing or pre-screening. As a rule only a small number of films, small number of exhibits, charts, pictures, maps, etc., can be found that will prove useful in a specified teaching-learning situation. Each teacher in the school system was given the opportunity of viewing, previewing and screening all of the available materials for her specific unit or project on the "Good Neighbor" theme.

The director of instruction had a teacher demonstrate her proposed unit on the social life and customs of the people of Brazil. As an introduction to her unit she selected the CIAA film, *The Bridge*, to give her students some background of the economic problems of South America and Brazil. Some understanding of the economic problems of Brazil is necessary to a study of the social life. She showed the film only once as it is rather long and would be time-consuming. She had prepared a list of specific points for her students to watch for during the presentation. No slides or film strips accompany the film so she has prepared individual charts of the animated phases for concentrated class study during the unit.

For the study of types of homes, occupations, recreation, etc., the teacher selected sets of flat pictures for individual and group study. Charts and graphs were selected to show income, expenditure, types of food, clothing, etc.

After considerable preparation the class was shown the CIAA film, *Good Neighbor Family*, which presents a study of the family life of Latin America in contrast to the family life in the United States. Considerable discussion was held on this film and it was reshown several times for further study of the various aspects of life on the large estates and small farms of South America.

Several of the girls made native costumes of the Brazilian people. The boys were interested in the film, *Brazil's Fishing School*, and spent considerable time showing and discussing the implications of education in Brazil. An exchange student from the nearby college was asked to speak before the class on family life in her home town, Rio de Janeiro. The exchange student brought with her several pictures and display items that she used in her discussion.

Finally, an assembly program was arranged by the speech department on "Pan-American Day." Color, gaiety, dances, songs, plays, musical numbers, speeches and a grand finale culminated the study. Students of all ages, color and creeds had lived a true experience of "Life in Latin America." An experience that was real to every participant—a teaching-learning situation that was unified.

Still-Projection Methods in the Teaching of Reading

An authoritative expose of the neglected possibilities of still pictures in the teaching of reading.

AN official of an important concern engaged in the manufacture of still projectors recently asked the writer whether there was a place for still-projection methods in teaching reading to young children. The writer replied that there was no question about it. The official became interested and agreed to sponsor an investigation of the possibilities for using the still-projection technique in the reading program.

The writer promptly turned the problem over to his research seminar, with students assigned different parts of the job to be done. The scope of the work accomplished is indicated by the specific questions which individual students tackled: What mention is made of still projection methods in professional texts on the psychology and pedagogy of reading? What mention is made of the topic in professional texts on visual education? What reference is made to the problem in the periodical literature? What still-film material has been developed for the teaching of reading? What use has been made of the opaque projector in reading programs?

The first disclosure was that the writer had perhaps been too optimistic in his reply to the company official. Of the twelve most popular professional books on the teaching of reading, only five made any mention of the use of filmstrips or slides. These five books contained only slight references, and just one book had as much as a full paragraph on the subject. Durrell's excellent books,¹ for example, contained only these three sentences: "Lantern-slide projectors will help to vary the classroom instruction" (p. 107). "Word meanings may be further enriched through visual aids" (p. 170). "Words may be shown on lantern slides [in connection with visual-motor methods]." (p. 181).

The results from the professional books on visual education were equally discouraging. Seven well-known books were examined in this field. Three of these books made no mention at all of still-projection methods in teaching reading. Typical of the suggestions found in the other four books were the following from Dent's book:² "The cellophane slide is a valuable teaching tool in the hands of the busy teacher. All sorts of reading exercises, outlining, and other matter, usually printed or written on the blackboard, may be put on such slides and kept for repeated use" (p. 61). "Number combinations and elementary reading material can be presented in slide form with effective results" (p. 185). These suggestions do not provide the detailed guidance the teacher of reading needs.

IRVING H. ANDERSON
Associate Professor of Education
University of Michigan, Ann Arbor

A search of the periodical literature for the last ten years applied a bibliography of 38 titles. These articles are the best source of ideas for using slides, filmstrips, and opaque materials in the reading program. They are written for the most part by classroom teachers who have experimented with these materials on the job. Sample titles were "Use of Filmstrip to Assist Retarded Readers," "Visual Aids in Remedial Reading," "Teaching Spelling with Hand-Made Lantern Slides," "The Experimental Use of Visual Aids in Teaching Beginning Reading," "Values of Visual Aids in Reading," "Visual Aids for Reading Tests," "Visual Aids in the Language Arts Program," and "Teaching Literature with Slides."

In the search which was made for actual slide and filmstrip material, 142 sources of film material were requested by form letter to submit listings of their offerings. These sources included the principal commercial concerns in this country and abroad as well as the educational film divisions of a long list of American colleges and universities. Eight colleges and universities and seven commercial concerns were found to list material which had been developed specifically for teaching reading. This may be taken as a credible showing or not, depending on one's expectations. The total yield was somewhat disappointing to the research group. There was much overlapping in the titles listed. The S.V.E. Picturoles for Primary Reading, for example, were listed by several sources. The Stories for Children, in slide form, listed by Williams, Brown, and Earle, Inc., Philadelphia, were also listed by Indiana University, etc. The amount of overlapping which was discovered reduced the total range of the material found.

The writer remains convinced that much more can be done with still projection methods in teaching reading than has been achieved so far. The failure to exploit these methods more fully can be traced to a number of conditions. First and foremost perhaps is a failure at the teacher-training level. Specialized courses in visual education are not the answer to the teacher-training problem. The problem is one that involves all methods courses. The expert in reading methods should be familiar with the visual materials and techniques which have been developed to teach children to read. He should cover these materials and methods in his own courses. That there has been some neglect in this regard would seem to be indicated by the small

¹Durrell, Donald D. *Improvement of Basic Reading Abilities*. Yonkers-on-Hudson, New York: World Book Company, 1940. Pp. viii + 407.

²Dent, Ellsworth. *Audio-Visual Handbook*. Chicago, Illinois: Society for Visual Education, Inc., 1942. Pp. 1-227.

mention made of still projection methods in professional texts on the psychology and teaching of reading.

The slides and filmstrips which various sources list for the teaching of reading are unrelated to the basal reader series commonly in use. Closer correlation of slides and filmstrips with these books would promote a wider use of visual methods in reading programs. The late Ben G. Graham, superintendent of the Pittsburgh schools, used to say: "If a representative of a textbook company should come into my office and tell me that he had not only a set or sets of textbooks that fit into the Pittsburgh curriculum, but also sets of films that correlated with these books,² I would immediately give him a serious hearing, and his offerings serious consideration. In considering textbook adoption, preference would be given to the combination of correlated films and books."³ An ambitious survey is now underway to explore more fully the possible correlation of film and textbook.⁴ Evaluating the activity which is currently underway, Hoban reaches this conclusion: "Investigations currently being made by textbook publishers, both individually and collectively, indicate that the correlation of textbook and film is approaching the stage where something will be done about it."⁵ The correlation of textbook and slide or filmstrip is especially needed in the reading field, where, with the notable exception of the Keystone Visual Readers, almost no progress has been made in that direction.

The reading expert and producer of film material are another team that should get together. A filmstrip series for Primary Reading is again a good example of what the writer has in mind. They represent a satisfactory photographic job, but one of the stories contains such words as "rebels," "encampment," "summon," "orderly," "meadow," "Redcoats," and "curtsy." Words like these are ordinarily not a part of the primary child's reading vocabulary, and the vocabulary burden of the story might well spoil the fun of reading it. Another story uses an unorthodox style of type. Primary children have difficulty making the transition from standard type to a style which is unusual. Defects like these could be avoided through closer cooperation of education specialists and film producers.

How specialized interests sometimes become is well illustrated by the reply the writer received in connection with a request for information on slides and filmstrips for reading from a nationally known dealer of projection equipment. The manager of the concern replied that he had no knowledge of slide or filmstrip material which had been developed for teaching reading, but suggested that the present writer might be willing to edit a series. The manager went on to say that he had the projection facilities for such a project. Actually, there is some slide and filmstrip material available for teaching reading. To know about this material and be able to refer customers to it is good business, if nothing else. To sell a projector is one

²As reported by Charles F. Hoban, Jr., "Films and Textbooks," *Educational Screen*, XXIV (December, 1945), 445.

³"The Teaching-Films Survey," *School and Society*, LXII (December 8, 1945), 366-367.

⁵Hoban, Charles F., Jr., "Films and Textbooks," *Educational Screen*, XXIV (December, 1945), 445.

thing, to make it functional in the school another. The director of the reading clinic of a state university received the same request for information as the above dealer. This individual also replied that he did not know of any material but that he had a projector and would we please notify him of anything we found so that he could put the projector to use. This is a common condition. Many schools have projectors which are never used.

There is a silver lining to all of these cloudy forebodings. While the teacher of reading will not find much in the way of slide and filmstrip material which is specifically labelled reading, she will find a wealth of other slide and picture material that can be related to the stories which appear in children's books. Several of the students in the writer's research group have become interested in correlating commercially available slides with the stories found in children's readers. Their problem has not been that there is too little material available but too much. They do not know where to stop. Pictures from magazines and other sources can similarly be related to children's stories and prepared for opaque projection.

The slides and pictures can be used for motivating the pupils and for arousing their interest and curiosity. They can be used to enrich word meaning and for making the words stand for something concrete. They can be used for discussion purposes and for building a language background. In her discussion of the slides and pictures, the teacher can use words and expressions which are later to appear in the story. By properly directing the discussion, she can get the pupils to use the same words and expressions. The reading of the story will then be easier, the pupils will get over what otherwise might have been hardspots, because these words and phrases will still be "ringing in their ears." After reading the story the pupils will want to review the pictures and study them in the light of what they have learned from the story. These are just a few suggestions of ways for using slide and picture material in the reading lesson.

The writer would reply as he did before to the company official, but the possibilities for using still-projection methods in teaching reading cannot be fully exploited until the problem spots suggested above have been corrected. The correction of these difficulties requires the cooperation and concerted effort of all of the interests concerned.

Full Steam Ahead in Virginia

A total of 58 county and city school divisions in Virginia have established local Bureaus of Teaching Materials, in comparison with 15 libraries in operation prior to this year. Indications are that there will be approximately 70 such libraries operating by the opening of the new fall term. This is obvious evidence that the recent legislative appropriation has made it possible for school divisions to decentralize the state's film distribution facilities to a considerable extent.

Twenty-two extension classes in audio-visual education are now being conducted by representatives of the University of Virginia throughout the state. In addition, a large number of teacher study groups have been organized to provide in-service training for teachers.

The Application of Military Audio-Visual Techniques to Civilian Teaching

Part Two, concluding the presentation begun in May of a major problem facing the visual teaching field today and demanding early solution.

IN the process of expediting their training programs, the Army and Navy have planned the production of films and other training devices specifically to fulfill definite instructional objectives. Early in the training program, authorities realized that, just as there, can be no all-purpose gun, so there can be no all-purpose instructional film or other audio-visual materials. Each teaching situation, each attitude to be established, and each phase of a skill to be taught requires a special tool—i. e., a film, a device, or other audio-visual material must be designed, planned, and perfected so that once it is placed in the hands of the instructor it can be used as a sure tool for doing the specific teaching job effectively. With full appraisal of the simple principle and its significant implications, the Army and Navy developed systems for intensively planning their audio-visual materials so that each production was geared to the requirements of a definite teaching situation exactly as it existed in the schools, in the field, or at the place of its ultimate utilization. This means that the requests and specifications for audio-visual materials were initiated by the users, the instructors themselves, who were repeatedly consulted throughout the process of production. The audio-visual materials thus requisitioned and planned were then made available by mass production and were distributed to all activities in which their use was applicable.

In the process of constant and continuous use of these materials, teaching situations frequently were found to change, defects in the materials were discovered, and numerous ideas for improvement materialized. Tempered by these changing teaching conditions and evaluated by the experience gained from utilization, carefully planned revisions of audio-visual materials were promptly initiated and carried to completion. This resulted in constant and progressive refinements, a circumstance which largely explains why audio-visual materials in use at the end of the war were far superior in quality as well as in quantity to those which previously existed. Briefly stated, it can be said that the Army and Navy have practiced an audio-visual technique which can properly be labeled the *technique of systematic planning of production for utility*.

II. The Technique of Systematic Planning of Production for Utility

What has been done in civilian education about this technique? This technique is, on the whole, most conspicuous in civilian education for the degree in which it is lacking. Frequently the films most needed by teachers have not been produced, and many of those produced do not have the quality of utility in the sense

GILBERT C. JOHNSON, LT. (jg) USNR
Corpus Christi, Texas

of serving accurately the instructional objectives. At the present, the best a teacher can do is to examine film catalogues to see if any films are listed pertaining to a particular subject area. If the teacher is fortunate, he will find some films sufficiently promising to warrant previewing for prospective use. Upon further examination he may find that many of these are beautiful, but too general; crammed full of technical facts, but not organized into teachable units; or entertaining, but not suitable for instructional purposes. If he turns to the so-called free sources of films furnished by various business concerns, he will find much the same situation, with the added burden that most of the films consciously or unconsciously sell a bill of goods along with the teaching. True, the production of the thousands of films available to public schools today has been "planned." These films are planned to sell a product or a viewpoint, planned to entertain, planned to cover wide scopes of subjects, planned to appeal to large audiences, but rarely planned for precise utility as needed by the classroom teacher.

How can the technique of systematic production for utility be achieved in civilian education? It can be achieved by the establishment of a well-organized and close liaison between the classroom teachers and the producers of audio-visual materials. This liaison must consist of classroom teachers and school administrators on the one hand and technical writers, editors, and producers on the other. What has already been done along this line in limited areas and subjects is, of course, a step in the right direction. Via such a system, applied comprehensively to the whole curriculum, the teachers and administrators would make known precisely what audio-visual materials are needed in each subject area. They would define the instructional objectives to be satisfied and would serve as consultants in organizing the material into teachable units suitable for classroom use. The technical writers and editors would formulate the final "blueprints" and shape each project for final production.

In this manner, purpose and usage of audio-visual materials would be well defined even before production. Integration into the curricula would no longer be difficult or time-consuming. The quality of utility of a production would no longer be a hit-or-miss proposition; it would be assured by scientific planning geared to the dictates of classroom requirements and instructional objectives. Once this liaison were broadly organized and functioning, it would not only serve as the

Mock-ups are used to teach navigation.

Official U. S. Navy photos

A display of knots being used in teaching recruits.

springboard for new productions, but it would be the logical source for revisions, improvements, and refinements of audio-visual materials from year to year. That this system would be practical cannot be denied. If such a system of planning of production for utility can be practical and can be successfully expedited even under the restrictions of a military organization, who would dare predict any limit to its achievement in a field so broad in scope and so versatile in character as public education?

Who should initiate the system of liaison between classroom teachers and producers? The state of lethargy which until the present time has existed in the matter of planning of production for utility cannot be broken until either the educators or the producers initiate the necessary liaison between the two groups. In recent years there have been a few producers in the field with plans for producing the type of films needed, but no large-scale planning for utility is yet in evidence. After all, why should producers change their technique of making audio-visual materials so long as no one is complaining about the present product? It therefore behooves educators to initiate a liaison system now, outline and specify the type of materials desired, and offer to work with the producers in broad-gauge planning of production for utility. This should be done on a basis at least state-wide, and presented to the producers with the solid backing of local, state, and national educational associations. If producers of audio-visual materials then choose to ignore such requests and offers of assistance, the time is near when educational organizations should negotiate for the manufacture of audio-visual materials by the state. Granted the necessary budgetary provisions, state departments of education could very well establish laboratories and manufacture the materials according to specifications. It is incumbent upon educators to present a united front on this question and to learn precisely what position producers will take in regard to it. Certainly no one else will do it for them, and the needed audio-visual materials must come from one or the other of these two sources.

III. Development of Audio-Visual Teaching Techniques and the Training of Teachers for Effective Utilization of Audio-Visual Materials.

Early in the complicated process of planning and developing their training programs, both the Army and Navy learned that the perfection and production of audio-visual materials were not enough to assure efficient and successful instruction. First, for each tool, methods of utilization had to be developed—methods whereby the tool would best do the specific job for which it was designed and produced. Second, the instructors had to learn these methods and become proficient in their application.

For the solution of these two problems, the armed services had at their disposal the theories of utilization long expounded by educators, a sizable number of professional school men as instructors and administrators, and all the training schools of both the Army and Navy for a laboratory, or proving ground. From skillful and uninhibited exploitation of these potentialities, the development of teaching techniques was brought to a state of subtlety and uniformity, and the final success of the program was realized through the high proficiency which the instructors achieved as a result of methodical training both in the classroom and on the job.

A complete résumé of the audio-visual teaching techniques developed and practiced by the armed services has not yet appeared in print, and nothing less than a full volume on this subject alone can provide an adequate revelation of the achievements attained. Such a volume would require at least one chapter each on such advancements and innovations as the following: (1) the integrated use of both motion-picture training films and slide films on the same teaching subject; (2) the relentless and never-ending fight against unintelligent or careless use of films and the evolution of effective methodology for film utilization; (3) the skillful use of color schemes in posters, in training mock-ups, and on the blackboard; (4) the judicious incorporation of humor in training aids.

Realizing that the mere mastery of technical knowledge and skills did not necessarily qualify nor enable individuals to instruct others efficiently, the armed

Instruction in progress with a mounted model engine.

Official U. S. Navy photos

A demonstration in a class of radio operation.

services on numerous occasions planned courses of instruction in effective teaching methods for instructors. These courses placed special emphasis on the utilization of audio-visual materials and were centered entirely about demonstrations and practice in effective teaching methods developed for training films, film strips, objects, models, charts, posters, blackboards, and special devices. For influencing and assisting even a greater number of instructors, training manuals and detailed film guides were circulated widely. For further assurance supervisors and coordinators were actively engaged throughout the training programs in the actual training of instructors on the job. It was by these methods that the proficiency of instructors was progressively kept on the upgrade.

Much Left to Do in Civilian Education

What has been done in civilian education about the development of audio-visual teaching techniques and the training of teachers for effective utilization of audio-visual materials? The fundamental theories have been expounded by numerous competent educators. These measures have to a very large degree proved sound and fully capable of the accomplishments predicted for them. In fact, it was largely on these theories that the armed services relied for guidance and planning in implementing and expediting their successful audio-visual programs. Professional educators and administrators have politely agreed in general to the potential values of these theories. However, their active participation in the practical development and application of these theories has been, in most cases, too scattered and too limited to permit systematic coordination and long-range planning. Discussion panels have been held, conventions have met, and literature has been written. In all these it was agreed that the potentialities of audio-visual materials are great and even limitless, but the total of it all has usually been mere passive agreement followed by little or none of the active exploitation which is essential for real development and refinement of effective teaching techniques.

While the development of audio-visual teaching techniques has been brought at least to the theoretical stage, the adequate training of teachers for the effective

utilization of these techniques still remains an unsolved problem. In a recent nation-wide survey of audio-visual education programs,¹ one-fourth of the school systems contacted were sufficiently interested to participate. Of these, ninety-four per cent indicated that, in their opinion, the development of audio-visual education programs is hindered by lack of systematic training of teachers in audio-visual techniques. Few teachers have any clear-cut ideas of how an audio-visual program should be handled. Even the simple procedure of operating and caring for projection equipment is yet unknown by most teachers. All too few of even our larger cities have full-time supervisors of full-fledged audio-visual education programs. Only a handful of states require any specific training in audio-visual techniques for their teachers. Presumably the training of teachers in effective teaching methods is the charge of teacher-training colleges and universities. It is clearly evident that most of these institutions have not yet extended their training sufficiently to qualify teachers properly in the effective use of audio-visual teaching techniques. It is equally apparent that public educational systems in general have neglected the in-service training of their teachers in these techniques.

The Problem of Teacher Training

How can such training of teachers be achieved in civilian education? The development of audio-visual teaching has basically been achieved. No doubt refinements and perfection of these techniques can proceed to unlimited levels. Civilian education can achieve this development by effective utilization and practice, but this can be done only when the majority of teachers receive specific training for the audio-visual technique. To be effective, this training must be expedited in two places: (1) teacher-training colleges and universities, (2) supervision and in-service training on the job.

It is urgent that teacher-training institutions immediately initiate expert courses of instruction in the effective utilization of audio-visual materials. To permit

¹Alvin B. Roberts, "Audio-Visual Education in the Post War Period," *Educational Screen*, XXIV, No. 8 (October, 1945), p. 343.

persons to qualify for teachers' certificates without proper knowledge of how to use blackboards, bulletin boards, objects, models, charts, slide films, 16mm. motion pictures, and other aids is just as great a mistake and as professionally unsound as it would be to license physicians and surgeons without expert instruction in the use of medical formulae and surgical instruments. Present courses in educational psychology and the art of teaching are no longer sufficient to render teachers professionally competent. Basic knowledge in the use of the audio-visual tools which enable psychological laws and teaching techniques to be most efficiently applied can no longer be omitted without irreparable stifling of the teacher profession. The efficient training of future teachers can be achieved by initiating and requiring expert courses of instruction in the use of audio-visual aids for all teacher-candidates in colleges and universities.

It is urgent that the public school-systems—municipal, county, and state—establish adequate supervision of audio-visual instruction. This system of supervision must provide in-service training in the utilization of audio-visual materials for all teachers already on the job. It must provide the source and distribution of audio-visual materials as well as serve in the capacity of developer and promoter of ideas for new aids. Furthermore, the supervisor of audio-visual instruction is needed to provide the leadership which the audio-visual education program requires for its ultimate success. The training of present teachers for effective utilization of audio-visual materials can be achieved in civilian education by instituting adequate supervision and in-service training for all teachers already on the job. To postpone this action now is equivalent to denying at least the present generation most of the benefits of the advancements of audio-visual instruction developed during the war.

For an Effective Program of Audio-Visual Education

Here are some constructive suggestions for the operation of an effective program of audio-visual education.

First, there must not be any mistaken concept that the extensive use of audio-visual aids will liberate the classroom teacher from work. Just as in the case of new developments in medicine and surgery, so new and potent educational tools require greater skill and responsibility of the individual who is charged with their use. The value of these tools lies in the fact that they make subject matter more teachable, enrich the curricula, and promote efficiency and thoroughness in teaching. The real beneficiaries are the students.

Second, educators should remember that all audio-visual materials are of diminishing value, and may frequently become actually confusing, unless the following fundamental principles and practices governing their use are faithfully observed:

1.—Most motion-picture films are fully effective only when supplemented by key still pictures taken directly from the film. To focus attention for thought and discussion, to provide a pause for learning, each still picture must be skillfully spaced so as to embrace and recall all of the motion shown since the preceding still picture.

2.—All audio-visual materials must be tailor-made to fulfill the instructional objectives of the particular subject.

3.—They must be selected and presented at the right time to the right group of people.

4.—The teacher must evaluate them before and after using.

5.—The teacher must prepare the class to receive them properly.

6.—The teacher must follow them up with planned discussions, questions, and tests.

7.—The students must know what they are expected to learn from them and must be held responsible for it.

8.—The teacher must use them as an integral part of the instructional plan and not as something in addition to the regular class procedure.

9.—A clear distinction must be made between the use of entertainment films and instructional films.

10.—The teacher must use them for better purposes than to fill in time or to get a few minutes' relief from facing the class.

11.—Students must be able to ask sensible questions after a film showing.

12.—The teacher must know the film, both its advantages and its weaknesses, and must know how to answer most of the questions it raises in the minds of the students.

13.—Projection equipment must be kept in good condition and operated smoothly.

14.—Projection rooms must be properly ventilated and sufficiently darkened at the same time.

15.—The teacher must know how to center attention on the points that really "count."

16.—The teacher must know how to eliminate distractions.

17.—The film must be shown in an instructional setting.

Third, films must be regarded as something more than an instructional device to bolster existing conventional patterns in educational systems. In many cases new instructional tools point the way to more efficient and beneficial patterns.

Fourth, unanalytical enthusiasm and mere lip service favoring the potential values of films must be avoided and fought. It is easy for the public, the students, and the teachers to drop into this rut and temporarily fool themselves into believing that something worthwhile is being achieved when actually everyone's time is being wasted.

Finally, it must be recognized that audio-visual education, in addition to supplying valuable tools for teaching the conventional subject matter and the fundamentals on all levels, has also a broader mission in teaching basic desirable attitudes in understanding social, political, and economic changes as they constantly evolve in a dynamic pattern both at home and abroad. Agencies and interests outside the schools have already recognized this potent value, and public education is the only medium available to hold the line for a healthy balance in the future.

Improving Sound Film Technique With a Microphone

Some concise, straightforward arguments for use of the microphone in teaching situations.

JOHN L. DE BEER, Director
Audio-Visual Education
Glen Ridge, N. J., Schools

TEACHERS frequently criticize educational sound film because of the poor quality of the sound track. Among sound films now in use are many commercial subjects which have been revamped for school use. While the photography of these subjects is often good, the sound track is open to criticism. In many cases the narration is too fast and includes many irrelevant details which confuse rather than assist learning. Music is often added whose type and tempo does nothing but distract the listener. In many cases the vocabulary is far above the level of understanding of the group for which the film supposedly is intended.

Even with films produced specifically for teaching purposes by reputable organizations the vocabulary employed is such that the film is suited only to a certain level even though the visual contents could be used in other areas.

The addition of a microphone to the school sound projector provides a means of overcoming many of these handicaps. Wherever a poor sound track is encountered it can be switched off and the film projected with the teacher providing the narrative through the microphone. This is not as difficult as might at first be supposed. The teacher in previewing the film will have grasped the essential points to be taught. These are then outlined to the class as the film is shown at a rate and in the words best suited to the class's ability to comprehend. Many teachers do this now with silent films.

As a further refinement of this technique it will be found possible to mix the sound track with the teacher's narration. For example, in the preview it may be found that certain sections of the film sound track are adequate or contain sounds which are essential to the understanding of the lesson. At this point the teacher switches over to the sound track. When that section passes she can switch back to the microphone for further comment.

In this way it is almost always possible to use any film no matter how poor the sound. It is likewise possible to extend the range of use of a given film to classes where it would not otherwise have been used. Where the vocabulary is unsuitable, the teacher's wording is substituted.

This technique may be extended to embrace student participation. Pupils themselves may take part in previewing, preparing narration and showing the films. Here are many opportunities for speech training, exercise of correct diction, and development of poise.

A microphone is not too expensive an outlay. An inexpensive microphone without stand may be purchased as low as \$6 or \$7. A wiser purchase, of course, would be one of better quality with a desk or floor

stand and with an adequate length of connecting cord. Such an instrument may be had upwards of \$20. Several types of microphones are available including crystal, dynamic and ribbon velocity. The type suited to your sound equipment can best be recommended by the manufacturer of your projector.

Once it is purchased, many other uses will be found for this device. Silent film can now be accompanied by narration in a professional manner, either by teacher or by students. The public address system thus provided will be useful for announcements, assemblies, game, and dramatics. Radio programs can be produced which provide all the opportunities for speech training without the burden of providing costumes and props which are required for the conventional stage production. The voice amplifier will likewise be found useful in the language arts program through the detection and correction of faulty speech habits. Defects in speech are thus magnified and easily pointed out. If a good microphone is purchased it can become the first step in securing voice recording apparatus which can be more extensively used in the speech training program.

Best of all, however, is the greater freedom which this method provides in the wider selection and utilization of currently available sound films.

A third grader at Central school uses the microphone to explain a sound film.

Unexplored Areas in Visual Education

Abstract of address given at the EFLA convention in Detroit, April 23, 1946.

PRIOR to 1941 educational motion pictures might have been classified roughly into three categories: (1) films which provided *general information*, as, for example, one on the country of Mexico; (2) those which demonstrated a particular *skill*, such as pottery making; and (3) those which provoked *discussion*, in the development of attitudes, principally the Human Relations series by Dr. Alice V. Keliher. The armed forces produced thousands of the first two types, for indoctrination and for teaching specific skills required in innumerable military operations. The United States Office of Education also produced approximately five hundred films of the skill type to speed up the production of war materials.

During the war two new types of instructional motion pictures were developed. One of these is the so-called *provocative film*. It was developed by the armed forces, principally the Navy, to present a tactical problem exactly as it might occur under actual conditions. No information is given, and the class must work out a solution to the problem as presented. As yet no known films of this type are available for peacetime school use, though there are obvious implications as to its value in fields such as mathematics, science, and other subjects where problems can be presented pictorially. The other type developed during the war is the *attitude film*, designed to create a desired attitude through dramatic impact, such as the Army series, *Kill or Be Killed*, or the OWI films encouraging condemnation of black marketeering or absenteeism on the home front. The potentialities of this type of film for peacetime school use in creating favorable attitudes toward study habits, race relations, hygiene and the like are practically limitless.

In recognition of those potentialities, the Commission on Motion Pictures of the American Council on Education was formed in 1943 through a substantial grant by the Motion Picture Association. Results of extensive surveys conducted by the Commission indicated that new films should be produced first in the fields of democracy, geography, mathematics, and art; to be followed by films for health, teacher training, literature, English, reading, languages and science. Production of films in the first four subject-matter areas has been begun, under Committees of nationally known experts in each area.

The Democracy Committee has drawn up a comprehensive outline of needed productions under the following major headings: I. Freedom of Person; II. Economic Freedom; III. Political Freedom; IV. Freedom of the Mind; V. Social Freedom; VI. Freedom of Conscience; VII. Freedom and Justice for All; and VIII. Our Community. A course in World Geography, entitled "Widening Our Horizons," emphasizing the social and economic adaptability of peoples to their environment, has been defined by the Geography Committee. In the field of art, the Committee is preparing

GARDNER L. HART, Director
Commission on Motion Pictures
Yale University, New Haven, Conn.

film objectives, stressing skills such as painting and sculpture, and appreciation of the elements in art such as perspective, line, color and proportion in home decoration, dress and business. Surveys conducted by the Mathematics Committee reveal that the greatest challenge to film production in this field is on the elementary level; the program now being set up stresses motivation as well as direct teaching.

The procedure is uniform in each area. Research personnel of the Commission work out for each selected topic the specific objectives, a statement of the subject material to be covered, and references which provide necessary background for a story treatment. When these data have been evaluated by the Commission, the project is assigned to a story treatment writer who prepares the film story in narrative form. The treatment is then re-evaluated to determine whether the objectives are attained. It is next turned over to a professional script writer who translates the narrative into the specialized form of the shooting script. From the script a "story board" is prepared. The "story board script" is a type of shooting script arranged in three parallel columns: (1) the narration or dialogue; (2) a drawing of the proposed image or action to match the narration; and (3) accompanying camera direction. "The story board" is examined by the Commission and, following its approval, it is made available to producers. Thus the production starts.

Educators must play the major part in the selection of the topics to be produced, the subject matter to be presented, and the educational specifications which the picture must meet. The producer then begins to draw on his special talents, working closely with the educator to insure that the best possible picture is made both from the educational and technical points of view.

In its efforts to make available to all educational producers the best plans and educational specifications for films, the Commission is evaluating and experimenting, under actual classroom conditions, the educational effectiveness of such elements of cinematography as the use of different types of sound, color, humor, dramatic techniques, and animation and models. In relation to each production, experiments are planned to determine the most efficient means of promoting motivation and student participation. To date, the utilization of those elements cited above and the development of motivation and participation remain an almost unexplored area of educational measurement. Through its experimentation, the Commission seeks the solution to those problems and hopes to establish standards for further development in visual education.

Training Prospective Teachers in Making and Using Visual Aids

*Detailed outline of a summer course
in Visual Technique for Teachers*

EARLE S. COLLINS
State Teachers College
Hyannis, Massachusetts

AS a result of a strong conviction that students going into teaching should know more about making and using their own visual aids, I established the one-semester course listed as "Photo-visual Aids to Teaching," open to juniors and seniors. The course is organized almost entirely on the project-laboratory basis, with very few lectures. Students learn by actual experience in the field or darkroom how to use principal kinds of cameras; do their own developing, printing and enlarging; make their own lantern slides; and operate all kinds of projectors—still, standard, opaque, motion picture (silent and sound). They also learn the current sources of all kinds of visual materials now available to the teacher for classroom use.

Students are expected to correlate their projects with their practice-teaching at the Hyannis Training School, photographing pupil activities there, and supervising the making of those visual aids within the scope of the ability of elementary school pupils—such as the hand-made lantern slides, stereographs, and the collection of pictures for the opaque projector.

This course has not been previously given at the college, although some of the items incorporated in it have been treated in science-methods lectures and demonstrations. It is my belief that two semesters, or a full year of treatment, would be needed to cover adequately the very broad field of audio-visual education; to insure an attitude of confidence on the part of young

teachers in their ability to make or select, and use judiciously and effectively, the great diversity of visual aids now available to the modern educator.

"Photo-Visual Aids to Teaching."

Objectives of course: to inculcate in prospective teachers an appreciation and understanding of

- (1) the growing importance of visual education in schools;
- (2) those photographic processes an educator can advantageously use, either in making his own visual aids, or directing student activity into those channels;

Project work at the training school.

Copying, using plate-back camera with double extension bellows.

- (3) the cultural and avocational value of improved picture taking;
- (4) how to find and use appropriate photo-visual materials;
- (5) proper techniques in using such optical devices as cameras, balopticons, filmopticons, miniature projectors, sound-on-film projectors, opaque projectors, etc.

Topics covered (work largely of a project nature, students carrying out field, laboratory, and darkroom work individually or in small groups):

- I. Pinhole photography, (a) construction of pinhole camera; (b) loading with cut-film; (c) making exposures; (d) developing by tray; (e) printing by contact.
- II. Construction and operation of conventional cameras, box and roll-film type: (a) essential parts of cameras and functions; (b) kinds of film available and properties; (c) kinds and properties of lenses, meaning of f. number.
- III. Kinds of cameras—advantages and disadvantages—box, folding (fixed focus); focusing models; cut-film double-extension bellows type; reflex; miniature.
- IV. Exposure and processing of film: (a) Gauging original exposure; (b) composing picture; (c) preparing solutions; (d) tray and tank developing; (e) Judging negatives and determining kind of printing paper appropriate.
- V. Enlarging: (a) advantages; (b) the enlarger, essential parts and functions; (c) operation; (d) exposures; (e) grades of paper; (f) solutions; (h) local control in printing; (i) cropping; (j) washing, spotting, drying, mounting prints for exhibit.
- VI. Making of lantern slides (standard size, $3\frac{1}{4}'' \times 4''$): (a) hand-made lantern slides on etched glass,—silhouettes, crayon and ink-colored; (b) photographic slide by contact print-

- ing; (c) by projection; (d) solutions, developing, fixing, drying; (e) finishing slides,—taping, masking, cover-glasses; (f) projecting slides,—parts and functions of lantern, operation and care; (g) commercial slides,—sources and ways of using.
- VII. Photography using flash and flood bulbs: (a) arrangement of lights; (b) exposures; (c) arrangement of subjects for story-telling effect.
- VIII. Copying or reproducing: (a) lighting; (b) use of process film, loading film-holders for plate-back cameras; (c) focusing double-extensions bellows camera; (d) copying with roll-film cameras using close-up lens; making prints or transparencies from copy-negatives.
- IX. The 35 millimeter or miniature camera: (a) advantages and disadvantages; (b) kinds of capabilities; (c) loading of bulk film; (d) operation of camera; (e) tank development with fine-grain developer; (f) emulsions available in 35mm film; (g) enlarging from small negatives; (h) accessories used with miniature camera—rangefinder, filters, close-up lenses, synchronizer.
- X. The 35 millimeter film-strip: (a) the still projector,—parts and functions, operation and care; (b) use of film-strip attachment to opaque projector; (c) double-frame film-strips made from negatives exposed in 35mm camera; (d) sources of commercial film-strips and application to classroom use; (e) advantages and disadvantages of filmstrips.
- XI. The 2" by 2" lantern slide: (a) in monochrome, printed on 35mm positive film, from negatives exposed in 35mm camera; (b) reduction transparencies from negatives taken in conventional cameras; (c) copying onto 35mm positive film, using close-up lens on 35mm camera; (d) masking, covering, binding, labeling, cataloging, storing slides; (e) Kodachrome or natural color slides,—for general out-of-door photography; indoors, close-ups on flowers or specimens, sources of commercial slides, illustrated lectures on all aspects of photography; (f) the 2" by 2" slide compared with the standard slide.
- XII. The stereoscope and stereographs: sources and uses.
- XIII. The 16 millimeter movie in teaching: (a) silent films; (b) sound films; (c) sources; (d) care and operation of projectors.
- XIV. The opaque projector or reflectoscope.

List of projects which must be successfully completed by all students in the course:

1. Making pinhole camera, exposing, developing, printing from several pieces of cut-film.
2. Study of properties of lenses in the laboratory.
3. Examination in detail of different types of cameras and focusing of images on ground-glass.
4. Exposure of several rolls of film in conventional camera, developing and printing.
5. Enlarging from best negatives and mounting prints.
6. Making several hand-made lantern slides on etched glass and coloring.
7. Making several photographic slides.
8. Copying diagrams or pictures useful in teaching and making up as transparencies.
9. Flash or flood-bulb photography of project activities of pupils in the training school.
10. Operation of all types of cameras and projectors available.
11. Loading 35mm camera with bulk film, taking a number of exposures under a variety of conditions, developing, enlarging, making up as 2" by 2" slides using positive film.
12. Copying teaching pictures or diagrams on 35mm positive film, using close-up lens on 35mm camera.
13. If available, using Kodachrome or natural-color film.

“Threshold of a Decisive Decade”

*A Review of Eric Johnston's Annual Report as President of
The Motion Picture Association of America, Incorporated*

THE first report by the new President of the erstwhile “Hays Organization” displays a most encouraging breadth of vision and depth of feeling for the broader social uses of the motion picture. The very first paragraphs call attention to and explain the change of the organization’s name* and its wider outlook—

“By calling it the Motion Picture Association we signify that our interests extend to every phase and function of the motion picture. . . .

“I look upon the medium of motion pictures as one source of many values, one instrument of many services. It seems to me that we must concentrate upon what is common to all uses of film and screen, if we are to find a common unifying purpose for all the groups which ought to work side by side for the improvement of motion pictures. . . . I for one am interested in motion pictures of every type and every use, theatrical and non-theatrical. The war demonstrated the value of them all. In all forms, lengths, and widths, the motion picture served as a means of communication, combining fiction and fact, entertainment and information, inspiration and education. . . . In the

*Heretofore “Motion Picture Producers and Distributors of America, Inc.”

By WILLIAM F. KRUSE, Chairman
Photographic Industry Co-ordinating Committee

years ahead we must meet the challenge to utilize films of various kinds, in various lengths and widths, for various audiences.”

No champion of the non-theatrical film will question his reservation, in this connection, that this new development must be fostered “without injustice to existing investments in production, distribution and exhibition, for we know that films made for theatres yield the bulk of the revenue which enables the industry to pioneer in these new fields.

The first six of the scant twenty pages in the report are devoted almost entirely to a discussion of the non-theatrical film. The ground is cut from beneath the “entertainment only” critics by an old quotation from Will Hays to the effect that “it would be just as silly to use language exclusively for writing novels as it would be to use motion pictures exclusively for theatrical entertainment”. There is praise for the mounting skill of the documentary film producer able to “capture and hold the attention of the same theatre audience which, as the war progressed, first tolerated, then accepted and finally applauded films of this sort.”

Johnson reviews the steps taken by his organization over a span of many years: the human relations excerpts released by the Progressive Education Association (1936), the \$50,000 grant for the selection of educationally useful shorts through Mark May's committee (1937) and their subsequent release (1939) through Teaching Films Custodians, now promised a broader field in handling condensed versions of outstanding cultural features. Then came the \$125,000 grant to the American Council on Education for a 5-year survey of gaps in the coverage of present classroom films, resulting in the completion of 75 film treatments, none of them thus far shot. This year another \$50,000 has been allocated to actual production of three "experimental" classroom films, "without any expectation of or desire for profit", but on a level that would make the production of similar films commercially possible.

Here's a sentence from the report that is likely to be quoted by our copy writers as a welcome variant from the well-known Chinese proverb: "There is no subject in the whole curriculum of studies, at elementary, intermediate or advanced levels which would not benefit pedagogically from the use of films integrated with other means and methods of teaching". But this is not the whole educational story. Mr. Johnston points out that "The educational use of films is by no means limited to classroom instruction". Again citing war-born experiences, he mentions adult education, factory, school, Red Cross, civilian defense, foreign language groups, and mass education abroad—"Films for theatres, films for schools, films for factories, films for churches, films for labor unions, films for community forums, films for public agencies—all these are within the area of our attention". He concludes this section thus: "The educational promise of motion pictures has been demonstrated at the very moment in history when the social need challenges us to make good that promise with all speed. And we shall". To which every user and protagonist of the 16mm. educational or community-purposed film will echo a fervent "Amen".

If good will alone could bridge the gap that still divides the efforts of theatrical and non-theatrical wings of "the motion picture", here would be ample building material. But more than good intentions are needed as paving blocks for these uphill roads. The forward-looking majority, at least, of those active in the various organizations that function in the two fields, would welcome a chance to implement this common desire to work together for the common good. The movies' theatrical wing is well-knit, with Johnston's organization at the head and the various organized exhibitor groups and certain public relations affiliates rallying behind. The non-theatrical wing, too, though necessarily grouped into a large number of separate organizations, reflecting the greater diversification of interest areas, is also more homogeneous than ever before. Several trade organizations, including the Allied Non-Theatrical Film Association, the Educational Film Library Association, the National Association of Visual Education Dealers, the National Microfilm Association, the Photographic Manufacturers and Distributors Association, and the organizations of pho-

tographic dealers and photofinishers, follow a joint public and industry relations policy under the guidance of their Photographic Industry Co-Ordinating Committee. Several of these trade bodies have joined with such consumer groups as the American Library Association, the National Education Association, the National University Extension Association and others, to form the Film Council of America, with a local and a national organizational program of uniting all elements (commercial, professional and consumer), interested in any phase or form or application of photography, in any of its branches.

In view of the interest in "every" phase and function of the motion picture", so emphatically expressed in President Johnston's report, should not the Motion Picture Association of America participate with these many other specialized groups on matters affecting the broader goals and common services of the motion picture? This could be done through a broadening of the Photographic Industry Co-Ordinating Committee, or the Motion Picture Association might issue or underwrite a call for a still broader association of Associations, to constitute a clearing house for all motion picture matters of major public interest. One field of activity for such a motion picture "Senate" might well be the encouragement of greater support for culturally outstanding film forums for the broad non-partisan discussion of domestic and international affairs.

The Motion Picture Association's own machinery for self-regulation, as a substitute for police or political censorship, might be made more effective and at the same time more liberal if there was a chance of recourse to a top-level public jury which such a "Senate" could provide. Perhaps the weakest spot in the Johnston report was the confinement of discussion of self-regulation largely to violators of the Code, overlooking the possibility that the Code itself might be used to stifle or at least constrict the screen's freedom to grow in the very direction charted by the Johnston report. The Code was devised in order that the Industry might better serve its Public. If, in the normal operation of this self-regulatory apparatus, any given ruling should be challenged, reference of that issue (at least for counsel) to a responsible group competent to speak for the Public Welfare, might prove very helpful.

Regardless of the limits the Motion Picture Association might incline to impose upon such collaboration with other trade and consumer groups, some sort of machinery for collaboration in the general field of the motion picture and its public would seem to be as necessary now as is the United Nations Organization in that of international affairs. There are undoubtedly some in the theatre ranks to whom this public recognition of the growing importance of the non-theatrical field must sound like sheer heresy. There are, too, some rather influential voices in the educational and social film worlds who have become soured on the very thought of working with "Hollywood". But there are skeptics, too, who see no hope in international collaboration. Good will and high purpose, so well expressed in the Johnston report if carried out into mutual action, will dispel all remaining doubt and advance the common interests of our whole industry and augment its services to mankind.

The Curriculum Clinic

Selecting Films to Meet Curriculum Objectives

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

FOR the past three afternoons I have been previewing sound motion pictures for use in primary grades—forty-four of them altogether. But I was not reviewing them alone; in fact, what I thought about the pictures didn't really matter for I was by choice, a non-voting member of a committee of six. It was the other members whose opinions really counted—a first, a second, and a third grade teacher, a teacher of special classes, and a supervising teacher. Substitute teachers took over the classrooms for these teachers while they were using their invaluable experience to determine which motion pictures the Board of Education should acquire to best serve instructional needs in the primary grades of Rochester schools.

The evaluation form that served as a guide was as simple a one as we could devise, yet we believe it was effective. Here it is:

Preview and Evaluation of Motion Pictures for Use in Primary Grades May 21, 22, 23, 1946

From the films to be previewed we want to select the very best—in terms of their probable usefulness in primary grade instruction. Those pictures that are rated highest by the previewing committee will be acquired by the Board of Education.

RATING—Indicate your overall judgment of the film as

- X—an excellent film, closely related to teaching needs, and one that will be continually useful
- G—a good film, one that might be used, but generally supplementary in nature
- P—a poor film, one that would have little or no value in teaching

Will you also please indicate the specific grade level for which the film is best suited?

REMEMBER, WE ARE NOT EVALUATING MOTION PICTURES AS MOTION PICTURES, BUT AS MATERIALS FOR ACHIEVING CURRICULUM OBJECTIVES

Film Title	Grade Level	Rating
------------	-------------	--------

Then listed in the first column were the forty-four films to be rated. To get this list of forty-four, we had scanned dozens of film catalogs including the comprehensive Educational Film Guide and had culled out some sixty titles. This list with a brief description of each film was sent to all elementary schools to gather teacher judgments of those titles that seemed to correlate best with teaching needs. This rough screening cut the list to forty-nine, and the nine producers concerned were able to furnish screening prints of all but five of the subjects requested.

Did the plan work? Were we able to agree on the films best suited to our needs? Will we follow the same plan in the future? Such questions can only be answered with an emphatic YES. Eighteen of the pictures reviewed were rated "X" by all five teachers; five pictures were rated "X" by four and "G" by one; four were rated "X" by three and "G" by two; prints of all twenty-seven of these will be acquired, and a

sufficient number of prints so that teachers will be able to use them when they need them most.

This previewing procedure is one that has been gradually evolving throughout the current school year. Last fall we recognized that the time had come for rebuilding our film library. We needed to withdraw the subjects and prints that had become obsolete and deteriorated through years of use. We needed to rethink our audio-visual service in terms of changed curriculum and changing needs. We needed to bring our audio-visual materials up-to-date in order to be ready to realize the instructional advantages that had been proven when best materials are used in the best possible way.

When the budget hurdles were passed—and they were difficult hurdles—we decided that we should concentrate our attention in certain subject matter and grade level areas. So far, three of these areas have been covered. For music, thirty films were previewed and twelve selected. For high school science, a total of seventy-six films were previewed by five different committees—8th Grade Science, 9th Grade, General Biology, Chemistry, and Physics. In addition all science teachers re-evaluated (based upon their experience in using them) all of the silent and sound pictures already available to determine which of these continue to be of most value. A total list of fifty-two old and new titles was drawn up for immediate acquisition.

Now what are some of the conclusions that can be drawn from all this evaluation and re-evaluation experience? It seems clear, that at least for a school system like ours, films must be previewed before acquisition. Existing film descriptions and evaluations can at best be only a guide to selection and cannot be depended upon for final judgments. Previewing committees should consist of classroom teachers, who know from first-hand experience what the needs are. They should be allowed time from their regular teaching schedule to serve on such committees. Another conclusion is that the best results can be achieved when many films are review intensively—comparisons sharpen judgments. We also believe that evaluation forms need not be detailed and ponderous; that teachers can make a dependable answer when asked, in effect, "Is this a motion picture which you could use advantageously in your teaching?"

About the motion pictures themselves, some additional conclusions can be stated: Already available today are many excellent instructional pictures that many more school systems should acquire and use as an integral part of their teaching procedures. Just because a picture has a recent copyright date, that is no assurance that it is a most useful film. Many films produced ten or more years ago have continuing instructional values. There are indications in some of the current productions of creative imagination, technical

excellence, and curriculum values, that far surpass pre-war productions.

I should like to single out for special citation three motion pictures from all I have previewed during the current school year (and there have been many in addition to those reviewed by committees). Now this is entirely a personal and subjective judgment, but there are three outstanding films that brought me a new thrill for what they promise for the future of audio-visual materials in instruction:

WHAT IS FOUR (produced by Young America Films, Inc.)—because it brings the greatest potential power of the medium to bear upon the problem of teaching better a fundamental tool subject; because of its psychological and pedagogical excellence; and because it demonstrates forcefully that even concepts which do not include motion as an essential factor, are fit subjects for instructional motion pictures—the pow-

ers of the motion picture to present material in carefully studied sequence, and to command viewer attention may alone justify the use of the medium.

JULIUS CAESAR (produced by British Information Service)—because it brings new life and meaning to one of the great classics of English literature that has traditionally been a part of our English curriculum, but which now no longer needs to be taught traditionally; and because of its technical excellence.

MARY VISITS POLAND (produced by International Film Foundation Inc.)—because of its creative, ingenious device, which puts the commentary into the words and lips of a youngster, and makes it most convincing and comprehensible; because it deals sympathetically with people as people, succeeding admirably (so it seems) in its major objective of developing understandings of other people; and because of its artistic integrity.

For Distributive Education Courses

T EACHERS of Distributive Education and Retail Selling have long realized the value of visual aids as teaching devices. The techniques of selling, merchandise information, and economic problems, are ably portrayed in films released by manufacturing firms and sales agencies. The following partial list of films and firms may help teachers of these subjects locate teaching aids which are supplied free of charge by the firms involved. A charge for postage is the only money required.

16 mm. sound film

- It's The Little Things That Count*—Bates Mfg. Co., 30 Vesey St., N. Y. C.
- How to Make a Sales Presentation Stay Presented*—Modern Talking Picture Service, 9 Rockefeller Plaza, N. Y. C.
- How Demonstrations Make Sales*—Ray-Bell Film Co., 2269 Ford Road, St. Paul, Minn.
- A Gift for the General*—Pepperell Mfg. Co., 166 State St., Boston Mass.
- Alaska's Silver Millions*—American Can Co., 230 Park Ave., N. Y. C.
- Battle of the Age and Dog Daze*—Westinghouse Electric Co., East Pittsburgh, Pa.
- Bringing Back the Customer and Bye-Bye Buttons*—Talon Inc., 71 W. 35th St., N. Y. C.
- Know Your Money*—U. S. Secret Service, Washington, D. C.
- Ca-Vel-Code*—Collins and Aikman Corp., 200 Madison Ave., N. Y. C.
- Minutes Are Pennies*—Forum Films Inc., 649 S. Olive St., Los Angeles, Cal.
- Quality Control Plan*—American Viscose Corp., 350 Fifth Ave. N. Y. C.
- Story of the Fuller Brush*—Castle Films, 135 South La Salle St., Chicago, Ill.
- The Lady Walks*—Lockwedge Shoe Corp., Columbus, Ohio.
- Two Cents Worth of Difference*—Eberhard Faber Pencil Co., 37 Greenpoint Ave., Brooklyn, N. Y.
- Two Salesmen in Search of an Order*—Y. M. C. A. Motion Picture Bureau, 347 Madison Ave., N. Y. C.
- Fashion's Favorites and Facts About Fabrics*—E. I. Du Pont DeNemours Co., Wilmington, Del.

16mm. silent film

- A Woolen Yarn and Land of Cotton*—General Electric Co., Schenectady, N. Y.

Art of Glove Making—Rowland Rogers, 74 Sherman St., Long Island City, N. Y.

From Mine To Consumer—American Brass Co., Waterbury, Conn.

How All Wool Blankets Are Made—Elmans Blanket Co., N. Y. C.

35 mm. sound slide film

Closing Sales By Helping Customers Buy—Dartnell Corp., 4660 Ravenswood Ave., Chicago, Ill.

Coopers Underwear Selling—Markovitz Brothers, 321 Market St., Philadelphia, Pa.

Eight Billion Yards—Pepperell Mfg. Co., 160 State St., Boston, Mass.

Facing the Facts and It's Up to You—Lever Brothers Co., Cambridge, Mass.

New Figures for Sale—Talon Inc., 71 West 35th St., N. Y. C.

Sizzle Selling and The Chemist and The Customer—Proctor and Gamble Co., Cincinnati, Ohio.

Silent Slide Film

Art of Rug Weaving—Rowland Rogers, 74 Sherman St., Long Island City, N. Y.

Cotton and Gloves, Lovely Linen and Romance of Perfume and Silks—Educational Still Film Service, 101 West 31st St., N. Y. C.

This is but a sampling of all the material available. To utilize these aids to the fullest extent, the school should have a room equipped with a 16mm. sound film projector, a 35 mm. sound film slide projector, a still film projector, black shades, screen and A.C. current outlet. All film lessons should be preceded by a preparation lesson in which the students are told what to look for. This will necessitate a pre-viewing of the film by the teacher. The showing should be followed by a lesson, on what the students have obtained from the film with careful preparation, discussion and follow-up.

Used to their fullest extent, these visual aids will give an impetus to learning on the part of the student that you previously would not have thought possible. Start using them today and give your class the advantages possible through the use of these devices.

Philadelphia, Pa.

School Made Motion Pictures

Building a Recruitment Film for the Summer Session

FRANKLIN T. MATHEWSON
State Teachers College, Oneonta, New York

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

ALWAYS a believer in *making* as well as *using* visual aids, the writer requisitioned 16mm. color film months in advance for his 1945 summer course in visual education. We expected to use the film in photographing some phase of unit-teaching in the demonstration school, thus giving the teachers—students in the visual education class—a practical opportunity to write script for an educational film and gain experience in the the problem of actual production. For, with film again available, more and more of this will be done and the experience will have high practical value. However, the film was late in arriving and, as the demonstration school was scheduled for the first three weeks only, we were forced to change our plans to “a recruitment film for the summer season.”

Organization

At a staff meeting the writer screened a public relation film, which he had previously made for a high school, to show some of the possibilities. After a discussion the director appointed a faculty advisory committee composed of specialists from the fields of radio script writing, dramatics and art, representatives from various departments, and the chairman of the social and recreation committee. We asked for and received suggestions from the faculty and from members of the visual education class. Our plans were informal. The title was the most difficult and the picture was well under way before we evolved “Summer Session Highlights”. There was not time to prepare a script, but we listed the events we wanted to show and something of the sequence desired. Much of this had only to be modified slightly from the suggestions received. It’s difficult to anticipate when the sun will be shining at an outing, or what must be done about action taking place in shadow too deep to be photographed.

The Picture

The picture opens with a teacher at her classroom desk, examining a catalogue. A colorful pupil-made mural is behind her and a close-up reveals the catalogue to be that of State Teachers College, Oneonta, New York. Turning a page, she looks at her pocket-book, and nods “yes”. Then a bus labeled “Oneonta” rolls down the main street of the town. White fleecy clouds in the sky. The bus pulls up to the curb. With other teacher passengers she alights and smiles happily at recognizing a friend in the sidewalk crowd. Not all teachers come by bus. Two others arrive, one in a private automobile, the other by train. The bus line and railroad are identified in close-ups. Everybody’s happy, and the “girls” rush to give each new arrival a true feminine demonstrative greeting. It is good to be back at the summer session and see former friends again. “Oneonta” suddenly appears in bold type on a map

of New York State and a cross-valley shot makes good its boast, “The City of the Hills.” The beginning of the session is implied by the cloud-crowned shot of the campus and the traditional raising of the flag by the superintendent of buildings and grounds. (This is the shot for your polarizing filter!) From within the building, with the arched doorway as a frame and the hills across the valley as a background, students are photographed as they come up the main walk, climb the steps and are silhouetted as they enter and turn toward the registration room.

The director of the summer session arrives and a medium close-up shows him greeting and chatting with a group of students on the steps. About two-fifths of the four hundred-foot picture is devoted to this introduction, yet the actual registration and other preliminaries are not shown. It is expected that succeeding summers will add chapters which will supply such omissions and make “Summer Session Highlights” complete.

Some of the activities portrayed last summer include the earth science class on a field trip—a speech class using a sound recording device—weaving and pottery formation—painting a landscape (with both the painting and the original landscape shown in comparison)—visiting instructors from foreign lands in costume—the bicycle club—faculty and student softball—the post-session outdoor camping education group—and one of the big outing picnics. This last was a field day for the cameraman too, with smoke curling upward from outdoor fireplaces, hamburgers frying, a close-up of their turning, and informal shots of groups chatting and eating, particularly that line in front of the table where a close-up shows the cutting of the black-seeded red watermelons.

The film closes not with the traditional “The End”, but with a title “To Be Continued—Next Summer”. This title is held while the shadow of a hand appears from each side uniting in a friendly clasp. We are ready for the next chapter this summer.

After the editing and titling, in which we used raised white plaster letters pinned on a colored fabric-covered background the picture was duplicated in color and is now distributed by the secretary to the president, Dr. Charles W. Hunt.

Results

What could be better than to have your friends *ask for your publicity and show it for you* to their friends who are your prospects? The film was released in the late winter, notification was given in the alumni paper and by letter to the members of the visual education class of 1945. Many teachers (summer school students) appear in the film. They like to see themselves and can get the film free from the college. The picture is rather beautiful in color, so they naturally invite their

teacher friends to see the "show", many of whom are prospective students for the coming summer. We believe it is a "natural" in summer-school publicity, and wherever shown it is a powerful reminder not only of Oneonta but of the "Course in Visual Education."

Question Box on Film Production

QUESTION: On about three hundred feet of film I have different shots of five groups of participants in some athletic events. Each of these groups expressed a desire to get a duplicate copy of the footage. Do I have to order reversal prints for each group? What is the approximate cost per foot? The original is in black and white. It is possible to duplicate my own at home?

ANSWER: A black and white reversal "dupe" can be obtained for about five cents per foot. To get five reversal prints at that rate the total cost would amount to seventy-five dollars. You can get positive prints which will project as sharp as the original by proceeding as follows. Order a fine grain negative made from the original. The cost of this negative is about five cents per foot. From this negative have the laboratory make five positive prints. The cost of each positive print is two cents per foot. Thus, by using the negative to positive method of printing, you bring the total cost of your duplicates down to forty-five dollars—a net saving of thirty dollars, in addition to which you still have a master negative for your file.

It is not too difficult to duplicate films at home. By removing your one inch lens from your camera, your instrument becomes an optical printer. Take about forty to fifty feet of your original film—footage showing even exposure, that is to say avoid fluctuating areas of illumination. Holding the emulsion side of the raw negative film against the emulsion side of your original, wind both clockwise in the empty 16mm camera spool. Be sure that your negative film winds on the outside with its shiny side outward. This will bring the shiny side of the original nearer to the source of light. All this should be done with about two feet of leader and two feet of trailer for both films. Remember, too, that panchromatic film should be handled in total darkness. After spooling carefully—sprocket holes must match—the film may be threaded under subdued light, the same way as threading a single layer of film.

Exposure comes next. Point the camera's aperture against a number one photoflood lamp held about twelve to eighteen inches away. A trial exposure at various distances will reveal the optimum distance for each roll of film. Run the entire film through while holding the camera steady against the source of light.

In a large tray pour at least two quarts of fine grain developer. In another tray prepare about an equal volume of hypo. Open the camera in total darkness. Separate the original film from the negative. A pair of rewinds properly placed can facilitate this operation. Thread the negative on to a homemade developing drum (see February 1944 column in Educational Screen) and develop in total darkness for about twenty minutes. Wash and fix in hypo. Wash in running water for about fifteen minutes before hanging film to dry. (A type of developing tank used by the army to develop 16mm film in daylight has recently been marketed by the Morse Instrument Company.)

Making the positive print is the last step in this process. Using the dried negative instead of the original reversal, you spool it with a raw positive film of equal length, emulsion side against emulsion, and repeat the entire procedure. D. S.

Report from Holland

SOME film producers turn out pictures just to make a handsome profit, some use films to glorify their products—material or ideological, but leave it to the Dutch to find a novel reason for introducing their own films into about a thousand of their public schools.

The Nederlandsche Onderwijs Film (Dutch Educational Film), a semi-official school film organization, was founded in May 1941, by its director, Mr. A. A. Schoevers, whose one burning desire was to prevent the Germans from introducing their Nazi propaganda films into the Dutch schools. According to the report, which came to the attention of this department, "the plan has been completely successful, as not a single German 'educational' film has been shown in the Dutch schools during the occupation."

"In the meantime", the report continues, "the Dutch Educational Film, composed of a pedagogical and technical section, planned a complete film program for the Dutch schools with the help of well-known authorities in the fields of geography and biology. A complete technical staff was trained in the preparation of the scripts and the direction and shooting of this particular type of film. The distribution of these films in the schools, the instruction of teachers in the use and care of projectors, and the way in which they were to give the lessons with the help of the films, was done by a special department organized for this purpose." In less than three years, four thousand teachers acquired this new skill of conducting film lessons regularly. Over 100,000 children, who might have been exposed to the Nazi virus, were thus given this visual as well as spiritual prophylaxis. By August 1944, 34 films, all excellent, had been released. Here is a list of some of their outstanding films: *Sand and Heath, Field and Woods, Chairmaking, Charcoal-Burners, Bark Stripping, Wheat Crops, Skating, Cows in the Stables, Cattle Market, From Green to Bread, Fresh Water Fishery, Sugar Factory, Lapwing, Peat Fields, Cheese, Glass, Bulb-Growing, Pottery, Butter and Milk, Seagull*. In the company's catalogue each of the above films is accompanied with a terse and illuminating description. As a sample, we give one entry complete—"Wieringermeer. This is an impressive little film showing the results of 10 years work to regain land from the sea. Within this time it has been possible to make this place rich in cultivated ground, with roads, bridges, and a limitless extent of fields. It is a monument to Dutch perseverance. In one day the Germans destroyed it all!"

If the thrifty Dutch can turn out such splendid educational films in periods of adversity, we certainly ought to strive to make the fullest use possible of all our equipment, resources and talents to keep America in the lead in visual education.

REMINDER: Have you sent in your completed Questionnaire on school-made films? You owe it to the rest of our readers who are waiting for the tabulated report. D. S.

Classroom Teachers A

TEACH-O-FILMSTRIP

Meet **BETTY AND BILLY**...

... the stars of *Living Together in the U. S. A.*, our first black and white TEACH-O-FILMSTRIP production. Betty and Billy appear in all of the 8 Filmstrips comprising this series, designed for use in Social Studies classes in the Middle Grades.

These TEACH-O-FILMSTRIPS are particularly valuable for classroom use because each . . .

- ... is a self-contained teaching unit
- ... is a tailor-made job with 1/3rd original photographs
- ... was conceived, planned and written by experienced classroom teachers
- ... will be accompanied by a functional Teaching Guide which will include a photographic reproduction of the Filmstrip in its entirety.

LIVING TOGETHER IN THE U. S. A.

OUR COUNTRY, ITS RESOURCES AND ITS WORKERS

THE STORY OF OUR FOOD, Parts I-II

HOW WE ARE CLOTHED

OUR HOMES AND OUR COMMUNITIES

COMMUNICATION IN OUR COUNTRY

TRANSPORTATION IN OUR COUNTRY

PLAY AND RECREATION IN OUR COUNTRY

Price of each 45-frame TEACH-O-FILMSTRIP, including FREE Teaching Guide: \$2.50

Now Available for Primary Grades

4 TEACH-O-FILMSTRIPS IN COLOR.

These TEACH-O-FILMSTRIPS contain only original drawings in vivid colors, which, when combined with words, provide direct word-picture association. Each TEACH-O-FILMSTRIP will be accompanied by a Teaching Guide.

STORY OF HEIDI—44 Frames

FUN WITH MITZIE—41 Frames

THE LOST DOG—40 Frames

LET'S MAKE A POST OFFICE—38 Frames

Price of each TEACH-O-FILMSTRIP story in color, including the FREE Teaching Guide: \$3.50

TEACH-O-DISCS

TEACH-O-DISC Classroom Recordings are favored by teachers in Elementary, Junior and Senior High schools as an invaluable auditory aid and adjunct to courses in English, Speech, Literature, Drama, History and Social Studies because they...

- .. illuminate and interpret what is read
- .. stimulate the use of good spoken English
- .. create the habit of good reading
- .. lead to wider reading of good literature
- .. bring history to life
- .. arouse student interest
- .. are a relaxing change from classroom routine

TEACH-O-DISC Classroom Recordings bring you a carefully selected library of the great classics of English literature by Longfellow, Dickens, Tennyson, Goldsmith, Browning, Shakespeare, Scott and others; as well as dramatizations of momentous events in American History, written by Marquis James, the noted Pulitzer Prize winner.

The Subjects—The Courtship of Miles Standish (202), Paul Revere (152-153), Drafting the Constitution (159-160), A Christmas Carol (130-131), Evangeline (123-124), Man Without a Country (101-102), Patrick Henry (151-152), Macbeth (103), etc. — have been selected from the syllabi of the various states, with the advice and assistance of teachers and school administrators. These selections have been vividly and accurately interpreted by professional actors.

TEACH-O-DISCS are 12-inch, double-faced records of 78 r.p.m. prepared especially as a teaching medium for school use. They may be played on any standard phonograph or transcription machine. TEACH-O-DISCS complement the textbooks and courses of study; they are not a substitute.

There are now available 75 TEACH-O-DISCS (134 titles) for use in Elementary, Junior and Senior High Schools. Each TEACH-O-DISC will be accompanied by a functional Teaching Guide.

Price of each TEACH-O-DISC including the FREE Teaching Guide: \$2.50

TRI-PURPOSE PROJECTOR for single- or double-frame 35 mm. Filmstrips and 2" x 2" slides. Available for immediate delivery. \$76.75 f.o.b. New York.

REMBRANDT PORTABLE ELECTRIC PHONOGRAPH Has built-in record carrying compartment. Available for immediate delivery. \$48.90 f.o.b. New York, including Federal tax.

Visual Aids on the Home Mission Field

SERGE F. HUMMON

Delta Parish Churches, Rapid River, Michigan

THE biggest hurdle in using visual aids on the mission field is the cost—cost of equipment and the cost of materials. All kinds of projectors cost too much for the mission church. Downstate churches can help, and have helped, but we have had to use the projectors of the public school on many occasions.

I have taken pictures with my 35mm. camera and sent slide lectures about our work to larger and interested churches in other parts of the state. Thus I am using visual aids to help get the money for more visual aids.

The little church wants to do its part in providing equipment but motion picture projectors at 400 and 500 dollars just do not fit into its present budget. These churches can meet the cost of slides by free-will offerings and they often give generously. We keep trying to get the cost of audio-visual materials written into the local church's budget at the time of the annual meeting. Some times we succeed. With more help from the outside, and more funds from the field as visual education is better understood, we can solve the problem of equipment if the curve of prices starts downward after a while.

What kind of equipment do we need on a mission field? First, it should be light. Very often it is used in three different churches on the same Sunday. There is work in lugging a heavy projector around to that extent. It should be rugged. We show under the stars. We use it in camps. It must be dependable, and operate long and hard without major overhauls.

The miniature slide projector is used in preaching and in calling—yes, calling. Only recently I projected some Biblical and nature slides for a shut-in and she rewarded me for my trouble by saying that the pictures were the most beautiful things she had ever seen. Fortunately, the miniature slide projector is light and it is rugged enough to stand hard usage. Most of all it gives a brilliant picture.

When you turn to the churches themselves, we find them poorly suited for visual aids. There is no way to darken the windows. My wife solved that problem. She dyed material black, cut it into large pieces, and quickly tacks it over the windows as we go from church to church.

Motion pictures must be used carefully among sermon-conscious church goers. If there is a motion picture in the place of the sermon, many of the congregation will not feel that they have "been to church". It is necessary, therefore, to *utilize* films and slides in services of worship and preaching. They cannot be substituted for preaching. Again, when a mechanical

breakdown comes, the service of worship disintegrates beyond the salvage point very quickly on the mission field. Recently, a splice broke in the middle of a film on the Prodigal Son and the service was all but wrecked. Here, as everywhere, the mechanical side of visual teaching and preaching must be mastered. The preacher must think of everything and have it under perfect control at all times.

Recreational programs are difficult to execute in small churches of the one-room type with fixed pews. Here the film can help. The whole family can come to the church for a fun-film. There can be laughter, and beauty, and the seeing of far-away places and people. There can be simple refreshments afterwards, and again the church has welded her people into closer friendship and fellowship through fun.

I use slides for hymn singing, for worship centers, for illustrating the stories and the teachings of the New Testament. Both the old and the young like them. The color is enjoyed, and the impression they make endures for a long time. One worship service, utilizing koda-chrome slides, is entitled *Hands*. It pictures the role of hands in everyday living—hands of the farmer, stewards of the soil; hands of the mother, center of the home. Young hands, old hands; hands in the attitude of prayer, and hands doing the work of the world. This service is appreciated by the simple and sincere folk of the mission churches, and it gives them new understanding of the beauty and dignity of labor.

Third Annual Visual Workshop

THE Third Annual International Workshop in Visual Education will be held at Green Lake, Wisconsin, September 2-7, under the auspices of the International Council of Religious Education.

This workshop is planned for national and regional denominational staff members and delegates, especially age-group workers, directors of program departments, executives and directors of education in areas, conferences, and synods; for denominational editors-in-chief, age-group editors, and curriculum builders; for lesson writers and directors of and committees on visual education in the church; for city and state council staff members, including deans and teachers in local institutes and visual workshops; for denominational publishing house and bookstore representatives, and professors of religious education.

The program will include a morning forum featuring addresses by outstanding leaders; film and slide previews and reviews in the afternoons and evenings, and 10 or 12 work-groups on the creation, evaluation, and use of projected and non-projected visual aids.

For particulars, including hotel rates and registration information, write direct to the Workshop Director, Dr. Mary Leigh Palmer, 205 N. Wabash Ave., Chicago 1, Ill.

Three Clergymen and Visual Education . . .

First clergyman: "What do you think of this visual education the churches are all talking about?"

Second clergyman: "Just a fad! I don't put much stock in it."

First clergyman (replying): "Well, now I think you're wrong. Every time I use films, I get crowds coming to see them. It increases your church school attendance and brings the parents out, too."

Third clergyman: "We don't book films close together. I've booked three Cathedral films for the year. You see, the children like them so well that we don't want to have them too often or they may not want their regular lessons."

Which clergyman had the right answer to the question, "Why use visual materials in the church program"? None. Each was aware of a new tool for education—or they would not have been attending this program for church workers—but none of them understood the primary purpose of visual aids or their integration into the total parish plan.

There is only one answer—Increased effectiveness of the work of the church. This work consists of two things: bringing children and adults to a greater understanding of the love of God; and, teaching the ideas and ideals of Jesus and stimulating children and adults to translate these ideas and ideals into Christian action in the world in which we live.

If these three interested clergymen were not aware of the value of visual aids, or the best methods for their use, is this not an argument for more teacher training in audio-visual conferences, or diocesan classes? There is no lack of interest. There are good materials for use. But there is a lack of knowledge of *how* to use them. Educational theory of visual aids is another lack, and knowledge of source material is needed.

A short eight-week elementary course might include the following subjects:

1. Why use visual aids?
2. The school journey or trip—Going out to see and to learn.
3. The flat picture and how to make the most of it.
4. Lantern and kodachrome slides and how to use them.
5. Motion pictures—sound and silent—and how to use them.
6. Managing and administering the visual aids program.
7. A demonstration of the sound film with children.
8. An exhibit of projection equipment with an opportunity to examine and operate various kinds of projectors.

This is the time of year for looking ahead. The local church ought to plan some kind of visual education training for its teachers and leaders. Denominational leaders should plan some visual aids courses and institutes for the churches of an area. Eventually, the seminaries will include visual education in the minister's training and the church will do all its work with greater effectiveness.

MRS. HAROLD W. MELVIN
Director of Visual Aids
Diocese of Massachusetts
1 Joy Street, Boston

We Used . . .

At a Lenten supper—one of a series of six—we used the film *Home Town U.S.A.*, as a basis for a discussion of the question, "Can a person be a satisfactory church member and not take an active part in community action and community living?"

The group was made up of about 100 members of the Men's Forum and their wives and friends. The leader asked it to discuss the question, "What are the areas of effective community living?" The following were nominated: Good schools, homes, churches; home-church-school cooperation, industry and good government.

Then the leader called attention to the fact that *Look Magazine* has made a similar study, drawing editorial conclusions on the same question and putting these conclusions in a film.

Next the film was shown with the group looking for areas of community activity they had not mentioned in the prefilm discussion. It added four more areas: community health, recreation, attention to juvenile delinquency, and concern for potential slum districts.

No conclusions were drawn by the leader at the close of the discussion, but every area mentioned above has opened up a possible discussion subject for future meetings of the group.

FLOYD L. SMITH, Principal
Woodruff School, Ypsilanti, Mich.

(The editor will be pleased to receive and report other types of utilization in the church.)

Any of These Questions Yours?

Q. We expect to build a new educational building and would like for our architect to make the minimum provisions for the use of visual aids in our teaching. Where can I find some good articles which I can look over and give to him?

A. You are very wise. In these days no church building should be planned without taking visual education requirements into careful consideration. In the September 1945 ARCHITECTURAL RECORD (119 W. 40th Street, N. Y.) Mr. Adrian L. TerLouw discusses some fundamental considerations in an article entitled, "Planning For Audio-Visual Education." Bell and Howell Company (7100 McCormick Rd., Chicago 45) will be glad to send to you or your architect their series of bulletins and handbooks on visual aids and architecture. See the July 1941 Journal of The Society of Motion Picture Engineers for a report of the committee on non-theatrical equipment.

Q. Can I get a projector which will show 3¼x4 slides, miniature slides (2x2) and film strip? I don't see why there should not be such a machine.

A. The full answer and explanation would take several long paragraphs. The short answer is that there is no such machine on the market. You can get a projector for miniature slides and film strip. You can get a projector for stereopticon slides which can be adapted to show the miniatures by inserting a special slide carrier. If there is one taking film strip, also, it has not come to my attention.

(Concluded on next page).

New British Biblical Films

The British-produced Biblical series entitled, "Two Thousand Years Ago", has been brought to this country by the Bell & Howell Filmsound Libraries, the exclusive representative of the church and educational films sponsored by Sir J. Arthur Rank. Five two-reel sound films in black and white make up the series: *The Home, The Day's Work, The School, The Travelers, and The Synagogue*. They reproduce the kind of life lived in Palestine in the time of Jesus and should be useful to the teachers of all ages in making setting of biblical events more real. The casting is good, the action simple, the settings convincing and the general treatment sympathetic. They are to be available July 1 at a rental of six dollars each.

Questions (Concluded)

Your observation deserves a comment: The projection beam created by the optical system in a stereopticon is of a size suitable for the efficient projection of larger slides and when the adapter is used only a fraction of this beam is used, thus giving a poor image on the screen. What's the use having high-quality kodachrome slides if they are projected with an insufficient amount of light?

Q. Should we join another church and purchase a film projector on a cooperative basis or is it best to own your own?

A. Generally, it is best to own your own. You may need to wait a little longer to buy it but your use of it will be much more satisfactory. There are exceptions, of course, but cooperative ownership of projectors has not worked out very well. Could two or three churches cooperatively own a mimeograph machine or a carpet sweeper? Churches tend to want to use projectors on the same days of the week and at the same time of the day.

Q. I can do fair photography and I would like to make some stereopticon slides. Can you refer me to a know-how book which is complete but not too technical?

A. Practically everything you will need to know is packed into a little book of 80 pages entitled, *How To Make Lantern Slides* (Practical Photography No. 7), by Frank E. Fraprie, and published by the American Photographic Publishing Co., Boston, Mass.

Q. We asked a distributor to send us films so that we could choose what would suit us best. He refused, and did not explain why. Can you throw any light on this?

A. Perhaps. Ideally the local church should be able to see-before-it books. However, there are not enough prints of many films to meet booking demands, much less to meet requests for previews. You will need to depend upon the catalogue, magazine previews, and other sources of information. Equipment dealers will cooperate with groups of churches to arrange preview programs of off-season films and other visual aids. Take this problem to your local church federation or ministerial association.

(For an immediate reply, write to the editor of this department, inclosing an addressed and stamped envelope.)

News Notes

■ Under the auspices of the Cincinnati Presbytery a visual aids workshop was held in the Presbyterian Church of Mason the evening of April 30th. More than 75 leaders from the churches and the public schools attended. They listened to panel discussions, inspected extensive displays of materials, and saw a demonstration of the use of slides, recordings and film in a worship service. Rev. E. Lee Niswander, host minister, has pioneered in the outdoor display of life-size copies of religious masterpieces illustrating the central ideas of Christmas and Easter.

■ In late May more than 60 church leaders attended an institute on techniques and methods with projected pictures which was sponsored by the Cleveland Church Federation. The program opened at 4 o'clock in the afternoon with demonstrations of the use of miniature slides and filmstrip. After supper techniques with the silent film were presented and discussed, and the program closed with the use of a religious feature.

■ Under the joint auspices of the Council of Churches of Northern California and Western Nevada and the College of the Pacific (Stockton) a workshop on Audio Visual Teaching will be held at the college the week of July 15 to 20. It will provide church and school leaders with an opportunity to widen their information about materials, deepen their understandings of methods, and strengthen their skills. On the first and second evenings respectively Prof. Lloyd Sweetman, of the Sacramento Public Schools, and Reverend James K. Friedrich, of Cathedral Films, will address the workshop. The other evenings will be devoted to previews of materials. It is significant that the first hour each afternoon will be used for a consideration of "Public School Materials Available for Church Use."

Book Notations

● *ABC's of Visual Aids* (Projectionist's Manual), by Phillip Mannino, State College, Pa. A useful little book of 80 pages dealing competently (and too sketchily in places) with the management of the physical factors in the use of projected visual aids. It has been available at \$1.00 from the author direct. But distribution will now be handled by the Educational Film Library Association, 45 Rockefeller Plaza, New York 20, N. Y.

● *Visual Aids Teaching Helps* (Guide-Lines To Leadership Series) by the Department of Religious Education, Reorganized Church of Jesus Christ of Latter Day Saints, Auditorium, Independence, Mo. This well-written and illustrated booklet of 64 pages has value and significance beyond the communion for which it was written. Its articles cover every media and method of visual teaching and each is written by a practitioner, not a theorist, in religious education. If interested, write direct.

● *The Use of Visual Aids in Catechetical Instruction* (A Guide) by Arnold H. Jahr, Wartburg Film Service, Waverly, Iowa. This 40-page booklet will be of use to those interested in pretty thorough-going use of 2 x 2 slides in visualizing the catechism. Thirty five cents from WFS.

Coming Articles

Beginning with the September issue this department will run an article each month dealing with one of the pressing questions in the church field. 1) **How Verbal Should a Visual Aid Be?** Are currently produced materials maintaining the psychological dominance of the visual? 2) **Can the Projected Visual Media Be Rated?** Can each one of the projected visual media be given a coefficient of effectiveness in relation to the general objectives of the church? As a starter, the article will propose such a table. 3) **Can Filmstrip Terminology Be Standardized?** An analysis of the nomenclature now in vogue will be made, and a standard terminology proposed.

The departmental editor would be pleased to receive short manuscripts (up to 800 words) on any of these subjects. Your comments and correspondence on these questions will be welcomed and is invited.

Films On India

The Land of Five Rivers. This eleven minute black and white sound film shows the huge dams and canals which have been constructed in the Punjab Province of north India to irrigate more than a million acres of fertile but dry land. The film would be more useful (to the church) if more of its footage were given to showing the land and the people rather than concrete construction and flowing water. The commentation is instructive and fair in quality. Useful in men's groups especially.

Tube Wells. A ten minute black and white sound film on the need for, construction, and operation of tube irrigation wells. A few sequences show the live-giving water reaching the villager's field. Background film for youth and adult groups in the church.

Daughters of India. An eleven minute black and white sound film showing the small but growing tendency of upper-class Indian women to seek an education and an active part in public affairs. The film tries to show that the Indian woman is making a brave effort to reinterpret traditional virtues in terms of the values and activities demanded by the new age. Will be of interest to church and club women.

Handicrafts of South India, a ten minute sound film in black and white, shows how the craftsmen of Travencore fashion exquisite works of art from simple native materials such as pith, wax, brass, silver, wire and sandalwood. Photography is good and the closeups satisfying. The commentation is clear. Background music of native Indian melodies adds charm to the film.

Tree of Wealth. This eleven minute film in black and white is the story of the utilization of the cocoanut palm and its fruit for food, drink, shelter, bedding, rope, oil, and even the cocoa mats which enter world trade. Photographic sequences are logical; commentation instructive and helpful, and the background music appealing.

All these films will be useful to the church in its study of India beginning this fall, and these and others may be obtained from the Government of India Information Services, 2107 Massachusetts Ave., N. W., Washington 8, D. C.

Films In Production

■ According to Cathedral Films, Inc., they have two films ready for the cameras: *Jairus' Daughter* and *The Unjust Steward*. Both are to be two-reelers. They have, also, signed a contract to produce two new films for the Episcopal Church. The first, *How To Teach With Films*, will be of great interest to the entire church field. If it is soundly conceived and well executed it will be of great usefulness to the church. The second will carry the title, *Go Forth*, and tells the story of a young medical doctor who chooses to be a medical missionary to the Philippines rather than enter a thriving practice with his father. The cameras will begin clicking on these four films this month.

■ Under the Charles Anson Bond Memorial Trust Fund the American Bible Society will immediately undertake "a series of productions in which the complete scriptures of the Bible will be narrated in sound and acted out in color motion pictures". The release states further that "the first three (films) will be devoted to the Nativity, the Woman of Samaria, and the Parable of The Sower. No continuity will be used other than the exact text of the King James version assuring absolute accuracy in the transfer of the scripture from printed pages to sound and film."

■ The filmstrip visualization of Luther's Catechism is being undertaken by a committee representing several Lutheran bodies—Missouri Synod, A. L. C., Norwegian Lutheran, and the Augustana Synod. Several meetings have been held and scenarios are being developed, criticised and reworked, and it is hoped that the first of the series will be ready by this fall.

Released

● According to the National Lutheran Council (231 Madison Avenue, N. Y. 16), the agency for eight Lutheran bodies, the newly released 16mm. sound film, *The Good Fight*, is now available to the church thru distribution centers in New York, Columbus (Ohio), Chicago, Minneapolis, Seattle and San Francisco, and from 18 substations. It was produced by Caravel Films, Inc., N. Y., for use in the Lutheran World Action campaign to raise 10 million dollars for overseas relief and reconstruction in Europe and Asia. Another film which is being used in the LWA campaign is a 75-minute 16mm. sound version of the commercial motion picture, *Mary Louise*, which tells of the succor given a little French girl by a Swiss family. The demands for these films is heavy and it is expected that the majority of the 10,000 churches in the National Lutheran Council bodies will book them during the coming year.

● A 35-frame black and white filmstrip on the Cathedral Film, *A Certain Nobleman*, is now available for purchase (\$2.50) and rental. The filmstrip on *No Greater Power* (story of Zaccheus) has 44 frames and sells at the same price. Many small churches with limited budgets, or without film projectors, will be interested in Cathedral's experimentation along these lines.

The Film and International Understanding

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

United Nations Film Coverage Policy

THE following information, obtained from official United Nations sources, will be of interest to all who are concerned with the availability and use of film footage on the proceedings of the United Nations.

The production policy of the Film Section of the United Nations is *not* to enter into competition with existing film companies, but merely to produce and make available (largely to the ready and interested non-theatrical market), basic films which are of the same relative nature as a press release, emphasizing authenticity, objectivity, and the United Nations viewpoint.

This consideration of the film record as a documentary record comparable to the written or printed word is commendable and advanced thinking in the field of the function of the film in our civilization. This point of view is emphasized by the editing procedure for film footage on the London Conferences and the New York Security Council meetings.

The material on the London and New York meetings is being edited as an official documentary film record of the proceedings for the United Nations own archives. The footage also is being catalogued as a basis for building up a film library for the Film Section of the United Nations. In addition, a short film on the nature, structure and meaning of the United Nations General Assembly is being produced, to be available before the next meeting of the Assembly.

Filming Facilities

The care taken to make this film record adequate is evidenced by the provisions which were made for filming both the London and New York meetings.

At London an international newsreel pool was set up. British Paramount News filmed the Conference (including meetings of the Executive Committee, Preparatory Commission, General Assembly, Security Council, and Economic and Social Council) for the pool. This footage was available to all the United Nations, a number of whom made use of the service, including Canada, Australia, China, India, Poland, Czechoslovakia, Great Britain, and the United States.

The Crown Film Unit, working in cooperation with the British Ministry of Information, filmed additional footage, over and above the newsreel coverage, in order to make a full documentary film record. This coverage included closeups of speeches by committee chairmen, summarizing various technical aspects of the work of the Preparatory Commission and the General Assembly.

All facilities for filming in London were carefully planned to achieve an intelligent balance between the necessity for obtaining full coverage and for doing so in an unobtrusive, discreet manner in keeping with the dignity and gravity of the occasion.

In New York installations of filming facilities at Hunter College were planned and built in along with other installations in the Council Chamber. An inter-

national newsreel pool was set up on the same basis as in London, except for the fact that arrangements were made for the five local newsreel companies to work on a rotation basis, each company covering for a two-weeks' period.

Plans for the Future

Various methods of distribution now are under consideration. A survey has been drawn up on the values of rental and purchase in both 16mm and 35mm, as well as possible channels of distribution. An information and liaison service plans to supply information, documentation and film footage to existing film companies who are interested in making films about the United Nations. This service also is concerned with supplying information about documentary films dealing with United Nations subjects or countries in response to inquiries from non-theatrical users throughout the world. It is expected that this will be an informational service, rather than the distribution of actual films.

The above brief survey evidences the intelligent and progressive point of view of the Film Section of the United Nations regarding the use of films as instruments for documentation and education for better international understanding.

Series of Discussion Films And Filmstrips Planned

A series of international discussion films and filmstrips, entitled "Your World," has been announced by Film Publishers, Inc. Films will be ten to twenty minutes in length, and will be accompanied by study guides, bibliographies and other related materials. Subjects will range from general film statements on individual nations to the analysis of international problems, social, economic, and political. It is planned to make available for each subject one documentary film and one slide film, to be used separately or to complement one another, the former being useful to provide an interest and a better grasp of the overall facts, while the latter lends itself to audience participation and discussion.

Five filmstrips, the first in the series, already have been released. They are: *The People of France*, a presentation of the background and current problems of France and its relation to the United States; *United Nations Charter*, which explains the organization and functions of the UN; *Forward—All Together*, a presentation of the nature and reasons for discrimination and what can be done about it in America; *Foreign Trade—It's Good Business*, a cartoon slide film explaining international trade in terms which high school students can understand; *American Counterpoint*, a picture commentary on what makes an American.

Pearl Buck, famous author and Nobel Prize winner, is writing the script for three further filmstrips now

(Continued on page 320)

THE RIGHT FILM—

THE RIGHT PROJECTOR—

AN IMPORTANT COMBINATION

THE proper choice of sound films for classroom use is vitally important—subject matter, orientation, and quality of presentation, are all basic factors for careful consideration.

Recognizing the increasing requirements for modern sound films, RCA has turned to "The March of Time"—Forum Edition—as an outstanding film series in the field of audio visual education. Now, RCA Victor Educational Dealers, in co-operation with the March of Time, bring you the famous March of Time Forum Edition, at a rental cost of only \$22.50 for a complete series of 8 films.

The Forum Edition is specially edited for school use by men trained to think in terms of *audience*

interest. Discussion outlines for classes—supplied two weeks in advance of booking—enable students and others to prepare for the showings through classroom talks or library research.

To insure maximum benefits from this important film series, as well as others designed for school curricula, the lifelike sound and brilliant screen image of the RCA Sound Film Projector make it the logical choice for school use. Simple to operate—easy to maintain—the RCA Projector assures you top quality, unflinching service.

For complete information on the RCA Sound Film Projector and the March of Time Forum Edition—see your RCA Victor Educational Dealer today.

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

ADMINISTRATION

- **Administration of the Audio-Visual Program.**—S. C. Morgan, Principal, Concord High School—*Virginia Journal of Education*, May 1946 p. 386-9.

An excellent article, giving practical details for carrying on an efficient audio-visual program in a school building. In this article, it is assumed that there is one person in the school responsible for the program, and that the necessary equipment has already been purchased. The author recommends three forms: 1) a teachers' weekly requisition form, filled in preferably a month in advance, showing the titles needed for each week. The director can then assemble all requisitions and coordinate or modify as the situation demands. 2) an order form, filled out preferably in duplicate, to be mailed to the film library. 3) a confirmation card. 4) a weekly schedule which summarizes the projection program of the school.

In addition to the routine of ordering and using films and other aids, the author recommends that the administrator assume responsibility for in-service training of teachers and for an on-going system of evaluation to assure best results.

- **Ten Questions on Sound Conditioning and the Answers**—Celotex Corp., Chicago. *Film and Radio Guide*, 12:57 April, 1946.

Valuable information on acoustically treating classrooms for best sound reception.

- **Virginia Steps Out in Audio-Visual Education**—James W. Brown, supervisor, Bureau of Teaching Materials, State Dept. of Ed., Richmond, Va.—*N. E. A. Journal*, 35:176 April, 1946.

Description of one of the most progressive of state-wide audio-visual film bureaus. The Bureau of Teaching Materials of the State Department of Education of Virginia began its long-range program in 1940 when \$20,000 was voted to begin a regional distribution service in the teachers' colleges of the state. In 1945 the appropriation was \$1,112,530, or \$2.00 per child. The state program has four distinct phases: the state functions, carried on by the Bureau of Teaching Materials, Division of School Libraries and Textbooks from Richmond; regional functions, conducted by each of the four cooperating teacher-training institutions; county and city functions, where 50 of the 110 school divisions have already established bureaus of teaching materials and the rest are under way; and the work of the individual schools, where such materials as filmstrips, 2" x 2" slides, maps, globes, recordings and the like are being purchased and used. In each school the librarian is recommended as the school representative to maintain and distribute the teaching aids, and the principal is urged to provide leadership in training teachers to use these materials effectively.

UTILIZATION

- **Some Ills of Film Instruction**—Gray Barker, student, Glenville State College, West Va.—*West Virginia School Journal*, 74:5 May, 1946.

A very clear evaluation of what is wrong with the use of films in the school by a teacher in training. He is convinced that the motion picture is an important tool for education, but that teachers must know how to use it. Among the weaknesses noted are: 1) that the average teacher or administrator is untrained for the efficient use of the motion picture; 2) that expense has hindered the full development of film education programs; 3) that projection facilities are poor, especially with respect to lighting, ventilation and acoustics; 4) that films are transitory and superficial; 5) that they are too short to accomplish their purpose; 6) that they are made by producers who

do not know how to make effective use of the medium; 7) that teachers and students still look upon classroom films as diversion.

Note to the author: The picture is not so black, nor has utilization been quite so neglected. Read, for example, the study by Wittich and Fowlkes here reviewed.

- **Films Can Fight for Democracy**—Charles G. Spiegler and Esther L. Berg—*High Points*, 28 no. 5 p. 44. May, 1946.

Describes a recent meeting of the New York Society for the Experimental Study of Education at which three types of films were shown on the subject of education for democracy.

Representing the documentary type were *The Cummington Story* (OWI Overseas) and *County Agent* (Julien Bryan for OIAA) and to illustrate the subject-centered film were *Democracy and Despotism* (Encyclopedia Britannica). Speakers included Helen Grayson of the OWI, Mr. Bryan and Dr. V. C. Arnsperger.

- **Introducing Classroom Films in a Small School System**—L. L. Hagie, Supt. of Schools, Osceola, Iowa—*Film and Radio Guide*, 12:25 March, 1946.

The techniques developed in a small school system after the purchase of a sound projector interestingly described. All films used to date are rented, and utilization is noted on a card file system for permanent reference. The original article should offer useful items of interest.

ARMED FORCES TRAINING AIDS

- **Swords into Ploughshares: What Civilian Education Can Learn from the Training Program of the Armed Forces**—Administrators of the state of Michigan—Published by Eugene B. Elliott, Supt. of Public Instruction, Lansing, Mich. 1946. 44p. illus.

The report is based on a field study of the schools of the Armed Forces by a group of 26 Michigan superintendents and principals enrolled in a graduate course at the University of Michigan in 1945 under Dr. Raleigh Schorling, Professor of Education. Many schools were visited in each of 17 installations of the Army, Navy and Coast Guard.

The report is enthusiastically recommended in its entirety for the observations and conclusions it contains, and the important implications noted for postwar civilian education. One section is devoted to "A New Program for Learning Aids." This will have special appeal for visual education workers.

It was natural that the Army and Navy should go all out for training aids, for the use of the senses is the foundations of the method used by the Armed Forces in the training program . . . The pedagogical guide is: whatever is to be mastered should be learned in its natural setting, or in a situation that is staged as close to the real situation as possible.

One of the striking features of the G.I. method is the wide use of a great variety of training aids which provide realistic learning situations. The hundreds of classrooms visited were serviced with a wealth of instructional aids. The classrooms looked very different from our academic classrooms. Roughly one might say that the principle underlying the settings of good first-grade activities has been utilized for adult education purposes.

A significant observation was that both the Army and Navy had developed their training aids programs very similarly without much cooperative planning . . . The rapid development of the training aids program by the military was not a miracle—it came direct from civilian education. For example, the Navy gathered together about 200 men

(Continued on page 318)

ABSORBED...CREATING

- *The look of a busy, happy class that makes one glad to be a teacher*

Have you tried Handmade Lantern Slides? The pupils work out the pictures themselves (with the aid of specially prepared base drawings)—and also project them.

Enthusiastic pupil participation is easily achieved with retarded groups—while the response of average and above-average classes is fully as gratifying.

The possibilities of this method can only be appreciated by the teacher who has used it. We suggest a trial.

Write for this book — 192 base drawings for **HANDMADE LANTERN SLIDES** for the Lower grades

As a service to teachers, we have prepared this book of drawings—to teach Holidays, Seasons, Good Manners, Safety, Health, etc.

At trifling cost, handmade lantern slides afford an unsurpassed means of obtaining pupil participation. Mail the coupon for this new book.

KEYSTONE VIEW CO., Meadville, Pa.

Please send "Handmade Lantern Slide Copy for the Lower Grades," price \$1.75 (which I may return after examination, if desired).

SINCE 1892—PRODUCERS OF SUPERIOR VISUAL AIDS

who in civilian life had had wide experience in visual aids. These men were given the very challenging problem of providing realism in the classrooms of the Navy. They were given plenty of money and adequate personnel to do the job.

The basic recommendation for civilian education is that greater use be made of sense experiences when staging learning situations. With special reference to the schools of Michigan, there are several very valuable recommendations.

TEACHER TRAINING

- **A Syllabus of University Film Courses**—Sydney Kaufman—*Film News*, 7:15 April, 1946.

Brief notes on five courses on the university level: a general course on the cinema, the film in education, the documentary process, a research seminar, and a film production workshop.

- **In-Service Training in Audio-Visual Aids**—Kingsley Trenholme, Portland, Oregon—*See and Hear*, 1:33 March, 1946.

The in-service training program might begin with a local conference, serving as motivation to further interest. In each school, the more effective use of visual aids can be encouraged through faculty meetings and teacher-conferences. Finally, there are the courses in visual education which are given after school or during summer session. In Portland, the supervisor of the Dept. of Audio-Visual Education gives an in-service course, comprising 12 two-hour sessions; half the time given to lecture and half to laboratory practice.

- **Oklahoma Education Conference**—W. R. Fulton, Oklahoma Southwestern Institute of Technology—*Film World*, 2:222 May, 1946.

A series of conferences held throughout the state of Oklahoma on visual education revealed that teachers are actively interested as the following examples show: in Bechkahm County, most schools have visual equipment; in Elk City, the faculty and superintendent held a four-day workshop to learn techniques of use and sources, and climaxed this with attendance at the county teachers' institute where the theme of the program was visual education; in other counties of the state teacher-conferences where visual aids were demonstrated, were fully attended.

RADIO

- **Radio Education in the St. Louis Public Schools**—*St. Louis Public School Journal*, 1: no. 3, May, 1946.

This magazine is a storehouse of practical information on radio in the classroom. St. Louis, while awaiting an FM station, has been using time (at no cost) on the local broadcasting station. The radio activities are centered in the Division of Audio-Visual Education, with a teacher committee under the direction of the radio member of the Division, Miss Dorothy Blackwell.

The radio activities of the school system have given teachers and students an opportunity to learn by direct experience how to write, produce and use radio program in school. There are four regular series: Newscasts for Students, Journeys into Storyland, Our Country, and The Story of Old St. Louis. In addition there is an extensive professional library for teachers, a monthly listening guide, a course on radio in the high schools, and in-service training of teachers.

The magazine contains articles by those persons who have helped produce and utilize the radio programs. It ends with a list of radio equipment needed for schools, and a list of books. This bulletin reveals great planning and fine success on the part of the radio division of the St. Louis Schools.

- **Visual and Other Aids**—D. E. Gibson, Columbus, Ohio—*The Social Studies* 37:178 April, 1946

A critical appraisal of the use being made of radio in education. The author cites the arguments given by I. Keith Tyler in his article, "Is Radio Educational?" (reviewed here in *March*); and then follows a listing of standards or 'guideposts' recommended by the National Committee of Education by Radio: standards for choosing programs for educational purposes; and standards for the preparation of programs in terms of audience interest.

SPONSORED FILMS

- **The Educational Motion Picture Field**—J. Walter Thompson Co., New York, Jan. 1946.

A report for industry on the feasibility of investing in sponsored educational film production. The report should be useful to all who want a summary of evidence that the educational film is a useful medium. It also provides useful conclusions on the nature and type of sponsored films that should be made: The report recommends: 1) that films be designed for a homogeneous audience. . . . that films be aimed at the greatest amount of learning rather than for the largest number of people at each screening; 2) that the film cover only one subject, utilizing the teachers' manual and study guide to supplement; 3) that titles should clearly describe the film; 4) that the picture teach a useful lesson which has tangible value in the curriculum; 5) that advertising be clearly identifiable. Educators are more likely to be apprehensive that a point-of-view will be advanced than they are of clearly identified advertising. Education cannot take sides in political, social or economic problems; 6) that sponsored pictures run 10 to 15 minutes, never over 20. A useful reference work.

HUMAN RELATIONS

- **Aids in the Teaching of Intercultural Understanding**—Conn. Interracial Commission, State Office Building, Hartford, March, 1946 revised. 15c.

A selected list of films, filmstrips, recordings and radio scripts, compiled by Joseph P. Maguire. Topics in the classification of 16mm. films include: attitudes, social and economic backgrounds, the democratic ideal, the Negro, the American Indian, Japanese Americans, and international.

- **Toward a Better World: Modern Aids for Interfaith Education**—Etta Schneider Ress—Interfaith Affairs Committee, Women's Division, American Jewish Congress, 1834 Broadway, N. Y. C. 12p. May '46.

The scope of audio-visual aids that might be used to promote closer interfaith understanding. The handbook suggests ways and means, but does not list sources of films.

PHOTOPLAY APPRECIATION

- **Christmas in Connecticut**—Dean Lobaugh—*The Clearing House*, 20:421 March, 1946.

A protest against the standard of ethics which certain Hollywood films propound. In the case of *Christmas in Connecticut*, the story resorts to glamorized dishonesty. Such themes are an obstacle to the honest efforts of community groups in their fight against juvenile delinquency. We must raise the tastes of our audiences to the point where pictures which subtly or openly violate our basic moral concepts cannot be shown successfully.

ADDITIONAL SOURCES

- **Motion Pictures**—Norman Woelfel—*Progressive Education*, 23:146. February, 1946.

Points out the social responsibility which the film industry must accept.

An inventory of the films available to the junior high schools of New York City, and keyed to the curriculum bulletin on the teaching of science.

- **They Learn Faster by Seeing**—Darrell Huff—*Liberty Magazine*, February 16, 1946.

The accelerated teaching program for the armed forces has taught us that the screen in the classroom promises faster and better teaching to match the new and faster age.

- **Audio-Visual Aids Supplement to the Science Handbook**—Board of Education, 110 Livingston St., Brooklyn 2, N. Y.—Curriculum Bulletin Series 1945-6. No. 3.

- **Some Questions and Answers on Auditory and Visual Aids**—H. Arnold Perry, Division of Instructional Service, State Dept. of Public Instruction, Raleigh, N. C. 14p. mimeo. 1946.

A concise bulletin for teachers, indicating the most basic

BOOK REVIEW

Audio-Visual Paths to Learning—Walter Arno Wittich and John Guy Fowlkes—Harper, 1946. 135p. \$2.00.

A summary of the findings of an experiment to determine how important were the planned introduction, follow-up and testing in connection with educational sound films. It was believed by the authors that children tend to regard motion pictures in the classroom as fun and relaxation because of their experience with entertainment films. When they were shown that educational movies are an important tool of learning and need to be treated as such, they expressed their approval not only of the films, but of the study materials that helped them get the most out of each film.

The experiment was then conducted in 1942-43 at the Marquette Elementary School, Madison, Wisconsin. There were three classes each from the fourth, fifth and sixth grades. The classes were equated numerically for size, but further pairing for intelligence, reading ability, etc. was not deemed necessary because the rotation method was used.

Three experimental methods were used; first, a film was shown after only a casual, brief introduction and test questions answered; second, the teacher read a description of the film to convey a general impression or mood, to teach difficult words and to discuss certain leading questions; then the film was shown and the test given immediately after. The third, and most effective method, was to introduce the film as in the second method, with the addition of a discussion period 24 hours later, and the second showing of the film. The test was given at the end.

Each grade saw nine films (produced by Encyclopedia Britannica Film), all directly related to the social studies and science units being studied. Each group was rotated three times in the process of seeing the nine films. This meant that the average amount of time spent under the first method was 35 minutes per film; for the second method, 45 minutes; and for the third, 90 minutes. All films were shown in the auditorium.

Special Learning Guides for the pupils were constructed, including: a) an introduction to the film; b) what to look for; c) words and phrases to understand; d) a 50-item test for facts and social situations; and e) discussion questions.

The results showed without any doubt that the third method led to greater understanding. The groups made double the gains in that method over the gains in the first. Most important for teachers is the conclusion that through the use of the second and third methods children became increasingly able observers. . . . The attitude that movies were fun and relaxation gradually gave way to a realization that educational sound films constitute an interesting, effective, understandable method of learning about new ideas, processes, modes of living, and social customs.

The authors conclude, from their study of the pupil reactions and from the statistical evidence, that the method of using educational sound films in the classroom must be subjected to evaluation. Like good books, maps and other learning materials, good sound films must be used in a manner which will fully anticipate their value to the pupil. To use them casually is to waste a primary learning source and to deprive pupils of experience that can be gained otherwise only by living. The book includes a summary of previous research on educational method, and a chapter quoting pupil reactions.

The study here described should stimulate further informal experimentation on the part of classroom teachers. For, although a rigid conformity to film titles, types of film, and methods of introduction, follow-up and testing were here necessary, the creative teacher will be challenged to try other methods, using the abundance of other film material as well as the many other types of educational experiences which make for better learning. This experiment has shown what educators have urged again and again, viz: that educational tools and methods, whatever they may be, must be carefully studied and planned to assure their maximum usefulness. The greater the amount of planning and follow-up, the greater the returns in better education.

The Film and International Understanding

(Concluded from page 314)

in preparation, covering China, India, and the Soviet. Immediately following production of the slide films will be release of motion picture documentaries on related subjects. A film on France is currently in production.

Striving for impartial presentation, the producers of this series of films are working in close collaboration with representative national institutions, including the Carnegie Endowment for International Peace, Public Affairs Committee, East and West Association, Council Against Intolerance, and others. In the case of specific films, the advice of experts and citizens of respective nations is likewise sought.

American Council on Education Hemispheric Filmstrips

International understanding among the nations of our hemisphere is a reciprocal matter. It must take place in both directions. In order to promote this mutual understanding, the Filmstrip Project of the American Council on Education sponsored two series of filmstrips: one to give us a better understanding of our southern neighbors, and one to give them a better understanding of us. Each series was quite comprehensive, including thirty-three filmstrips.

The series on "The Other American Republics" is entirely in color, and is made up in 2 x 2 slide form. There are thirty-three units, varying in size from fourteen to ninety-one slides. There are a total of 1526 slides in the series. The materials, compiled by Florence Arquin, include only slides of high quality. Each unit is accompanied by teachers' notes, including background material and identification and comments on each slide.

The series on "Life in the United States" is made up in filmstrip form. The strips vary in size from thirty-eight to seventy-five frames, with a total of 1632 frames in the entire series. Copies of these filmstrips, with accompanying teaching scripts in Spanish and Portuguese, were sent to all of our sister republics to the South to further, through knowledge and understanding, the Good Neighbor policy.

On the recommendation of the committee of educators who advised on the production of these filmstrips, the American Council on Education has now arranged to release this series of thirty-three filmstrips in the United States. It is felt that these filmstrips will help our own children, as well as adults, to learn of the varied aspects of their own country—that those who live in the East may know and understand those who live in the West; that those who live in the cities may know and understand those who live in small towns or rural areas; that we all may better understand the problems and achievements of our own country.

Both series—the 2 x 2 filmstrips on "The Other American Republics" and the filmstrips on "Life in the United States"—now are available to schools and other interested groups in this country. Complete information can be obtained from the American Council on Education, 744 Jackson Place, Washington 6, D. C.

International Film Foundation

announces its initial offering of

Eight JULIEN BRYAN Productions On RUSSIA and POLAND

Never has the need for good films on International subjects been so urgent as it is today when public opinion on International questions of far reaching consequence is being formulated . . . All over America, schools, clubs, libraries, churches, labor unions, have been seeking good films on International subjects, particularly on Russia . . . they have urged us to produce them.

Six films on RUSSIA and two films on POLAND have been produced as the first contributions of the International Film Foundation, a non-profit organization established late in 1945 to "promote better understanding between peoples of different nations, races, and religions . . . through the production of motion pictures . . ."

This series of eight subjects has been produced from footage shot by Julien Bryan and his crews just prior to World War II.

As is customary in all Julien Bryan productions it is the people who get the emphasis—people in a timeless sense—people living, playing, working, for life itself.

*

Order your copies of these films TODAY through your Visual Education dealer or directly from us.

*

Contact your film rental library for rental of these subjects.

*

Show them while they are new!

Ready for Immediate Distribution

MARY VISITS POLAND

Mary, an American elementary school girl, describes to her class her experiences in visiting her grandparents in Poland. In her own language she takes her class into a Polish school, into Polish homes, and into the fields where agricultural activities are seen. She shows them the beautiful costumes and colorful dances of the Polish people and gives her class an insight into the cities of Lowicz, Krakow, Zakopane, and Gdynia. *Screening time: 10 minutes.* *List Price, \$35.00*

POLAND

This is an over-all picture of Poland—as it existed prior to the destruction wrought by the German invaders and as it will exist again when the current reconstruction program is completed. The primitive methods, so common in agricultural and manual labor are contrasted with the modern methods of construction in Warsaw. This contrast is typical of the pictures drawn between the old and new Polands throughout the film. An insight into Polish historical backgrounds as well as into the varied business, agricultural, educational, religious and social life of the Polish people is afforded by this film. *Screening time: 18 minutes.* *List Price, \$70.00*

A RUSSIAN CHILDREN'S RAILWAY

Over on the other side of the world in the U.S.S.R., is a land called Georgia, the capital of which is Tbilisi. Here the Bryan cameras have recorded for American children the story of the fifteen Children's Railways built by the Soviet Government, not as a pure entertainment device, but as a motive for furthering interest of youngsters in railroads, thus helping solve one of Russia's major problems—transportation. The film is primarily for elementary schools but older students and adults will also enjoy it. *Screening time: 7 minutes.* *List Price, \$30.00*

CHILDREN OF RUSSIA

You wouldn't expect to see a dramatization of our American Huck Finn in this film but it's there because it is included in the Russian school curriculum. In this film we see how the Russian children go to school . . . garden . . . play . . . parade . . . visit museums and art galleries . . . and live in the summer Pioneer camps, comparable to our youth camping programs. *Screening time: 13 minutes.* *List Price, \$50.00*

Ready for Distribution July 1

The ABC's of Audio-Visual Equipment

Survey Review of 16mm Sound Equipment, Present Use, and Future Needs

Edited by
ROBERT E. SCHREIBER

THE survey forms printed in the April issue have been returned from a number of individual schools and school systems across the country. Reader use of and preference for certain kinds of equipment are far from startling in view of the apparatus currently in use and the personnel operating it. The editor, having been directly or in-directly stimulated from various quarters with respect to the extreme weight, high cost, and complexity of current motion picture equipment, decided that it would be a good idea to secure a consensus of opinion from you, the readers of the ABC's Department, with respect to these various matters. Now, you have spoken, and here are the results:

- 1.—Amount of equipment and age:
 - Number of projectors per school..... 3½.
 - Projectors less than a year old, 21%; 1-2 years, 28%; 3-4, 15%; 5-5, 16%; 7-8, 9%; 9-10, 11%.
- 2.—Type of use made of equipment:
 - Auditorium only..... 5%
 - Classroom only.....20%
 - Both Classroom and Auditorium.....75%
- 3.—Type of personnel operating equipment and hours of training given:
 - 80% of schools report use students, who receive from 1-100 hours of training with an average of 10.8 hours per student.
 - 50% of schools report use of teachers, who receive from 15 minutes to three hours of training, with an average of 1.7 hours each.
 - 5% of schools report use of other paid help, who receive 4 hours of instruction each.
- 4.—Most satisfactory operating personnel:
 - 80% have found students most satisfactory and intend to continue using them.
 - 20% have found teachers most satisfactory and intend to continue using this type of personnel.
- 5.—Personnel used to move equipment from room to room:
 - Students 65%; Teachers 25%, Janitors 5%, Other paid help 5%.
- 6.—Characteristics insisted upon as ideal equipment:

Briefly, those schools reporting mentioned most frequently 1000 watt illumination, sound and silent operating speeds, sufficient volume for classroom and auditorium use, and motor rewind. A detailed breakdown of specific items by percentages of schools follows:

Lamps: 1000 watt	60%	Weight: 50-75 lbs.	30%
750	30%	25-50	50%
500 or less	5%	25 or less	20%
Speeds: sd. only	20%	Blimp case	50%
both	80%	Microphone attachment	55%
reverse	20%	Motor rewind	80%
still	20%	Micrometer tilt	50%
Volume: classroom	20%	One case	25%
auditorium	80%	Two cases	45%
		Special safety devices	35%

7.—Interest in purchasing low priced (\$250.00) equipment having their specifications as indicated:
70% of the schools reporting evinced an interest in such equipment, indicating that from 1-10 such machines might be secured during the next 12 months if available, or an average of 2.5 machines per school.

Similar equipment surveys will be undertaken from time to time. If you, as readers, feel that additional important information has not been asked for in the present survey and should be included in the future, drop the editor a line. These columns are for YOUR information.

DeVry Comments on Projector Parade

“IT seems that your addenda in the March “Projector Parade” stating that the amplifier and speaker ratings were not absolute factors of comparing equipment performance has . . . not been read . . . and that much confusion exists as to why the various manufacturers utilizing the same essential tube complement have different power output ratings for their amplifiers. . . .

“To amplify on the preceding, I should like to present you with an analysis of methods of rating amplifiers, as taken from standard practice, some of which has been reduced to generally accepted specifications:

- 1.—Power rated at a single frequency usually 400 cycles with 10% distortion.
- 2.—Academy of Motion Picture Arts & Sciences—power rated at all frequencies for which the equipment is usable at less than 2% distortion.
- 3.—Navy—power rated at a single frequency at less than 6% distortion.
- 4.—Joint Army-Navy specification P-49 and U. S. Treasury Dept. specification—power rated at less than 2% from 100 to 2000 cycles and less than 4% from 2000 to 4000 cycles.

“Now, as you can see from the preceding, the same amplifier is capable of several power ratings—for example, the amplifier listed in your rating as measured under Method 1, develops 32 watts, whereas under Method 2, develops 18 watts, and for complete comparison, develops 29 watts under Method 3, and 26 watts under Method 4.

“All of the preceding adds up to mean that you cannot evaluate an amplifier on a wattage basis without specifying the per cent distortion and the method of measurement.”

E. W. D'ARCY, DeVry Corporation

Editor's Note:—Readers of this department, having negotiated the foregoing, may well understand that the Editor's major concern in preparing “Projector Parade” was to present a lucid, usable account for the average purchaser, technically safeguarded by stating in the article that “Amplifier rated output and speaker rated capacity in watts are not an exact measure of useful power available. . . .” Electrical engineers in our ranks will appreciate Mr. D'Arcy's helpful clarification.

EQUIPMENT QUERIES

"When projecting slide-film in our projector, the focus seems to change during the exposure, so that two changes of focus are necessary for each frame of film. Am I operating the machine correctly?"

In most of the 35mm film projectors, the film passes between two glass plates set in the aperture. These glass plates fulfill the functions of holding the film flat and thus maintaining the same focal position for each frame. It may be that one of these plates has dropped out. If so, the film is being buckled by the heat of the lamp, thus effecting the change in focus as the frame is exhibited.

R. E. S.

"I am learning to operate our new portable recorder and am having considerable difficulty turning out acceptable recordings since changes in pitch occur when playing these back. This seems to be especially noticeable with musical numbers."

Your dilemma may be due to one of several things or a combination thereof. If the recordings seem more high pitched or low pitched than the original sounds, you may be playing these recordings on a phonograph who's turntable is operating at a slightly different speed than your recording machine's. Turntable speed may be regulated on conventional phonographs through a brake on the governor or, if no speed adjustment is to be found, by having some resistance inserted in the motor circuit. If the recording seems to "wow" when played back (i.e. an irregular variation in frequency), it may be that you are exerting too much pressure on the recording turntable in removing the threads cut from the surface of the blank. A soft brush, delicately applied, will reduce the possibility of slowing the turntable during the process. Lastly, there is the possibility that your recording turntable is not being driven at constant speed. This may be due to poor tension on the drive rollers or governor trouble with the motor itself. Either of these may be coped with by skilled help.

R. E. S.

To Veterans Seeking Jobs In Visual Education

According to a recent NAVED announcement, the permanent peace-time Army Air Forces center for the production and distribution of training aids is now being set up at Wright Field, Dayton, Ohio. Civil Service jobs are or shortly will be open in several classifications, including script writers, photographers, lab. men, film librarians and projectionists.

If you are interested, obtain a standard "Application for Federal Employment" form from your nearest Civil Service office and send it directly to Lt. Col. H. T. Cowling, c/o Headquarters, Air Technical Service Command, Wright Field, Dayton, Ohio. If a copy of the form cannot be secured locally, Col. Cowling will send it upon request.

Summer Courses in Visual and Audio-Visual Education, 1946

The following list, with those previously listed in April and May, completes courses offered for the current summer sessions. Full data are given as far as supplied. Figures in parentheses show semester or quarter credits. Final totals for comparison are:

In 1945 ... in 32 States ... 107 Colleges ... offered 139 courses.

In 1946 ... in 38 States ... 136 Colleges ... offered 186 courses.

Mary Visits Poland

(The International Film Foundation; Julian Bryan, Executive Director; 1600 Broadway; Suite 1000; New York 19) 10 minutes, sd. List price \$35 less 10% discount to accredited educational institutions. Apply to producer for rental sources.

Mary, an American seventh grade school girl, describes to her classmates her visit to her grandparents in Poland in 1934 when she was six years old. Relating her experiences in her own language and in the first person, Mary tells how because her father wanted to see his parents again she was taken on the trip to Poland. Her grandmother lived on a farm near the Polish village of Lowicz where everyone worked hard to raise enough food to eat. The wheat was threshed in a primitive fashion by Uncle Thomas and his horse. On Sunday everyone "dressed up" to go to church. Children walked by themselves; some who lived a great distance from the church came in horse-drawn carriages or on bicycles. No one had an automobile. Many of the children wore old Polish costumes. On one Sunday while Mary was visiting her grandparents a young couple were married. After the ceremony several of the young people enjoyed an old folk dance in the open air. The next day when the children went to school, they played games, danced, drew, and learned to write. The games they played were similar to the ones American children play. Before returning to America, Mary also visited Krakow, Zakopane, and Gdynia. A ride in a cable car in the mountains, samples of exquisite woodcarving and hand painting, and folk dances in costume highlighted this part of Mary's visit.

Appraisal:

This is one of a series of films to be released by The International Film Foundation to promote a better understanding of all people by all people. Mary's natural and interesting commentary, the appropriate background music, the friendly and intimate views of Polish people, the simplicity and genuineness of treatment, and the significance of film content combine to make the film a delightful and worthwhile experience. The film emphasizes some of the ideas and understandings about the life of Polish people appropriate for study by pupils in the intermediate grades. The committee recommended it as excellent for introducing on this level a unit in social studies dealing with Poland and coordinated with related activities in oral and written composition, music, art, and dramatics.

Freedom and Famine*

(U. S. Department of Agriculture, Washington, D. C.) 11 Minutes, 16 mm, sound. Produced by RKO Pathe, Inc. Apply to Department of Agriculture for rental sources and terms governing purchase.

Eight months after our celebration of VE Day a Dutch town near the Zuider Zee remained flooded and many cities on the route of the Allied march of freedom lay in the rubble to which they had been reduced by our guns and planes. Can we, now, just as effectively and wholeheartedly undo the work once done by our bombers? This, in substance, is the question with which *Freedom and Famine* opens; and it is apropos to the film's portrayal of how seriously the wrecked transportation and industrial systems in war-torn countries have affected their food problem. Using as a case study the daily experiences of a middle-class French family, the film shows how the lack of transportation throughout their country forces the mother

and daughter to spend their days searching far and wide for a quantity of food constituting for us a good family meal, but for them a whole month's ration. As Elaine, the fifteen-year-old daughter, bicycles over the countryside in search of food, she sees depleted land and neglected farm tools; and her mother patiently waiting in long lines formed before shops contents herself with the most meager of purchases. Meanwhile the father, a minor railway official, labors day and night in an unheated office to discover ways and means of supplying more engines and repairing more rails and bridges—bridges haunted by the cry of babies in Paris hungering for the milk of the Meuse Valley. The twelve-year-old son of the family is deprived of schooling as he remains at home to care for his baby brother, thereby freeing his mother and sister for the important task of shopping. At night, with her own children well sheltered and comparatively secure, the mother is haunted by the plight of other children sleeping in rooms or camping out—children whose faces, often revealing disease, are "masks of stupefaction until they smile." It is with a plea to us to return this smile that the film closes.

Appraisal:

This rather unusual treatment of a timely subject comprises a dramatic appeal for humanity and world-mindedness. At first some of the material in the film seems extraneous, but when the picture is considered and re-considered as a whole, it seems to relate effectively the several facets of the European food problem. The commentary, subtle and mature, represents a skillful combination of factual and attitudinal material, and combines with well-selected photographic sequences in a film recommended for editorial purposes among adult groups and for direct teaching in current events, government, and other social studies classes in the senior high school.

Suffer Little Children*

(U. S. Department of Agriculture, Washington, D. C.) 11 minutes, 16 mm, sound. Produced by the National Film Board of Canada, Ottawa, Canada. Apply to USDA for rental sources and terms governing purchase.

This film documents the need for the work of UNRRA. It explains that children in starving Europe suffer not only from hunger and disease, but also because they do not understand the clashes which take place among their people—people who only recently fought side by side against a common enemy. Many youths, the film points out, are already beginning to look back, not to the horror of bombed cities, but to the glory of Nazi ceremonies and order. Twenty-five million children in Europe are homeless. Schools likewise have been destroyed on a large scale. Under UNRRA's leadership these and hospitals have top priority in the building program and the work of these institutions is being extended to the youth camps now available to all too few of the orphaned children of Europe. The film surveys this problem and treats also at some length the problem of clothing distribution among Europe's suffering people. In contrast to those who benefit from UNRRA there are pictured in the last sequence of the film groups of the many children yet without care. The commentator warns that even these shall someday meet our children, but expresses the hope that when that day comes, they will meet as friends.

Appraisal:

Presented as an argument for the continuance and expansion of the UNRRA program this film is recommended for a variety of audiences interested in post-war problems. Its point that children are confused by the conflicts and disorder which they see and its portrayal of the great

*Selected by the Department of Agriculture for use in the National Famine Emergency Program.

variety of goods and services provided by UNRRA are among its chief contributions. While most generally useful in lay and civic groups of adults, its presentation of the concepts just mentioned recommends it also for junior and senior high school social studies classes.

Huckleberry Finn

(Teaching Film Custodians, 25 West 43rd, New York City 18) 45 min., 16 mm. sound. Produced by Metro-Goldwyn Mayer. Lease price \$100 for three years. Apply to distributor for rental sources.

The opening scenes of the film remind us of Huck's combination of ne'er-do-well tendencies with a lovable character. The story proper begins with the extortion from Huck's aunts by his father of \$800 without which Pap will take Huck back to the life of squalor and ignorance from which his aunts have tried to rescue him by adoption. When Huck tries to run away so as to relieve his aunts of this payment, he is caught by his Pap. But he soon escapes, leaving behind evidences that he has been murdered. In his flight Huck meets Jim, also running away lest he be sold by Huck's aunt, who needs the money to meet Pap's demands, and thus fall into the hands of slave traders. Proceeding down the river together toward a free state, Huck and Jim rescue two gamblers who are thrown overboard by the Captain of a river boat for unfair dealing in cards among the passengers. When Huck and the Captain, a few days later, attempt to interfere in the efforts of these gamblers to get control of an estate just left by a friend of the Captain's, the would-be swindlers expose Jim as a runaway slave, and once again Jim and Huck are forced to flee together. While in hiding Jim reveals to his young friend that his Pap is now dead, thereby making unnecessary Huck's flight from home. At first Huck is heartbroken at Jim's failure to tell him previously, and he is about to desert the slave when a rattlesnake bites Huck. Endangering his own freedom Jim takes Huck back to the Captain's home for medical care. By this time the swindlers have been so thoroughly exposed as to be tarred and feathered out of town, but evidently not before they had made known that Jim was not only a runaway slave but also that he was wanted back home for murder. Therefore the Captain, while Huck is recuperating, turns Jim over to the authorities for trial. As soon as Huck learns of this, he once more takes to the road, still in a weakened condition, bent on returning to his home town as living evidence that Jim is not a murderer. He is overtaken in his flight by the Captain who takes him the rest of the way on his river boat. Sailing under full steam they reach the jail just in time to save Jim from execution. Soon afterward Huck's aunt agrees to release Jim so that he might rejoin his family in a free state, all on the condition that Huck try to stop smoking and keep his shoes on. The closing scenes, then, show Huck waving goodbye to Jim aboard the Captain's boat; and as Huck and his aunt walk away together from the docks, we see in his back pocket a pipe and on the wharf his shoes.

Appraisal:

Recommended especially for use in American literature courses to (1) provide additional satisfying experience for pupils who have read the original story, (2) gain an idea of the way in which Hollywood producers adapt a famous story to the screen, (3) provide backgrounds for a study of writing done on the expanding West in pre-Civil War days, and (4) show how Mark Twain's characters arose out of his own boyhood friendships and experiences. Incidentally the subject is also suggestive of points of correlation between the American literature and American history courses when both are concerned with the development of the West. It is excellent material for elementary, junior, and senior high school convocations. While this version of the Mark Twain story omits the role of Tom Sawyer, minimizes the role of the widowed aunts, and condenses greatly the events following the snakebite incident, this condensation of the Hollywood feature does give the spirit of the original writing and so represents a distinct

contribution to the growing list of famous stories made available on the screen.

Kitchen Come True

(National Film Board of Canada, 84 East Randolph Street, Chicago, Illinois) 15 minutes, 16 mm sound. Produced by National Film Board of Canada, Ottawa, Canada. Apply to distributor for terms governing purchase and a list of rental sources.

The film shows the family life of a Canadian farm family which centers in a kitchen that lacks modern conveniences. It shows this family planning to modernize the kitchen. The mother, who has waited fifteen years for this event, offers many reasons why they might not be able either to afford it or to want to do it now. The family's final decision is that the project should go ahead and that it will be financed by cashing a \$500 bond. The commentary indicates that the bond will cover all expenses except the stove and the refrigerator, both of which are to be bought on time. A combination electric and wood stove is chosen. The film shows many of the features of the kitchen which makes it especially practical for country life—a chute arrangement for directing wood from the out-of-doors into the kitchen, a utility room where outdoor wraps are deposited and preparation of vegetables is carried on, and units concerned with similar activities being planned closely together to save steps. The film ends by showing the new kitchen which is convenient and attractive and yet not too expensive.

Appraisal:

Recommended for stimulating an interest in modernizing older houses, especially kitchens. The emphasis placed on planning the practical features in the kitchen, discussing reasons for and against modernizing, co-operation of all members of the family in such a building project, plans to meet the specific needs of the family unit make this film useful for general adult groups and home-economics classes. Even though produced for Canadian audiences, the film is sufficiently general and applicable to districts in this country.

Which Way This Time?

(Office of Price Administration, Washington, D. C.) 11 minutes, 16 mm, sound. Apply to OPA for rental sources and terms governing purchase.

From the pages of a history book pictured by animated drawings one sees and hears explained by this film, arguments for continued price control in these post-war days. Using the Napoleonic Wars as a first example of the tremendous cost of war on both the military and home fronts the film charts the rapid price rise during these wars up to the Battle of Waterloo, immediately after which there was a sudden onset of inflation. Our own Civil War is described by a similar picture, but for World War I the line charted by prices during and after that conflict is much less regular. The film shows that while the inflationary tendency was checked briefly after 1918, there was soon an unprecedented upswing in prices because of (1) the increased markets stemming from the needs of returning veterans and the demands of starving Europeans, and (2) the careless buying habits of American consumers. Subsequently, according to the film, there was an increased number of farm foreclosures, business failures and unemployed workers.

Appraisal:

This film will prove useful for adult groups desiring a simplified and interesting analysis of inflation and for high school classes in business, social studies and mathematics concerned with identifying the elements and causes of inflation. The historical periods mentioned should have been more carefully delineated, particularly for the period of reconversion and inflation, following World War I. The direct treatment of the subject, enhanced by good animation and excellent incidental music, makes the film a useful one in discussing such theoretical and yet practical questions as "From what and how soon may we lift price controls?"

News an

Two More Film Councils Formed

The Film Council of Louisville, Kentucky, which has been organized under the leadership of Miss Lillian McNulty, Consultant, Visual Education Division, Louisville Board of Education, becomes the fourth local Council to be formed in the National movement, having been preceded by Washington (D. C.), Atlanta and New York.

Following closely the Louisville action, last month, The Bay Area Film Council came into being at a meeting conducted by Francis W. Noel, Chief of Audio-Visual Education of the California State Department of Education, who is the California Chairman of the Film Council of America. Major Joseph W. Burke, recently released from the United States Army, was elected Chairman of the Bay Area Council.

C. R. Reagan, president, Film Council of America, has announced that the Council is cooperating with the National Committee on Atomic Information in a survey of production plans for films and filmstrips on the atomic bomb. The object of the survey is to determine what films are planned by the motion picture industry, and educational and documentary film producers, on the social and political implications of the atomic bomb. When the information has been assembled the two organizations will cooperate in planning additional films if needed and securing production and maximum effective distribution for materials which give information on this urgent problem.

A national audio-visual conference to discuss the forthcoming program and work of UNESCO has been called for June 14 and 15 in Washington, D. C., by the American Council on Education and the Film Council of America, according to a joint statement issued by Dr. George F. Zook and C. R. Reagan.

It is expected that about 100 American educators and motion picture and recording specialists will join with representatives of the State Department and delegates from major civic organizations in formulating recommendations to be presented to the UNESCO Preparatory Commission which meets in London in July. Observers from other governments of the United Nations are being invited to attend the conference.

UN Film Plans

An aggressive campaign for peace through the medium of the screen is the immediate objective of the UN, Benjamin A. Cohen, Asst. Secretary-General of Information of the UN, told 150 members of the New York Film Council at their monthly luncheon meeting, April 10, at which he was the guest speaker. Thomas Brandon, Chairman of the organization, presided.

The UN official declared that the UN Department of Public Information would call upon producers and distributors of the newsreels, documentaries, and feature films for their cooperation in order to pursue such a campaign for world peace. He said he would like to see in the near future a day when in every motion picture theatre in the world there would be a five or ten-minute short presented by the UN. This film would

Notes

not necessarily be produced or distributed by the UN but would be made with the approval of the UN because of the particular emphasis on the idea for world peace it contained.

War always has made the headlines, but peace never makes the headlines, Mr. Cohen said. "Why can't we attempt to make peace important to the peoples of the world?" To do that, he recommended that "we use an essential instrument, the documentary film, which is more effective than any other medium of communication".

He reported the following progress of his Department: it is now preparing a documentary about the London Conference for the UN archives (approximately 67,000 feet of film were shot at the Conference); a short film of the structure and aims of the UN General Assembly which is scheduled to be held in New York September 3rd, is being produced; the Department plans to establish a cataloging system preparatory to building a permanent UN film library; the film on the Conference at Hunter College will be edited and prepared as an official screen record of the proceedings. The Department also is investigating various methods of 35 and 16mm distribution and, following this survey, will make certain recommendations.

Mr. Cohen proposed that the UN Department of Public Information set up a liaison who would supply information and film footage to all existing film companies that desire to produce motion pictures about the UN. This liaison, he added, also would supply information (presumably film stock shots) dealing with specific facts about the member nations in the UN.

He definitely declared that the UN Department of Public Information should "retain control of the dissemination of factual information pertaining to the aims, purposes and scope of the UN". This function, he said, was established by the San Francisco Charter. He pointed out that the distribution of visual material about one country to go to another country in order to make all the peoples of the world better understand each other may be the field of the United Nations Educational, Scientific and Cultural Organization.

Sloan Foundation Grant to College for Project in Economic Education

The Alfred P. Sloan Foundation for Economic Research and Education has awarded to Montclair State Teachers College a grant of \$75,000 for the remainder of the year for the purpose of carrying on and expanding the New Tools for Learning Bureau, a project in economic education. Prof. Edgar C. Bye, director of the Bureau of Field Studies and associate professor of social studies, has been designated by President Sprague as director of the Bureau.

Montclair State Teachers College (N. J.) has been selected by the Foundation to develop this service because of the fact that it has already created and has for many years successfully operated two unique services of its own in the same fields, the Teaching Aids Bureau and the Bureau of Field Studies.

The New Tools for Learning Bureau conducts three separate projects designed to promote a wider understanding of basic economic problems among the general public. It prepares kits of audio-visual aids on various economic topics, designed to assist teachers, group leaders, program chairmen and forum directors in presenting programs. These kits, which may be bought or rented from the Bureau, provide film strips and lantern slides and discussion material, in printed form and on recordings, to accompany the illustrative matter. They cover such topics as foreign trade, full employment, inflation, sound investments versus idle savings, and other subjects under preparation.

The Bureau also owns and carries on a radio serial, "Keeping Up With the Wigglesworths," which is broadcast regularly over WOR and thirty-five other major radio stations in all parts of the country, and which, through the experiences of a boy, "Snuffie," and his family and friends, is designed to teach fundamental economic principles in entertaining form. The recordings are written and produced by Laurence Hammond under the direction of the college, which controls their distribution.

The third department of the Bureau is a continuation and extension of the college's own field studies program, organized by Professor Bye in 1932, which has been known as the pioneer project among the colleges of the country in the establishment of field study courses given separately for credit instead of as occasional supplements to classroom work. Professor Bye's 12,000-mile transcontinental field trips, offered as a means of learning through direct observation and contact with real situations, have been resumed this year after an interruption due to wartime travel restrictions.

The Alfred P. Sloan Foundation is a private, benevolent organization, conducted without bias or propaganda in the interest of public economic education. During the past seven years it has contributed over two million dollars to the task of bringing a better understanding of economic life to the American people and encouraging more effective instruction in economics in our schools and colleges.

Educational Film Research Institute

In August of 1945 over a hundred educators and producers of educational films met at Occidental College to discuss the need for establishing in Los Angeles, the heart of the motion picture industry, a central clearing-house or research center which would assemble and coordinate all of the existing surveys, plans, statistics and film needs of education, at all levels and in all fields, and which would initiate further projects and investigations so that film producers might know what the educational world needs and the extent of its demands.

A planning committee of about twenty-five persons was appointed under the Chairmanship of Mr. James McPherson, President of the Audio-Visual Education Association of Southern California, and over the ensuing six months many meetings were held to clarify objectives.

The fifteen original directors elected the following as officers of the new corporation, called Educational

Film Research Institute: President, Prof. Albert Croissant, of Occidental College; Vice-President, Mrs. Alice E. Field, of the Motion Picture Association; Treasurer, Mr. Chas. M. Jones, and Secretary, Mrs. Ruth B. Hedges. At the last meeting of the Board of Directors the By-laws were amended to increase the Directorate from fifteen to twenty-five, representative of the educators, producers, motion picture talent group, business and public affairs.

The first annual members meeting of the Institute was held April 20, 1946.

Educators who are on the new Board include: Dr. Arthur Coons, President of Occidental College; Mrs. Irene T. Heineman, Assistant Superintendent of Public Instruction, California State Department of Education; Dr. Mark A. May, Director, Institute of Human Relations, Yale University, President and Chairman, Teaching Film Custodians, Inc.; Dr. Edwin E. Lee, Dean of School of Education, University of California at Los Angeles; Francis Noel, Director of Audio-Visual Education, California State Department of Education.

A statement of the objectives of the Institute, and specific enumeration of the activities which will naturally arise out of these objectives is available to those who may be interested.

MGM Teaching Film Plan For Foreign Countries

Metro-Goldwyn-Mayer is ready to launch its widely discussed 16mm educational film distribution program outside the United States and Canada. According to the announcement by Arthur M. Loew, president of Loew's International Corporation, the main features of the new plan are a proposal for long-term financing of film costs to schools and other organizations and a new system of annual leasing of prints, with cost adjusted to the number of pupils in a school or the number of members in a club or trade union.

One of the chief purposes of this venture, Mr. Loew declared, is to make classroom, documentary and fact films "as readily available as the textbook is now," not only to schools and colleges throughout the world, but also to trade unions, farm groups, clubs and all other organizations that are potentially an audience for films of cultural and instructional content.

Under the supervision of Orton H. Hicks, head of the Loew's International 16mm department, and R. Haven Falconer, chief of the educational division, the new program will actually get under way with the coming school year this Fall.

Paving the way for this activity, Metro-Goldwyn-Mayer has just issued a 16-page illustrated pamphlet entitled, "The M-G-M Budget-Service Plan," which discusses the practical details of the plan, and also stresses the broad implications of using the potent device of the motion picture screen as a means of educating the peoples of the world on how to get along with each other.

Many M-G-M shorts and features will be adapted for educational purposes. In addition, pictures made by specialists in 16mm cultural and school subjects will be used. More important than this, however, he said, is his proposal to purchase documentary and

735 MARKET STREET • SAN FRANCISCO

educational films made abroad, as part of a "cultural exchange" plan. In this way, countries that have developed the art of the educational and documentary film will be able to find world-wide outlet through Metro-Goldwyn-Mayer, achieving wider dissemination of their national customs, literature and contributions to science and the arts than might otherwise be possible. Some of the outstanding films bought abroad will be made available to schools in this country.

All sound tracks will be made in the language of the country of distribution. Secondly, special arrangements will be possible whereby the commentary can be written by the Minister of Education himself or by an educational authority designated by him. And thirdly, in cases where no suitable films are available, M-G-M's technical experience and know-how will be utilized to have such a film or series of films made for use abroad as *this project is a foreign activity only*.

S. M. P. E. Honors Inventor of Projector

A Scroll of Achievement honoring Thomas Armat for his invention of the motion picture projector was presented at the semi-annual dinner-dance of the Society of Motion Picture Engineers at the Hotel Pennsylvania on May 8.

The ceremony, highlighting the society's 59th semi-annual technical conference, in progress all week, was held in commemoration of the twentieth anniversary of sound films and the fiftieth anniversary of the first exhibition of motion pictures in a theatre.

In presenting the Thomas Armat scroll, Don E. Hyndman, President of the S. M. P. E., recalled that it was on April 23, 1896, that the first theatre exhibition of film was given in Koster and Bial's Music Hall in New York. On that occasion, he said, Mr. Armat personally operated the projector he had designed. This was the first projection machine employing a loop-forming means and giving the film longer period of rest and illumination than the time required for movement from frame to frame.

In a report submitted at one of the S. M. P. E. sessions, the Society's Committee on Motion Picture Instruction deplored the lack of specialized professional courses on cinematography and modern sound recording in American institutions of higher learning. The results of a survey of 155 universities, colleges, and technical schools conducted since the committee was

formed last October indicate very clearly that the technology of motion picture making has not been given serious consideration in institutions of this calibre. "It would appear," the report said, "that the industry has advanced to a point where training for it should be recognized as calling for special instruction in our schools and colleges."

University of Wisconsin Holds Institute in July

The fourth annual Visual Education Institute will be held July 15-19 during the 1946 summer session of the University of Wisconsin. Morning sessions will take place at the Washington School and all afternoon meetings will be held in the Memorial Union Play Circle.

Out-of-state audio-visual educators who will participate in the program include: Francis Noel, California State Department of Education; L. C. Larson, Indiana University; Kingsley Trenholme, Portland Oregon Public Schools; William H. Bristow, New York City Public Schools; Harry E. Childs, Providence, R. I., Public Schools; Arthur Stenius, Detroit Public Schools.

Audience participation in discussion following formal addresses and classroom demonstrations, will be encouraged. Following the closing of each afternoon meeting, new films of current interest will be shown.

For a copy of the complete program, write to Mr. W. A. Wittich, Director, Bureau of Visual Instruction, University of Wisconsin, Madison.

14th Annual New England D.V.I. Conference

The New England Section of the Department of Visual Instruction of the N. E. A., in cooperation with Boston University, Harvard University and the Massachusetts Department of Education, held its 14th annual conference on May 18 in the School of Education, Boston University. The theme was "Looking Ahead in Audio-Visual Education." On the General Session Program, Lt. Colonel Thomas Abernathy, Principal of the Westfield, Mass. High School, and Mr. Paul C. Reed, Director of Audio-Visual Education in the Rochester, N. Y. Public Schools, spoke on the subject "What Have We Learned from the Army Audio-Visual Education Program and How Can We Incorporate These Experiences into our Schools," and Mr. Neville C. Gardiner, Film Officer of the British Information Services, presented the British Government's Postwar Film

Program. Panel discussions and demonstrations on the selection and effective use of teaching aids were held in various sectional meetings for primary grade teachers, intermediate grade teachers, junior and senior high school science teachers, junior and senior high school social science teachers, guidance teachers, and teachers of religious education.

Second Annual Lake County Audio-Visual Conference

Mr. W. C. Petty, superintendent of Lake County schools, opened the second Lake County one-day Audio-Visual Conference in May at the Waukegan, Illinois, Township High School. Over 700 educators attended the interesting program which was planned by Orlin D. Trapp, Director of Vocational and Visual Education at the Waukegan High School.

Speakers were Dr. Stephen M. Corey, Director of the University of Chicago's Visual Aids Center; Dr. John Guy Fowlkes, Dean of the Summer Session, University of Wisconsin; O. H. Coelln, Publisher of Business Screen, Chicago; and C. R. Crakes, Educational Consultant, DeVry Corporation, Chicago. Demonstrations and exhibits of visual aids were additional features.

Audio-Visual Institutes

Virginia. A series of six two-day audio-visual instructional materials institutes is planned by the Bureau of Teaching Materials, State Department of Education, and the following institutions:

July 8 & 9: Virginia State College, Ettrick; July 11 & 12: College of William and Mary, Williamsburg; July 15 & 16: Farmville State Teachers College, Farmville; July 17 & 18: Madison College, Harrisonburg; July 19 & 20: University of Virginia, Charlottesville; July 22 & 23: Radford College, Radford.

Oklahoma. The University of Oklahoma, Norman, will hold its 7th Annual Audio-Visual Aids Conference July 9-11. Highlights of the program will be an address on "Building an Effective Audio-Visual Aids Program," and a demonstration of the "Possibilities for Pupil Participation in the Preparation of Classroom Materials." It will also include reports of outstanding School Audio-Visual Aids programs and an explanation of Oklahoma's Audio-Visual Aids utilization project for the school year 1946-47.

Adamson Joins National Film Society of Canada

Gordon Adamson, formerly Supervisor of Urban Distribution for the National Film Board of Canada, has been appointed Executive Secretary of the National Film Society. During his three years with the Board Mr. Adamson promoted the organization of community projection services and film libraries, which are now bringing films within the reach of teachers in many Canadian centres. In response to a greatly increased demand for specialized educational films, Mr. Adamson is planning a rapid expansion of the National Film Society's library to meet the needs of teachers of all grades and subjects.

NAVED Summer Convention

The first postwar Convention and Trade Show of the National Association of Visual Education Dealers, scheduled for August 5-7 at the Continental Hotel in Chicago, promises to be well worth the trip for even the most distant pilgrim. With wartime restrictions removed, this will be their first opportunity to display equipment and films incorporating war-born advances in technology and technique. The Association not only invites, but urges, the attendance and participation of all persons interested in visual education. This includes educators, religious workers, industry representatives, and the like. NAVED's officers believe they have planned a program in every way worthy of the anticipated audience. There will be sessions on the following topics:

"The Square Deal," with an address by John W. Anderson, President of the American Fair Trade Council; also a discussion including representatives of manufacturers and producers, visual education dealers, and consumers—"Serving the Public," a discussion including participants from church, school, industry, and others—"Whither Classroom Visual Aids," an inquiry into present trends and prophecies for the future—"Literature, Criticism and Evaluation," a discussion of the professional literature of visual education—"Community Councils," dealing with the formation of local Film Councils.

High points of the convention will be the Annual Banquet at which NAVED's new officers will be introduced and various awards presented.

Report on Audio-Visual Program in Canada

Mr. Charles R. Crakes, Educational Consultant for the DeVry Corporation, recently returned from a series of conferences with the provincial educational officials of five Canadian provinces—Nova Scotia, New Brunswick, Prince Edward Island, Quebec and Ontario.

In addition to conferring with educational directors, Mr. Crakes spoke at the Provincial Normal College at Truro, Nova Scotia. He also addressed the teachers at Halifax, Nova Scotia, at Moncton and at St. John, New Brunswick. Schools were dismissed in order that all instructors could hear Mr. Crakes discuss greater utilization of audio-visual materials. He urged that teachers incorporate audio-visual materials into their teaching techniques and he stressed the fact that these modern tools of learning will bring to the youth of North America better understanding and appreciation of peoples of other countries, and thus aid in the preservation of the United Nations Organization and weld together the family of nations.

Mr. Crakes reports that all the provinces he visited had started central film libraries and had appointed provincial directors of audio-visual aids, and that an intense interest was indicated by the educational leaders of Canada in the need for providing audio-visual tools of learning for the rural areas and small villages of that country. "Cooperative film libraries", Mr. Crakes said, "seem to be an immediate need in Canada. We in the United States must give every possible assistance to our neighbors to the north in their efforts to further the audio-visual movement."

Current Film News

■ **THE INTERNATIONAL FILM FOUNDATION**, Inc., 1600 Broadway, New York 19, recently established as a non-profit, membership corporation to further peace and understanding among all peoples through the medium of documentary motion pictures has ready for immediate distribution the following Julian Bryan productions:

Mary Visits Poland—10 min. An American elementary school girl describes to her class her visit to Poland. An insight is given into Polish schools, Polish homes, agricultural activities, the colorful dances and costumes of the Polish people.

Poland—18 min. An over-all picture of Poland—as it existed prior to the Nazi invasion and destruction, and as it will exist again after reconstruction. Primitive methods, so common in agricultural and manual labor, are contrasted with modern methods of construction in Warsaw. An insight into Polish historical backgrounds, and into the varied business, agricultural, educational, religious and social life of the people.

A Russian Children's Railway—7 min. Records the story of a children's railway in Tbilisi, capital of Georgia. This is one of several such railways built by the Soviet Government, not purely for entertainment, but as a motive for furthering interest of youngsters in railroads, to help solve one of Russia's major problems—transportation.

Children of Russia—13 min. How Russian children go to the school, garden, play parade, visit museums and art galleries, and live in summer Pioneer camps.

The following subjects will be available on July 1st:

Peoples of the U. S. S. R.—33 min. Pictures the many racial groups which make up the Soviet Union. Believed to be the first film offered to American education which gives a truly over-all concept of this vast country with its many separate and distinct peoples. Beginning with the people of Moscow and Leningrad, there follow pictures of the Karelians, the Armenians, the Georgians, the Tartars, the Buryat-Mongolians, the Jews, the Ukrainians, the Uzbeks and others, showing how they fit into the pattern of life in the Soviet Union.

How Russians Play—14 min. This film was made in the belief that a study of the way people spend their leisure time, of their own free will, often reveals a great deal about their character. It pictures the Russians in their many recreational activities.

Soviet Women—14 min. Shows the important role of Soviet women in the economic and agricultural life of Russia. Their work in factory, in the

fields of medicine, science, welfare, farming, and many others, are pictured.

The Reindeer People—8 min. The peoples of Siberia—the Tungus, inhabiting the region from Yenissei to the Sea of Okhotsk, who live primarily by reindeer breeding, fishing and hunting.

■ **KNOWLEDGE BUILDERS FILMS**, 625 Madison Ave., New York 22, reports the following recent additions to its classroom film productions:

Jungles of the World—1 reel. A comparison of the jungles of South America, Central Africa, Burma and the East Indies, showing similarities in vegetation, animal life and the methods adopted by man to fit human life into a tropical environment.

Life in a Jungle Village—1 reel. Shows the establishment of a native village in Central Africa, the building of homes and granaries, the raising of grain, vegetables and livestock; the games and manner of life of inhabitants.

North Pole Explorations—1 reel. Opens with dramatization of the ill-fated Franklin expedition to the far north. Shows Perry's discovery of the North Pole and concludes with Byrd's

flight from Spitzbergen, encircling the pole and back again.

■ **YOUNG AMERICA FILMS**, Inc., 18 E. 41st St., New York 17, has obtained 16mm distribution rights to the RKO production—

The House I Live In—10 min. This short subject, starring Frank Sinatra, has received a special award

from the Academy of Motion Pictures, as well as citations from other organizations in recognition of its powerful contribution to the cause of racial and democratic tolerance. The song of democratic thought by Earl Robinson which gives the film its title is sung by Frank Sinatra to the group of youngsters who appear with him in the film. It will be available for sale to schools and other interested groups through Young America's nation-wide distributing organization.

**Now ready for
16mm RELEASE —
THE MIRACLE MUSICAL HIT!**

Produced by Boris Morros
You can consistently depend upon the extensive program of major Hollywood product available to the 16mm market from

ASTOR PICTURES CORP.

130 West 46th Street
NEW YORK CITY 19, N.Y.

■ OFFICIAL FILMS, Inc., 25 West 45th St., New York 19, offers a new series of three musical short subjects, to be known as DeLuxe Musical Classics, each approximately 350 ft. in length, and featuring the great composer-pianist, Paderewski, in performances of *Chopin's Polonaise*, *Beethoven's Moonlight Sonata*—with Paderewski's own *Minuet in G* in the same reel—and *Liszt's Hungarian Rhapsody No. 2*.

Also newly acquired by Official is a series of three sports subjects, each approximately 10 minutes in length, as follows:

Swimming for Beginners—instructing a ten year old child in the fundamentals of swimming—from the conquest of fear, to breathing, kicking, arm strokes and coordinated deep water swimming.

Advanced Swimming—perfecting the style and strokes of the average swimmer. Correction of common swim faults. Proper body alignment, arm action, leg action, breathing, and all the "musts" that make for champion swimmers.

Fundamentals of Diving—balance, coordination, rhythm, and the basic fundamentals of the proper approach to this sport. Covers many types of diving, importance of footwork, arm and leg action, etc.

Produced under the supervision of Fred Cady, nationally recognized as one of the outstanding aquatic coaches of the country, and narrated by Ken Carpenter, these films employ, in addition to straight photography, the use of slow motion, stop action and animation and are designed as aids for learning the basic as well as advanced techniques of swimming and diving.

■ EASTIN PICTURES COMPANY of Davenport, Iowa and Colorado Springs, Colo. has acquired exclusive U. S. 16mm rights from British Information Services on the two motion picture dramatizations of key scenes from the Shakespeare tragedies:

Julius Caesar—19 min. Presents Act III, Scene 2, depicting the stirring events in the Roman forum immediately following the assassination of Caesar, with first Brutus and then the eloquent Antony, swaying the Roman populace.

Macbeth—16 min. Presents Act II, Scene 2, in which the ambitious Macbeth abetted by Lady Macbeth, murders Duncan, King of Scotland, and Act V, Scene 1, in which the conscience-stricken Lady Macbeth appears in her dramatic sleep-walking scene.

These subjects, announced as the first two releases of the new Eastin School Film series, have attracted much favorable comment on the part of school film reviewers and evaluating committees for their unique value in English, drama, speech and Latin

Upper scene: Antony tells the Romans of Caesar's will. Lower: Brutus tells them Caesar died because he was ambitious.

classes. The distinguished casts include Wilfred Lawson, Leo Gem, Cathleen Nesbit, Catherine Lacy, Felix Aylmar, and others who are respected on both sides of the Atlantic for their able stage and screen performances. Excellent musical scores played by the London Symphony Orchestra add to the dramatic impact of the presentations, as do the authentic settings and costumes. Eastin Pictures Company will offer the subjects for both rental and sale.

Upper scene: Macbeth and Lady Macbeth immediately after Duncan's murder. Lower: the sleepwalking scene.

■ **BELL AND HOWELL COMPANY**, 1861 Larchmont Ave., Chicago, by special arrangement with British Instructional Films, Ltd., is making available a large group of educational films for rental and sale through the Bell and Howell Film-sound Library. Many of these films are not unknown to American schools, prints of some having been in use for years by leading university and city educational film centers. During the war when source of supply was cut, representation here became dormant. The Bell and Howell Films Division will revive active distribution, importing the necessary negatives and other originals to assure prompt service, and enlisting the collaboration of a committee of American visual teaching authorities in selecting and adapting the subjects best suited for use in our schools. The first three series to be released will be in the field of physical education, where accent difficulty is said to be practically non-existent. In other subject fields new sound tracks will be made wherever necessary.

■ **HAWLEY-LORD, Inc.**, 51 West 56th St., New York, announces the release of its first film:

Pheasant Fever—1 reel, color and sound, photographed by Thomas R. Conlon, and picturing the training of a young dog in field work.

Hawley-Lord, a new firm in the field of 16mm films and 35mm filmstrips, is also the sole sales distribution agent for the 16mm film productions of "Field and Stream" magazine, and now has available for national distribution fifteen of these sports shorts covering many spectacular phases of hunting and fishing in North America. The 35mm filmstrips just completed and ready for release include the first of the color Nature Studies series, *Game Birds and Dogs*, based on the collection of paintings on this subject made by "Field and Stream", and *Malaya*, the first of their Global Geography series.

Andre Lord, the founder of the company, was formerly in the banking and investment business and served during the war in the Combat Intelligence Section of the Army Air Corps and as Air Intelligence Officer to the U. S. Military Mission to Moscow. Mr. Lord plans thorough coverage in sound films and filmstrips of the field sports, hunting, fishing and wild life, using color in all of his productions. There will be specialization, also, in color and black and white filmstrips with a curricular treatment of global geography and nature studies.

Now in process of completion is *Blue Geese*, 1-reel color and sound film on the hunting of geese, photographed by Van Campen Heilner. Mr. Heilner is now in Mexico doing several films on Mexican sports and amusements, planned for Fall release. Other pictures in production include four subjects photographed by Dr. A. E. Laszlo, recognized

authority on hunting and wild-life in Alaska. Color filmstrips on Iran and India, especially topical at present, are also now being completed.

Production Director of Hawley Lord is Zella G. Young, who has produced and edited educational filmstrips and recordings for the audio-visual aids program of Popular Science Publishing Company in New York.

■ **FILM HIGHLIGHTS, Inc.**, 330 West 42nd St., New York 18, is making available for classroom use, a group of 16mm sound and silent films of the series on Living Natural History produced by the internationally famous zoologist, Dr. Raymond L. Ditmars. Sound sub-

jects currently available cover *Anthropoid Apes, New and Old World Monkeys, Cat Animals, Bear, Canines, Smaller Carnivores, Smaller and Larger Rodents*. Additional subjects in the series are in process of completion.

■ **SUN DIAL FILMS, INC.**, 625 Madison Ave., New York 22, has just completed a 16mm. sound film for the Flay Schools Association, called:

Play Is Our Business (2 reels)—a documentary film dealing with integrated work-play programs for children in congested areas. Dr. Alice Keliher served as consultant on the film, which was directed by Samuel A. Detlowe.

AMONG THE PRODUCERS

New Da-Lite Screen

Da-Lite Screen Company, Inc., 2723 North Crawford Avenue, Chicago, Illinois is introducing a new Challenger Tripod Screen, which has many new features.

"Slide-A-Matic", a new and exclusive inner-locking system in the new Challenger completely eliminates external locking devices, such as thumb screws, etc. To adjust the height of the screen, it is necessary merely to pull back on the square elevating tubing, raise or lower it to desired height, release the tubing, and it automatically locks in place.

One simple motion opens the tripod legs of the new Challenger and their

The new Da-Lite Challenger screen.

"Slide-A-Matic" locking device automatically locks them in place. A new four-sided "roof-top" shape makes the new legs more rigid. No rubber tips are needed for the feet of the new Challenger. The leg itself is formed into a rounded foot which provides a firm grip on any surface, yet will not scratch floors.

The new, octagon-shaped case is stronger than the former round case and prevents screen surface from rubbing on edges of case. Other improvements are the new hanger bracket and hanger loop, which hold the screen fabric more securely and prevent it from accidentally slipping off. A new metal carrying handle conforms to the shape of the hand and folds flat against the case for compact storage.

YMCA Motion Picture Bureau Becomes "Association Films"

The YMCA Motion Picture Bureau, National Council of YMCA's, with national headquarters at 347 Madison Ave., New York 17, will henceforth operate under a new name—*Association Films*. This designation was first introduced as a title of the film production unit of the National Council of YMCA's, established to fill a need for group leadership, instructional sports, and character education films. *Ploy Volleyball*, a 16mm instructional sports film and *Play Soft-*

ball, a 35mm instructional slide film, have already been successfully launched, and prints on a new series of six 16mm sound films on *West Point Championship Football* will be ready by July 1st. The subjects in this series run approximately 10 minutes, demonstrate specific phases of football, with every play aptly interpreted by narration. Each film demonstrates elementary fundamentals and progressively introduces the more intricate phases. Slow motion, stop motion, optical effects and repetition of plays to focus on individual players are employed to indicate the assignment and execution by players in a given play. Other recent releases were the first two films in the *Art of Living* series—a joint production project of *Association Films* and *Look Magazine*—"You and Your Family" and "You and Your Friends", one-reel subjects designed to stimulate discussion of the personal family and social relationships of teen-age youth. The series will continue with "You and Your Health" and "You and Your Personality" to be produced in the near future.

Avoidance of World Destruction Via Atomic Warfare Discussed in New Slidefilms

In cooperation with the National Committee on Atomic Information and the American Federation of (Atomic) Scientists a new 35mm discussion slidefilm has just been released by Film Publishers, Inc., 12 East 44th Street, New York City. Convinced that only by an aroused intelligent public opinion can America be sure that its elected representatives will devise a practical solution to the atomic problem, *How to Live With the Atom* has been produced as a means to this end. Effectively employing light, satirical cartoons, the slidefilm, which consists of 58 such drawings, visualizes the various ways being currently considered to avoid world destruction by atomic warfare. Such ideas as simply keeping the atom bomb a secret, building up the biggest bomb supply, inventing a defense against atom bombs, signing treaties with other nations outlawing the use of such weapons, are depicted as false hopes for long-range security, with the conclusion presented that the only true hope for world security lies in world control of atomic energy by an international agency with power over the individual nations.

Accompanying the subjects are printed Spechnotes with the talk that the person presenting the film speaks while the cartoons are projected on the screen, and a helpful Discussion Guide.

A second 35mm discussion slidefilm, *World Control of Atomic Energy*, is being released by Film Publishers under the same auspices, on June 15. This will explain in clear visual detail the working of the plans proposed by the State Department for international atomic

Representative drawings from the slidefilm "How to Live with the Atom."

control. The two slidefilms sell outright at modest cost. A 15-minute, 16 inch electrical transcription recorded at 33 $\frac{1}{3}$ r. p. m. is available for each slidefilm at additional cost. With these transcription records the narration accompanying the slidefilm pictures may be reproduced through auditorium sound amplifying systems or on standard sound slidefilm projectors.

Boston Distributor Firm Changes Name

Visual Education Service, Inc., of Boston has become Audio-Visual Corporation of Boston, Hartford, and Providence. So announced Richard F. O'Neil, its President, and past President of NAVED, to mark his 25th year as a distributor of Audio-Visual materials. The name change will be effected gradually over the next twelve months, and was necessitated to keep abreast of the expansion in Company activities that has

taken place during the past dozen years. When all movies were silent and all 16mm film available to the Company were educational, the name "Visual Education Service" adequately described the Company's activities. With the addition of entertainment films, sound films, sound projectors, public address and intercommunicating equipment, disc and wire recorders, etc., it becomes necessary to make the Vesco Film Library a division of Audio-Visual Corporation. New branch offices and additional field representatives now bring complete audio-visual service to Southern New England. The Hartford office which formerly housed Hebert Studios, Inc., has been completely remodeled and re-equipped under its manager, Malcolm Sauer. Equally well equipped for service is the Providence office recently opened under Bill Cooper.

To publicize the 5,000 films—features and shorts, educational and entertainment—in the various offices, George Roghaar, director of the Vesco Film Library has published a 172 page catalog, including a 28-page equipment section.

134 Teach-O-Discs Ready

Popular Science Publishing Company, 353 Fourth Ave., New York 10, through its newly established Audio-Visual Division, lists 134 titles in its recent printed announcement of the new *Teach-O-Disc* series of recordings prepared as a teaching medium for school use in elementary, junior and senior high schools. These titles cover but two subjects—Literature and History. A constant flow of additional *Teach-O-Disc* titles in these subjects is planned, as well as titles in other subjects such as Geography, Biology, Foreign Languages, etc. The announcement also carries a condensed specimen of the teachers guides which are provided with each *Teach-O-Disc*.

The Rembrant Portable Electric Phonograph, a new machine designed especially for school use, is being distributed to schools exclusively by the new organization. This phonograph is described as having a 5" permanent magnet speaker; 3-tube amplification, light weight crystal pickup for minimum record wear; independent tone and volume controls; and indicator light. It plays 10 and 12 inch records at 78 r.p.m.; has built-in compartment holding 12 records; overall weight is 18 pounds; operates on alternating current only and carries a factory guarantee.

New RADIANT Screen Finder

A new, slide-rule type Projection *Screen Finder* for the users of opaque, movie, slide, and strip film projectors has been introduced by Radiant Screens.

It provides information on the correct Screen model to use and on the audience-handling capacity of a given screen, in addition to permitting the solution of such problems as the correct screen size to use, the correct distance from the screen to the projector, and the correct

focal length lens to use. This useful data is available by a simple movement of the handy slide, it is said, and will prove invaluable to all Projection Screen users.

With all this information at his fingertips in a simple form, the user need never wonder whether he has the right lens and the right distance to the Screen in order to provide clearly visible pictures for his entire audience.

For further information, write to Radiant Manufacturing Corp., 1140 West Superior Street, Chicago 22, Illinois.

Richard F. O'Neil and Wife Die in Fire

As we go to press, shocking news comes that fire which broke out in their New England summer cottage where they were spending the week-end, took the lives of Richard F. O'Neil and his wife during the night of June 1st. "Dick" O'Neil was President of Visual Education Service in Boston, a pioneer dealer and distributor firm. He was one of the founders and a past president of the National Association of Visual Education Dealers, and recently was elected one of the directors of the Allied Non-Theatrical Film Association.

ANFA Convention Report

The Allied Non-Theatrical Film Association reports a record attendance at its annual Convention held in New York May 9-11. The several hundred registrants were representative not only of the 16mm and allied photographic industries, but included many from the educational field. This year's Convention offered the first all-industry trade exhibit, combining all types of 16mm interests. One entire day was devoted to a special preview of selected 16mm motion pictures, including films for school and church, for adult discussion groups and for entertainment. Industry speakers covered various topics of policy and practice relating to manufacturer, distributor, dealer and library operations. In addition the program presented such speakers as Chester A. Lindstrom of the U. S. Department of Agriculture; Benjamin J. Cohen, Assistant Secretary-General in Charge of Public Information, United Nations; Nathan Golden of the U. S. Department of Commerce and John Bradley of the Library of Congress. C. R. Reagan of the Film Council of America.

Newly-elected officers of ANFA are President, Wm. F. Kruse, Manager of the Bell and Howell Films Division; Vice-Presidents, Stan Atkinson,

D. T. Davis Company Adds Educational Consultant

Beginning July 1st, Austin S. Durham, Director of Audio-Visual Aids in the Fort Thomas, Kentucky, city schools, will be associated with the D. T. Davis Company of Lexington and Cincinnati as Educational Consultant. Mr. Durham, who received his M. A. degree from the University of Kentucky, is well-trained in planning, organizing, financing and directing audio-visual programs. He has been a classroom teacher, administrator, and Director of Audio-Visual activities, and is thoroughly acquainted with the problems facing school systems with respect to selection and efficient use of audio-visual aids. He recently organized the Northern Kentucky Film Bureau, in which three school systems have combined resources to form their own library. Mr. Durham is the author of many articles on the use of audio-visual aids, which have appeared in educational journals. Among other duties, Mr. Durham will edit the D. T. Davis Company's new monthly organ to be called *Visual Varieties*, which will deal with matters of interest to audio-visual minded schools, churches and other groups.

General Films, Ltd. and Sam Goldstein, Commonwealth Pictures Corp.; Secretary, Harold Baumstone, Pictorial Films; Treasurer, George Cole, King Cole Sound Service; Directors, Ed Stevens, Stevens Pictures; Thomas J. Brandon, Brandon Films; Kent Eastin, Eastin 16mm Pictures Co.

ANFA Directors will hold a meeting in Chicago on August 3rd, just prior to the NAVED annual Convention. In the interim a special committee of ANFA is engaged in an exploration of the possibilities of future unity between the two organizations.

Photographed below are: Seated, W. L. Hedwig, past president of ANFA; W. F. Kruse, newly elected president; Horace Jones, outgoing president; Sam Goldstein, re-elected vice-president. Standing, left to right: Stan Atkinson, newly elected vice-president; R. F. O'Neil, Wilfred L. Knighton, Ed Stevens, Tom Brandon, Kent Eastin, George Cole and Clem Williams. All are directors, except Knighton (executive secretary) and Cole (treasurer).

The EDUCATIONAL SCREEN published monthly except July and August by The Educational Screen, Inc. Publication Office, Pontiac, Illinois; Executive Office, 64 East Lake St., Chicago, Illinois. Entered at the Post Office at Pontiac, Illinois, as Second Class Matter.
 Address communications to The Educational Screen, 64 East Lake St., Chicago, Ill.

A hand holding a lit torch, with the word "PLEDGE" written in large letters above it. The background features a map of the United States and several stars.

TO THE EDUCATORS OF AMERICA

... to the educational leaders who seek a broader understanding of the film medium ... to the men and women in whose hands rests the future of this powerful educational force ... to the schools and colleges throughout the world that have adopted Simmel-Meservey productions as an integral part of their curriculum, Simmel-Meservey addresses this timely re-statement of policy:

... To produce only those films which will motivate constructive student thinking.

... To employ only accepted educational techniques and, with the aid of competent research, to produce material which complements the existing curriculum.

... To maintain a standard of quality above all considerations of cost, sponsorship or other factors which might detract from our primary instructional function.

... To regard the educational film as a teaching tool capable of infinite adaptation and improvement and, to welcome and be guided by recommendations of qualified educators.

... To maintain maximum interest level through well-paced realism rather than unwarranted artifice.

... To regard the classroom as the real laboratory, standing ever beside the teachers in their use of this medium.

... To assume an active responsibility in aiding the progress of educational techniques.

... To regard as an honored privilege and a sacred trust our function in aiding in the development of finer men and women to the end that a better understanding may exist among all the peoples of the world.

—SIMMEL-MESERVEY

Diversitorials

Our Expanding Program

THE EDUCATIONAL SCREEN is keeping pace with its ever-broadening audio-visual field. In mere size this September issue is a record. There are more special articles on important recent developments; the departments are enlarged; the news-gathering is stepped up; illustrations are increased; and the advertising has passed all previous marks. The expansion program will be gradual, but every issue will show advance. Change and increase in personnel are compulsory. Readers will note this on the title page, this month. In October a further announcement should make interesting reading—of a new Managing Editor who will be recognized by the entire field, both educational and commercial, not only as outstanding in things audio-visual but as peculiarly qualified to implement the larger program ahead of Educational Screen. He will also edit a special section to be known as

The Audio-Visual Trade Review

This new feature makes its first appearance in this issue on pages 407 to 416. It will offer, every month, a comprehensive overview of plans and projects, personalities and products, activities and achievements of the commercial audio-visual field. It will select with utmost care the most significant material, and present it in a manner to yield maximum informative value to the educational field.

The need for closer understanding between the two fields has been often stressed in our pages. Paul C. Reed of the Rochester Public Schools, now Associate Editor and Chairman of the Editorial Advisory Board, adds fine emphasis to this idea in the adjoining column. His interesting "proposal" for 1947 aims precisely at the same desirable goal.

The educational side of the audio-visual field cannot afford to forget that its total equipment, as of today, is the achievement of commercial producers. It could never have come from the educational field itself. The wealth and power of industry are impossibilities for education. The chemistry of emulsions and reagents, the physics of light and lenses, the engineering and mechanics of design and production—these and many other problems have absorbed for years past the energies and the millions of our commercial colleagues. Without them there could be no cameras or projectors today. Even a photographic print would be unknown to any school. The field that produced such a heritage should be better known to the field that enjoys it. THE EDUCATIONAL SCREEN means to contribute as it can toward this mutual acquaintance and appreciation, toward a more genuine and cordial understanding, as an essential part of the fuller service it seeks to render to the field. For it remains our firm belief that audio-visual education has always been, is now, and will always be more crucially

dependent upon its commercial collaborators than any other aspect or department of the educational realm.
—N. L. G.

A Great Date for 1947

NO one who attended the August Convention and Trade Show of the National Association of Visual Education Dealers could doubt that this infant industry had finally come of age. Only a half dozen years ago NAVED was little more than a visionary idea in the minds of such practical idealists as Reagan, Stackhouse, Davis, the late Dick O'Neil, and others. Now it has become a great trade association, attracting almost a thousand registrants to its annual convention, providing a thoughtfully constructive three-day program of group meetings and general sessions all aimed toward improving the materials and equipment of the industry, and improving the methods and practices that bring these materials and equipment to the users.

Every schoolman who has purchased audio-visual equipment or who has used audio-visual materials in his school knows the importance of his relationships with the representatives of equipment manufacturers and visual materials producers. School people have learned much about these newer tools of communication from those who make and distribute them. Not only have these "commercial men" brought understandings of their own particular products to educators, but they have spread the word of best practices and procedures as they have observed them. They serve a valuable clearing house function in their multiple contacts with school people. Growth in the feelings of mutual respect and confidence between the commercial men and the educators is a sign of the maturity that has come in this field.

It is unfortunate that more educators did not have the opportunity for attending the NAVED Convention, for they would have come away with greater understandings of the problems of the industry and greater appreciation of the men who are dealing with these problems. Also they would have seen one of the best displays ever presented of new visual materials and equipment. Plans should be started right now for next year to bring together every educator and every person interested in the use of audio-visual equipment and materials. Here is a proposal.

For 1947 why not jointly planned conventions of all the organizations in this field—The National Association of Visual Education Dealers, The Educational Film Library Association, The Allied Non-Theatrical Film Association, the Department of Visual Instruction of the N. E. A. and others? All would plan conventions for the same time and the same city. Each organization would retain its own identity and have its own meetings. But there would be joint meetings for a maximum interchange of ideas and experience, and there would be a single trade show to serve the interests of all. Such a combination of conventions would be so significant and important that no one interested in the field of audio-visual education could afford to miss it. **It would be the one great date of 1947 for all who are visually minded.**

P. C. R.

Audio-visual instruction by athletes, coaches and experts . . . that's the modern way to teach!

What could be better than having renowned experts appear *in person* to help your athletic training program?

The answer is—Official's new sound-on-film "INSTRUCTIVE SPORTBEAMS!" For, in these films, experts not only *tell* and *show* their secrets, but utilize sure-fire camera techniques, as well!

"OFFENSIVE FOOTBALL," for instance, not only presents big-time teams in action, but shows plays in s-l-o-w motion, plus many animated diagrams, closeups, superimposed titles and stop-action!

"DEFENSIVE FOOTBALL" is equally clarifying. Both films are narrated by Ken Carpenter; are available on 16mm. sound-on-film. See your dealer...or mail the coupon below!

FOR MUSIC CLASSES! IGNACE PADEREWSKI plays: CHOPIN'S POLONAISE . . . BEETHOVEN'S MOONLIGHT SONATA and PADEREWSKI'S MINUET IN G . . . LISZT'S HUNGARIAN RHAPSODY No. 2.

FREE! Send coupon for 32-page 1947 Catalog of over 230 subjects —greatest variety of selected short films from any one source!

THE INCOMPARABLE BILL TILDEN makes the principles of big-time tennis performance crystal-clear in two great new films! TENNIS FOR BEGINNERS teaches the fundamentals—ADVANCED TENNIS, the techniques that real experts use! Both narrations and demonstrations are by "Big Bill" himself.

TWO INSTRUCTIVE SWIMMING REELS, SWIMMING FOR BEGINNERS and ADVANCED SWIMMING —

made under the supervision of Fred Cady, Coach of United States Olympic Teams and the University of Southern California. Ken Carpenter narrates.

FUNDAMENTALS OF DIVING covers balance, coordination, rhythm—all the fundamentals. S-l-o-w motion and visual techniques cover many types of diving, show proper foot-work, arm and leg action, etc. Narrated by Ken Carpenter; supervised by Fred Cady.

KEEP YOUR SCREEN ALIVE

An opaque projector can keep your screen as alive and up-to-date as the latest newspapers and magazines.

Just such a projector is the Spencer Model VA Delineascope. With it you can project printed pages, maps, photographs, stamps, coins, and other specimens not readily obtainable in slide form.

This versatile Delineascope also accommodates lantern slides and, with at-

tachments, 2" x 2" slides, slidefilms, and micro-slides.

More than 50,000 teachers have requested our free manual: "Opaque Projection—A New Frontier in Teaching." For your copy write to Dept. J12.

Films for Tomorrow

A thoughtful study of educational potentialities of films based on the author's addresses before the Philadelphia Alliance and the Educational Film Library Association.

THOMAS BAIRD
Director, Film Division
British Information Services

TO speak with seeming authority on the future of any subject calls for some temerity on the part of the forecaster. But where angels may fear to tread, it is not necessarily folly to foretell, for only by forecasting the future can we shape it. Our thought about the future can become our plan for the future.

In tracing the graph of the future, we may use two references—the experience of the past and the requirement of the future.

The past history of film, short as it may be, reveals that film has already taken several forms; just as printing allows us to produce books on a variety of topics and subjects and in different styles, so film already has its own forms. There are story films which compare with the novel. There are non-fiction films which record history and travel. There are teaching films which compare with the educational textbooks and some which can be used as classroom aids to teaching curricular subjects in schools and colleges. In the newsreels we see a form comparable to the periodical, if not the newspaper.

Because the film has already many forms and styles, it is likely that there is not a single future for films but many different futures.

Let us try to see what has happened in the past and what is now happening to several types of film.

Before doing so, however, it were well to remember that film is an expensive medium. The writer, with a penny pencil and a sheet of wrapping paper, can retire to his garret and compose a great sonnet. With a little more paper, he may write a great novel. The painter, with paint and canvas, can paint a great picture with little financial outlay. The orator need expend only his own breath, the composer only his energy and a little ink. No such easy access to the materials of his craft lies open to the film maker. It is true, a script may be written in an attic, a production planned in a man's mind, but to translate the idea or script into a finished film is a costly venture. Even the simplest film involves the collaboration of many craftsmen and the expenditure of much money on costly materials, equipment and processing. We must, therefore, always remember that the creation of a film is not only an artistic or a creative venture, it is also an industrial project. For this reason, most films require to earn a great deal of money in their retailing. Most films require eventually to be sold to you and me and the rest of the general public and this puts the creative artist eventually at our mercy, or at the mercy of those who sell his film to us. Few producers can afford to defy public taste, or the opinion of the film salesmen and make the film which they want to make irrespective of public opinion or public taste.

The expensive cost of production is seen particularly clearly in the field of the entertainment film. A commercial entertainment film, produced for popular showing, often has a budget running into millions of dollars. The motion picture industry is, therefore, perhaps *more of an industry* than anything else, and like all other industries, it serves its retail trade. Those who rail against the lack of imagination, the poor taste and the shallow political outlook of commercial film producers would do well to remember this. They should, perhaps, be grateful that such an industry does, from time to time, produce a film which can be called imaginative or even great.

If the same critics of the film industry were to apply their same tests and criticisms to the publishing of books, or to the publishing of music, they would probably find no greater proportion of true value in these worlds. If Hollywood and the other motion picture centres of the world produce a dozen first-class films in a year, they are probably doing as well, by an artistic standard, as the book publishing centres and the music publishing centres of the world. And I submit that it is economically easier for a creative artist in writing or music to create a masterpiece than it is for a craftsman in the film industry.

Remembering then the economic situation in the world's motion picture industry, there is no reason to expect any great development of imagination in the years immediately to come. So long as the cinema-going public continues to find the films as they are to its liking, there is no good reason why the film producer should change his style. As soon as the cinema-going public reject the published films, rest assured that the producers of films will protect their fantastic investments by providing what the public want. When good taste pays dividends, the producer will be interested, but not until then. The future of the entertainment film is, therefore, in the cinema-goer's hands. If the cinema-goer will patronize what you and I might believe to be the "good" films, there will be more of them; as soon as they reject the trivial and the shallow and the vulgar, there will be less of these. But I can find little evidence that Hollywood, in its present output, is not judging well the public taste.

Let those who criticize commercial films remember this well. Let us also hope that they will go on criticizing and pointing out to the motion picture industry other possibilities of films which will appeal to the public. But it is likely that before there is any fundamental change in the public taste for films, other forces will have to work and have their say. Perhaps the war was such a force and has engendered here and there a sense of new values which will create a taste for a different and better kind of film. Perhaps, on the other hand, war experience will tend to turn people away from any

The Science School of Achimota College, West Africa, which is well equipped with laboratories, a Library and biological museum—presented in the BIS film, "Achimota."

film which brings any more reality to our difficult daily lives and perhaps will cause us to seek even more distraction and make-believe. It would certainly seem true that the tendency is for the cinema-going public to prefer singing and dancing and color rather than any glimpse of reality in the world of today. But be sure that the motion picture industry will serve the tastes of the public.

During the war we have had many examples of other kinds of film. We have seen commercial film producers turn away from their breadwinning to serve other purposes. Films have been made which have helped to inspire people through dark days; films have been made to bring real knowledge of everyday living in a wartime world to thousands of citizens; films have been made to help soldiers to become more efficient. Film makers all over the world discharged their wartime duties with high honor and we are likely to learn soon whether the wartime episode will affect films in the theatres or in the other film worlds.

Many of the commercial film directors, who turned their back on the trivialities of peacetime film production, found a freer expression in the documentary and educational field. They made great contributions to the character and quality of documentaries and many workers in the documentary field learned much from them. Many of them have, however, with equal facility, turned their back on documentary and embraced once again the commercial ideal. Faced once again with the problems of breadwinning, they have become the competent servants of the public taste. It is to be hoped, however, that some of the brilliant directors who made outstanding films during the war may yet demonstrate that the episode was not a passing phase and we may yet see more noble films if the public will pay to see them.

A great deal of the non-fiction film making during the war was directed towards helping us all to do our wartime job more efficiently. Films were made to speed up the teaching of skills and in this the record of the

U. S. Army is spectacular. I will not trouble you with statistics. It is sufficient to draw attention to the fact that many peace loving citizens, by virtue of seeing films, were able to learn to manipulate the engines of war in a much shorter time than would have been possible using the older implements of teaching. But I believe this very success tends to carry within it a great danger. It is presumed that we are serving well the purposes of education when we speed up the processes of learning. Perhaps not enough attention yet is being paid to the content of what we teach. I think it was Lord Curzon who said that the only appreciable difference popular education had made in England was that the rude remarks on lavatory walls were now lower down than they used to be. Perhaps we are making too much of this speeding up and not giving enough attention to what we are teaching. I am thinking of the kind of film which concentrates on teaching a skill. If a man can learn to work a lathe in half the time, it will serve him little if he is to be unemployed. If a child can be taught by film to read a year earlier, it will serve him little if it only gives him access to trash and pulp; it will serve him less if it denies him the experiences more fitting to his age. The old instruments of teaching serve well enough to teach us a mass of knowledge and skill for which we find little service in our daily lives. Perhaps we should pay more attention to a film which cuts across the school curriculum than to one which slavishly serves it. Perhaps, even better, we should examine our curriculum and see how far it serves our needs as citizens. I think we would find that it serves us ill. Teaching us skills we never use, teaching us content which is invalid in our daily life.

I foresee that the success of the teaching film in wartime will burden our teachers with proposals to make films which teach "how to do it" and not enough films asking the questions "why we do it".

Many articles are being written about the relation

Below: "Children of the City", a British Ministry of Information film. The theme of juvenile delinquency is further treated in another film, "Children on Trial" (right).

of the educator to the film producer. That is interesting enough.

But many of us who have been concerned with education in the period between the wars now realize how ineffective not only our teaching techniques were but how poverty-stricken was the substance of our education. We settled for the teaching of formal science and mathematics and geography and gymnastics and now and then congratulated ourselves because we had a film or two to help us tell the old, old stories. But some of us found ourselves beginning to worry less about the science film and the cookery film and the geography film. As we moved into the war, we saw children all over the world becoming adult in a degree which many adults of a previous generation had never achieved. In the war, children came to know life and death and many of them were killed, not because they did not know their science or geography or their algebra, but perhaps because their educators all over the world did not know their contemporary history and their international politics. The old, outworn curriculum was taught well enough without the new instruments of film and radio and shackling these new instruments to the old curriculum denied them the possibility of teaching the new education. It is to be regretted that so many teachers in the period between the wars made great effort to deny the new instruments their opportunity to teach a new subject. And now a generation of children in Asia and in Europe are growing up quicker than the limping curriculum can cope with and in America too, I suggest that new working conditions, new legislation and a new war-time way of life have had a deeper effect than formal education, and the daily newspaper and the newsreel film are teaching the adult population a geography that they never learned in their schools. The advent of a great world civil aviation scheme will ask for another geography which school curricula barely dream of. The job for the educator is, therefore, not to line up the film producers to shackle films to the old formal education, which can get on well enough without them, but to line up the new potentials

of film (and also the new potentials of every other creative medium) to help crystallize, clarify and make more real the new ideas which are flowing around the world. In the Atomic Age there may not be time to make the same kind of mistake again. The factual and dispassionate scientific knowledge of the classroom is not enough for our day-to-day citizenship. We must extend our thinking to cover the problems of the world we live in.

The business of the government providing films of world problems is of course suspect in many quarters, and before we go any further, we might look this problem straight in the face. Too long has the odium of Hitler's bludgeoning of the minds of the German people been allowed to mask the real significance of a government information service—the real necessity to inform and give understanding to the community, whether that community is living at peace or at war.

During the war this special function of film, to discover and articulate our daily life and to illumine it with new thoughts, was greatly developed. It was a time when we saw many nations and many citizens take up their responsibilities; we saw men sail abroad to fight; we saw people who stayed at home and who did not run away either from the enemy or from their jobs or from their responsibilities; we saw people carry on their work or take on new jobs with a vigour and imagination unprecedented.

The war was fought well, not only with the sweat and toil of arms but in peoples' minds, because they knew a great deal about it. Radio, press and films recorded and described the situation as no other event in history had been recorded before, and this was done while the battle still raged. But they did more, they pictured ideas—the ideas we fought for and also the ideas in the enemy's mind.

And now the problem is the conduct of the peace and it will matter little what we as individuals want of this world if we do not get peace and are prepared to settle merely for a cessation of hostilities.

It could be argued, without much difficulty, that our

record in the peace is not so good. We have brought liberation to two continents, but there are some who ask already have we brought food, have we brought hope? If we fail to bring unity not only among the Allies but to all the liberated territories, Naziism may yet live in the hope that the world will turn again to its rejected New Order. Some say that there is little hope for the world unless there is new evidence of a profound belief among all the Allies, which we can share with the liberated countries, to prove that we can save the world for the right things and for the right way of life.

Looking back on the last peace it is easy to be wise after the event and to say that we failed because we did not know. This time it will be less easy to say that we do not know. Great new powers for explaining the problems and the jobs to be done are to hand. To have an idea of how powerful and effective they are, we have only to look at what we have done in the war.

A "Country Town", one of the films on British life.

In England, we have seen the Government take up the challenge to tell the people what the war was about and what was required of people in their everyday citizenship. We have seen the Government conscious enough of its stewardship to explain its actions and explain what wartime citizenship demanded. This was done not only in the magnificent words of the Prime Minister and not only on the floor of the House of Commons but in more humble ways, in pamphlets and booklets, in the press and on the radio and in films.

In the United States we have seen the War Department conscious of its obligations to a citizen army. We have seen film after excellent film come out to explain to the soldier what the war was about and to tell the public what the Army was doing.

Many examples could be given of how in both our countries the Governments and the official organizations have described the battles and the victories. For the first time in history, through such a film as *Desert Victory*, the people of many nations could follow and understand the fight as it was being fought. This is a remarkable and unprecedented fact, and we should re-

member that the Battle of Waterloo was fought and won three days before anyone in London knew. But this is a spectacular example and not the most important one. There are many humble films which have played as important a part.

When the war came to England all of us were required to learn a new citizenship. All of us had to learn how to keep alive and how to get along in an island bombarded by the enemy and threatened with invasion. Many films were made and shown to the whole cinema-going public. There were films to teach people the pattern of their new citizenship and of their new way of life. We had to learn how to do the black-out, how to build the shelter, how to care for our gas masks, how to protect our children's health and even how to make the best of *Spam*.

At that time it was my job to see that such films were shown to people who could not readily get to cinemas: to show them to factory workers in the lunch hour break at noon and midnight, to take them to the mining villages in the valleys of Wales and to farms in East Anglia; to have them shown at shipbuilding yards on the Clyde and to the small holders in the Hebrides. In this way we learned to recognize their value. We saw how people who would normally have been remote from the danger areas get into line and realize and identify themselves with every fighter in the island or overseas. We saw being created in our hands, a new, vast and important instrument in the public's education.

The Peace calls again for every organization to take up the challenge and assume its responsibility. It won't matter much if we don't have every instructional film telling us how to drive a car or how to cook a steak, if there are no cars or steaks. It will matter very much if the people of the democratic countries, the people of the United Nations, fail to realize the challenge which still faces the peace-loving

In Cornwall, the fields run down to the edge of the cliffs. From "Cornish Valley" (British Information Services).

nations. But if every organization in its particular field will teach, and teach, and teach, the important issues which will come before men's judgment and will devote

(Concluded on page 368)

Two-by-Two Slides - *and How!*

MARK J. FLANDERS

Director, Audio-Visual Education
Waterloo, Iowa, Public Schools

Showing the wide range of uses by schools, and practical methods for school production of 2 x 2 slides.

SELDOM are so many good qualities combined in one powerful aid to learning as we find in the two-by-two slide. It is small, easily handled, light in weight, and inexpensive; and the projector which puts it on the screen has the same identical advantages. Through its low cost it can meet that ideal requirement,—often mentioned in talks on visual education but dismissed with “- - of course, that is impossible as yet,” - - of being deposited in each building for use by the teacher exactly when wanted.

We find a multitude of uses for two-by-two slides. A pupil may bring in some pictures, cartoons and charts which he'd like to use on slides in connection with an oral report. A set of slides may be developed on a unit of study. We may want to review a year's history-making news as told in newspaper headlines, and a hundred or more slides will do it. Our files contain sets of slides on Lincoln, the Constitution, inflation, synthetic rubber, and many other topics; collections from old files of Harper's Weekly and Godey's Lady's Book. A collection of photos taken in our community more than 40 years ago was recently “re-discovered” by the Chamber of Commerce, and is now recorded as a set of much-used two-by-two slides. A map or chart slide, projected on a large sheet of paper, can be quickly traced, then the tracing may be quickly filled in with color and desired details to give a temporary or permanent map or chart for classroom use.

There are many uses for such slides outside the classroom, also. Our Seniors at East High School have repeatedly used slides made from baby pictures or informal snapshots of prominent members of the graduating class as a part of “Senior Day” activities. Slides made from application photos have been used to introduce new teachers at the first teachers' meeting in the fall. At a party given for a retiring high school principal, a collection of 70 slides made from the school annuals through his 28 years of service brought back many pleasant memories. Slides providing six-foot images of the “fighting faces” of football stars make good pep meeting material. By means of slides shown at a Farm Bureau meeting a few weeks ago, parents were “taken on a tour” of nearby farms, viewing 4-H Club boys with their steers, rabbits, and other projects. Other uses without limit keep presenting themselves.

Any moderately serious camera fan with a 35mm. camera needs but little additional equipment (much of which he can make) and a bit of study and practice to make good two-by-two slides to supplement the excellent commercially produced slides already available. A good beginning can be made with a single home-made copying stand 10½ inches high, by means of which post-card size pictures are copied. With this stand, a half-inch extension tube is needed for the camera lens, but no supplementary lens is required. Or a start might

be made with a stand 27⅝ inches high, which covers an area about 13x19 inches when a portrait lens is added to the regular camera lens, without the extension tube. This size will cover the upper portion of a newspaper front page, showing headlines, the cartoon, etc. Other stands may be added as needs require and time permits. My collection at present includes nine stands in assorted sizes, covering areas from 13x19 inches down to 2⅝ x 4 inches when the camera is equipped with various combinations of the regular lens, short extension tube, and three supplementary lenses (-1 diopter, -2 diopter, and portrait). A chart showing working distances (height of stands from copy to camera front) and areas covered with different combinations of extension tubes and supplementary lenses has been worked out by the manufacturers of Argus cameras. Permission has been received to reproduce the chart with this article, and it should be useful with any 35mm. camera with a 50mm. (two-inch) lens.

Basic construction of the copy stands is evident from the photographs. Details and exact dimensions may be varied according to materials available and the ideas of the individual builder. A stand must, of course, be permanently rigid. Openings in the top must permit free use of all camera adjustments, and the camera must be supported firmly, lens downward, held in unvarying position by the little strips fitting snugly around the camera position.

Cutting the opening in the base is the final major step in construction. To establish the size and location of this opening, place the camera in position on the stand, lens “wide open,” shutter open on “time,” camera back opened, and a small piece of ground glass (rough surface downward) covering the film or image position. Place any convenient copy, such as a piece of newspaper, on the base of the stand. Illuminate it brightly, and focus for a sharp image. Remove the copy, and draw directly on the baseboard a rectangle slightly smaller than the area shown in the image. The ruled rectangle is then cut out, edges are beveled to reduce shadows, and the rim or whole base is painted black. It is now necessary to focus the camera again, on some fine-line copy placed *under* the base. Use a magnifier to get the sharpest possible image, then place a mark on the under side of the camera-support board to indicate the lens adjustment. This makes it possible to return to the sharp focus later, when the camera is loaded, without use of the ground glass, and to change from stand to stand for pictures of different size, on the same roll of film. This mark is not needed on stands with which the portrait lens is used, without lens-extension tube.

In use, the stand is placed directly on the material to be copied, and the part that shows through the opening is what you get in your slide. Pictures somewhat

smaller than the opening may be "framed" with strips of black paper to eliminate white margins and unwanted material.

In making black-and-white slides, two ordinary 150-watt lamps in reflectors give good illumination when placed one on each side of the picture to be copied, about four feet from the picture and at about a 45 degree angle. Even illumination is more easily secured thus than by using smaller lamps closer to the picture. With the camera loaded with positive film and the lens stopped down to $f\ 11$ (which amounts to about $f\ 14$ when the half-inch extension tube is used) an exposure of about eight seconds gives good results from average copy. Experience must be your guide for longer or shorter exposures when picture materials vary in type or tone. When in doubt, it may be well to make two or three exposures of different length, and use the positive from the one that turns out best. A weight on a string, suspended from some convenient nearby support, can be adjusted to beat seconds for timing the exposures. The pendulum will be very close to 40 inches long to swing once across in one second, and if the weight is heavy,— a pound or two—it will swing a long time when set in motion.

"Positive" film is simply a low-speed, fine-grained, color-blind film, and is used both in making the negative strips as explained above and in printing the positive transparencies for projection. It can be purchased from or through photo supplies dealers, in rolls of 50 or 100 feet, at slightly more than two cents per foot. With the bulk-film cartridge loader, rolls of around 20 exposures can be provided, and will be found of convenient length for handling.

The exposed roll of film may be tray-developed in Eastman Dektol, Ansco 103, or similar developer, in from three to five minutes. The yellow-green safelight used for enlarging papers is safe if turned so that no direct light (and only rather weak indirect light) strikes the film. When the image shows quite distinctly through the back of the film, by reflected light, development is probably sufficient. Again, experience must be your teacher. Properly exposed and developed, images will present good tone range, and the spaces between frames will be completely transparent, without fog. If your first attempts have a weak or fogged appearance, watch for stray white light, use weaker safelight if necessary, and be sure that the developer is of proper strength and temperature. The film is fixed, washed and dried the same as any other. A few drops of wetting agent in the final rinse is safer than wiping the film to prevent water spots,—and scratches.

Positive transparencies for projection may be contact-printed in a number of ways. Magazines have printed detailed plans for several devices by which one frame may be exposed at a time. In my own first attempts I used an ordinary 5x7 printing frame, with slits cut through the ends so that a strip of 35mm. negatives could be threaded between the glass and the back. On a carefully placed short piece of positive film about four frames could be printed at one time. Uncertain exposures were given by snapping a 60-watt lamp on and off quickly at about four feet distance, and frequently two or three attempts were required to produce the desired slide quality.

Equipment for slide-making: copy stand, pans for processing film, lamps, a bulk-film cartridge loader, can of film, film cartridge, exposure meter, lenses, lens-extension tubes.

Camera placed in position in copy stand. Stands like these can be built in different sizes.

The piece nailed across the uprights and camera-support board insures permanent alignment and rigidity.

A pencil mark under camera-support board makes it possible to focus tube-and-lens combination without return to ground glass.

Top: Printing frame with back held firmly in place by heavy rubber bands. Center: Frame opened up for loading. Bottom: Supported in position for making the exposure. Below: Copy stand with heavy corner blocks eliminated and camera-support board improved.

My present printing method is not offered as the "last word" in this line, but merely as a simple method which requires but little equipment and which gives good results. I hope eventually to build a compact box type printer by which I can quickly produce strips of positives on either paper or film, but that box is as yet only in the sketch stage.

The long printing frame shown in the photographs is 42 inches long and eight inches wide, though those exact dimensions are unimportant. It is built mainly of $\frac{3}{4}$ inch stock, and some glass strips salvaged from the scrap box of window glass trimmings at a store. The 42-inch pieces are grooved to receive the glass, and fastened to the end pieces so as to leave space just the width of 35mm. film. Thin wooden blocks at the ends hold the glass strips in place. The backing strip is slightly narrower than 35mm. film, and is covered with black velvet on one side. Saw cuts about an inch apart and a quarter inch deep along the uncovered side, as shown in the picture, give the back sufficient flexibility to allow it to be held snugly against the film along its entire length. The back is held firmly in place by heavy rubber bands cut from a discarded inner tube, stretched across screw-eyes as shown.

In use, a strip of negatives is placed next to the glass, emulsion side up, and, using only weak safelight for illumination, a length of positive film is cut and placed over the negatives, emulsion side down. The back is next fastened in place, pressed down firmly along its whole length. The frame, loaded with negatives and film, is then supported on edge on a table, as shown in the illustration, with the glass facing the lamp to be used in the exposure.

The problem of even exposure of a strip of film about three feet long is solved by "distance." By the well-known laws of physics, if the lamp were only three or four feet from the center of the frame, the central portion would receive much more exposure than the ends. Two or three lamps spaced along the length of the frame would still present a complicated problem. But a single 15-watt lamp in a reflector clamped to a chair 15 feet or more away, and directed squarely toward the center of the frame, gives sufficiently even illumination along the whole strip, and properly exposes the film usually in from three to five seconds—as timed by the seconds pendulum. Copy negatives are apt to be of fairly uniform density, and a single strip of positives correctly exposed and developed should provide a good slide from each frame.

A Three-Directional High School Program

A clear, concise description of a tested working technique for a three-fold program of motion pictures in a large High School.

IN the larger secondary schools a well rounded visual education program can be developed by building it around three separate units. 1. The classroom. 2. The department. 3. The assembly. All of these situations require adequate facilities for darkening the rooms, as well as the necessary projection equipment and electrical service outlets.

The class room program is no doubt the easiest to carry out. As a result the greatest activity has developed here. This is as it should be, since the classroom is, of course, the basic unit of instruction. Most science classrooms are equipped for the showing of pictures. Each teacher arranges his own program for his individual class. Then too, the variety of subject matter in the various science subjects makes the individual class-room program virtually a necessity. In English and History classrooms, however, virtually no provision has been made for the showing of pictures. This is indeed a real obstacle in the development of a classroom program, because of the initial expense involved. However, in these subjects, many classes even in the same hour are studying the same subject matter concurrently. This makes possible a departmental solution to the problem.

In our high school, the history department has developed a departmental program in visual education which has been very successful. The first step was to provide a suitable projection room. Two classrooms with a sliding partition between were chosen. The combined seating capacity is about 175, enough for 5 classes of 35 each. Drapes were provided for darkening the room. These are mounted on a steel track and controlled by cords. Drapes were chosen in this case

because the same room is used for P. T. A. meetings, etc., so that a matter of decoration was involved. Any method is satisfactory which produces effective darkening. Color pictures cannot be shown to advantage unless the room is completely dark.

The choice of a screen is important. It does not make sense to have a good projector and a good picture and then show it on the wall or a poor screen of inadequate size. *Good showmanship* is essential to the success of any visual education program. With color pictures and mazda light projection a beaded screen is a necessity. The size chosen was 8'x10' wall type, with metal cover, permanently mounted. The width of the screen should be at least one-sixth of the length of the room. In general no one should be seated closer to the screen than twice the width of the screen nor farther than six times the width of the screen. It is true that with a beaded screen, there is a marked decrease in the brilliance of the picture when viewed from an angle greater than 25 degrees from the perpendicular. It has been our observation that those seated beyond the 25 degree angle still see a better picture than with any other type of screen. It is only with arc light projection that any other type of screen can be considered.

The installation of a sound system is also important. It was deemed impractical to set up for each showing the portable speaker that comes with the projector. Instead a good 12 inch, 25 watt speaker was mounted per-

L. A. PINKNEY
Northeast High School
Kansas City, Missouri

manently in an adequate baffle on the wall to one side of the screen. The impedance of this speaker must be matched to the output impedance of the projector. A permanent speaker cord was run from the speaker to the rear of the room terminating in a wall socket near the projector. Another short cord with proper plugs was provided to connect from the projector to the wall socket. This makes for convenience in getting ready to show. All that is necessary is to draw the dark curtains, pull down the beaded screen, place the projector on the stand, plug in the power cord and the speaker cord, thread the projector and you are ready to go. The quality of sound produced under these conditions is satisfactory but not perfect because the acoustic properties of the room are not perfect. We hope to have the ceiling and part of the sidewalls sound treated soon. Then our sound will be near perfection.

The next step in the development of the departmental program was to arrange a schedule of motion pictures which would correlate with the subject matter studied. This was successfully done in the subject of American History and World History. Each program was planned to take about 40 minutes of a 50 minute class period. This means about four reels of ten minutes each can be shown. All reels are spliced together and put on one large reel so that the showing is continuous. All teachers of American History keep to the same schedule of subject matter. Preparation for the picture is made in the class periods before the showing. Utilization comes the day after. On the day of the showing all classes in American History meeting in a given period go directly to the projection room for the presentation of the picture. Thus the showing is repeated each period during the day as necessary to accommodate all classes. This program has been supported enthusiastically by the teachers and, needless to say, the students.

The assembly offers an opportunity for the development of a visual education program. Here the problem is to produce the satisfactory projection of 16mm. sound pictures in an auditorium seating from 1200-1800 people, and with a projection throw of 75'-90'. In our auditorium, seating about 1500 with a throw of 85', this has been satisfactorily accomplished. The brilliance of the picture was increased in three ways.

1. By using a beaded screen. Size 11'x14'.
2. By equipping the projector with a 2-bladed instead of a 3-bladed shutter. This will pass more light to the screen. Flicker is not apparent at sound speed and is not objectionable at silent speed.
3. By using a 1000 watt short life lamp at the voltage actually delivered at the projector, in our case 105 volts. This is the equivalent of about 1200 watts.

The brilliance of the picture will be further increased by the use of a coated lens as soon as it is available. This is a postwar development which at present is available only on new projectors. A coating on all surfaces of the lens increases its light passing ability about 15%. It should not be concluded from this that the picture produced is equal to commercial theater quality where an arc light is used. It is not. However, the quality is such as to make an acceptable picture.

Another problem was to provide adequate sound projection which could be conveniently used. The setting up of the portable speakers with 100 ft. or more of loose cord and providing a stand in the center aisle or over the backs of seats for each showing are indeed discouraging obstacles. The solution is the installation of a permanent sound line from the regular projection booth to the phono input of the amplifier for the public address system of the auditorium. This phono input is usually high impedance. The regular outlet from the projector is low impedance. So to prevent distortion the projector must be provided with a special high impedance outlet to match. This can be easily done by any competent sound service man. This makes it possible to show at any time with a minimum of preparation. Set the projector on the stand in the booth, plug the sound line into special outlet, turn on the public address amplifier which is always in position, turn up the phono volume control to the desired level and your sound is there.

This plan of course assumes that the auditorium is already equipped with a good public address system of adequate power and quality. In our case a 35 watt amplifier drives two 12", 25 watt speakers. These speakers are placed at balcony level on either side of the stage opening. This makes them about fifty feet apart. We were told that this arrangement would not be satisfactory when the voice from the speaker has to be synchronized with the lips on the screen, that the sound must come from one speaker placed directly behind the screen. This condition would be virtually impossible for a high school stage. This would require a perforated sound screen which would decrease the brilliance of the picture, and also the removal of the special speaker after each showing to clear the stage for other activities. It is our experience that the present arrangement is entirely satisfactory and that the wide divergence between the screen and the speakers does not seriously affect lip synchronism. The eye and the ear seem to be able to merge the two stimuli successfully in spite of the divergence. For auditoriums seating more than 1800 and with a projection throw of 100 ft. or more, the 16mm. arc projector with a higher powered amplifier is the only satisfactory answer to the problem. It should also be borne in mind that the arc projector will give much more satisfactory projection in the smaller auditoriums.

Now what about the availability of pictures that are suitable for an assembly program? Nearly every 16mm. film library has many pictures that are very desirable. English classics, lives of great men and historical films are readily available. The color pictures of Walt Disney on South America, and many other government releases are exceptionally desirable. Many industries are producing films of great educational value. Many films on travel and the air age are also excellent. In fact, the field is so rich that it is a comparatively easy matter to arrange an effective assembly program.

Our small projection room is used by classrooms and departments. The football coach shows his recruits how football is played by experts. Physical education classes are shown films on health and posture. Food classes are shown films on diet and food preservation, human

The Curriculum Clinic

A Neglected Area

PAUL C. REED, Editor
Director, Visual and Radio Education
Rochester Public Schools, New York

“FROM the first lesson to the last, reading should be a meaningful process. Instruction must lean heavily upon the backgrounds of experience the children have.”¹ These words from a good practical text on the teaching of reading are repeated here to stimulate some further thinking about the relationship of visual materials to the teaching of reading. That is an area—the teaching of reading—that has for too long been neglected by us who are concerned with the use and production of audio-visual materials, and especially motion pictures.

Think about what the Bonds said: glance back and read it again. Now think of what we know from actual experience and from what we have read about the theories and use of visual materials.

If there is one thing we are sure of, it is the value of projected pictures when used purposefully with classroom groups to bring them planned experiences that approach reality. You have seen the Eastman silent film, *The Panama Canal*, or Encyclopaedia Britannica's *Adventures of Bunny Rabbit* or *Sound Waves and Their Sources*, or the Government's *Plow That Broke the Plains* used with classroom groups. And if you have seen it used well, you have seen the interest that this seeing experience developed, you have heard the meaningful discussions that this kind of vivid experience can create. You are convinced of the value of motion pictures in providing a rich background of experience. If you have read and studied some of the standard texts in the visual field like Hoban's "Visualizing the Curriculum" or Dale's new "Audio Visual Methods in Teaching", you know something about the theory of the function and importance of motion pictures in making learning meaningful.

The great variation in backgrounds of children when they enter school, and the fundamental aims of the instructional program at the primary level make it imperative for the primary teacher to diagnose those differences and to broaden the base of meaningful experiences for all the children. Yet what actually happens? Verbalisms begin early to pile upon verbalisms. Too often a teacher, even at the first grade level, substitutes a discussion for a "meaningful experience." One child may have visited a farm, and what he says about the cows added to the teacher's words about cows, passes for "meaningful experience", and it is assumed the group is ready to read about cows. Of course this is the kind of thing that happens in city schools, but substitute the word "policeman" for "cows" and the comment will typify the situation in too many rural schools.

But cows and policemen are not the only abstractions in the books. The pre-primers, primers, and readers are filled with words that are abstractions for

many children. Pigs, chickens, goats, ponies, boats, trains, airplanes, turtles, snow, bears, clowns, sandmen, brownies, Christmas, and the list can be extended in several directions dependent upon which series of readers you use. Not all of these words will be abstractions for all—but they will be abstractions for every child until he has meaningful backgrounds of experience.

Now I am not ignoring the fact that all modern readers are well illustrated. Not only has a picture been drawn for every new noun, but the verbs and sometimes the adjectives are cleverly illustrated too. But pick up a reader (I think most any one will do) and take a look at the pictures. Imagine yourself with the limited background of a six year old—a city six year old who has never seen a pig. Now, is that picture real—that picture of a happy pig, with a sun-bonnet on, talking to the old woman? Is that reality? Before you answer, remember you are a six year old who has never seen a real pig, and maybe you haven't even seen other pictures of a pig. Now this may be a slight exaggeration, but it is highly probable that too much reliance is placed upon the drawings in the book. These may help, and certainly they are better than just the words, but they fall far short in providing the background of experience that is needed.

Granted the superior value of the excursion or field trip in building meaningful experiences—actually taking the city children to the cows, and the rural children to the police station—in most cases this is just not practical, and certainly there is not time to provide field trips for all the experiences that children must have. It is at this point, so it seems to me, that the great potential power of the sound motion picture should be called into play as it never has been in the past.

Motion pictures should be used systematically and extensively throughout the primary grades for the specific purpose of building the backgrounds of experience that children must have if reading and learning are to be meaningful processes. Where are the schools that are doing this today? Where are the teachers who are making regular and frequent use of motion pictures in relation to their teaching of reading? If there are such teachers, their specific practice and experience should be set down in writing and published. This Curriculum Clinic page will welcome that kind of story.

In the meantime I should like to point specific suggestions to three groups of educators:

To Teachers of Primary Grades:

If you have a motion picture projector in your school, and if motion pictures are available for your use, why not give some special consideration this year to using them experimentally in the teaching of reading? Look over your list of films. If it is a good general list

¹Bond, Guy L. and Bond, Eva, *Teaching the Child to Read*,

you will find dozens of films that are excellent for primary grade use. Although, I haven't mentioned it before, you may find some real possibilities for using these also to develop facility in using oral language. Children have something to talk about after they've seen a picture. These are opportunities that should not be neglected.

To Professors in Teacher Training Institutions:

Something needs to be done in really exploring the potentialities of audio-visual media in the teaching of reading. If you were to make an all-out attack on this one educational problem, the chances are that education would make a record in the use of visual materials to teach that would far outshine that of the armed forces

in using visual materials to train. You have the know-how and the facilities to carry on the necessary studies and further the thinking in this field. You should not neglect this area.

To the Producers of Audio-Visual Materials:

You have already given us some materials, you should produce more. Your research, planning, and production divisions should give some new thought to this comparatively neglected area. The schools are going to continue to teach reading for a long time. Improvements can still be made in the methods and materials for teaching reading. If we are to make use of audio-visual materials in teaching reading, you have a job to do, too.

Films for Tomorrow

(Concluded from page 361)

all their energy to the discussion of these issues as they appear in their own specialized fields, we may yet bring the democratic idea into all men's minds and purge from their thinking for all time the diabolical idea which Hitler has for a brief period dangled before men's eyes.

With hostilities stopped and with world-security in infancy, a new educational problem arises and film will have its part as an instrument of perspective and focus.

So let us get rid once and for all of this bogey of propaganda. Call it what you will, an information service which creates in men's minds and hearts a feeling of responsibility and citizenship is a necessity in any state which would be democratic and in any world which seeks to be one.

It could be argued without much difficulty that the public has a right to an account of the stewardship of its public servants not only as it is recorded in *Hansard* or in the *Congressional Record*, not only in the often unreadable White Papers, Annual Reports and Balance Sheets which issue from government printing offices, not only in the newspaper reports of government speeches but by every lively means that lies open to official spokesmen. Why should the public be content with the word symbol when the image is available in film, with the spoken word without the content which film can bring. The public has a right to this accounting; it has also the right to ask for it in modern, easily assimilable terms.

The future of documentary films may lie mainly in the hands of governments and official agencies. In Britain, the government has decided to continue to produce documentary films to promote the discussion and at times to point directions in the trying days of a post war reconstruction. The Ministry of Information has now passed out of existence as public expositor of current ideas and problems and its place has been taken by the Central Office of Information, which has already scheduled some 200 films for production. Among those soon to be completed are films on military government and the problem of Germany, a film on the overwhelming problem in European countries of the displaced person. For the Ministry of Education, the COI will pro-

duce films on child psychology and on the parent-teacher relationship. The history of writing and the development of printing are additional subjects planned for general education courses. Juvenile delinquency, recently treated in a film called *Children of the City*, will be further developed in a film called *Children on Trial*. Life in our colonies will be explained in films dealing with native villages and life on the Gold Coast. British life will be explained to the colonies in a series of specially produced films. The function and structure of Parliament will provide another subject and from the Scottish Office will emerge films dealing with local government and education. In this country, I understand the State Department is seeking authority to make films specially to explain United States ideals and ways to other countries.

But it would be unfortunate if the weapon of the documentary film lay solely in the hands of governments. Governments may at times have their own special purposes and all sides of a question might not always be discussed. There is evidence, however, that films produced by private sponsorship will not be lacking. In England there is a new movement to make films especially for children and to organize children's cinema going on a new level. In this country there have already emerged a number of organizations which promise to represent many different approaches to film making.

It is natural for us at this time, in looking to the future, to imagine the United Nations Organization utilizing film. It is to be presumed that UNESCO will endeavor to secure the circulation of many films throughout the world and perhaps to produce its own films on international problems. Here lies one of our greatest hopes for the future. It is presumably U. N.'s job to keep the peace, but that is not enough. The absence of war does not guarantee any more brotherhood in the world. Knowledge of other nations is essential if the democratic ideal is to have world currency. We can no longer rely on our purely national ideals; we must have access to the ideals, intentions and aspirations of other countries and it is to be hoped that UNESCO will be able to circulate films emanating from many countries, so that all of us may have the benefit of a variety of points of view. Given access to many diverse opinions and to the many different national ideals throughout the world, we shall have a freer air in which to develop the Truth and the Peace.

The FCA---A New Channel for Community Action

DURING the war, while C. R. Reagan headed the 16mm motion picture activities of our government's Office of War Information, he called into life the "National 16mm Advisory Committee," composed of representatives of the seven national professional and trade associations most directly concerned with motion picture as a means of communication. These were the Allied Non-Theatrical Film Association, the American Library Association, the Educational Film Library Association, the National Education Association (NEA), the National University Extension Association, the National Association of Visual Education Dealers, and the Visual Equipment Manufacturers Council.

This committee guided, implemented and evaluated the various motion picture projects of the OWI; its constituents were among the most important participants in the Army-Navy Incentive and the War Finance campaigns. In January 1946, in Washington, a final meeting was held at which the war service chapter was closed. But the need for a national coordinating center was just as great in the face of the problems of peace as it had been in wartime. Accordingly, the organization heads agreed to continue to function as they had been doing. Out of the National 16mm Advisory Committee the Film Council of America was born.

There could be no other first president than C. R. Reagan. He accepted reluctantly, solely from a sense of duty in the face of a vital social job not quite done. No man had made greater personal sacrifice of private business interests than had "CR," and no man was more entitled to rest on his well earned laurels. But he was finally prevailed upon to take on the job just for the first critical year.

Other officers were David Strom (University of Connecticut) as first vice president, I. C. Boerlin (EFLA) second vice president, Vernon G. Dameron (DVI-NEA) secretary, Merriman H. Holtz (ANFA) treasurer.

Operations on National Level

A very simple statement of purposes was worked out, an equally simple national organizational structure was formulated. The Governing Board consists of the head of each constituent national organization plus one additional representative. It meets thus far usually in conjunction with some other national gathering at which most members will be in attendance in the course of their own activities. Thus one meeting was held in conjunction with the War Finance windup at Washington, another at the site of a five-organization joint meeting on Adult Education, another at the ANFA convention, still another at NAVED's, and another at the UNESCO conference.

From all parts of the country, leaders in the field, professional and commercial alike, have been drawn into functional committees. As these committees begin to function in their respective fields and pass their recommendations along to local film councils for implementation, the effective use of audio-visual means

WILLIAM F. KRUSE
Member, FCA Governing Board

of communication, for community enlightenment and motivation, will be vastly expanded and improved.

Operations on the Local Level

Parallel with this national activity, local organizations pursuing substantially similar aims are making their appearance. One pattern source has been the Washington Visual War Workers Council, also originally fathered and fostered by C. R. Reagan, which throughout the war held weekly Dutch-treat luncheons at which experiences were exchanged by audio-visual staff members in various government departments. This individual membership, knife-and-fork-club type of organization seems to be the most readily usable one in towns where there are a number of individuals vitally interested in films and other audio-visual media.

The national governing board does not attempt to fix any local pattern of organization, however. In other localities, especially where one or more existing organizations or groups are already well established in active use of films for community purposes, an actual "council" representing such existing film-using organizations may be preferable. Such a pattern is said to work very well in Hamilton, Ontario, where college, government, labor, church and other bodies are represented on a joint committee. Again, it is entirely possible that in areas where there is an active Better Films Council operated by local women's clubs, churches, etc., the interests of such bodies can be expanded beyond the limits of the theatrical film review, to take in all the purposes of the current film council movement.

Aids in Formation of Local Councils

In order to help interested individuals through the first steps of local organization, a manual is in preparation by a committee headed by Thurman White, of the University of Oklahoma, chairman of the FCA's committee on local organization. This job was started by NAVED executive secretary Don White; and has drawn in a number of active collaborators, including C. R. Reagan, Gordon Adamson (Canadian Film Council), H. Otto Coelln, Jr., and several more. It will set forth the functions of the local council and outline how to form and maintain it. Several local organization patterns will be set forth, sample by-laws and programs will be published, and the relations between local and national levels will be made clear.

This relation at present is a loose and informal one. Any local film council that accepts the aims and purposes of the national body can obtain a charter from it. No dues are paid to the national office, this being kept up at present by contributions from its constituent national organizations. As soon as twenty or more local councils exist they will be invited to send delegates to a national conference where representatives will be elected to the national governing board.

Any individual willing to undertake preliminary organizational work for the formation of a local council need but communicate with president Reagan, secretary Dameron, or local organization committee chairman, Thurman White. If no other is making the same effort in the same area, the volunteer's name is sent to the headquarters of the constituent bodies so that their affiliates in the area can be asked to extend local co-operation.

The potential community services that can be rendered by the Film Council, locally, nationally and internationally, can hardly be envisaged. Already now we find the Lexington council a superlative vehicle for better inter-creed relations. Collaboration in film matters is sure to result in more constructive and harmonious relations in all the other fields that film can touch. There are very few that it doesn't.

How the "Blue Grass Film Council" Was Formed

A GOOD example of the simple procedures involved in the formation of an effective local film council can be taken verbatim from a letter sent out by D. T. Davis, as temporary chairman of a group of Kentuckians in the Lexington area. The first seven paragraphs of his invitation letter follow:

"On May 3, a number of representatives from local organizations and educational institutions met at the University of Kentucky. The purpose of the meeting was to discuss the formation of a Lexington Branch of the Film Council of America.

"Miss Mary Reese Land, Assistant in the University Extension Department, spoke on the use of 16mm films as informational media during the war. We now more fully realize that films can be used for a better understanding of ourselves and other peoples and countries.

"I gave a brief summary of how the Film Council of America operates and of the many organizations that it aids, and of how a Lexington Film Council might help in our city.

"We had a brief period of discussion, and the members present decided to postpone organization until we had the opportunity of hearing Mr. C. R. Reagan, national president of the Film Council of America.

"We next met on May 14 to hear Mr. Reagan and to complete our organizational plans. Most of the people who attended our first meeting were present, in addition to representatives of other organizations and schools.

"Mr. Reagan outlined for us in detail the purpose and functions of the Film Council of America; also, information regarding the organization of local Film Councils in Atlanta, Washington, New York, Cincinnati, Louisville, and other cities, and of how these groups serve their communities.

"His address was followed by a discussion in which it was decided that Lexington should form a Film Council. It was moved and approved by those present that the Chairman appoint a nominating committee to meet and nominate officers; these nominations to be presented at the first official meeting of the Film Council. The Committee was also empowered to present a Constitution and By-Laws at the meeting."

After the committees had had a chance to function, the first meeting was called. It was a 6:30 outdoor dinner, at \$1.25 per plate, in the garden of Adath Israel Temple. The meal was served picnic style by the Rhodes Addition Home Makers Club, and the advance announcements stated that in case of rain the meeting would be held in the vestry. Two current documentary films on famine relief were shown. The

speaker was Mr. M. D. Royse, of the U. S. Department of Agriculture field service. In the business session simple local by-laws were adopted, and the following officers were elected: President, Rabbi Albert Lewis; Vice President, Bruce Poundstone (University of Kentucky Experiment Station); Second Vice President, Miss Laura Marlin (University of Kentucky Library); Secretary-Treasurer, D. T. Davis. Four committees, each of four members, were elected—to deal with membership, program, publicity and arrangements respectively. On each there is a fine balance of school, church, community, government, industrial and commercial people. University campus, high, elementary and vocational schools, the YMCA and the utilities company, Department of Agriculture and Community Chest, Central Christian Church and Temple Adath Israel, projector, film and office equipment vendors, all share in active leadership. The "Blue Grass" pattern is one that can be followed in many communities.

Film Council Hears Emily Taft Douglas

AN outstanding feature of the NAVED convention was a public meeting held by the Film Council of America in the Grand Ballroom of Chicago's Continental Hotel. Principal speaker was Emily Taft Douglas, Illinois Congresswoman-at-Large. Mrs. Douglas spoke of her work in Washington, where she had become more than ever convinced of the great role of the motion picture as a means of mass communication, unique in its power to leap over language and other barriers of international understanding. Her own Library Service Extension Bill, which provides for federal grants for such extension work, and for state-matched federal funds, has the backing of the American Library Association and similar groups.

Mrs. Douglas paid tribute to the work that can be done by community groups like the local Film Councils. Each state will determine the extent, character and contents of its library extension services, when her bill is passed, and it will be up to interested citizen groups like the Film Council to influence the program of their own state. In Canada, it was pointed out, both the "bookmobile" and the mass circulation of informational films are recognized as everyday educational procedures.

C. R. Reagan, president of the Film Council of America presided. Other speakers included Chester Lindstrom (U. S. Department of Agriculture), Arch Mercey (OWMR), and Thurman White (University of Oklahoma). Mr. White spoke in some detail on organizational routines and activities of a local film council. Wm. F. Kruse, temporary chairman of the Chicago Film Council, stressed the importance of complementing and co-ordinating rather than competing with existing film activities. In Chicago there are already such activities conducted by the Film Workshop, church bodies, schools, libraries, Red Cross, American Medical Association and similar professional centers, Park District, women's clubs, trade unions, fraternal organizations and many more. Each has much to give to a community film council, as well as something to gain by active participation.

The Church Department

A Monthly Service

WILLIAM S. HOCKMAN, Editor

How Verbal Should a Visual Aid Be?

IF the story of the Good Samaritan is told by the use of ten miniature slides and 960 words, do we have a visual aid to the teaching of the story? If a children's version of the Twenty Third Psalm has 13 slides and 1200 words, do we have a visual aid or a verbal aid to the understanding and appreciation of the Psalm? If a filmstrip averages over 100 words per frame, is it a visual aid or a lecture punctuated by pictures? If a certain slide presentation has 66 kodachrome slides and 2000 words, is it built upon the principle of the psychological dominance of the visual element in a well-constructed visual aid?

Bible stories are now being told by the use of from four to 15 highly colored miniature slides and a veritable downpour of words. Is this visual religious education? How long will children and youth tolerate this kind of so-called "visual teaching"? When we bring before our children and youth a loose-jointed sequence of motion picture photography exclusively devoted to "nature shots", and supplement this with a high-velocity, high-tensioned, over-packed commentary from the soundtrack, have we a visual aid to something, or are we misunderstanding and mis-using one of the media for religious education? In such a film the ears are so preoccupied with the sermonic-commentary that the mind has no time for dealing with the meaning in the pictorial sequences. If the mind tries to find the relevant meaning in the pictorial, the dominance of the auditory is simple and unalloyed annoyance. Yet, we are being given such films, and their makers wonder why the church is stingy with praise.

The church is being offered sets of kodachrome slides which completely visualize the more important bible stories. The Good Samaritan story has 7 slides; The Prodigal Son has 11; the Lord's Supper 22; the Christmas Story 28. The remainder have under ten slides each, and many no more than 4 or 5 for the story. The church is supposed to buy these sets, write a script for them, and "tell visually" these wonderful stories. The children of the community are supposed to be attracted to the church schools employing such visual materials and methods.

When some of the scripts for these sets are examined we discover that the dominant element in these materials is verbal, not visual. The story is told verbally, not visually. The children hear the story, do not see it. Let us not label this kind of teaching visual education. It is the same old "word education" we grew up on. The pictures are little more than bait.

A study and analysis of six miniature slide presentations selected at random from a great many illustrates

the failure of the pictorial content to maintain psychological dominance:

The Program	Total Slides	Total Words	Words Per Picture	Most Words Per Slide	Fewest Words Per Slide
I	10	1232	123	290	33
II	13	1287	99	200	12
III	13	1320	131	153	59
IV	62	2070	33	85	3
V	7	960	135	216	24

What is wrong in the above? There are too many words per picture. If there is meaning in the pictures, why all the words? If the pictures have no or little meaning, why the pictures? Are these pictures to be considered as so much psychological punctuation for stories which would have been more interesting if told, and for sermons that would have been more effective if they had been preached in words alone?

The word-ratio in many of the filmstrips being turned out for church use is very high. Until we have thought through the fundamental character of the filmstrip as a medium for education, we will not be in a position to determine the word-saturation point for it. We do know already that the integrated filmstrip, where the commentary is reduced to a few highlighting words and phrases which divert the mind to the meaning of the picture rather than to themselves, is a more pleasing and powerful medium than the various types of un-integrated filmstrips.

The word-ratio in the filmstrips produced for the Coordinator of Inter-American Affairs in 1944 by the American Council on Education for use in Central and South America is considerably lower than in most filmstrips for church use. The wordiest script has approximately 51 words per picture, while the least words has only 27 words per frame. Only three of the 12 scripts average in excess of 40 words per frame, and the remaining nine average from 27 up through 38 words per frame. Yet, even in these less verbal visual materials the mind is more than ready to move on to the next picture before the commentary on that frame ends.

The essence of power in a good visual aid resides in its *visualness*. This principle is not appreciated in any except program IV in the table above. When 100 or more words are used per picture we are not depending upon the visual element to carry the burden of meaning and the visual content will not dominate the psychological processes and our *visual* education will be an illusion. It will be an illusion that no amount of enthusiasm can make into solid reality.

It should be pointed out here that the artist-created pictures contain more meaning than do photographically-created pictures. Why? In the former the arrangement is psychological while in the photograph it is accidental. The artist packs meaning into his picture far beyond the limit of the most skillful and artistic photographer. And, because there is more meaning in the art-picture, the mind needs more time to comprehend

and assimilate it, and will welcome such well-selected words as help it to do so. In the photographically-created kodachrome slide the depth of meaning is slight and the mind comprehends it quickly and is ready to move on to the next. Therefore, since the increment of meaning in any one (photographic) miniature slide is small they must be used plentifully if the total meaning carried by them is to be sufficient to justify their use. One small slide cannot be given a shower of words! That is to misunderstand the fundamental character of the miniatures. They must be plentifully used, and the supporting words must be integrated with this pictorial content. Otherwise the mind is attending to one set of stimuli and being irritated by the other, or, it is oscillating between two competing sets of stimuli. This induces feelings of frustration and blocks comprehension.

How wordy, then, should a visual aid be? A great deal less wordy than many present materials!

In a program utilizing the miniature slides on *The Prodigal Son* there are 123 words per picture for the whole. The seventh slide gets 294 words; the tenth 266. Number five gets 32—a better ratio. Since these pictures are photographs of posed individuals and groups there is not in them sufficient meaning and content to keep the mind occupied for the duration of 266 or 294 words. If the pictures had a story to tell, why all the words? If they were of no value to the sermon, why not preach without all the bother of projection?

In a kodachrome presentation worked out by Professor Frank A. Lindhorst, *Teaching the Bible to Boys and Girls*, the average time each slide is on the screen is from 10 to 20 seconds. In a worship service, *Hands*, by Rev. Serge Hummon and as yet unpublished, the ratio of pictures to words is 1 to 26 for the entire presentation of 96 pictures. On many pages it drops to 1 to 20. In these programs there is psychological dominance of the visual and they are, therefore, effective as visual aids to instruction and worship.

The opposite of this is found in a version of the Shepherd's Psalm for children. The ratio of pictures to words is 1 to 100. Slides 9, 10, 11, 12 and 13 are given 200, 149, 150, 164, and 125 words respectively. The script out-talks the pictures seven-eighths of the way. The visual does not carry the burden of meaning. It carries very little. The words have it. We have an AUDIO-visual aid and not an audio-VISUAL aid. The children are drenched with words while they look at pictures. There must be a name for it, but it cannot be visual education.

Visual Institute for Catholic Schools

In late July Saint Louis University acted as host to a Visual Education Institute for Catholic Schools of the area. It was the purpose of the institute to create interest in visual aids in religious education, and to give guidance in their use. Stress was laid upon the advantages which accrue to the schools through close cooperation in improving and extending the visual aids program. The institute was directed by Father Cosmas Herndel, O. F. M., Quincy College, Quincy, Illinois, who is widely acquainted with the utilization of visual aids in Catholic education in the Mid-West.

Use Slides at Christmas

GOOD Christmas films are scarce, and when available are not too easy to use. Therefore, dust off that school or church stereopticon projector and plan to use some of the excellent programs which have been worked out on the Christmas theme.

Now is the time to plan. Fortunately, you do not need to make your own slides nor build them into programs. Audience-tested programs are available at reasonable rentals.* If you desire to create your own program, then you can turn to the above stereopticon slide resources for high-fidelity hand-colored stereopticon slides. (Rentals from 2 to 6 dollars per set per day.)

Madonnas is a program for youth or adult worship. The manuscript is complete and the picture interpretations are by Dr. Albert E. Bailey, one of America's foremost interpreters of religious art. It requires advance preparation, but no rehearsal. (26 colored slides; 35 minutes.)

Changing Conceptions of the Christmas Story is another Dr. Bailey program which reveals how the artists in different epochs have interpreted the Christmas message. The manuscript interprets some of the best known Christmas pictures. Here is a program which will appeal to all above the fourth grade in school or church. (28 slides in full color; 45 minutes.)

The Christmas Story is simply told through art, song, Scripture, poetry, and readings arranged by Dr. Bailey. This program requires advance preparation and at least one rehearsal. (35 color slides; 60 minutes.)

Christmas Is Jesus' Birthday is a program for children asserting through art, song, Scripture, and picture appreciation a basic and neglected truth in these days of commercialization. The children may take part in this program. The manuscript is complete. Preparation plus one rehearsal is all that is necessary. (8 color slides; 45 minutes.)

If you are looking for a special program for your school, or for some special group in your church, the above programs are more than worthy of your investigation. The slides used in them are from the finest and most extensive library of art slides in the United States, receiving the highest praise of objective and disinterested educators and critics.

*From the Educational Film and Slide Library, Evangelical and Reformed Church, 1505 Race Street, Philadelphia 2, Pa.

Well Spoken . . .

"The motion picture can become the greatest aid in the propagation of the Christian truth since the printing press," writes Rev. John W. Gable, of Religious Film Service, Richmond, Illinois, in a recent news letter to his customers. "That it should emerge at a time of world crisis is certainly God's providence. Rise, ye children of salvation! Be as wise as the children of the world. Let us use this new medium of interest, to teach and inspire."

New Films on India

The Board of Foreign Missions of the Presbyterian Church in the U. S. A., 156 Fifth Ave., N. Y. 10, is producing a new film, *Heart of India*, a 16mm., 22-minute, sound film in color. It will be available from this board, and other denominational boards and agencies which are purchasing prints, about the first of October. It tells the story of an Indian youth who, upon graduating from a Christian college, decides to give himself in Christian service to village life—the heart of India.

The Color of Man is a 16mm., 20-minute, sound film in color which is being produced by the Missions Council of the Congregational Christian Churches, 287 Fourth Ave., N. Y. 10. The release date has not been announced.

Ganges Farmer is a 16mm., 20-minute, silent color film showing the daily life and activities of an Indian farmer in the Punjab region. It was photographed by a teacher in the Allahabad Agricultural Institute and edited and titled by the Presbyterian Board in New York.

A mimeographed booklet, "Sound and Silent Films on India and Race", by the editor of this Department and available from him at fifty cents a copy, or in quantities, lists nearly 200 films on these two subjects. Each film is annotated as to content and the sources from which it is available are given. A large number of the films listed were previewed by the writer, and a great many have been used in his educational program.

Slides in Spotlight

At a meeting of the Eastern District of the American Lutheran Church in June at Birmingham, Pa., slides and flannelgraphs occupied the attention of those concerned with parish education. The new filmstrip, *The Visiting Teacher*, favorably impressed the previewers as did certain slides made from the religious masterpieces. The emphasis for the coming year will be on the *integration* of visual aids into the Sunday School and the vacation Bible school. Certain churches will carry forward experiments in the effective coordination of visual aids and lesson material and report back at the next convention. (From a report by Rev. Wilson C. Egbert, Youngstown 5, Ohio.)

Film on Missionary Praised

The great Buenos Aires newspaper, *La Prensa*, has recently designated the Argentine-produced motion picture, *When the Roll is Called Up Yonder*, as the best film ever made in that country. The film depicts the life of William Morris, early Methodist missionary, who established and directed six schools, an orphanage, and a manual training school through which more than 200,000 Argentine children have passed. It is remarkable that the story of this missionary should receive such high praise in a country where clerical reaction has seriously interfered with the programs of such schools as those founded by Morris. However, the democratic spirit is integral with the on-going processes of the universe and reaction always plants the

Scripture Passages on Records

The church will find use in its educational program for standard phonograph records which carry the great passages of the Bible. When these selections have been narrated competently, they can be used to add new interest, appeal, and meaning to visual and other services. A promising beginning has been made, and one of the latest recordings is from Simmel-Meservey. It is *The Sermon on the Mount* and *The Last Supper*, narrated by J. Carrol Naish. His reading is expert and pleasing, and his interpretation brings new meanings to the mind of the listener. The musical background is subdued and generally in the mood of these great passages. This type of recording can be used to present the Scripture lesson in departmental worship services, youth meetings, and mid-week services of devotions and prayer. The attitude of the user toward this material must be keyed to the type of service and the purpose of its use. Otherwise, he will induce an objective and critical attitude in the group.

Wooster Visual Workshop

A workshop in visual materials and methods was conducted by Rev. Harold L. Clark, of Brick Presbyterian Church, Rochester, N. Y., in connection with the annual Leadership Training School of the Presbyterian Church U. S. A. which was held on the campus of The College of Wooster (Ohio) the last two weeks of July. Mr. Clark reports that projected visual materials were more popular with the group than the non-projected visual aids. The current Bible comics were evaluated by one group which pointed out that the child may tend to regard Biblical material as comic and unreal. Another project was the listing of the basic materials, equipment, and procedure needed in getting a visual program under way in a local church. This report will be mimeographed and may be secured direct from Mr. Clark.

Seminary Course Popular

During the second term of this year's Summer Session Union Theological Seminary offered its first course on the use of audio-visual aids in religious education. More than 70 seminary students, ministers, directors of religious education, professors, rabbis and other religious leaders from all parts of the U. S. and Canada enrolled for this course and the majority of them completed the work for postgraduate credit. It was conducted by the editor of this Department.

New Cathedral Films

How to Teach With Religious Films, the first Cathedral Film on utilization, is to be released soon. If this film has educational insight as well as a technical excellence, it will be in great demand by the educational leaders of the church who are eager to promote the sound and effective utilization of motion pictures in the total program of the church. The other titles announced for early release are: *Go Forth, For All People*, *The Unfaithful Servant*, and *The Calling of Matthew*.

A Film Review and Evaluation

*Child of Mother India**, 3 reels, 16mm., 30 minutes, black and white. Produced by Central Films; directed by Philip M. Brown. Semi-documentary; photographed in Trinidad, population center for 100,000 East Indians living in the Western Hemisphere.

Contents: The dramatic story of the infatuation of a Hindu fisherman for a little girl of nine years and his betrothal and marriage to her. After seeing the child playing on the beach the fisherman visits her parents and asks for her in marriage; the parents are reluctant; visit the Hindu priest who reads the ancient scriptures making child marriage mandatory; the betrothal ceremonies; the escape of the girl and her playmate; their wanderings and their return from hunger; the wedding preparations go forward at an accelerated pace; the day-long marriage rites and ceremonies; the tying of the wedding knot; the little bride paraded by her lord and master before the wedding guests; the pitiful child following her husband to her new home a few days after the wedding to take up her new life which will bring her middle age at 25 and old age at 40 years.

Appraisal: The photography is excellent, with enough close-ups to satisfy the mind's desire for detail. The commentary is informative, well paced, and well integrated with the pictorial sequences. The condition of the print is fair to good.

Utilization: Do not use this film with children. It can be used with youth and adult groups as a background for a discussion of such questions as, Is One Religion As Good As Another?, Can Christianity Meet the Challenge?, What Can Break the Power of Religious Tyranny? It can be used to initiate a study course on India. It can be used in meetings of church women, and club women outside the church. It could be used in a Sunday evening series. Whatever the type of utilization, those in charge would do well to preview the film carefully and prepare their program thoroughly.

*Available from Ideal Pictures Corporation.

Episcopal Institute Features Visual Aids

The third annual training institute for key leaders in the church school, sponsored by the Department of Christian Education of the Diocese of Texas and held at Camp Allen in late July, had for its theme, "Christian Education Through Visual Aids". This four-day institute emphasized the enrichment of worship and instruction through the careful and integrated use of visual media. Miss Mary L. Palmer, of the International Council of Religious Education, spoke on "The New Day in Visual Religious Education" and "Visual Aids in the Worship Program", and conducted a workshop session on the use of visual aids in worship. It is in this type of institute that the local church receives help in understanding the fundamental character of visual materials and gets practical guidance in their use in the classroom and chapel.

College of the Pacific Workshop

The first Audio-Visual Workshop for church leaders on the College of the Pacific campus, Stockton, California, closed July 20 after six days of intensive study, research, demonstration and project work. Representing 17 denominations, 120 church school teachers, community leaders, and ministers, studied the opportunity of applying modern audio-visual teaching devices to the educational program of the church. A staff of 15 experts in radio, film slides, fine arts, puppetry and other specialized devices formed the faculty.

The Workshop was staged jointly by the Christian Community Administration project on the Pacific campus, headed by Frank A. Lindhorst, and the interdenominational Council of Churches of Northern California and Nevada of which the Reverend Abbott Book of San Francisco is executive secretary.

Religious and teaching films were prominent in the workshop program. Previews of many productions were evaluated; equipment and exhibition techniques were displayed and demonstrated. Similar projects developed the making and use of slides and film strips, non-projection picture use, and radio broadcasting techniques.

The Workshop was significant as an impetus toward new and more effective teaching techniques for the educational program of the church and a demonstration of inter-faith cooperation.

Although the workshop chiefly represented California and the Pacific Coast States, delegates came from as far as Illinois and Michigan. The Conference closed with recommendations that it become an annual service event on an expanded program.

Bible Society Releases

According to Mr. H. H. Ragatz, Secretary of the Visual Materials Department, the American Bible Society (450 Park Avenue, N. Y.) will release this fall the first of three motion pictures which were produced this summer in Hollywood under an arrangement with the Anson Bond Production Company. The titles are: *The Parable of the Sower*, *The Woman of Samaria*, and *The Nativity*.

Question Box

Q. We used some Old Testament films and our people complained about their poor technical quality. Are church films going to improve in technical quality?

A. We hope they will. Even the best can improve. The films you refer to are British-made. The soundtrack is poor. The velocity of commentation and dialogue is too great for ears unaccustomed to English-English. Our American-made films are superior, generally, in these matters, but may be weaker in casting and dramatic action. Yes, films will improve in scenario, photography, and sound *if the church insists*. In the meantime, we must make the best use we can of what we have, and be patient with the distributors.

Meeting the Problem of Visual Education Opportunists

DURING the next few years, American education and educators will be faced with the great challenge of selecting educationally reliable audio-visual materials of instruction.

Because of the proved value of the audio-visual approach to learning, especially as a result of the successful war training experience, many organizations and individuals of unknown merit and educational standing have rushed headlong into the visual field to take advantage of the ready market. The way that the audio-visual leaders deal with these new developments will greatly influence the success, or failure, of audio-visual education throughout the United States during the next decade.

True pioneers in the audio-visual field, for years have been working closely with the schools of America toward a goal. That goal has been to help boys and girls better interpret their world by developing aids to instruction that bring the world into the classroom in an understandable interesting manner. The goal was to fire the minds of boys and girls with ideals for more effective individual and group living by means of instructional tools that helped them better to approach the reality of an experience.

After years of patient growth through the uncertain years of infancy, then childhood and adolescence, the audio-visual approach to learning is now coming of age. We are aware of the ever greater acceptance by the leaders of American educational thought of the importance of visualization in the learning process. The development of modern projection equipment has led many to believe that audio-visual education is at the threshold of maturity, with the ever-present goal of the pioneers of the field finally in sight!

But what has happened? The truth is that the audio-visual field is faced with the problem of "visual education opportunists." Announcements of new individuals and groups that hope to produce new visual materials and equipment for the educational field appear regularly in educational journals.

We all know that among the new groups now being organized for various purposes in the audio-visual field, there will be those who will make a fine educational contribution. Those teachers interested in the promotion of audio-visual programs should become acquainted with these new groups. New producers and distributors that are doing a commendable job should be welcomed and encouraged, for their efforts will assist the pioneers in working toward the goals which have been set up by visual educators over the last three decades.

Good judgment in the selection of equipment and instructional materials on the part of teachers will help audio-visual education come of age. Educators owe it to themselves and to the boys and girls whom they teach to place "fly-by-night" organizations and instructional materials under close professional scrutiny. The audio-visual "opportunists" should be weeded out lest

THURMAN WHITE, Head
Department of Visual Education
The University of Oklahoma, Norman

they do irreparable harm to education. One thoughtful superintendent said recently, "What we need is a Better Business Bureau for schools."

As a matter of fact, each school system can establish its own Better Business Bureau by setting up a set of standards when the procurement of new audio-visual equipment and materials is contemplated.

The following questions concerning organizations which are now entering the visual field can serve as a guide for building this set of standards:

- 1.) What is the organization's main motive in producing visual materials?—
- 2.) What, in the organization's past record, gives it the "know how" concerning the production of audio-visual equipment and materials?—
- 3.) What is the standing of the organization and the individuals in the organization as far as the new audio-visual and general educational field is concerned?—
- 4.) What assurance exists that the equipment which is offered is technically sound?—
- 5.) Do you feel that the company, in terms of its past records, will be in the audio-visual field five years from now?—
- 6.) Is there a nearby reputable audio-visual education dealer willing to stand behind the equipment or materials offered?—
- 7.) Is an organization or individual willing to sell you inadequate equipment for a given function in visual education just to make a sale, or use up an allocated amount in a budget?

Only after the true answers to these and other questions are received should one consider working with, or doing business with, a new audio-visual organization. The truth which is uncovered will cast the necessary light so one can judge the organization to be considered.

The fulfillment of the great promise of audio-visual education is in the hands of the American educator. An important phase of the improvement of instruction by means of the audio-visual approach is the selection of reliable equipment and materials. If this challenge is met wisely, we can look with assurance in the visual field to a brighter, ever-broadening future.

A Three-Directional High School Program

(Concluded from page 366)

science classes on first aid and nursing, etc. In the assembly the events of history, the best in literature, art, music and science, the manners and customs of our neighbors throughout the world, all are brought before our young people, to the end that their lives will be greatly enriched and that they will experience a more enjoyable and yet more effective process of education.

In keeping with the IDEAL policy of con in Educational films, we are happy to anno

We now have sale and rental rights on the *Films of the Nations*

comprising scores of subjects on such countries as THE NETHERLANDS, NETHERLANDS INDIES, SWEDEN, SWITZERLAND, NORWAY, DENMARK, POLAND, INDIA, CZECHOSLOVAKIA, and others. These up-to-date films show how people in other countries live—their customs, industries and arts, their particular problems in the post-war world, and their position in international relations.

For those who wish to purchase prints of these films, we have secured the EXCLUSIVE SALES RIGHTS for *all the United States* except 13 Eastern States. However, we *rent* this product *throughout the entire country*, through our nation-wide distribution network. All subjects are 16mm sound, with many in color and also in silent. Representative subjects in this series are:

NETHERLAND INDIES

Bali, East Indian Island, 1 reel
Nias and Sumatra, 1 reel
Toradja, 1 reel
Peoples of the East Indies
Macassar, 1 reel

School Made Motion Pictures

EVERY school, in particular every high school, occasionally plays host to some outstanding personality in the community, local or national. The more fortunate schools preserve for posterity the record of such visits in the form of snapshots or newspaper reports and let it go at that. But not at Philadelphia's Northeast High School. There the guests are made to perform over again and again for the benefit of the rest of the student body as well as their parents, who could not be accommodated in the school's auditorium at the initial show. All this has been brought about because of the foresight of the authorities and the filming ability of one of the faculty members, Mr. Nelson A. McGowan.

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

To Mr. Paul E. Duffield, chairman of Northeast High School's Music Education Department, we are indebted for this interesting account of the Celebrity Assemblies. Mr. Duffield is not a newcomer to the pages of the EDUCATIONAL SCREEN. Last December he gave us a vivid account of the highly successful fusion of music—mainly an audial subject—with the visual arts, films, slides, maps and charts, into that very popular course, Global Music.
D. S.

"Celebrity" Assemblies at Philadelphia's Northeast High School

PHILADELPHIA's Northeast High School, for over fifty years exclusively a boys' school, now has the largest pupil enrollment in the city, and is also the largest boys' high school east of the Mississippi River. For the past fifteen years, Northeast's principal, Dr. Theodore S. Rowland, has sponsored the most unique "Celebrity" assemblies in the United States,—personal appearances in the school's auditorium by noted stars of the Metropolitan Opera Association, as well as by outstanding figures of the stage, screen, radio, literary and political life.

Two thousand students crowd the auditorium for each "Celebrity" assembly, while an additional two thousand hear the program in sixty-five classrooms over the school's public-address system installed ten years ago by Philco. A typical "Celebrity" program begins with an overture by the school orchestra or band, followed by the national anthem and pledge of allegiance to the flag. The principal then reads the Bible selection, and after briefly sketching the career of the visitor, presents him to the eager audience.

Singers from the Metropolitan Opera Association invariably bring their accompanist and give a short song recital; James Melton and Paul Robeson not only sang generously but also told amusing experiences

encountered in their screen and radio work. Walter Huston conducted an impromptu "quiz" program answering many queries about his stage and screen career. Thomas E. Dewey and J. Edgar Hoover brought to the students fascinating anecdotes and glimpses behind the scenes in their battle with crime; Frank Speaight, the English actor, gave excerpts from his greatest stage successes.

Delightful to both faculty and students was the annual visit of William Lyons Phelps, with his penetrating observations on contemporary books and plays. Professor Albert Einstein spoke modestly of his difficulties with our language, charming everyone with his sincerity and simplicity. Ann Sheridan and Jane Withers recalled their own school days and offered excellent advice on the value of secondary education.

Treasured in the school archives, is a complete pictorial record of the assemblies on 16mm. silent film, as well as in a collection of over one hundred newspaper and news service photographs. Faculty member, Nelson A. MacGowan, has filmed the entire series using a Victor 16mm. camera with turret head lens. About one thousand feet of film are used to record all important school events during the school year including athletic contests, classroom activities and "Celebrity" assemblies. Once a year this is cut to a standard 400 foot reel, edited and titled and displayed at the six annual performances of the school's musical revue. During the screening, a student reads a carefully synchronized commentary over the auditorium amplifier, producing in effect, a commercial newsreel. Musical background is played on the school organ. In this way, over 100,000 people have seen Northeast's assemblies on the screen.

Dr. Rowland's discerning philosophy that the experience of actually seeing and hearing famous personages will constitute a lifelong memory for Northeast students, is verified by the frequent reference made to the assemblies by visiting alumni members. And as an experiment in public education, the "Celebrity" assemblies have paid incalculable dividends in helping to mould adolescent ideals and character.

PAUL E. DUFFIELD

Professor Albert Einstein and Mrs. Einstein with school officials and student officers.

Something different happens when teachers use **SOUND FILMS**

WHEN scholastic studies can be looked at and listened to simultaneously something happens to students that increases the capacity of their minds for learning. Students learn more efficiently, more understandingly.

Sound motion pictures enable students to see and hear the lesson on the projection screen—causing concepts to grow and knowledge to be acquired more quickly and retained longer.

With an RCA 16 mm Sound Film Projector, you get the utmost advantages from sound films as a valuable teaching aid. The silvered pyrex reflector, large condenser lens and F 1.6

“coated” projector lens provide brilliant reproduction of black-and-white or full-color scenes in true photographic tones, in unequalled contrast and clarity. A powerful four-stage amplifier and a precision-engineered mechanical filter provide sound reproduction of narration, music or sound effect, with all the fidelity of the original.

Simple to operate, easy to maintain, the RCA Sound Film Projector assures you unfailing service in the classroom.

For complete information on RCA 16 mm Sound Film Projectors, write Educational Department, 27-I, RCA Victor Division, Camden, N. J.

RADIO CORPORATION of AMERICA

College-Produced Safety Film

The best film on traffic safety produced in the United States in 1945 was made by the Motion Picture and Recording Studio of The Pennsylvania State College under the direction of Frank S. Neusbaum, studio head, who wrote the script and directed the picture.

Teach Them To Drive, sponsored by the American Legion, was produced to encourage the establishing of planned driver training courses in schools and communities in the interest of highway safety. It is a 22-minute dramatization of what driver training is and why one man secured such a program for his town's schools.

The Legion released the film early in 1945 and submitted it in the contest conducted annually by the National Committee of Films for Safety of the National Safety Foundation where it took first place. There are over 200 prints of the film now in circulation in every state in the union.

I. C. Boerlin, supervisor of Audio-Visual Aids at the College, served as production supervisor. Paul H. Seitzinger was in charge of sound recording and film editing and Luther F. Kepler was photographer. Amos E. Neyhart, administrative head of the College's Institute of Public Safety, was technical adviser.

Producers of School-Made Films: Have you a good film on some school subject that you have found very useful in your classes? If the photography is excellent, the continuity pedagogically correct, and the original in a good state of preservation, it may pay you to investigate the Educational Film Library Association's plan for distributing your film. This may be the opportunity you have been looking for to recoup your investment in your film venture. It may even bring you a handsome profit to turn out bigger and better films. If you have been shooting school events merely for the sake of recording school events, may we suggest that you now "focus your cameras on learning"? Ask your subject teachers. They'll only be too glad to point out curricular areas badly in need of film treatment.

Remember, if you plan to include a sound commentary with your film, to shoot at 24 frames per second. And don't forget to make a work print with which to play around.

EFLA provides a clearing house service for 16mm. films produced by member educational institutions and agencies. For complete details of its "Plan for Distribution of Educationally Produced Films", write to Educational Film Library Association, Inc., 45 Rockefeller Plaza, New York 20, N. Y.

Question Box on Film Production

QUESTION: Are there any studies on sizes and styles of types best suited for projection?

Surely by this time somebody knows whether lettering should be three or six or eight inches high on a fifty inch image for third grade, for example. Also, whether sans-serif types are better. From what I have seen of projected materials, lettering sizes and styles used are pretty much whatever has been handy in the studios. I should be grateful to you if you could refer me to sources of information.

ANSWER: Your observations about the varieties of sizes and styles of letters are true not only about amateur film producers. Professionals are equally guilty.

As far back as 1918 a book called, "The Textbook" by Hall-Quest advocated shorter lines and larger letters for young children.

The British Association for the Advancement of Science specifically recommends the following:

- 24 to 30 point type for children under 7 years
- 18 point type for 7 to 8 year olds
- 14 point type for 8 to 9 year olds
- 10 point type for children 12 years and older.

After twelve years of study involving reading tests given to 33,031 persons, Donald G. Patterson and Miles A. Tinker published a book, "How to Make Type Readable" (Harper 1940). In this book the authors make the following recommendations:

- 1.—All modern type faces are equally legible.
- 2.—Readers prefer a type that borders on the bold face.
- 2.—American Typewriter type definitely retards speed of reading.
- 4.—Old English seriously retards speed of reading.
- 5.—Ultra-Modern (Kabel Light) retards speed only slightly.
- 6.—Reading italics is accompanied by eye strain.

7.—Material in capitals is read much more slowly than identical material in lower case.

8.—Bold face is preferred for posters since it's most legible at a distance.

9.—Readers prefer type sizes from 10 to 12 points. Below 8 and above 12 points are unsatisfactory.

Since all these studies deal mainly with the printed rather than the projected letter, it would be appropriate to reconsider the Snellen Chart, the nearest approach to distance reading. According to Snellen, a person with good eyesight should be able to read block letters about $\frac{3}{8}$ inch high at 20 feet away. In proportion, at twice the distance he should be able to discern a block letter twice the height.

The experiences gained with the Navy Training Film Program led Mr. Frank Nastasi to the conclusion that the best size for adult audiences is a letter $\frac{1}{36}$ th the height of the frame. For children Mr. Nastasi recommends $\frac{1}{20}$ th of the height. These figures are much more liberal than those used on the Snellen charts and probably take into consideration those spectators with poorer vision. Shall we show you just how liberal these figures are? The average 2 inch lens on the 16mm projector in the classroom gives us a picture about 33 inches high on a screen twenty feet away. On the Snellen Chart a letter would be $\frac{3}{8}$ inch high. According to the Navy calculations the letter should be $\frac{1}{36}$ th of 33 inches or $\frac{11}{12}$ of an inch. For children in the primary grades the letters would reach a height of about 1.65 inches.

As for style of letters, the Navy found the block type best. This almost agrees with the recommendations of the authors of text books that readers prefer types bordering on bold face. For very young children it is important to note that many of them are brought up on a style peculiar to their immediate locality.

One final point I would like to make is this. Many good letters are lost on a poor background, especially in the use of colors. I still prefer a white letter against a dark backing. No matter what color combinations you use, it's best to heed the advice of eye specialists that artificial illumination, evenly distributed, should give a level brightness of 80 to 100 foot candles.

Films from Britain

MAN ONE FAMILY

Professors Huxley and Haldane discuss widely accepted beliefs on racial distinctions and emphasize that many so-called national characteristics are common to all mankind thus refuting the theory of the master race.

Department of Visual Instruction of the N. E. A

DR. WALTER WITTICH, Director, Bureau of Visual Instruction and Assistant Professor, School of Education at the University of Wisconsin, Madison, has been elected president of the Department of Visual Instruction of the National Education Association by a mail ballot distributed this summer by Mr. Vernon G. Dameron, Executive Secretary. Mr. J. Wesley Crum, Superintendent of Chehalis, Washington, Public Schools was the other candidate for the presidency.

Edgar Dale, Research Associate, Bureau of Educational Research and Professor, Ohio State University, Columbus, Ohio, is the new first vice-president; and Lelia Trolinger, Director of Bureau of Visual Instruction, University of Colorado, Boulder, second vice-president.

Serving on the Elections Committee were Floyd Brooker, Chairman, Helen M. Riordon and Don Carlos Ellis.

Below are biographical highlights in the careers of these well-known leaders in the audio-visual field.

Walter Wittich—Native of Wisconsin.

Educated in Wisconsin public schools; two years undergraduate work, Wisconsin Teachers College; undergraduate and graduate work in physical education, economics, public administration, and educational administration, with B.A., M.A., and Ph.D., University of Wisconsin. (Doctorate thesis on film utilization.)

Twelve years teaching experience: social studies, English, and mathematics, in intermediate, junior, and senior high schools, and Education at both undergraduate and graduate levels.

Director of guidance, school psychologist, curriculum supervisor, elementary school administrator, and director of visual education.

Edgar Dale—Native of Minnesota.

Educated in public schools of Rugby, North Dakota; A.B. and M.A., University of North Dakota; Ph.D., University of Chicago.

Rural school teacher, junior high school teacher, and superintendent in North Dakota and Illinois, 1921-1926.

Member, Editorial Staff, Eastman Teaching Films, 1924-1925.

Motion Picture Chairman of National Congress of Parents

and Teachers, 1937; delegate as motion picture specialist to Child Welfare Committee, League of Nations, Geneva, 1936.

President, DVI, 1937-1938; consultant to various governmental motion picture production agencies during the war.

Co-editor of *News Letter*; author of books, including: *How to Appreciate Motion Pictures*, *The Content of Motion Pictures*, *Motion Pictures in Education*, and *Teaching With Motion Pictures*.

Lelia Trolinger—Native of Missouri.

Undergraduate work for teacher's certificate, Warrensburg, Missouri; A.B. and B.E., University of Colorado, 1920; M.A., University of Colorado, 1924; graduate study, Columbia University and University of Colorado.

Evaluation of Still Pictures for Instructional Use, a study which was to have been a doctorate thesis but which was condensed and changed into a popular study; has taught courses in visual instruction at the University of Colorado since 1929.

Organized Section of Visual Instruction of Colorado Education Association and was the first president.

Chairman, Committee of National University Extension Association on preparation of lesson guides for certain films from Teaching Films Custodians, 1941-1942.

President of Zone VIII, DVI, 1941-1942; Acting President of DVI at national meeting in Denver, 1942; Secretary-Treasurer of DVI, 1942-1945.

State Chairman, 16mm Film Section of War Finance Committee.

Prospective Program for the DVI

A prospective program of service and action for the DVI was drafted during a series of conferences the latter part of last April. Several proposals for the program were discussed, but it was the consensus that three problems should be concentrated upon. Following are the motions, all unanimously approved, upon which this decision was based:

Project I

That DVI conduct cooperative case studies, research, and experimentation for the purpose of (1) determining what constitutes adequate audio-visual programs for the various types of elementary and secondary schools,

(Concluded on page 384)

Walter Wittich

Edgar Dale

Lelia Trolinger

ABSORBED...CREATING

- *The look of a busy, happy class that makes one glad to be a teacher*

Have you tried Handmade Lantern Slides? The pupils work out the pictures themselves (with the aid of specially prepared base drawings)—and also project them.

Enthusiastic pupil participation is easily achieved with retarded groups—while the response of average and above-average classes is fully as gratifying.

The possibilities of this method can only be appreciated by the teacher who has used it. We suggest a trial.

Write for this book — 192 base drawings for **HANDMADE LANTERN SLIDES** for the Lower grades

As a service to teachers, we have prepared this book of drawings—to teach Holidays, Seasons, Good Manners, Safety, Health, etc.

At trifling cost, handmade lantern slides afford an unsurpassed means of obtaining pupil participation. Mail the coupon for this new book.

KEYSTONE VIEW CO.

Name.....

Address.....

Department of Visual Instruction

(Concluded from page 382)

and (2) determining indices of initial financial outlay and continuing financial support for audio-visual programs in the various types of schools.

(This project would involve consideration of pupil needs in terms of educational objectives and philosophy, rather than the formulation of arbitrary criteria, upon which to base the recommendations for adequacy of audio-visual programs.)

Project II

That DVI conduct cooperative case studies, research, and experimentation with trial installations, for the purpose of determining what constitutes adequate physical facilities, and the cost of such facilities, for audio-visual programs in the various types of school buildings.

(This project would deal with such architectural considerations as arrangement of rooms and problems of darkening, ventilation, acoustical treatment, etc.)

Project III

That DVI conduct evaluations of audio-visual materials in actual classroom situations and under actual classroom conditions.

(Many audio-visual specialists are extremely enthusiastic about this project, while some others are skeptical with reference either to the value of teacher evaluations as contrasted with the usual panel evaluations, or whether the time, money, and effort devoted to this Project could not be spent to better advantage on projects dealing with such subjects as utilization of audio-visual materials or teacher training in audio-visual instruction.)

The following additional motions were unanimously approved:

1. That, as a matter of policy, DVI should solicit the cooperation of other NEA departments, divisions, councils, commissions, and committees, and any other interested professional organizations, in the accomplishment of its present and future objectives.

2. That a Constitution Committee be established to study the proposed changes in the structural organization, policies, and functioning of DVI for the purpose of recommending revisions and/or amendments to the Constitution.

3. That in lieu of an annual meeting this year, business matters be voted upon by mail ballots.

The following committees have been established:

1. A Constitution Committee.

2. A Publications Committee, to explore the field of official publication problems of DVI for the purpose of making recommendations on DVI-Publication relationships for incorporation in the Constitution.

3. A special, temporary committee, to study the various proposals for a new name for the Department of Visual Instruction for the purpose of recommending a name of greater scope which includes reference to the radio, as well as the visual phases of the field.

Members of the DVI have been requested to make suggestions for changes in the Program and partially revised Constitution, the final draft of which will be sent to the members for approval as soon as it is completed by the Constitution Committee. Chairman of that committee is Paul Wendt, Director, Visual Education Service, University of Minnesota.

Two-by-Two Slides—and How!

(Concluded from page 364)

In printing from "snapshot" negatives, which are probably taken under varying light conditions and consequently show considerable variation in density, it helps to print two strips of positives, one exposed longer than the other, and thus usually get a good positive of each frame on one strip or the other.

Positives are developed, fixed, washed and dried the same as the negatives. When dry, they may be cut apart and mounted either between home-cut cardboard squares or in inexpensive cardboard mounts now sold by several firms. If home-cut squares are used, a razor blade in a dime-store handle is a big help.

Kodachrome color slides are easier to make than the black-and-white product because the company that produces the film also processes it and mounts the slides for you. In making the copies, however, light quality and length of exposure must be correct within very narrow limits if satisfactory color is to result. If the "artificial light" type film is used and the work is done at night or in a dark room, the light can be easily controlled. Two No. 2 photo-floods in reflectors, placed as described for black-and-white copying but about six feet or more from the picture to be copied, will give very even illumination and may be adjusted in position to provide proper light intensity for exposures in two or three seconds. These exposures may be timed quite accurately by a pendulum about 10 inches long, adjusted to beat half seconds. Since the "1/25," "1/50," etc. on many cameras do not always remain accurate, I consider the longer exposures, timed by the pendulum, as more desirable. A good photoelectric exposure meter may be classed as a necessity in making consistently satisfactory color copies.

The above suggestions are intended to help interested photo fans get a start in slide making. Once the start is made, interest is apt to increase, and further experimentation will result in improved equipment design and technique.

Educational Film Union

A Scandinavian union for exchange and joint production of educational films was formed on initiative of A. B. Europa Film, Sweden. Members of this union were in the beginning in Denmark—Statens, Filmcentral, Köpenhamn, owned and directed by the Danish Government, in Norway—Kommunenes Filmcentral, Oslo, owned and directed by the Norwegian municipal authorities; in Finland—Finlandia Kuva, a semi-official enterprise subsidized by the Finnish Government; and in Sweden A. B. Europa Film, Stockholm, as there exist no governmental enterprise in the educational field in Sweden. The union is not an official or governmental enterprise but of purely commercial nature.

The idea of this union is that the members shall place at the disposal of each other the films produced by themselves and in exchange receive corresponding material from member countries. In this way educational films from different parts of the world will be put at the disposal of any member of the union at cost price.

Further information can be given by the Secretary of the Union, Mr. Bertil Edgren, A. B. Europa Film, Educational Film Dept., Stockholm.

1606 Shakespeare is hailed as England's greatest playwright. His latest tragedy, *Macbeth*, is performed by the King's Men at the new Globe theater and is the sensation of London!

1946 The world pays fresh tribute to Shakespeare's genius. *Macbeth* and *Julius Caesar* are studied as classics. The screen version of *Henry V* is the sensation of two hemispheres!

Eastin Pictures proudly offers two superb picturizations of famous scenes from the tragedies of William Shakespeare

Macbeth

with Wilfred Lawson and Cathleen Nesbitt

Act II, Scene 2—Macbeth, abetted by his ambitious wife, murders Duncan, King of Scotland. *Act V, Scene 1*—Tortured by her guilty conscience, Lady Macbeth appears in her eerie sleepwalking scene. Length, two reels, Running time, sixteen minutes.

Julius Caesar

with Leo Genn and Felix Aylmer

Act III, Scene 2—Trouble flares in the Roman forum after the assassination of Caesar. First, Brutus placates the mob, then the eloquent Antony delivers his inflammatory funeral oration over Caesar's body. Length, two reels. Running time, nineteen minutes.

THESE refreshing revelations of the dramatic power and poetic beauty of Shakespeare's masterpieces were filmed in England from scripts taken straight from the original plays. Their distinguished casts include actors prominent in Laurence Olivier's monumental production of *Henry V*. The musical scores, composed by Ben Frankel, are played by the London Symphony Orchestra under the direction of Muir Mathieson. Their other noteworthy features include impressive sets, authentic costumes, brilliant photography and excellent sound reproduction.

BUY Your school's film library is incomplete without 16mm. sound prints of *Macbeth* and *Julius Caesar*. **\$37.50**
Price each.....

RENT These films are also available for classroom use under the Eastin School-Week Rental Plan, or for general use at attractive rental rates.

Macbeth and *Julius Caesar* were produced by the British Council. The 16mm. rights for the United States are owned by

The Film and International Understanding

Unesco Audio-Visual Project Drafted

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

MEETING under the joint sponsorship of the American Council on Education and the Film Council of America, a national Conference on the Use of Audio-Visual Materials toward International Understanding met in Washington this summer to explore the possible functions of UNESCO (the Educational, Scientific, and Cultural Organization of the United Nations) in relation to audio-visual materials of an educational character and to formulate recommendations to the Preparatory Commission of UNESCO.

Those in attendance at the Washington conference represented all phases and fields of education, as well as civic groups and producers and distributors of audio-visual materials. The number of persons invited to attend was limited in order to keep the group small enough for a real "working" conference, yet every effort was exercised to secure wide representation and to include those who might be expected to make outstanding contributions in terms of their experience, particularly in the international field.

The conference spent the greater part of its time in discussion and deliberation. Prepared talks were limited in both number and length.

In order to supply, on the national level, the information and services necessary to implement any program which UNESCO might undertake in the field of audio-visual materials, the conference adopted a resolution which favored the establishment of a national voluntary coordinating organization in the field of audio-visual materials and recommended that the American Council on Education and the Film Council of America endeavor to set up such a body.

The conference adopted the two following general recommendations for submission to the Preparatory Commission of UNESCO:

1. That all other departments or divisions of UNESCO establish liaison officers to work closely with the mass-media and audio-visual

sections of UNESCO to the end that they will utilize audio-visual materials in their work.

2. That an international conference on audio-visual materials be called in the early future.

The other recommendations of the conference were grouped into eight categories for submission to the Preparatory Commission of UNESCO, and are presented below. These categories were chosen as ones with which the group were most familiar. There are many interrelations between the categories, and such a division of functions within the international organization was neither implied nor necessarily recommended by the conference in their formulation.

Information Services

It is recommended that UNESCO:

1. Collect and disseminate evaluative and descriptive information on audio-visual materials from competent national authorities of member nations for collation, classification, editing and circulation, including detailed information regarding methods of procurement.
2. Collect and disseminate information on audio-visual materials in production.
3. Collect and disseminate information on audio-visual materials planned for future production.
4. Collect and disseminate information on needed production.
5. Collect, compile and disseminate information on audio-visual equipment, including information relative to the standardization of equipment.
6. Gather and disseminate all other information related to audio-visual materials necessary to promote the objectives of UNESCO, including information on distribution, production, utilization, evaluation, certification, research and exchange of personnel.

The First Postwar Film on Poland

A Tribute to the Spirit of the Polish People!

Produced by
WARSAW FILMS, Inc.

Released by
BRANDON FILMS, Inc.

16 mm Black & White, Sound
11 Min.

RENTAL . . . \$1.25 Per Day

SALE \$25.00 Per Print

UTILIZATION

Program film for general community groups meeting to discuss international affairs, world peace, and aid to Europe. Classroom film for high schools and colleges in the study of modern European history, social sciences, and international relations.

Dramatic scenes of the devastation of Poland's capital city wrought by the Nazis add further coverage to the pictorial record of World War II. In Warsaw German ruthlessness reached its peak of intensity. Each abortive uprising of the inadequately armed Polish people under the occupation met with additional reprisals resulting in the almost complete destruction of the city and the deportation or murder of hundreds of thousands of civilians and partisans.

Shown for the first time in WARSAW REBUILDS are scenes of the Polish underground during the occupation, and the plans of the Polish people for rebuilding Warsaw, already underway despite acute shortages of equipment. Here is a record of total war and a testament to the Polish people whose spirit could not be broken.

BRANDON FILMS, INC.
1600 Broadway, New York 19, N. Y.

Production Services

1. Arrange for the production, or produce, audio-visual materials about the work of UNESCO.
2. Arrange effective working relationships with other international organizations in the field of production.
3. Facilitate the production of audio-visual materials relating to the objectives of UNESCO.
 - a. Discover needs and stimulate production by governmental and non-governmental producers in member nations and, when necessary, produce such materials.
 - b. Advise producers or sponsors who plan international audio-visual projects on potential needs, values, and possible distribution.
 - c. Assist producers of educational audio-visual materials to produce such materials in countries other than their own.
 - d. Stimulate cooperative production in which producers of more than one country cooperate in the production of audio-visual materials.
 - e. Aid producers in securing film footage, recordings of indigenous sound, and the like, from producers in foreign countries for incorporation in audio-visual materials of an educational character.
 - f. Study the extent to which language is barring international use of specific audio-visual materials and work out, by subsidies if necessary, means of providing needed language versions.

Evaluation Services

1. Define internationally the criteria for determining the educational character of audio-visual materials for international exchange.
2. Standardize techniques and format for the evaluation of audio-visual materials for international exchange.
3. Act as a clearinghouse for the collection and dissemination of evaluations made by member nations.
4. Stimulate, coordinate and expedite the evaluation of audio-visual materials in all countries.

Certification Services

1. Encourage the admission of audio-visual materials of an educational character by all member countries, free of duty and without quota restrictions.
2. Encourage each member nation to cooperate in a system of certification by country of entry, based upon evaluations applied by competent bodies, in order to facilitate and expedite the international exchange of audio-visual materials, duty-free and without quota restrictions.
3. Encourage all countries, in addition to other means devised to facilitate the waiving of customs charges and quota restrictions, to adopt regulations which permit the waiving of customs charges on presentation to the customs authorities of a letter from an institution or

responsible organization certifying that the materials will be used for educational purposes within the program of the institution or organization.

4. Endeavor to work out, as an ultimate goal, agreements with member nations whereby they will accept certification of audio-visual materials of an educational nature by UNESCO.

Distribution Services

1. Direct the distribution of audio-visual materials about the work of UNESCO, which are produced in accordance with Recommendation No. 1 under *Production Services*.
2. Facilitate the distribution of audio-visual materials related to the objectives of UNESCO, whether their source be international or national, governmental or non-governmental, through all existing channels, including channels developed through UN, and governmental, commercial, and educational channels within each country.
3. Maintain a non-circulating central library of sample audio-visual materials for reference purposes.
4. Encourage each member nation to maintain a reference library of audio-visual materials containing at least one copy of all audio-visual materials which have received UNESCO certification.

Utilization Services

1. Direct the attention of member nations to the importance and value of effective utilization of audio-visual materials for educational purposes.
2. Encourage member nations to study and evaluate their techniques of use and disseminate such information to all member nations.
3. Study and evaluate utilization practices of member nations in the following situations:
 - a. Mass use
 - b. Forums and small groups
 - c. Organized education
 - d. Such others as may develop
4. Make recommendations, on the basis of information gathered, on methods and techniques of utilization which will lead to the most effective use of audio-visual materials in the accomplishment of the purposes of UNESCO.

Research Services

1. Survey completed research and facilitate the compilation of a bibliography and digests of all pertinent materials in the field of audio-visual education.
2. Conduct surveys of needed research or recommend that member nations conduct such surveys.
3. Coordinate research through the interchange of information and personnel and through the maintenance of a register of research in progress.
4. Stimulate and encourage new research.
5. Undertake research activities where necessary.

DESIGNED FOR... good habits,
good health,
good fun...

WINKY THE WATCHMAN

... a new 16mm sound COLOR movie by

"Winky the Watchman" is a delightfully charming film which combines lessons in care of teeth with entertainment acceptable to 60 year olds as well as those only six. Although it is designed essentially to stimulate dental care, its general nature is such that it can be fitted into any health program, whether on teeth or general nutrition.

"Winky the Watchman" stresses only care and watchfulness. Boring, detailed particulars are avoided. Attention to the film is thereby assured, and the teacher may herself prescribe specific methods applicable in accordance with individual programs and needs. You really can't appreciate "Winky" until you meet him in person. In fact, he's so delightful that you can run him as a straight entertainment film.

Running Time: Approximately 8 Minutes

Purchase Price: \$100.00 - 16mm Sound Only - Technicolor

ADMINISTRATION

- **Planning the School Auditorium for Audio-Visual Education**—E. DeAlton Partridge and Irvine H. Millgate, Visual Education Consultants, Inc., N. Y. C.—*School Executive*, 65:48 June, 1946.

A very practical description of some of the important elements to include in equipping an auditorium for projection and for radio or central-sound reception. The article is brief, and the suggestions clear-cut: where to set up a screen, how (if at all) to fix up a projection booth, the kind and shape of screen, and some of the methods of darkening.

* * *

- **Suggestions for the Organization of a County Audio-Visual Education Program**—*California Journal of Elementary Education*, 14:163 February, 1946.

A report prepared by a committee of audio-visual education directors in California, with the collaboration and approval of the Elementary Education and Audio-Visual Education Divisions of the State Dept. of Education. Members of the committee were: Lorene Kelly (Alameda Co.), Joseph F. White (Ventura Co.), James McPherson (Kern Co.), chairman. Outlines clearly the objectives of a county-wide program of audio-visual education, what services should be rendered by the central office, and which should be left to the schools. There is a statement of principles underlying the teacher-training program, with some suggested techniques for carrying on such a program. This report should be examined by all who are working on the administration of a program on a county-wide basis.

* * *

- **Commercial Supplementary Teaching Materials: a Discussion of Aids to Teaching as Furnished by Business Institutions**—Consumer Education Study, N. E. A. National Assn. of Secondary-School Principals, 1201 16th St., N. Y., Washington, D. C. 1946.

This is not a discussion of whether or not commercial materials should be used in the classroom: it is a justification for such use, and marks the first step in the co-operation between organized educators (a department of the N. E. A.) and the organized big business agency, National Better Business Bureau, Inc. It is a smooth piece of "concealed advertising" (which, incidentally is deplored in the text), and will be innocently accepted by classroom teachers as the official approval of certain industrial teaching aids to supplement textbooks.

After a lengthy introduction regarding the advertising purposes underlying the production of teaching aids for schools by manufacturers, certain "criteria" are listed: 1) The materials must contribute positively and effectively to promoting without distortion the educational program of the school, and 2) the materials must not contain direct promotion of sales. Further considerations for selection are given. The materials should be: educationally sound, significant, timely, well-balanced, accurate, fair, concerned with principles or products and not with specific brands, adapted to the needs, interest, maturity level, economic level and locality of the students who will use it, truthful, objective in presentation, and responsible.

Arguments against the use of advertising materials are weakly, even scornfully presented. The Consumer Education Study does not mention the extent to which whole states and school systems forbid the use of advertising materials, but it has, in its own research discovered that "there is evidence that those few rules which entirely forbid the use in schools of commercial materials for educational purposes are not generally known by the teachers or in

many cases are ignored, with or without the tacit approval of the administration, because use of the materials is thought to promote the students' education and not to violate the spirit of the regulation." After presenting some 23 pages of reasoning absolutely akin to all the literature from the National Association of Manufacturers, our Consumer Education Study, representing the National Association of Secondary-Principals of the N. E. A. makes this offer: First, they will advise business when it is planning and producing materials for use by schools, giving curriculum level, suggestions for use, school people who are competent to give constructive criticism, and would use the materials experimentally. Secondly, they will transmit to business concerns through the National Better Business Bureau, Inc., suggestions by teachers of supplementary teaching materials that they want. Both of these services are offered *without charge*. The final offer in the pamphlet reads:

"If teachers will indicate what they want to enrich and to enliven their courses of study and business concerns are informed specifically of these wants, the probability is that at least some of them will be satisfied. . . . Teachers are invited to send to the Consumer Education Study a statement of their needs, both of materials and of methods of presentation. The more full and explicit the suggestions are, the more likely they will receive favorable consideration."

The implications of this pamphlet are of serious importance to the American educational system, and to the producers of educational materials other than textbooks. It means that the N. E. A., representing American education has given its support of a movement which will, among other things, flood the schools with the "concealed advertising" which will give a biased interpretation of all aspects of modern living for use by school children, and secondly, will greatly strengthen a trend which other educators (with no less regard for the good of the school children) have decried, and have even forbidden—viz. the use of commercial, "free" materials as opposed to the selection and purchase of materials especially produced for schools.

UTILIZATION

- **Free and Inexpensive Materials for Classroom Use**—Virginia G. Goldsmith, Director of Instructional Materials, Highline (Wash.) Public Schools—*College of Education Record*, 12:88 April, 1946.

A complete and very significant account of the ways in which teachers can use free and inexpensive materials. There is a directory of master lists, followed by a set of criteria for evaluating whether or not such materials are educationally sound. Some of the areas of learning where these aids could be used are reprinted from the N. E. A. Consumer Education Study, "Commercial Supplementary Teaching Materials". Then, there is a section devoted to "Examples from the Classroom," where we read how a primary group studying transportation, a sixth grade group in need of better habits of personal cleanliness, a fifth grade class concerned with the care of the teeth, etc. made use of materials supplied by industrial sources.

* * *

- **Use of Pictures in Mathematics**—Ida D. Fogelson, Bowen High School—*Chicago Schools Journal*, January-June, 1946 p.65.

This teacher uses pictures as a means of illustrating mathematical principles, a means of teaching reading in mathematics. For example, the principle of an equation is demonstrated in pictures of children balancing on a teeter board, tug of war, fire ladders, and the like. The pupils

ENTERTAINMENT and EDUCATION

go hand-in-hand on the screen

Motion Pictures have become the world's greatest medium of expression! In the language of motion and action peoples of the world may come to better understanding of each other through the medium of the screen.

Universal Pictures company provides for education and entertainment both feature-length and short subject films, bringing to the screen the world's finest artists in fine plays and stories. Listed herewith are some attractions, either released or about to be, that you will want to watch for:—

CANYON PASSAGE
from the Ernest Haycox novel
and Sat. Eve. Post serial
IN TECHNICOLOR

ABBOTT & COSTELLO
the screen's top funny men in
"The
TIME OF THEIR LIVES"

THE BLACK ANGEL
starring
**DAN DURYEA, JUNE
VINCENT, PETER LORRE**

DEAD OF NIGHT
with
Mervyn Johns, Roland Culver
Frederick Valk, Sally Ann
Howes

Ernest Hemingway's
"THE KILLERS"
with
Burt Lancaster, Edmond
O'Brien, Ava Gardner,
Albert Dekker

LITTLE MISS BIG
with
Beverly Simmons, Fred Brady
Frank McHugh, Fay Holden

WHITE TIE AND TAILS
starring
**DAN DURYEA, ELLA
RAINES, WILLIAM BENDIX**

"THEY WERE SISTERS"
starring
**PHYLLIS CALVERT, JAMES
MASON**

Also Excellent Short Subjects

The world comes alive before your eyes . . . as ace commentators point up each interesting scene in **VARIETY VIEWS** (single reels); and interesting inventions and unusual things done by persons 'in the news' in **PERSON-ODDITIES** (single reels).

NAME-BAND MUSICALS (2 reels each) present excellent music and accomplished artists. **TECHNICOLOR CARTUNES** (1 reel each) entertain with good music and clean, sparkling comedy.

SING & BE HAPPY SERIES (1 reel) and
THE ANSWER MAN SERIES (1 reel)

UNIVERSAL "world-events" **NEWSREEL** is issued twice weekly.

UNIVERSAL PICTURES COMPANY, INC.

Rockefeller Center New York, N. Y.

CIRCLE 7-7100

are also taught to draw pictures of mathematics in application. These help to strengthen the impressions and assure retention of what has been learned. Suggests a resourceful teacher whose pupils must be enjoying their mathematics as they attempt creative art illustrations of what has been learned.

G. I. EDUCATION

- **Training Aids in a Navy Curriculum**—Lt. Comdr. Allan Finstad and Lt. Comdr. Gale C. Griswold (USNR), Training Aids Division, Bureau of Navy Personnel—*College of Education Record*. 12:81 April, 1946.

Describes the problems involved in training naval personnel as Electronic Maintenance Technicians. A committee of representatives from the various sections interested in this program helped to plan the training aids to be produced and visited the schools for follow-up. Some of the educational implications are:

1. Planning for the use of training aids should be concomitant with a development or revision of curricula.
2. Teachers should be enlisted in the evaluation, selection and development of the program.
3. The use of training aids in the classroom must be carefully planned, with the help of printed guides.
4. Teacher training programs should give adequate instruction in teaching methods.

The article concludes with four well-rounded questions for thought:

- a) How can teachers really become an influence in the production of training aids by central education or commercial agencies?
- b) Should the audio-visual program be an independent department, or should it be an integral part of a program for curriculum development and in-service teacher training?
- c) What should be the educational experience and background of the personnel that supervises audio-visual programs?
- d) The successful integration programs of the armed services be applied to senior high and junior college levels?

EQUIPMENT

- **The Problem of Projector Maintenance**—Don L. Kruzner, director King County (Washington) Visual Education Department—*College of Education Record*. 12:86 April, 1946.

Describes the beginnings of an excellent idea to have the local projector companies submit contracts to guarantee the maintenance of projection equipment during the school year. The final details of the contract had not been worked out when this article was written, but the idea had been accepted as highly desirable by the equipment companies.

BOOK REVIEW

- **Building an Audio-Visual Program**—Schreiber, Robert E., University of Chicago, and Calvert, Leonard, Director of Vocational Guidance, Des Moines, Iowa. Science Research Associates, Chicago, 1946. 103p.

Another handbook has been added to the bibliography in the field, its chief original contribution being a listing of films, filmstrips and recordings in vocational guidance.

The brochure devotes the three first chapters to an introduction to the scope and values of the various devices. Then follows a fairly useful section on administration. A large section (pages 63-103) has been given over to source lists and bibliography.

It is obvious throughout that the authors are experienced in vocational guidance. Would that they had really written a hand book useful for teachers and counselors that would have devoted more space to *utilization*. Teachers want to know how a given film treated a given subject—how a given group of young people used a selected film, and how they were influenced by it to do something meaningful.

The time is long past for new writings that tell the same "films are useful, slides are useful, museums are useful, filmstrips are useful" . . . ad nauseum. A section called "successful audio-visual guidance programs" is disappointing first, because it is too brief, and secondly, because it draws upon some of the references in the literature and offers nothing that is new, refreshing or (what is most important) stimulating.

As for sources of materials, these have been arranged as follows: federal, state, college, associations, commercial, industrial. On pages 88-95 will be found a list of titles of motion pictures and filmstrips that could be used in vocational guidance.

Teachers of vocational guidance will still be greatly aided in their reading in audio-visual education by: a) any of the standard textbooks in audio-visual education, and b) the section on audio-visual education in Gertrude Forrester's "Methods in Vocational Guidance" (Heath, 1944).

DIORAMAS

- **Models at Work**—*Science Illustrated*, May, 1946 p.74.

Article illustrated with color photographs, of a firm that is in the vanguard of the current interest in three-dimensional displays and dioramas, Diorama Corporation of America.

SOURCES

- **Films for Jewish Programs**—available from the National Jewish Welfare Board, 145 E. 32nd St., New York 16. 28pp, 20c.

This is a 28-page brochure which lists 99 different available films of Jewish interest arranged by subject matter and indexed alphabetically by titles. The 99 films listed are grouped into the following eight subject categories: Biblical, geographical, historical, Jews around the world, Palestine, intercultural, the work of community agencies, feature length films. With each listing, the brochure indicates the type of film, its content, running time, rental fee and where it may be obtained. Most of the listings are of 16mm. sound films in English, but there are some in Yiddish, too. The brochure also contains a list of sources for obtaining the films.

An introductory statement discusses the role of films in creating Jewish programs and explains briefly how films can be integrated into group programs.

- **Where to Get Visual Aids on Public Affairs**—a Guide to Displays, Exhibits, Maps, Charts, Posters, Photographs and Paintings. Third volume in the series of Cumulative Directories compiled by The Program Information Exchange, Inc., 41 Maiden Lane, New York 7. 12 pp., mimeo, 50c.

This is a comprehensive directory designed to stimulate the interest of program chairmen, teachers and librarians in wider use of visual materials. It lists 106 private, governmental and international organizations which provide one or more types of visual aids, and classifies them by fields of interest. In each case the type of material provided is indicated. Teachers and program chairmen are also urged to explore local sources such as libraries and history and art museums.

How an organization can create its own visual aids and develop a rich visual program is discussed by Mary Brady, Director of the Harmon Foundation, in an article entitled "The Creative Use of Visual Aids."

- **Guidance Personal and Vocational**—compiled by Lili Heimers Director, Teaching Aids Service of the Library, and edited by Margaret G. Cook, Librarian, New Jersey State Teachers College, Montclair. 1945. 36p. mimeo. 75c.

A list of teaching aids dealing with this subject prepared for teachers, school administrators, parents, camp counselors and community leaders. Sources are given for charts, posters, films, filmstrips, pictures, publications, recordings and transcriptions. Part I is concerned with Personal Guidance, Part II with Vocational Guidance and Part III gives detailed information about specific types of vocations.

READY NOW!

PAPER

A NEW
ENCYCLOPAEDIA
BRITANNICA
INSTRUCTIONAL FILM

Produced in Collaboration with
C. E. LIBBY
New York State College of
Forestry

WHAT THE FILM DOES: Tells the interesting story of modern paper making, from the forest to finished sheets. Selected scenes show paper being made into items familiar to children. Trees are cut and sawed in the forest. Logs are hauled to the mill where they are barked and cut into chips. The chips are then made into pulp. The machine that makes paper from pulp is carefully explained. The entire picture is a pictorial exposition of modern technology at a child's level of interest and understanding.

SCOPE OF THE FILM'S USE: Primary and intermediate grades.

COURSES IN WHICH FILM MAY BE USED: Reading, elementary science, social studies and geography.

LENGTH: One reel; safety stock; 16mm., sound.

PRICE: \$50. Discount, 10%. State and other taxes extra.

TERMS: Net 30 days. Transportation prepaid.

This film can be obtained on the Lease-to-own Plan or the Cooperative Film Library Program. For further information, and a complete list of instructional films, write today to Encyclopaedia Britannica Films Inc., Dept. 21-J4, 20 N. Wacker Drive, Chicago 6, Illinois.

ENCYCLOPAEDIA BRITANNICA FILMS INC.

The ABC's of Audio-Visual Equipment

Film Inspection: Key to Showmanly Educational Exhibition

Edited by
ROBERT E. SCHREIBER

IT is a familiar old saw that a chain is no stronger than its weakest link, yet, when the components of the audio-visual program are regarded as links in a chain keeping the student well-tethered to the solid rock of reality, the significance of the simile is obvious. Adequate administration and supervision, proper selection and utilization of materials, the materials themselves, and the mechanics of projection serve as important links in connecting instruction with reality.

In the area of motion picture usage, the simple, unimpressive film base is often the weakest link in the program. Selection may be adequate, utilization fine, and projection splendid; yet the film itself, committed to an existence of jerky rollercoaster rides through the projector, is afforded little more attention than frequent rewindings on unyielding reels. And the film itself, you know, in addition to varied emulsions carried on its surface, is pretty important. Suppose the film breaks; hmmm? Then, where are you? The world you brought into the classroom vanishes out the window, and a lengthy ribbon of cellulose acetate is all that remains. Selection? Utilization? For what? To acquaint your pupils with technological failure? Yes, let's put it that way . . . let's not harbor any suspicions about the efficiency of a director, who thinks that film direct from the exchange may be slapped into the projector—and perfection result. Handing an instructor or a student operator a reel of uninspected film is running the risk of sabotaging the instructional effectiveness of that class hour.

"Well, what do I do," asks the conscientious director, "preview all our films in advance of showing?"

No, that's unnecessary, although teacher previews may well be the means of checking a number of the films to be used. Instead, provide the audio-visual workroom with a good set of hand rewinds firmly attached to a lower-than-average table equipped with adequate illumination, secure a precision splicer, and train a sharp-eyed clerk for the job of film inspector.

Film inspection should occur whenever a film is received from an outside source for use. If the school has a film library of its own, inspection should be made following every series of showings before it is returned to its cabinet or rack. Then, the staff may be sure that when the film is called into service again, it will be ready to perform its task without endangering itself or the instructional program.

Specifically, the first step in examining a reel of film for possible flaws is to look at the "leader", which should be about six feet in length and without tears or torn sprocket holes. In addition, it should be opaque throughout the foot or so of its length immediately preceding the opening titles. The remainder may be dotted with "Academy numbers", although, to offset

the possibility of some eager projectionist's switching on the lamp too soon, it is better to have it opaque throughout. A supply of opaque "leader" film is preferable in providing adequate leaders than a collection of odds and ends. In addition to the much-abused leader, the title length of the film should be minutely inspected, since it is in these two areas that faulty threading encourages most film damage.

Having followed the course of the usual film damage through the leader, the titles, and the opening scenes of the picture, the inspector may advance more rapidly through the reel, but he continues to check the condition of the film by passing it through his thumb and first two fingers. By touch, splices in need of repair or torn sprocket holes may be discerned and repaired.

The last stronghold of film damage is found in the last five or ten feet on a reel. This is due to at least two things; first, on 400 foot reels, the film is wound in such a tight circle around the reel hub that—if it remains thus for some time—it tends to resist straightening while passing through the projector. Second, the end of the film may become tightly wedged in the film hub slot, and the claw and sprockets tear perforations in the effort to effect passage. Following the end title should be another foot—at least—of opaque "leader" film; more, if the title does not fade out—and several feet if there is no end title at all.

Thus far in this discussion we have assumed that the film inspector knew what to do when film damage of any sort was encountered. The mere mechanical act of splicing two pieces of film together is not an art, but it should be done skilfully. A good splice should last the life of the film, but making such a one is somewhat difficult without the use of relatively expensive equipment. Basically, the operation of splicing involves removing the emulsion from one film and with a wet or dry scraper unit so that—in overlapping the two ends—film base contacts film base without any emulsion, dirt, or water intervening. Contrary to popular belief, films are not "glued" together; welding is a better word, since film "cement" is really a solvent for the film base. When this solvent is applied between the overlapping film ends, the base of each is momentarily softened. Pressure is then applied, and a "weld" approximated.

To minimize the pictorial distraction of a splice passing through the projector, it is imperative that the splicer be accurately adjusted so that emulsion is removed only to the extent of the "bonding" area. When the splice is completed, there should be no clear streak across the film. If such exists, the splice is noticeable to the eye as well as to the ear—the light streak on the sound track causing a "bloom" as it passes the photo-cell. The diagonal splice has been recommended in some quarters on the basis of strength, but it is more noticeable than a straight splice, which has been stan-

dard in the motion picture industry from the beginning.

A plethora of splices—no matter how well made—in a short space of film is a deterrent to smooth projection and film safety. Hence, except in title areas, when the film breaks within three or four inches from a splice, it is wise to remove the intervening inches and end up with one splice instead of two. Likewise, if a series of torn perforations are encountered, then several inches of good film followed by another series of torn perforations, it is best to delete the film between the tears and use one splice in repairing the total damage. Of course, if such a practice were followed in the title area, one would soon have no title at all, although a much spliced title area—due to the greater tension exerted on film as the projector starts—is apt to end up in the waste can anyway.

Concomitant with film inspection, it is desirable to advise projectionists in the school never to use clips or pins to connect broken ends of film, since these may prove uncomfortable to the film inspector's hands. Adhesive or scotch tape are not good either, since when removed part of the "stickum" remains on the film—necessitating removal of that section of film or running the chance of its sticking in the projector's film gate. Running off a sufficient length of film to tuck in the take-up reel under the loose end, and revolving the reel until tight, is the most immediately practical solution to such classroom emergencies.

Film inspection, of the nature outlined, requires little time or skill, but it pays large dividends by improving

the quality of motion picture exhibition—and thereby allowing lowly Cellulose Acetate to masquerade under a variety of educationally appealing aliases.

EQUIPMENT QUERIES:

Q. "Will you please recommend, from your experience, the best 16mm. sound projector for our school?"

A. As you have unconsciously indicated, the adjective "best" may be intelligently applied to a projector only in terms of the conditions of use in any particular situation. Consider your operating personnel, the amount of movement of equipment required, proximity of reliable maintenance service, and other items before purchasing. Above all, have several demonstrations under actual classroom conditions and secure the consensus of opinion among those of your staff who will have most contact with the equipment if it is bought.

Q. "As each new piece of equipment arrives on the market, I notice an alarming diversity of designs and operating procedures. Is there no movement toward standardizing the design of classroom projection equipment among the producers?"

A. No. If anything, producers are exploiting the great American prerogative towards bigger and better diversity. It will probably be no time before we are threading film into the screen and enjoying beaded projectors.

READY NOW!

EGGS

**A NEW
ENCYCLOPAEDIA
BRITANNICA
INSTRUCTIONAL FILM**

*Produced in Collaboration with
G. F. STEWART, Ph.D.
Iowa State College*

WHAT THE FILM DOES: Tells the story of egg production on a large, commercial egg farm. Emphasizes (1) the care and feeding of large flocks of hens in laying houses (2) the gathering of eggs from open nests and trap nests (3) the cooling of eggs, and the automatic candling, grading, cleaning and packing of eggs for the market. Illustrates the use of technological methods in modern, large scale egg farming.

SCOPE OF THE FILM'S USE: Primary grades and intermediate grades.

COURSES IN WHICH FILM MAY BE USED: Reading, social studies, elementary science and general program of studies.

LENGTH: One reel; safety stock; 16mm., sound.

PRICE: \$50. Discount, 10%. State and other taxes extra.

TERMS: Net 30 days. Transportation prepaid.

This film can be obtained on the Lease-to-OWN Plan or the Cooperative Film Library Program. For further information, and a complete list of instructional films, write today to Encyclopaedia Britannica Films Inc., Dept. 21-J1, 20 N. Wacker Drive, Chicago 6, Illinois.

156 Films on State Department Program

The State Department's Office of International Information and Cultural Affairs, appropriation for which has been granted by Congress, is planning a large scale motion picture program to educate foreign countries in the ways of American democracy. About half of the 156 films scheduled for foreign distribution during the coming year will be acquired from other Government agencies or from commercial producers. The other half will be produced specially for the Department by independent producers on contract. Films now in production by these producers include: "Banjo Picking Boy," a story of American folk music, by Willard Van Dyke and Irving Lerner; 5 films on night schools, adult education, libraries, 4-H Clubs, and the Parent-Teachers Association—by Julien Bryan's International Film Foundation; a film on the Civil Aeronautics Board and several on medical training, by Affiliated Productions; a story on the agricultural college at Rutgers University and one on dairy farming, by Herbert Kerkow; "New Neighbors," a film on the activities of the League of Women Voters, and "Rural Nurse," by Willard Pictures.

Synchronized off-screen narratives will be prepared in more than two dozen languages by the State Department.

Through the New York office of the Cultural Division, headed by Frank Beckwith, assistant chief in charge of production, film scripts are first purchased from writers and independent producers, then the contracts for production are assigned to producers who "have the qualifications for the particular type of production desired," according to a spokesman for the Division.

Farm Film Foundation Organized

A new organization, Farm Film Foundation, Inc., has been formed for the stated purpose of bringing the best in educational films to rural America by establishing a minimum of 1000 16mm sound motion picture circuits through the country.

Representatives of the major National farm organizations, combined with the key figures in American industry, composing the non-profit Farm Film Foundation's Board of Trustees, are implementing their three-point program to (1) maintain a National film library from which any group can secure desirable pictures. (2) Establish through the facilities of the farm organizations a network of 16mm. circuits throughout rural America. (3) Advise on film production, a service available to any acceptable organization.

Walter D. Fuller, President of the Curtis Publishing Company, and Foundation Board President, states that the new organization will direct its activities toward creation of a better understanding of the importance of farming to the welfare of the world through the carefully considered

**ENCYCLOPAEDIA
BRITANNICA
FILMS INC.**

Notes

use of audio-visual education centered about 16mm films.

With the backing of the non-profit Foundation for American Agriculture of Chicago and Washington, D. C., from which the Film Foundation has received a substantial grant, a program has already been initiated to advise on the production of, and to distribute a higher standard of films with technically accurate subject treatment and a maximum of dramatic appeal. The films circulated under the auspices of the Foundation are to be made available not only to farm organizations, but to urban groups in order that American Agriculture may be better interpreted to the Nation as a whole.

Negotiations are under way by the executive staff of the Foundation which are aimed at making it possible for responsible groups to purchase projectors and maintain them at substantial savings through Film Foundation facilities.

Headquarters for the Foundation are at 744 Jackson Place, N. W., Washington 6, D. C.

ALA Resolutions on Library Use of Non-Theatrical Films

At its Buffalo Conference in June, the American Library Association Council passed the following important resolutions concerning the release of restricted United States government films, and the responsibility of libraries in the distribution and use of non-theatrical films:

I—Whereas, there have been excellent educational and documentary films produced by and for various agencies of the United States Government, heretofore unreleased for general use in the United States and,

Whereas, many of these films could be most useful in the development of education and better public understanding if freely available for general distribution in the United States.

Now, be it resolved that the Council of the American Library Association endorse the Library of Congress film program and the plans for its expansion and development; and urge upon the Librarian of Congress that he use his good offices in working with government agencies for the release of such restricted films as soon as possible.

II—Whereas, the need for information and understanding on the part of all citizens is vital to modern civilization,

And whereas the 16mm film given adequate distribution and use can do much to further such understanding,

And whereas there are notable examples of libraries in the United States and Canada which have developed excellent film-lending services as a part of their community responsibility for educational leadership,

Now, be it therefore resolved that the Council of the American Library Association encourage the extension and improvement of film services through the libraries of the United States and Canada.

It is the expectation of the Audio Visual Committee that this Council action will stimulate many libraries throughout the country to take a more

Missouri Visual Aids Conference

The University of Missouri held its first audio-visual conference at Columbia, Wednesday, July 10. Dr. L. G. Townsend, Dean of the School of Education and Director of the Summer Session, opened the conference. The theme was "Implementing the Instructional Program through Audio-Visual Aids".

Dr. Bruce E. Mahan, Director of the Extension Division, University of Iowa, gave the main address, "Fundamentals of Audio-Visual Instruction". Panel discussions and demonstrations were included in the program which followed. Dr. Ralph G. Watkins led the panel discussion on "Audio-Visual Instruction as a Contribution to Learning".

In the afternoon a group meeting for elementary school instructors was held with Mr. Cecil Floyd of Joplin, Missouri, as chairman. "The Audio-Visual Program in the Elementary School" was the subject for the panel discussion. Mr. W. W. Wyatt was chairman of the panel on "The Audio-Visual Program in the High School".

Eighth Midwestern Forum at Chicago

The Eighth Midwestern Forum on Visual Teaching Aids concluded a two-day session at the University of Chicago, July 12 and 13th, by electing a new set of officers and an Executive Committee. Dr. Joe Park, assistant professor at Northwestern University, and director of the Curriculum Laboratory there, replaced Dr. William C. Reavis of the Department of Education at the University of Chicago, as chairman. Joseph E. Dickman of the Chicago Public Schools will serve as secretary-treasurer.

Under the direction of the retiring president, Wm. F. Kruse served as a nominating committee to secure the names of nominees from fifteen professional and commercial organizations for the new Executive Board. The following were nominated and unanimously elected: Mildred Batchelder (American Library Association), John Hedges (Educational Film Library Association), Bertram Willoughby (Allied Non-Theatrical Film Association), Don White (National Association of Visual Education Dealers), O. H. Coelln (Visual Equipment Manufacturers' Council), Dr. Stephen M. Corey (University of Chicago, Dept. of Education), James Brown (Illinois Institute of Technology), Dr. Joe Park (Northwestern University, Dept. of Education), Dr. Walter Eggert (DePaul University, Dept. of Education), William F. Kruse (Film Coun-

cil of America). Millard Bell & Maurice E. Steele (Illinois Association of School Administrators), Ralph McAllister (Adult Education Council), William G. Hart (Zone III) & H. L. Kooser (Zone IV) (National Education Association, Dept. of Visual Instruction). In addition, Dr. Wm. C. Reavis, Nelson Greene (Editor, Educational Screen) and L. C. Larson were elected to the Executive Committee.

An address by Francis W. Noel, Chief of the Division of Audio-Visual Education, California State Department of Education, was the feature of the opening session Friday night. His talk on "An Effective Audio-Visual Program" was followed by a panel discussion, led by Joseph E. Dickman. Teacher Training and general prospects for future developments were topics discussed Saturday.

Audio-visual leaders and administrators, from California to New York, participated.

Benoit-Levy Heads UN Film Section

The French film director and producer, Jean Benoit-Levy, has been appointed Director of Films and Visual Information of the United Nations Department of Public Information. Mr. Benoit-Levy has announced that while most films to be used in the UN program will be produced by established companies, those films which are considered necessary and are not available from any other source will be made by the UN's film section.

Army's \$3,000,000 Overseas Film Program

Appropriations for a \$3,000,000 U.S. Army film production program were recently approved. The bulk of the new production will be directed to indoctrination subjects designed to rid Europe of its remaining mental cobwebs concerning the meaning and function of democracy.

Pare Lorenz, of documentary film fame, has been appointed to head the production unit, which expects to produce 80-100 subjects during the coming year. Lorenz is now busy assembling technicians from Hollywood, the wartime production crews having been largely demobilized since the close of the war.

Widespread exhibition of the films to be produced is assured, since the Army has considerably greater authority in distributive matters than other agencies concerned with motion picture exhibition abroad. This new move on the part of the army is an encouraging sign that this government realizes the peacetime importance of the motion picture, paralleling the expanded governmental film program of the British Information Services and other agencies.

READY NOW!

MAKING COTTON CLOTHING

A New Encyclopaedia Britannica Instructional Film

Produced in Collaboration with ISABEL B. WINGATE New York University

WHAT THE FILM DOES: Tells the story of a child's cotton print dress from the designing of the original to the pressing and packing of hundreds of dozens of garments in a modern mass production garment factory. Every step is clearly pictured. Hand methods are contrasted with quantity production techniques. Shows the contribution made by efficient workers and emphasizes the close relationship between workers and machines. A sequel to the film COTTON, which shows the making of cloth.

SCOPE OF THE FILM'S USE: Designed for the primary grades, this film may also be used at the intermediate level.

USE OF THE FILM: May lead to discussion and activities about making garments of all kinds, and about life and activities of garment workers.

COURSES IN WHICH FILM MAY BE USED: In primary grades, general program and reading. In intermediate grades; social studies, geography, elementary science, general science, home economics.

LENGTH: One reel; safety stock; 16mm., sound.

PRICE: \$50. Discount 10%. State and other taxes extra.

TERMS: Net 30 days. Transportation prepaid.

This film can be obtained on the Lease-to-own Plan or the Cooperative Film Library Program. For further information, and a complete list of instructional films, write today to Encyclopaedia Britannica Films Inc., Dept. 21-J2, 20 N. Wacker Drive, Chicago 6, Illinois.

IS THE STATIONERY OF THE SCREEN

Freedom of the Screen Stressed by Truman

In officially designating the Office of War Mobilization and Reconversion as the central Government agency for clearance of requests for theater exhibition of Government film messages, President Truman recently stated that Freedom of the Screen must be "firmly protected."

The chief executive's stand was made public in a letter to S. H. Fabian, American Theaters Association president, and read to a meeting of cabinet members, Government officials and ATA representatives by John R. Steelman, new director of War Mobilization and Reconversion.

While designating OWMR as the central clearing agency for Governmental films, President Truman added, however, that "any assistance which this Government may request of any part of the film industry must not be interpreted as interfering in any way with complete freedom of expression and complete freedom of the screen.

"At a time in contemporary history when freedom of expression is being jeopardized in many parts of the world, I want the film industry to know that freedom of the screen is an important attribute of our democratic system and must be firmly protected."

Mercey Appointed OWMR Film Consultant

Arch Mercey, formerly with the U. S. Film Service and more recently associate director of the OWI motion picture bureau, has been appointed liaison officer between the Office of War Mobilization and Reconversion and the newly-formed American Theatres Association. Mr. Mercey will handle all government requests which are to be directed to the industry.

Navy Releases Training Films To Educational Institutions

More than 500 training films and film strips are being released by the Navy Department for general use by educational institutions, civic groups and manufacturers. The films, representing the largest single collection of training films ever released by the Armed Services, were produced during World War II by the Motion Picture Production Section of the U.S. Naval Photographic Service.

At the close of the war, American educators and civic groups requested permission to use the Navy-produced films as visual aids in future civilian training. Nearly 4,000 Navy films were reviewed by educators.

Although security measures still withhold from general use a major portion of films produced during the war, additional releases are expected to be made in the future.

SOUTHERN VISUAL FILMS 686-9 Shrine Bldg.
Memphis, Tenn.

Of special interest are films dealing with engineering, aviation, machine shop work, office practices, shipbuilding, supervision, sciences, nursing, optical craftsmanship, welding, aerial navigation and flying, aircraft maintenance, safety and first aid, electricity and radio, aerology, hydraulics, mechanical refrigeration, fireroom operations, medical and dental techniques, diesel engines, and plastic surgery.

School Use of Surplus Training Films Urged by Senator O'Mahoney

"Unless the organized motion picture producers of the country cooperate to make prompt disposal possible, 5000 training and teaching films produced during the war for the government at an estimated cost of \$50,000,000 will be condemned to gather dust in storage instead of being used for the educational needs of students at American schools and Colleges," wrote Senator Joseph C. O'Mahoney (D.) of Wyoming, Chairman of the Surplus Property Subcommittee of the Senate Committee on Military Affairs, in a letter to Eric Johnston, President of the Motion Picture Association and Donald M. Nelson, President of the Society of Independent Motion Picture Producers. Asking their cooperation to remove legal impediments, he said.

"These films were used during the war to educate soldiers and war workers. They can now be used not only for the benefit of veterans who are attending American colleges in numbers far exceeding all estimates, but also for students in secondary schools who, through these films, can be given a vivid understanding of what America did in preparing and producing for the war.

"Since many of these films contain copyrighted scenes, music, text, etc., which it is difficult to clear with the individual copyright owners, the need is felt for a clearing house to negotiate arrangements, fair both to the government and the producers, which will make possible wide use of these invaluable training and teaching aids. I have suggested in these letters that film producers and distributors who have performed such signal service for the nation in times of war will undoubtedly be anxious to demonstrate their continuing public spirit and be quick to realize that the wide use of these films will open up ever-increasing markets for training and teaching films."

Motion Picture Industry Sponsors Production Courses

Ten or twelve colleges and universities will give courses in motion picture production this Fall by an endowment of the Motion Picture Foundation for Colleges and Universities Inc., under the sponsorship of the Academy of Motion Picture Arts and Sciences. Amherst and Smith will offer the first two courses, the necessary money for 16mm equipment having been donated by Burgess Meredith. It is reported that funds for equipment in the other ten courses will be furnished by the Motion Picture Association of America.

Film and International Understanding

(Continued from page 388)

Services in Exchange of Personnel

1. Call periodic meetings of representatives of member nations to review regulations governing national and international audio-visual bodies and to work toward the revision of these regulations in terms of changing situations.
2. Facilitate the entrance of production personnel into member nations for the purpose of producing audio-visual materials of an educational character.
3. Facilitate international conferences dealing with the production, distribution, and utilization of audio-visual materials.
4. Encourage and facilitate specialized international institutes or workshops in member countries for two major purposes:
 - a. To study pioneering developments in the audio-visual field in a particular member nation so that the new materials or techniques may be more widely used in other nations.
 - b. To study and recommend a program of audio-visual education in a particular member nation that has requested such assistance from UNESCO.
5. Encourage, through exchange of personnel, the training of technicians in the production of audio-visual materials for countries lacking trained personnel.
6. Assist in the arrangement of international conferences between specialists in the education of teachers to exchange ideas and techniques and plan toward the incorporation of all types of audio-visual materials into the educational patterns of member nations.
7. Assist in the arrangement of periodic and/of continual conferences between representatives of member nations on the relation between

READY NOW!

MEETING THE WORLD

A New Encyclopaedia Britannica Instructional Film

*Produced in Collaboration with
LAWRENCE K. FRANK,
Director, Zachry Institute of
Human Development
New York City*

WHAT THE FILM DOES:

Shows how the personality begins to emerge in the first year of life. The human infant, entering the world as a helpless dependent organism, is transformed into a member of society, by the way he is cared for and treated. Feeding satisfies his hunger, makes him feel safe and secure. Parental care protects the child; shows him what to expect from the world. Love helps him to develop desirable human relations.

SCOPE OF THE FILM'S USE:

Senior high school, college, and adults.

COURSES IN WHICH FILM MAY BE USED:

Social studies, human relations, child development, mental hygiene, child psychology and home economics.

LENGTH: One reel: safety stock; 16mm., sound.

PRICE: \$50. Discount 10%. State and other taxes extra.

TERMS: Net 30 days. Transportation prepaid.

This film can be obtained on the Lease-to-own Plan or the Cooperative Film Library Program. For further information, and a complete list of instructional films, write today to Encyclopaedia Britannica Films Inc., Dept. 21-J3, 20 N. Wacker Drive, Chicago 6, Illinois.

Young America Films
brings you this great
AWARD WINNER

Here's your chance to see
one of the finest one-reel
features ever produced!

Frank Sinatra

starring in R.K.O.'s

"The House I Live In"

ONCE you see and hear this magnificent 16 mm. film, we think you will be quick to agree that no school film-library should be without it.

It is a powerful emotional appeal for racial and democratic tolerance—and your students will be just as enthusiastic over the lesson it teaches as they are about Frank Sinatra, its star. The famous song of democratic thought by Earl Robinson which gives this film its title, and its force, is beautifully sung by Sinatra to the group of youngsters who appear with him in the film. Produced by Frank Ross, directed by Mervyn LeRoy, and released by RKO, the picture is not only something new in entertainment, but something extraordinary as a force for good.

Young America Films is indeed proud to be able to bring you this great 1-reel feature in 16 mm. print. The price has been made as low as possible to insure maximum distribution. 1-reel: running time—10 minutes.

(Orders placed now will be filled immediately.)

\$2750

■ **CORONET INSTRUCTIONAL FILMS**, 919 N. Michigan Ave., Chicago 11, have completed production on the following one-reel films, which are available in color as well as in black and white:

Matter and Energy—directed to beginning students of science. Matter in its different forms is presented, and elements, compounds and mixtures are defined. Examples are given of physical and chemical changes of matter, and the law of conservation of matter is demonstrated. Atomic energy is briefly treated.

How Man Made Day—tracing man's development of light from primitive to modern times—from the cave man's fire to such revolutionary methods of lighting as the neon and fluorescent.

Spelling Is Easy—a motivational film for intermediate grades. Presenting the five rules for learning to spell, the action is built around a boy who is writing a report of the fifth grade science experiment for the school paper.

Maps Are Fun—which teaches, in story form, the fundamental concepts of map reading and the principles of scale, symbols, physical and political maps, various uses of color, and how to use a map index.

The Nature of Color (available only in color)—designed primarily for use in physics and general science classes. It defines color as to the mental reactions to varying wave lengths of visible light, and explains the nature of color in physical terms. It illustrates the application of scientific color principles in the arts, color painting, and photography.

Catching Fundamentals—covering such points as stance, footwork, signals, catching high fouls, fielding bunts, and backing-up first base.

Simple Stunts—produced to meet the need of physical instructors for material for group activities. Three classes of stunts are demonstrated: stunts for strength, for skill, and with sticks. Safety precautions are emphasized throughout.

Springboard Techniques—demonstrating not only proper techniques, but also the step-by-step methods of acquiring those techniques. Stop motion and slow motion used for detailed analysis of lifts, tucks, somersaults, and other skills.

These films have been produced in collaboration with subject-matter specialists and classroom teachers of the specific subjects, and have been checked by actual use in classrooms before release.

Beginning Tumbling—a completely remade edition of an earlier Coronet film of the same title. Though containing the same basic material as the previous film, it incorporates improve-

ments in camera technique and progression of stunts developed through a careful study of several years' use of the earlier subject in actual classroom use.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, list among their latest releases:

Fenlands—2 reels—one of the "Pattern of Britain" series on the reclamation work done in the Fens, showing the intricate drainage system developed by the people of the Fenlands which changed a desolate wasteland into rich agricultural country. Prosperous farms are crisscrossed with man made rivers and canals.

Cyprus Is an Island—4 reels—a review of the history of the island during the past 2000 years and the methods being adopted, under enlightened administration, to tackle the great agricultural and forestry problems of today. Bit by bit the fertility and prosperity of Cyprus is being restored.

Partners—2 reels—revealing the vigorous measures that are being taken in Eastern Africa to ensure that living standards keep pace with the commercial progress. Shown are land cultivation, agricultural centers, hospitals, schools, and the war against malaria and sleeping sickness.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont, Ave., Chicago 17, has added the following educational short subjects to the **FILMOSOUND LIBRARY**:

Two Thousand Years Ago—a series of five 2-reel sound films depicting various phases of life in Palestine in

Biblical times. Titles are: "The Home," "The Day's Work," "The School," "The Travelers," "The Synagogue." These films, usable by schools of every type and by churches of all creeds, are exclusively distributed by Bell & Howell.

The Unseen Power—new 2-reel version of Paul Roth's documentary "Face of Britain," especially prepared for church and school by the Religious Film Society.

The Earthworm—a detailed biology study, in 2 reels, showing worm in

The Earth-worm dissected.

natural habitat, then cross-section, using photomicrographs with superimposed diagrams. Reel 2 presents a dissection of all main organs, coition, egg laying, and birth of young worms. Produced by G. B. Instructional, Ltd.

■ PICTORIAL FILMS, INC., RKO Bldg., Radio City, New York, has purchased outright the world-wide distribution rights of two outstanding amateur-produced 16mm movies:

Arts and Crafts of Mexico—by amateur cinematographer Ralph E. Gray—awarded first prize in Movie Makers' 1945 contest. This is a 4-reel 16mm silent film in Koda-

chrome telling a picturesque and educational story of life in Mexico, where Mr. Gray resided. In this picture he shows the Mexican artisans and artists at work, the marvels of design of their pottery, silver and copper, and many other fascinating details of Mexican hereditary customs, arts and crafts. The film is a documentary example of understanding of a great and ancient culture. It is being scripted for sound and will have a narrative track and musical score created by Pictorial Films.

The Inside Story—filmed by Dan Billman and a close runner-up in the same movie contest—is in a different vein. It is handled somewhat like a Pete Smith production, showing in an entertaining manner, what can

happen to a duck after the proud hunter brings it home to the little woman. A narrative sound track and incidental music will be added to this 4-reel 16mm Kodachrome film which was produced as a silent picture.

Pictorial Films has recently signed a contract with Nu-Atlas Films of New York, producers of musical short subjects, to purchase exclusive world-wide distribution rights to 23 one-reel musical films which they plan to release under their Home Movie Pictorial line, in 16mm black-and-white. A similar contract has been signed with Excelsior Pictures, New York, for the same one-reel shorts on 35mm. These shorts feature such stars as Jan Peerce, The Charioteers, The Merry Macs and other names famous in radio, on Broadway and the concert stage.

■ SAVE THE CHILDREN FEDERATION, 1 Madison Avenue, New York 10, a philanthropic organization concerned with the shipment of supplies to schools and needy children in Europe, announces its venture into the motion picture field with the release of:

Children of Tragedy—a 22-min. film report of the plight of the children in

Western Europe. Charles Boyer co-stars with Dr. Howard E. Kershner, noted relief administrator and author whose article in the New York Times Magazine provides the story on which the script is based. Highlighting specific educational problems, a camera records Europe's demolished school facilities, sacked libraries, devastated museums and malnourished children. Differing from documentary films on mass relief administration, "Children of Tragedy" deals primarily with the

WALTER LIPPMAN says: (one of many enthusiastic reactions)

"TRAINING YOU TO TRAIN YOUR DOG carries conviction that for dogs as well as others, education and discipline are not the accomplishments of tyranny, but are necessary to the pursuit of happiness and contribute something for which shouting and petting, beating and spoiling, sentimentality and irritation are no substitutes."

Narration by Lowell Thomas. Photographed by Louise Branch. Supervised by Blanche Saunders and based on her popular book.

UNITED SPECIALISTS, INC.

America's Foremost Producer of Dog Films

Quaker Hill, Pawling, N. Y.

problems of individual schools and children. It reviews specific ways by which schools and student groups in this country can send aid to schools and youngsters overseas.

Association Films has been selected as national distributor for this film. Loan prints will be shipped from their exchanges in New York, San Francisco, Chicago and Dallas.

■ OFFICIAL FILMS, 25 west 45th St., New York 19, offers several new 16mm sound subjects in its Sports-beam series:

Tennis for Beginners, demonstrating grip, stroke, stance, backhand, forehand, follow thru, and other basic elements of the game.

Advanced Tennis, explaining advanced techniques, such as service, footwork, smash, volley, etc. Narration and demonstrations are by Bill Tilden.

Defensive Football. Complete analysis of defensive football plays as demonstrated by leading teams, with the camera following the ball and the players through all the most intricate moves.

Offensive Football demonstrates and explains the various attacking methods employed—formations, blocking and different types of passing. Narrator in both films is Ken Carpenter.

Just off the press, and available free to all projector owners, is the regular 32-

page official Films catalog, covering over 230 8mm-16mm subjects and a wide range of titles, including over 50 animated Cartoons, 20 Sportbeams, exciting series of Adventure Thrills, Musical Comedies, Concert reels, Hymns, News Thrills, etc.

☐ ASSOCIATION FILMS (Formerly the Y.M.C.A. Motion Picture Bureau), 347 Madison Ave., New York 17, have many new films for Fall release, including:

West Point Championship Football—a series of five 16mm sound instructional films recently completed by Association Films and the American Institute of Motion Pictures, with the cooperation of West Point officials and coaching staff. Each film demonstrates specific phases of the game. The skills, plays and formations are shown in regular speed, slow motion and "freeze" frames.

The Building of a Tire—3 reels—produced for the Firestone Tire & Rubber Company by Walt Disney Studios. Diagrammatic sketches are combined with color photography of actual plantation, mill and factory scenes.

Gliding Wings—3 reels—a factual portrayal of man's use of the glider as a breathtaking sport and his ultimate use of the glider in defending his freedom. Construction of the CG-4a, the "flying boxcar", at a Ford plant is shown.

■ HOFFBERG PRODUCTIONS, 620 Ninth Ave., New York 18, announces a new series of six short subjects in German, built for classroom teaching purposes. Another series of six subjects in Spanish is also under way. 16mm. prints will be offered for sale and rent.

The first four subjects of a new series of twelve shorts completed are: **Time on His Hands**, a novelty dealing with a man's hobby in collecting time pieces.

Cradle of Christianity, a camera study of the Eternal City Rome.

On the Shores of Italy, a pictorial portrayal of Venice and Genoa with musical background.

Keep Fit, a treatise on the art of wrestling.

Spanish and German versions of these films will be available also.

■ HORIZON FILMS INC., 232 W. 14th St., New York 11, which has been formed to produce films to foster understanding and promote racial tolerance, has released its first film, entitled:

Of These Our People—a 2-reel survey of the Jew in America. This 16mm documentary subject is made up of authentic material and traces the history of the American Jews from their landing at New Amsterdam in 1654 up to our day, presenting the Jew's absorption into the complex fabric of contemporary American society, and his contributions to the progress and upbuilding of America.

■ BUREAU OF MINES, U. S. Department of the Interior, has released for free showing:

Tin from Bolivia (2 reels), the first sound motion picture film of the Bureau that has been photographed largely in another country. Produced in cooperation with the largest tin mining company in Bolivia, it covers nearly every phase of the mining, milling, smelting and refining of tin. Opening with a review of some of the more common uses of metal, it traces the history of tin mining from the early days of primitive hand methods and llama transportation to efficient methods of today. Homes, shops and schools of the supervisory staff and the Indian workers are also portrayed.

Applications for 16mm prints should be addressed to the Graphic Services Section, Bureau of Mines and Experiment Station, 4800 Forbes St., Pittsburgh 13, Pa.

Young America Films to Be Produced by Transfilm

Transfilm, Incorporated, 25 W. 45th St., New York City, motion picture and slidefilm producers, has signed an exclusive contract with Young America Films, Incorporated, under which Transfilm will produce all Young America Films. The schedule for the first twelve months calls

(Continued on page 416)

AUDIO-VISUAL TRADE REVIEW

NAVED Convention Big Success

WITH the election of Bernard A. Cousino of Toledo, Ohio, as its President for 1946-47, the National Association of Visual Education Dealers, which met in Chicago August 5-7, completed the most successful convention in its history. Present, according to certified registrations, were 891 persons from 27 states and 6 foreign countries, making this the year's largest national visual education gathering. The Trade Show accompanying the convention included 65 exhibits of audio-visual equipment manufacturers, film producers, and distributors.

D. T. Davis presided over the opening general session Monday afternoon, August 5, followed by keynote speakers Bertram Willoughby, Olson Anderson and Bernard Cousino. The feature of this meeting was an excellent address, "Sell or Fold Up," by Frank Birch of Milwaukee, former President of Lions International. Guest speaker at the second general session Tuesday afternoon was John W. Anderson of Gary, Indiana, President of the American Fair Trade Council, whose topic was "Let's Be Fair About Fair Trade."*

At the third and final general session Wednesday afternoon, the following talks were given: "Increase Your Knowledge to Improve Your Service," by Dr. Walter A. Wittich, University of Wisconsin; and "The Church's Audio-Visual Program and Its Needs," by Dr. Mary Leigh Palmer, Director of Visual Education, International Council of Religious Education, Chicago.

Tuesday and Wednesday mornings were devoted to twelve conference group meetings to discuss the following topics: dealer-manufacturer relationships, visual materials in industry, publicity and advertising of the dealer, short-cuts to efficient film library operation, new equipment and materials, serving the church, projection service, editors' and publishers' forum, what services should NAVED perform, management problems of the dealer, maintenance and repair problems, broadening sales opportunities.

Newly-elected officers for the coming year, in addition to President Cousino, are: Tom Brandon of New York City, 1st Vice-President; Olson Anderson of Bay City, Michigan, 2nd Vice-President; Hazel Calhoun of Atlanta, Georgia, Secretary-Treasurer. Members of the Board of Directors are: Barton F. Plimpton, Boston, Massachusetts; Art Zeiller, Glen Rock, New Jersey; E. E. Carter, Raleigh, North Carolina; Stanley M. Atkinson, Regina, Saskatchewan, Canada; Frank

D. T. Davis (right), retiring NAVED president, hands the gavel to Bernard Cousino, new president of the Association.

Left to right: W. F. Kruse, Mrs. B. A. Cousino, and B. A. Cousino, at the Bell & Howell dinner, held August 8, at the conclusion of the Association's convention.

Panel on "Serving the Church". Left to right: Robert M. Griffin, SVE; Dr. Mary Leigh Palmer, International Council of Religious Education; Jasper Ewing, New Orleans; Paul L. Folkemer, panel chairman, Baltimore, Md.; Rev. Paul G. Kiehl, Church-Craft Pictures, Hollywood.

Bangs, Wichita, Kansas; John Gunstream, Dallas, Texas; Merriman Holtz, Portland, Oregon; Paul Brand, Washington, D. C.; E. M. Hale, Eau Claire, Wisconsin; Art Hebert, Los Angeles, California; and Keith South, Minneapolis, Minn.

The question of merging ANFA with NAVED was discussed at a meeting of a joint committee representing both associations. Following this, the NAVED members approved a resolution to the effect that they were "of the belief that there is a need for an overall council to represent all of the commercial interests involved in the specialized field of audio-visual communications, and that NAVED will work with all duly constituted organizations in the field, toward that end, without, however, losing its own identity as a separate organization representing primarily the visual education dealer." The resolution also suggested the formation of joint committees with ANFA and other organizations for cooperative work on mutual problems.

Victor Animatograph Now Curtiss-Wright Property

The outright purchase of the Victor Animatograph Corporation of Davenport, Iowa, by the Curtiss-Wright Corporation has been announced by G. W. Vaughan, president of Curtiss-Wright. There will be no change in location, personnel or operation of the Victor company. Alexander F. Victor, president of the company bearing his name, often referred to as "the father of 16mm industry," will continue to direct engineering activities of the organization, while Samuel G. Rose, executive vice president, will continue to devote his time to the administration of the business.

"Curtiss-Wright has been impressed," Mr. Vaughan said, "by the achievements of the Victor company in the development of 16mm motion picture apparatus and envisions a broad expansion in the application of this equipment, particularly in the fields of education, instruction and home use."

From its start in 1910 in small quarters and a total of five employees, the Victor corporation has grown steadily until today it employs nearly 500 men and women, and is one of the largest manufacturers in the world exclusively devoted to production of 16mm motion picture equipment. It has sales outlets through 4000 dealers and 150 distributors in this country and 54 foreign outlets, and maintains offices in Chicago, New York and Los Angeles. Under a recent agreement with Salford Electrical Instruments, Ltd., of Manchester, England, Victor 16mm products will now be also manufactured in England according to the specifications of the American firm while distribution will be handled by Victor Animatograph Corporation (London) Ltd. While Victor products have been distributed in England for many years, they have never been manufactured abroad.

AMPRO Slide Projector

A new 2"x2" slide projector, called AMPROSLIDE, said to incorporate many basic improvements, is announced by Ampro Corporation, 2839 N. Western Ave., Chicago.

Easier, faster operation is emphasized, the result of a new automatic snap-action, self-centering slide changer. Developed by Ampro technicians,

2" x 2" Amproslide

this slide changer is said to embody patented features that assure instantaneous hair-line focus, perfect alignment of slides on the screen, and the interchanging of glass and ready mounts without refocusing. It can be operated with one hand, and the fingers need never touch the slide surface. Additional time is saved by the convenient case that quickly lifts off for easy accessibility, and by a new up-and-down tilting device.

Other salient features of this new projector are: F 3:5 anastigmat projection lens, 5" focal length with convenient knob for hair-line focusing, new condenser design that combines maximum brilliance with cooler operation, 300 watts of uniform light with effective heat dissipation and minimum light loss, and pointer aperture to permit use of pointer with slides.

Bell & Howell Absorbs Pathe Microfilm Division

Bell & Howell Company has acquired the physical assets and patents of the Microfilm Division of Pathe Manufacturing Company, a subsidiary of Pathe Industries. A complete Microfilm Division, including engineering, production, sales, and service, had been organized at the company's Lincolnwood plants, and microfilm equipment is immediately available for service operations in copying industrial and commercial records and documents. F. L. Rogers has been appointed to direct sales and service operations.

The recording process and equipment now offered permit the simultaneous microfilming of documents on both sides at a cost lower than that required for filming only one side by any other method previously available. While the cameras and other equipment and facilities are available currently under several different plans, Bell & Howell engineers

already are perfecting plans for improving and diversifying the entire microfilm line.

Radiant Announces 1947 Projection Screens

The new Radiant "DL", recently introduced by Radiant Manufacturing Corp., Chicago, is an improved, streamlined, portable tripod model, with the Radiant "Hy-Flect" screen surface. It incorporates, among its twelve new features, a patented "feather-touch friction clutch," an automatic leg opening device, a protective "shock absorber," a screen leveler, and a dual-action "Auto-Lock." Easy and trouble-free operation is assured because the legs open effortlessly and automatically, an uneven floor surface is compensated for by the "Balancer" which keeps the screen horizontally leveled, varying screen heights are rapidly and simply adjusted, and conversion from oblong sizes, for movies, to square sizes for slides, is instantly and readily made.

Another 1947 projection screen announced by Radiant is the Radiant "EC", a wall and ceiling screen for showings to large audiences. This screen is available in eight sizes, from 6'x8' to 12'x12'.

The "EC" offers seven new and improved features: 1) either wall, ceiling, or tripod installation; 2) ingenious hanger brackets; 3) heavy-duty, spring roller; 4) dustproof metal housing; 5)

The Radiant "DL" Screen

reinforced metal and caps; 6) lustrous, duo-color combination; and, 7) balanced pull cord plus the "Hy-Flect" glass beaded screen fabric.

For suspending these projection screens from either the wall or the ceiling, Radiant's engineers designed a reversible hanger bracket. The bracket holder, fastened securely to the screen case, holds the removable hanger bracket to permit safe suspension from the ceiling or firm fastening, flush to the wall. In addition, the "EC" may be mounted on tripods.

For complete catalogs, write to Radiant Manufacturing Corp., 1174 West Superior Street, Chicago 22, Illinois.

Coronet Kodachrome Slide Service

Coronet is making available 2"x2" Kodachrome slides of the color illustrations featured in the magazine. This new service began with the August, 1946, issue as an experiment and the response from projector owners was such as to fully justify its continuation. These 2"x2" slides are furnished in cardboard mounts at modest cost.

The principal color feature in the August issue was a series of nine paintings of an imaginary rocket trip to Mars. The September issue contains two color features: *How Your Money Is Made* and *Medicine 100 Years Ago*. The October issue will feature in color such glories of the past as *The Seven Wonders of the Ancient World*, a Picture Story, richly painted by Harper Goff. The November issue will contain series of color illustrations of *The Ten Commandments*, by Arthur Szyk. Kodachrome slides of these color features and all others in future issues of Coronet will be continuously available. It will not be possible to furnish Kodachrome slides of color features in issues previous to August, 1946. All slides are suitable for use in any standard 2"x2" projector or viewer.

For price, and information as to procedure for ordering the slides, write to the Education Department, Coronet Magazine, 919 North Michigan Ave. Chicago, Ill.

Filmstrips in Color Available From Curriculum Films

Educational filmstrips in English, Plane Geometry and Primary Reading, and sports filmstrip in Football, have just been released by Curriculum Films, Inc., New York. They are described as the first completely integrated series of full-color filmstrips prepared, supervised and tested by teachers.

In each of the subjects covered, the most important matter has been visualized in terms of classroom needs, and facts have been related to the pupil's own experience. The following filmstrips are now available:

English—Ten filmstrips, four on spelling, three grammar, three vocabulary, 500 frames.

Plane Geometry—A series of sixteen filmstrips, 630 frames, visualizing the most difficult phases. The subjects were chosen through a survey of geometry teachers all over the country.

Primary Reading—Fifteen favorite children's stories brought to life in beautiful color illustrations. Supervised by Mrs. Florence Matthews Tebaika, well-known writer and editor of children's books, fifteen filmstrips, 24 frames each.

Football—A graphic analysis of fourteen basic plays of the T-Formation prepared under the supervision of Howie O'Neil, Yale coach and famous authority. Clever use of color enables each "student" player to follow his position. More than 450 frames.

Kodak's New Color Film

The Eastman Kodak Company has announced a new color film known as Kodak Ektachrome Film, intended for simple and satisfactory processing by the photographer himself in his own workroom. The developers required for color processing have been perfected to a point where they are as safe to handle as ordinary black-and-white developers. Months of tests have verified the fact that the developers now provided are less likely to cause skin irritation than the most widely used black-and-white developers.

Featuring soft gradation and brilliance, and fidelity to the subject's basic hues regardless of reasonable variations in

lighting intensities, Ektachrome Film is said to give unbelievably lifelike results. This is achieved because there is no significant change in hue in shadow areas beyond a deepening of color.

Available in all present Kodachrome Sheet Film sizes, and in types for both artificial and daylight illumination, Ektachrome Film requires 90 minutes for complete development. Chemicals for the five processing solutions required will be supplied in convenient kits in sizes to make 1/2, 1, and 3 1/2 gallons of solution. These are sufficient to process about 8, 16, and 50 eight by ten inch films; 32, 64, and 224 four by five inch films, respectively. Most of the work in processing is done in the light.

Good films and projectors deserve good lamps

RADIANT PROJECTION LAMPS

RADIANT LAMP CORPORATION

300 Jelliff Ave., Newark 8, N. J.

PROJECTION • SPOTLIGHT • FLOODLIGHT • EXCITER • MOTION PICTURE PRODUCTION

Kodascope Projector Now Supplied in Two Units

The "FS-10-N," Kodak's top 16mm Kodascope is now housed in two units instead of one. Designed for versatility and carrying ease, one case holds the speaker unit, 50 feet of cable on Cordomatic reel, 1600-foot take-up reel, spare projection and exciter lamps and fuse, power cord, and oiling outfit; the other case holds the projector itself plus the reel arms. The speaker unit weighs approximately 25 lbs.; the projector unit, approximately 47 lbs.

Each unit is readily packed and unpacked. The speaker unit need merely be plugged in and located near the screen. The Kodascope may be set up in the case with the cover swung open or may be removed entirely, and seated atop the case, or alone on a table or other base.

Deliveries of these new two-case units will be made to dealers as fast as production facilities permit.

Primary Health Filmstrips

A Day with Bobby and Ellen is the name of a new series of five black and white Teach-O-Filmstrips now available from the Audio-Visual Division, Popular Science Publishing Company, 353 Fourth Avenue, New York 10, N. Y. This series is to be followed immediately by others in: Science, for Primary Grades; American History—Discovery and Exploration, for Middle Grades; and Punctuation, for Junior and Senior High Schools.

The series, *A Day with Bobby and Ellen*, is designed for use in the primary grades developing the basic concepts and attitudes relating to everyday health habits. The titles are as follows: "Getting Ready for Bed;" "Getting Ready for School;" "A Day in School;" "After School Hours;" "At Home, in the Evening."

Each of the Teach-O-Filmstrips consists of approximately 40 frames and they are organized as self-contained teaching units. The scripts were written by classroom teachers familiar with the practices and philosophy basic to the most effective teaching of Primary Health. The accompanying Teaching Guide contains a photographic reproduction of all of the five Teach-O-Filmstrips.

Bausch & Lomb Products Used At Rochester Drive-In

The world's largest outdoor screen—62 feet wide and 45 feet high—constructed for the new drive-in theatre at Rochester, New York, will be plainly visible to a 1,250-car audience. The Super-Simplex projectors installed, duplicates of those in Radio City's Music Hall, employ lenses, mirrors and optical systems produced by Bausch & Lomb Optical Company, Rochester.

The three and one-half inch Super Cinephor high-precision projection lens, Balcoted with metallic fluoride to increase light transmission, is made up of six elements carefully sealed in a lens

The Kodascope "B-10-N"

barrel to prevent infiltration of dust and foreign matter, making it unnecessary to take a Super Cinephor Lens apart for cleaning.

Other precision optical parts vital to the performance of the projectors include a condenser system which transmits light onto the film, and an optical-sound system. The latter consists of a condenser, slit, and objective which produces a controlled beam of light that scans the sound track.

Three Dimension Slide and Slidefilm Projector

Identified as Model DP 300, the Three Dimension Company, 500 North Dearborn St., Chicago 10, Ill., announces a new 2"x2" slide and slidefilm projector. Among improvements claimed for the projector are greater screen illumination from its 300-watt lamp; changing from slidefilms to slides is a matter of a few seconds; it is no longer necessary to realign the condensers and there is no loss of light; pressure plates have been eliminated. Slides are automatically centered regardless of variations in thickness; reverse slidefilm mechanism guarantees against film damage; smooth control of tilting device by gear-driven hand knob; focusing controlled to micrometer exactness by

Model DP 300 projector.

new micro-focus lens knob; a new type condenser system which is easily removed as a single unit for cleaning.

RCA Expands 16mm Facilities

RCA has increased its production facilities for 16mm sound film equipment and transferred its activities in this field from the company's Indianapolis plant to Camden, N. J., according to Meade Brunet, Vice President in charge of the RCA Engineering Products Department.

The company's program encompasses the production and marketing of a complete line of RCA 16mm sound film projectors, styled to meet the needs of educational, industrial, religious, civic, and roadshow organizations. RCA will also sell a complete line of 16mm accessories and auxiliary equipment, both at home and abroad.

A national merchandising organization of specialized 16mm sound film equipment dealers, with on the spot service facilities, has been set up by RCA from coast to coast.

Ampro Issues New Price Sheet

A new price sheet which has been issued by the Ampro Corporation, Chicago, shows the general trend in prices of its 16mm. motion picture equipment and accessories to be slightly upwards, but not as drastically as had been expected.

The management stresses the fact that the rise in prices reflects the increased cost of production, and not a desire to make a higher profit. The tremendous backlog of orders coupled with a lively demand for sound motion picture equipment can be counted on to hold the costs of production well within the lower brackets possible by mass production and quantity buying.

The new prices are based upon order No. 10 of MPR 188, dated April 11, 1946 of the Office of Price Administration; and the new price sheet is available at the factory or any Ampro dealer.

S.V.E.-Coronet Filmstrip Service Expanded

Filmstrips of the Picture Stories in Coronet magazine are again offered to schools by the Society for Visual Education, Inc., but with an important addition—eight filmstrips on Safety Education, produced by the National Safety Council. The entire series of sixteen filmstrips—eight from Coronet Picture Stories and eight on Safety Education—are available at very nominal cost.

Each month, from October, 1946, through May, 1947, those who order this service will receive two interesting and useful filmstrips. One will be the current Picture Story from Coronet. The other will be on Safety Education, prepared especially for this series by the National Safety Council, and will include such subjects as *Safety in the Home*, *In Case of Fire*, *Traffic Safety*, *Bicycle Safety*, and others. The filmstrips of the Coronet Picture Stories will be accompanied by reprints for use as manuals. The safety subjects will be accompanied by special manuals, prepared by the National Safety Council.

This new low cost filmstrip service is made possible through the joint cooperation of The National Safety Council, Coronet Magazine and the Society for Visual Education, Inc. Although the service is offered primarily for the benefit of schools equipped to show 35mm. filmstrips, it is also available to churches, clubs, industrial organizations, and other groups or individuals who may desire to use the material.

For further information write to the Society for Visual Education, Inc., 100 East Ohio Street, Chicago 11, Illinois.

Phase Microscopy Attachment

New equipment which transforms an ordinary light microscope into an instrument that extends the range of human vision far beyond the limits of present microscopes has been developed by American Optical Company's Scientific Instrument Division. This fundamental advance in the use of the microscope is called phase microscopy and the converted instrument a phase microscope.

The new microscope equipment consists of newly developed light-controlling diffraction plates. Placed in an objective lens system, the plate makes detail visible within a specimen by increasing, reducing or reversing contrast in the image formed by the microscope.

One of the features of the new phase microscope is that it makes possible an accurate study of transparent living organisms. Formerly, to make them visible it was usually necessary to stain them with dyes, a procedure that kills most organisms. As a result, most of the information gained in the past with the microscope was limited to the study of dead rather than living material.

Equipment required to transform a standard light microscope into a phase

microscope consists of a diaphragm for controlling light concentrated on a specimen and one of the new diffraction plates placed in the objective lens system. An auxiliary telescope used in place of the microscope eyepiece is helpful while centering the equipment. It is planned to make the equipment available for several models of the company's Spencer microscopes.

Automatic Sound Slidefilm Equipment

Aids Equipment Corp., 131 West 52nd St., New York 19, announces a completely automatic sound slidefilm projector-reproducer. Using specially recorded transcriptions, operation of the accompanying slidefilm projector is controlled by the machine. The instrument is said to open up new techniques in slidefilm presentation. Semi-animation is possible—no bells or beeps—plus remote control for those desiring to narrate their own filmstrips. In normal use the equipment operates by itself, changing frames as the narration flows from the amplifier and speaker.

Magnetic Wire Recorder

Bell & Howell Company, Chicago, is now distributing the Peirce Model 55A Magnetic Wire Recorder and Reproducer. The new machine, including a microphone of the desk-stand type, is priced at \$595.00, provides 66 minutes of continuous recording, embodies a 5" permanent magnet speaker, and will operate on any 115-volt A. C. line (or on DC with a converter).

Simplified and readily-accessible controls, welded steel case construction, silver gray wrinkle lacquer finish, rubber feet, and a convenient carrying handle are other features of the recorder. The amplifier unit will serve for public address work when used in conjunction with a high-impedance microphone or phonograph turntable and an auxiliary speaker, it is stated. Because no wear or deformation of the wire occurs during recording or reproducing, the wire itself will last indefinitely. Previously-recorded sound is "erased" automatically when a new recording is made, and portions of a recording thus can be removed and replaced as desired.

LET **SOUNDSCRIBER** HELP YOU

Trade Mark

teach **MORE** students

multiply your time

THIS YEAR, increased enrollment in language classes vastly complicates the teaching problem.

The SoundScriber electronic disc recorder can help you solve this problem by relieving the instructor of an important part of the teaching load. Not only is SoundScriber adaptable as an integral part of daily lesson planning; it is indispensable as a drill master in intensive language study—as a mechanical supplement to the teacher, enabling hundreds of students to record and

repeatedly listen back and correct what they have learned in phonetics, diction and usage.

SoundScriber records every shade of inflection, every nuance of diction on paper-thin, unbreakable plastic discs. Thus students' comprehension is increased because the instructor can make effective use of live-voice recordings. Multiple recordings may be made; each may be played back as often as necessary to insure thorough comprehension.

SoundScriber will instantly repeat a word, a phrase, a sentence or an entire speech. The SoundScriber is light in weight, is readily portable from one classroom to another, and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which the SoundScriber is being used by leading schools, colleges and universities.

New Natco Projector Model

Natco, Inc., 2638 N. Pulaski Road, Chicago 39, announces the latest Natco projector—Model 3015—described as a streamlined and improved version of the original Model "G".

The new model is said to retain all of the desirable features of the earlier model such as simple film threading, effortless servicing, and unexcelled sound quality. In addition, all functionally tested features of the model "G" are retained in Model 3015. The improvements are mainly in increased eye-appeal. The 3015 projector is housed in a streamlined, red morocco leatherette case; the speaker is built into a matching case. Both cases have the rounded contour corners. Structural changes consist of a full-depth main mounting panel, improved mounting of all components into the case, and a new, easily-removable back cover for the projector case. Model 3015 is equipped with a 25-watt amplifier, and may be had with either standard speaker cord or with cordomatic speaker cord.

Descriptive literature is available.

Klein Joins Optron

Optron, Inc., 223 West Erie St., Chicago 10, has recently appointed M. R. Klein as its sales manager. Optron, Inc., manufacturer of visual education

M. R. Klein

equipment, including transcription playback units, is a sister company of the Musitron Company, Chicago.

Mr. Klein has charge of sales accounts for schools, churches and industrial establishments. He was formerly with the Cleveland Public Schools and served as Director of Visual Education for three years. Before joining Optron in Chicago, Klein directed the visual education activities and sales promotion of the Dayton Acme Company in Cincinnati. He has contributed articles and lectured in the field of visual education and is the author and publisher of pictorial maps of literature.

Responsible school dealers in visual education equipment desiring to handle the Optron line should contact Mr. Klein at the above address.

Former Bendix Aviation Plant in Chicago now owned by NATCO, Inc.

Two Radiant Lamp Bulletins

A new 12-page guide entitled "Radiant Lamp Guide for Projection Equipment" has just been published by the Radiant Lamp Corporation, Newark 8, N. J., for distribution without charge. The guide permits the selection of the correct lamp for practically every type and make of projection equipment now in use. Completely listed are lamps for 8, 16, and 35mm portable and standard projectors, photo-cell exciter lamp requirements for sound models, lamps, for various miniature slide and slidefilm projectors, and lamps for stereopticons for slides and opaque projection. Different types of bulbs and filaments are described and illustrated.

Another new bulletin issued by Radiant Lamp entitled "Radiant Lamps for Educational Institutions," describes and illustrates lamps required for various types of projectors used in visual education, floodlights and spotlights for photographic and stage lighting units, weatherproof lamps for outdoor playgrounds, and standard lamps for indoor illumination.

Equipment Manufacturers Visited by Foreign Distributors

Various 16mm equipment manufacturers report visits recently from many 16mm film distributors from all corners of the earth, who predict greater expansion of markets abroad for American 16mm products.

Callers at the Ampro plant in Chicago were: P. J. Patel of Patel, India, Ltd.; Richard G. Karg, General Manager of Foto & Kino, S. A., Berne, Switzerland; Francisco G. Pena of Pan American Trading Co., Ltd., Costa Rica; Leon Descamps and son Roger of Brussels, Belgium; Leon Schauder of Alexander Films, Johannesburg, South Africa; Joe Cross and C. Ray Harnett of Telephoto Industries, Toronto, Canada.

Conferring with Bell & Howell officials were Cecil W. Gidley of Australia, G. R. Amonkar and Ram L. Gogtay of India, who were visiting the United

States in connection with the world-wide 16mm film program being launched by Metro-Goldwyn-Mayer. Gidley, until recently a captain in the Australian Army, is MGM's representative for Australia, New Zealand and the South Sea Islands. India, Burma and Ceylon will be the MGM 16mm territory of G. R. Amonkar. Ram L. Gogtay, who has been active for several years in visual education, will be Branch Manager for MGM in India.

Captain Gidley and G. R. Amonkar also inspected the Victor line of equipment. Other visitors at the Victor Animatograph plant in Davenport included Roy Kind of Melbourne, Australia, Executive of Pyrox, Ltd., Ltd., whose firm is shortly to become a manufacturing affiliate of the Victor Company; and B. N. Gupta, Managing Director of a cooperative production and marketing center in New Delhi, India, known as Cottage Industry Centre.

George H. Mitchell Co. Established

George H. Mitchell, formerly manager of Visual Education, Incorporated, has severed his connections with that firm and started his own business effective June 15, 1946. The new firm is known

George H. Mitchell

as George H. Mitchell Company, and will handle a complete line of standard visual equipment. The company has been appointed materials and equipment distributor for Victor Animatograph Corporation in New Mexico and Texas. Representation has already been established throughout the territory by trained visual education people.

During the past nine years, Mr. Mitchell has been associated with Visual Education, Incorporated, and for the past four has managed the business. For fifteen years prior to his activities in the visual education field, he was a school administrator in the Texas school system.

Victor Names Public Relations Director

Lewis H. Day has been appointed Public Relations director for the Victor Animatograph Corporation, Davenport, Iowa. His duties will include direction of the company's advertising program as well as promotional and public relations activities. Mr. Day was formerly assistant to the president of the Bettendorf Company, Bettendorf, Iowa, and in charge of advertising and public relations.

A reserve Lieutenant in the army, Mr. Day was called to active duty with a field artillery unit in September, 1940. He served with the 45th division at Fort Sill, Oklahoma, and later was trans-

Lewis H. Day

ferred to Washington, D. C., being assigned to the war department's bureau of public relations.

Following his tour of duty in the army, he became associated with the chamber of commerce of the United States. While with this national organization, he traveled extensively in the east and south-east, helping in the development of new business organizations and the training of executives.

In announcing the appointment of Mr. Day to the post, Mr. S. G. Rose, executive vice president of Victor, said the creation of an advertising and public relations department is an important part of the firm's program of expansion.

New Simmel-Meservey Staff Member

Lt. Colonel Douglas Meservey, General Staff Corps and former radio and advertising executive, has joined Simmel-Meservey, of Beverly Hills, California, producers of educational films and records.

Colonel Meservey served as Military Governor of Bremen, Germany, following duty in Africa, Italy, England and France. Previous to his army service, Colonel Meservey was deputy director of the OWI Domestic Radio Bureau, program executive of National Broadcasting Company, and advertising manager of the DuPont Cellophane Company.

Lt. Col. Douglas Meservey

units and movie establishments all over the world. As part of his work with our allies, the Lt. Commander served as Chairman of the United Nations Central Training Film Committee.

In his new position, Mr. Goldner will be in charge of the planning and educational development of all film-strips and motion pictures produced by independent studios for distribution by Curriculum Films.

R. E. Sievert Returns as B&H West Coast Manager

Following a three-year hitch as a Chief Specialist in the United States Navy, assigned to the Bureau of Aeronautics, Russell E. Sievert has resumed his post as Western division manager of the Bell & Howell Filmosound Library, with headquarters in Hollywood.

New Manager at Swank

Ray Swank, President of Swank Motion Pictures, St. Louis, Missouri, announces the appointment of Floyd Peters as General Manager. Peters had previously served during the war as Motion Picture Director for the Midwest Area office of the American Red Cross. He has been associated in an executive capacity with the Motion Picture Industry, both theatrical and non-theatrical, for the past eighteen years.

(Concluded on page 416)

Gene F. Swepston With Ampro Educational Department

The Ampro Corporation, Chicago, has appointed Gene F. Swepston, recently discharged from the Army Signal Corps, to

Gene F. Swepston

their Educational Department staff, where he will assist Ervin N. Nelson, Director Educational Sales, in coordinating educational and sales ideas from the educator's standpoint.

Mr. Swepston served four and a half years in the U. S. Army and spent 26 months overseas commanding the 6th Signal Company during combat operations in New Guinea and the Philippine Islands. He was on duty with occupation troops in Korea before being discharged with the rank of major.

A native of Hot Springs, Ark., he attended Henderson State College where he received extensive training in visual education.

Goldner on Curriculum Films Staff

Orville Goldner, who until recently was head of the Navy's Training Film Branch with the rank of Lieutenant Commander, has been retained as Chairman of the Educational Staff of Curriculum Films, Inc., New York, it was announced by Monroe B. David, president of the company.

Under Lt. Commander Goldner's supervision, the Training Film Branch produced over 3,500 training films and distributed over 1,500,000 prints to fleet

"Fair Trade" Obstructs Monopoly of Distribution*

JOHN W. ANDERSON, President
American Fair Trade Council

VISUAL education employs, among other important arts, that of semantics. It offers attractive opportunity for selection and arrangement of words to induce, in the minds to be influenced, thoughts provoked by subconscious reactions to impressions with which those words have long been associated.

That art may be used effectively to promote recognition of truths—and resultant helpful thinking. It is also used, with deadly effect, to promote deceptions and confusions having selfish objectives. For example, the predatory retail price cutter refers to his loss leaders as "bargains," "savings," and "economies." Those three words appeal strongly to the frugal American housewife. When used with such intent, they blind her effectively to a common device for the extension of what is perhaps the most vicious form of monopoly—which is monopoly of distribution.

One thing little understood by the public is that many manufacturers, with their products caught in that "cut-price spiral" which produces what has come to be known as "the quality squeeze"—are tempted to resign themselves to the demoralizing trend and seek every possible way to chisel fractional costs out of their products in order to stay in the race.

In that process the public suffers from what is in effect an inverted form of concealed inflation. Unit prices may remain at low levels and may gravitate even lower—but values go down much faster, under such conditions, than do prices. This is because it is the final percentages of added costs of producing the manufactured item that yield to the public its greatest values per unit of cost. Often by increasing the factory cost of an item by as much as five or ten per cent the value of the product to the consumer may be increased by two or three hundred percent—or more. By the same token, an arbitrary reduction of as much as ten per cent in the factory cost of a product may readily reduce the value of that product to the consumer by half or more.

Omitting the hardening operation on the wearing parts of the lowly can opener, for example, might reduce its factory cost by five or ten per cent—but would most certainly reduce its usefulness to almost zero—without any change in its appearance.

No civilization has ever grown any stronger than its internal obstructions to organized larcenies. America's overwhelming strength has sprung primarily from the fact that within the structure of her law, based upon her Constitution, there has developed the sturdiest network

of legal obstructions to commercial piracies ever found in any national economy.

Among those obstructions are our Copyright Laws, our Trade-Mark Laws, our Patent Laws and our Fair-Trade Laws. Each offers, to the creator of superior values, which did not before exist, protection from these predatory copyists who create nothing and who would "share everything." Only the offer of such protection can induce the citizen to apply that extraordinary diligence which, in its aggregate, lifts an industrial economy to higher and higher levels of good living—and of strength for defense of its people.

Fair Trade Laws are making increasingly important contributions to the progress of honest producers and resellers—toward improvement in their products and in their service to the public. Fair Trade Laws add to employment opportunities, and improve wages—as greater values, per unit of consumer cost, are created under the protection of those laws.

Fair Trade Laws are purely permissive. It is still a criminal offense against Federal Law for competitive manufacturers to connive with each other in agreement as to the prices they will charge. Fair Trade means simply that the individual manufacturer, if he desires, may fix, vertically, for a trade-marked or otherwise identified product, made by him and sold in open competition with other products offered for a similar purpose, minimum prices below which a reseller may not offer, or sell, that product.

Fair Trade is definitely in the public interest. For that potent reason the truth about Fair Trade, fairly and persistently told, will continue to bring to honest producers, whose opportunities for growth and stability depend upon their abilities to keep faith with their public—their best weapon against the destructive influences of predatory monopolists in the field of distribution.

Here visual education can make its greatest contribution to national welfare—by providing for manufacturers and resellers an effective means for emphasis of honest semantics.

Let us look behind the deceptive semantics of the retail monopolist.

Let us follow the simple economic truths upon which Fair Trade is based.

Let us lend our vigorous support to every plan—every movement—which has as its purpose the protection, from predatory practices, of that indispensable bond of good faith between the honest manufacturer and the public—which is his Trade-Mark.

(Ed. note: Forty-five states now have substantially uniform Fair Trade Laws. The exceptions are Missouri, Texas and Vermont.)

* Address given at Convention of National Association of Visual Education Dealers, Chicago, August 6, 1946.

PICC Opposes Censorship, Licenses

Two or more representatives of each of seven trade associations came together at Hotel Continental, Chicago, on Aug. 5th, at the second 1946 meeting of the Photographic Industry Co-Ordinating Committee, for a round-table discussion of general industry affairs. Participating were The Allied Non-Theatrical Film Association, Educational Film Library Association, Master Photo Dealers and Finishers, National Association of Film Producers, National Association of Visual Education Dealers, and Visual Equipment Manufacturers Council. In addition the Society of Motion Picture Engineers and the National Association of Photographic Manufacturers were represented by observers.

William K. Kruse, this year's chairman, presented a 10-point report covering various matters of public relations and industry concern. Of special interest were several nation-wide or regional conferences of consumer groups, in each of which representatives of the photographic industry were cordially welcomed as advisors and consultants. In several, furthermore, selected industry representatives functioned as active and equal participants. Notable examples included the Detroit meeting of five organizations of professional educators interested in adult education, the Washington meeting of the American Council on Education and the Film Council of America which drafted a visual communication program for UNESCO, the U. S. Dept. of Agriculture conference on broader film distribution and evaluation, and the eighth annual Midwestern Forum on Audio-Visual Aids to Learning. Visual Education summer school courses in over 180 colleges and universities also welcome constructive cooperation from qualified industry representatives to a greater degree than ever before.

Censorship Opposed

Reports of increasing censorship encroachments aroused grave concern. While an attempt to create censorship in Kentucky was defeated, and a similar proposal in Delaware apparently has been dropped, in at least two of the five lone states that still have censorship laws the censors are trying to extend their prerogatives to cover also 16mm. and 8mm. films. PICC went on record in support of Film Council of America's stand against censorship, especially the recent encroachments into media nonexistent when the laws were born, and instructed its secretary to bring to the attention of all member organizations any definite counter plans worked out by FCA's "Freedom of the Screen Committee". Popular campaigns will thus be assured of industry support, nationally and locally. Several arrests have already been made at the behest of the Pennsylvania censors. The censors have notified a number of 16mm. film distributors in and outside of their state of their intention to enforce the letter their ancient law

against every reel of motion picture film used in the state regardless of width. Under the letter of that law a roll of toy film selling for \$1.75 would be subject to a \$2 censor fee, and involve the splicing in of a state permit strip of film.

Operators' Licenses in Chicago?

A report was heard on the strong popular opposition voiced by thirty civic organization representatives before the Chicago City Council against a proposal to require operators' licenses on certain types of 16mm motion picture projectors. At a hearing before a Building Code Sub-Committee representatives of the public schools, American Library Association, Chicago Federation of Churches and other religious bodies, Chicago Civil Liberties Committee, Educational Screen, Business Screen, five projector manufacturers, four film distributors and other groups opposed the project. Not even the City Electrical Inspector would stand up for the proposal, admitting that all 16mm projectors and films are entirely safe, and that the only danger that might exist would come from overloading inadequate house wiring. PICC action suggested that the newly formed photographic Manufacturers Association might put a

Current Film News

(Concluded from page 406)

for 40 16mm sound motion pictures and 100 slidefilms. The program is designed to bring curriculum films to all age groups, first grade through high school.

Young America Films, Incorporated will continue to handle the editorial planning and preparation of shooting scripts. Under the supervision of Godfrey Elliot, Editor in Chief, Young America Films analyzes field surveys, courses of study and textbooks from all over the nation to plan and prepare the scripts which are to be made into curriculum films. Young America Films' editorial department is guided by two consultants, Dr. William S. Bristow, Curriculum Consultant of the New York City Board of Education, and Dr. Charles F. Hoban, Jr., special assistant to the Director of Visual Education, Philadelphia Board of Education. Other nationally known educators will assist on specialized projects.

Leading school supply houses and other important outlets throughout the country act as exclusive distributors of the films and equipment. This means that some 400 salesmen calling on schools will distribute Young America-Transfilm Educational Pictures.

Film Highlights Acquires 16mm Rights From Universal

Mr. Martin Ross, president of Film Highlights, Inc., announces that his firm has acquired, on an exclusive basis, from Universal Pictures Company, Inc., Hol-

lywood, California, 50 feature pictures, 4 serials and a large quantity of shorts, including musicals and cartoons, for distribution in the U. S. Among these 50 feature pictures, 8 will be in technicolor, with such titles as *Arabian Nights* and *Phantom of the Opera*.

Lecture Bureau Tabled

A proposal to set up an information center through which the services of itinerant manufacturers' representatives, and trade association officers on tour might be offered to local groups as lecturers and discussion leaders failed to meet unanimous approval and was automatically tabled. It was felt that such activities would extend the functions of PICC beyond that of an informal discussion group, a round-table of the industry.

Next Meeting

The next meeting of PICC will be held in October, jointly with that of the Planning Committee of MPDFA. Officers will be designated for the year 1947. Under the By-Laws no constituent organization can hold the PICC annual chairmanship more than once every five years. Joseph Dombroff (PMDA) was the first chairman, Wm. F. Kruse (ANFA) is the outgoing incumbent.

Mr. Jacques Kopfstein, an outstanding authority on 16mm films, will be associated with Film Highlights, Inc., in a consultant capacity, for the distribution of these films.

Since forming his own 16mm distributing company, Mr. Ross, with his vast experience in the movie field, including 10 years as a sales executive for Films, Inc., has held to one cardinal principle—that the 35mm exhibitors should be protected—and this principle will be strictly followed in the distribution of these newly acquired 16mm films.

Ideal Distributes Films Of the Nations

Ideal Pictures, 28 East 8th St., Chicago, has just announced exclusive distribution, aside from thirteen eastern states, of Films of the Nations 16mm. product. A provisional list calls for the releasing of 37 subjects from governmental sponsored libraries in Canada, Great Britain, India, Netherlands, South Africa, Sweden, Switzerland and Norway. A great many additional releases by other foreign governmental agencies are expected to follow. The object of the Films of the Nations is to maintain a central clearing house to which all inquiries of those interested in educational foreign films may be directed.

Ideal Pictures already report, even before the opening of the school year, a large demand for this product.

Exclusive Features of the Bell & Howell *Filmosound*

Easy Operation and Certain Film Protection Are Assured

Before the war—and with our armed forces everywhere during the war—Filmosound was famed for its dependable, easy operation . . . for its sure film protection.

This 16mm sound-on-film projector, long preferred by schools, has exclusive features that *banish* chances of film damage. Safe-lock sprockets assure correct film threading. "Floating film" construction keeps the picture area from ever touching the mechanism.

The exclusive Oscillatory Stabilizer prevents variations in film speed, provides superior sound reproduction. The *all-gear* projector drive is sure, positive, and trouble-free.

The direct-beam optical system, new coated lens, and 1000-watt illumination flood the screen with clear, brilliant pictures.

Write today for a descriptive, illustrated booklet. Bell & Howell Company, 7123 McCormick Road, Chicago 45; New York 20; Hollywood 38; Washington 5, D. C.; London.

Direct from England in 16mm Sound— 200 NEW FILMS

Through arrangement with the J. Arthur Rank Organization and the Religious Film Society of Great Britain, Filmosound Library has acquired distribution rights for some 200 outstanding school and church films.

Fine, late British entertainment films, too, will be available soon in 16mm—to add to the more than 5,000 educational, religious, and recreational films you can rent or buy from Filmosound Library.

Write for complete information and terms.

The Best Laid Plans o' Mice and Men . . .

“LIFE”, as the fine old Chinese philosophers have reiterated down through the centuries, “is the sovereign remedy for optimism.”

We have always been highly susceptible to that malady, and have repeatedly found the Chinese remedy effective for temporary but not permanent cure. Our latest attack was in September, when we blithely announced an October announcement of “a new Managing Editor”. Our optimism was shared by the nominee. For negotiations had been moving so smoothly and pleasantly through much of the summer, seemingly toward finality, that he too approved of our printing the prophecy in full prematurity. Then “life” stepped in and wrought a cure within a matter of hours. (But our optimism still knows no bounds, for we shall be out shortly with other announcements of staff changes and additions. As our only concession to the tyranny of “life” we shall not specify the month for said announcements—be it November or December).

In September we ethically refrained from mentioning the name of our expected colleague-to-be, William F. Kruse, though many in the commercial field were aware of the news before the September issue was off the press. “Bill’s” doings are always “news”. Now, instead of coming to EDUCATIONAL SCREEN as Managing Editor, he moves to another post of immense potentialities for service to the audio-visual field. We are not authorized, at this writing, to name that post. So, once again, we carefully keep the “secret” shared only by a large part of that same field. It must suffice us here, therefore, to express our sincerest congratulations to Bill Kruse on his new and greater responsibilities—our heartiest good wishes for brilliant success in his high endeavors—and our confident hope that the understanding friendship between us will strengthen through the years ahead as it has through more than two decades past.

It is a particular pleasure to present below a personal and gracious editorial by William F. Kruse himself, written in the characteristically vigorous style long familiar not only to the readers of EDUCATIONAL SCREEN but to the entire audio-visual field.

Wanted: Bridge Builders

IF people are to live *at all* in the days to come, they have got to learn to live *together*. On every hand today we run into barriers that divide people into rival nations, creeds, classes, groups. Many vested interests conspire to maintain those barriers at all cost, for their own ends. There is profit in barriers—prestige, too, and pomp, and such a wonderful source of self-sufficiency and self-righteousness.

It is the mission of Education to burst or bridge such barriers. Education fits man to live with his fellowmen. The first day at kindergarten leads a child into a vastly expanded world, filled with interesting new people, crammed with new things to learn and to do. And, so through life, as the student grows in knowledge and

(Concluded on page 473)

Who's Promoting What for Whom?

PROGRESS in the increased use of audio-visual materials in our schools, with its resultant improvement in instructional procedures, has been in large part due to the tireless efforts of “visual educators.” This group, once small, but now becoming larger, is made up of those staff members of educational institutions who are devoting most or all of their time to the production, distribution, and utilization of audio-visual materials.

Not to be ignored in giving credit for progress are those business men whose business is visual education—those whose business it is to produce the audio-visual materials that schools need, and those who are dealers in audio-visual equipment and materials.

All who are concerned with the progress in this field should write to the Consumer Education Study of the National Association of Secondary Principals, 1201 Sixteenth Street, N.W., Washington 6, D. C. and ask for a copy of “Specifications for Commercial Supplementary Teaching Materials for Science—A Report Prepared by the National Science Teachers Association.”

Now Who's promoting What for Whom?

If a copy of this report is sent you, in response to your request, keep this in mind while reading it. This report has been written for business men and circulated to industrial concerns by the National Better Business Bureau saying in effect, “See, here is positive proof, backed by the names of great educational associations, that teachers of the nation do not have the pamphlets, charts, pictures, and other visual materials they need for teaching. They are pleading for you to make them for them ‘for free’. This report tells you specifically what they want. Now you supply the need and help education.”

We believe that, because the great American Public School System is based fundamentally upon (1) support by public taxation and (2) serving the interests of all the people, audio-visual materials of instruction like our text-books, should be independently produced and bought and paid for with tax funds. We believe this as a matter of principle, but we are also realistic.

We recognize that there are some excellent sponsored instructional materials for schools, and we hope that industry will continue to furnish these in *limited* quantities. But we believe that anything that resembles a drive or effort, in the name of educational associations, to *flood* the schools with “free” instructional materials will be resented by those who are most concerned with true educational progress in the use of audio-visual materials for instruction.

A new and exciting "tool" for visual education . . .

Complete, originally illustrated visualizations of outstanding classics on

SLIDES and SLIDE FILMS in FULL COLOR

2" x 2" Slides and 35mm. Slide Films

New in conception and treatment, these PICTOREEL productions afford students the opportunity of visualizing period costumes, architecture, manners, as well as the pageantry and adventure of the stories themselves in gorgeous full color. Excellent for English literature and history courses.

IVANHOE

. . . by Sir Walter Scott. Highlights of the story condensed into a fascinating educational production.

TREASURE ISLAND

. . . by Robert Louis Stevenson. As Jim Hawkins relates his experiences, the magic of the story is vividly recreated.

THE THREE MUSKETEERS

. . . by Alexandre Dumas. The whole panorama of 17th Century France is captured in this exciting visualization.

RIP VAN WINKLE

. . . by Washington Irving. Adventures of the world's most famous sleepyhead . . . portrayed against an early American background.

ROBINSON CRUSOE

. . . by Daniel Defoe. Beloved Crusoe and his man Friday learn a new way of life on the tropical island on which they are marooned.

ALICE IN WONDERLAND

. . . by Lewis Carroll. Exciting stories for children and adults of Alice's visits in imaginary lands.

A CHRISTMAS CAROL

. . . by Charles Dickens. England in the 1800's . . . the time when Scrooge learns the meaning of Christmas in this immortal classic.

KING ARTHUR

. . . by Lord Tennyson. Here is the colorful court life of medieval England under the rule of Arthur and the thrilling knights of the Round Table.

ALI BABA AND 40 THIEVES

. . . from The Arabian Nights. A woodchopper overhears the password to a cavern where forty thieves store their loot . . . and eventually becomes its owner.

ROBIN HOOD

. . . from mythology. The medieval hero, Robin Hood, and his companions, Little John, Friar Tuck, live again in this fascinating series.

MOBY DICK

. . . by Herman Melville. An accurate account of whaling in the 19th century . . . from one of the most popular adventure stories of all time.

THE ODYSSEY

. . . by Homer. The story of Odysseus' life and travels, full of astonishing scenes and the early Greek way of life.

The Motion Picture in World Peace

An earnest, thoughtful and concrete proposal for the systematic use of films as a supreme means to international unity.

E. F. IMLE, Principal
Ascarate School, El Paso, Texas

EVER since the beginning of time probably man has always wanted to know more about his neighbor, to have his neighbor know more about him, and to become better acquainted with mankind generally. Very early in human history, long before there was anything like a written language as we know it, and perhaps not very much of a spoken language, man sought to communicate with man by the use of crude pictures and drawings on rocks and cave walls.

Language differed from valley to valley, from tribe to tribe, to the point of incomprehensibility. Yet these crude drawings conveyed the message with ease, and the first step in inter-group (international) understanding was taken. The American Indian left drawings and pictures at chosen places for others to see and interpret. All Indians could tell the meaning of the drawings even though there may have been a vast difference of race and tongue between the man making the pictures and the persons who later interpreted them. Thus man started out understanding man through the medium of pictures. Later on, when writing developed out of the pictures and drawings, fewer and fewer pictures were used until man achieved whole books of printed matter with no pictures or illustrations of any kind. Still later, pictures began to make their appearance again. Today, there are few books of any kind without pictures—especially is this true of textbooks—and in increasing numbers we see books and magazines composed almost exclusively of pictures.

Today there is still that yearning on the part of all peoples for a common meeting ground. The more these peoples know of themselves and of the world about them the greater is their desire to know more of the other fellow. The easiest way to bring this about now, as in the distant past, is through the medium of pictures. And if pictures are used, why not bring the experience of ancient man up to date through the movies and all of the modern developments that go with them. Pictures leap the language barrier today just as in the ancient past. If they did it in the past, how much more easily can they do it today with the added facilities of sound and color which make the pictures so real that the person seeing them is transported mentally thousands of miles away from the place where the pictures are actually shown. And still to come is television, as yet hardly more than touched. Whole new realms in the field of international understanding are opening up before us largely because of new developments in the moving picture, the radio, and television. Only time can tell what the future will bring forth, but the indications are that it will be something great.

As stated above, the ancients had pictures thousands of years ago; but they could not make them move. Yet

the idea of movement in pictures is not new by any means. It goes back to the days of the ancient Romans.¹ However, the first definite attempt to use persistence of vision to blend or combine different images did not come until 1825, when the Thaumatrope was invented by a Dr. Fitton of London. This instrument consisted of a circular card with two twisted strings fastened to the edge, at diametrically opposite points. On one side of the card was printed the picture of a bird, on the other that of a cage. By rapidly whirling the card by tightening the strings, the bird appeared within the cage. Other inventions followed, all being improvements over this first one.

Some 70 years after the Thaumatrope, the movie industry really began with the invention of the projector by Thomas A. Edison and others. The birth of the modern motion picture is recorded by the brass plaque on the 34th Street side of Macy's Department Store in New York City: "Here the motion picture began. At this site on the night of April 23, 1896, at Koster and Bial's Music Hall, Thomas A. Edison's motion pictures were projected."

The motion picture as we have it today has come a long way from that first projected picture in 1896. It has grown from a sort of novelty, and an imperfect one at that, to something that is a very important part of our everyday lives. Most of us accepted the old silent picture of the 1920's as something so perfect that no improvements could possibly be made. Yet, in 1929, came the "talkies", which made the motion picture definitely a new medium. The use of sound and color are marks of maturity in the film.

The future of the motion picture holds wonderful possibilities. Lewis Jacobs, the movie historian, says: "After almost half a century of progress, the American film has achieved a degree of maturity. It now moves forward toward a more profound destiny. Its future lies in the creation of new forms of expression, in the deepening of its content, and in the elevation of its integrity and its point of view." Certainly the film is coming more and more into its own as an aid in teaching. The "profound destiny" mentioned by Mr. Jacobs might well be the place the film will hold in educating our youth here at home. But over and beyond that, it may be the still greater task of educating the people of the world in the ways of international understanding and world peace.

There are many problems in international affairs facing the nations of the world today. But the central problem, the one which will determine the solution of all of the other difficulties, is that of bringing the

¹The World Book, Vol. 11, 1944, p. 4704.

Cattle Roundup on the Range.

(From "United States," released by British Information Services.)

peoples of all countries into a knowledge of one another that will end their fears and misunderstandings. They need to know the life, customs, and religions of one another. They need to be brought to understand that the masses of the peoples of all countries have the same hopes, fears, desires, dreams and aspirations as they themselves, and this understanding brings tolerance for all the other fellow has and all that he believes in. Only when such a gigantic task has been accomplished, can we begin to approach the ideals of international peace founded upon international brotherhood of all men. The task is indeed great.

Perhaps the thing that so complicates the problem today is the fact that the world has been so amazingly drawn together, by the advance of science and engineering, that no place on the earth is more than sixty hours from any other point in physical transportation, and only seconds away by electrical communication. Yet we haven't learned how to use effectively these facilities for the promotion of peace and the general betterment of mankind. On the contrary, the present-day tendency has been to use them against one another. We have all of the machinery for world peace and international brotherhood and lack the ability to put it together and make it work. Perhaps it is because of the lack of inspiring leadership in a day when so many of the world's leaders devote most of their time to attempts to aggrandize their own particular nations at the expense of some other. Or perhaps it is as the great French playwright and novelist, Romain Rolland, once said. "The world has become a unity, and for this destiny mankind is not yet ready." If this is true, then it is time for us to do something about it. Mankind is probably more ready today than ever before to be led to the place where he can be prepared and fitted for cooperation in a united world, but not yet ready for immediate participation in such a vast plan. In speaking of this same quotation, one

authority says, "It is the task of education to fit us for this destiny."²

All down through the ages mankind has suspected and feared his neighbor, quarreled with him, fought wars with him, and then made peace with him. After a few years of peace the whole cycle of events was gone through with again and again. Each time the cycle came around, it moved more rapidly and furiously until today it is as a roaring avalanche that has grown to enormous proportions, threatening to crush all civilization. Countless times man has sought to make a peace that will endure. Every time war came, the nations involved put the blame on the other side—the enemy nations. Usually this attempt to make the enemy bear the responsibility for the fighting was sincere, for while each side could see wherein they were partly to blame, that guilt was easily explained away by saying that their action was necessary in "self defense." Such reasoning indicates the presence of suspicion, fear, and a general lack of knowledge of the enemy people. Otherwise man would not have to search out an excuse for his actions.

Generally speaking, man's attempts to make a lasting peace have all failed. Yet with each attempt he has learned how to solve some of the difficulties. He has made several outstanding attempts to solve the problem. The earliest attempts were nothing more than a choosing of sides to maintain the balance of power. Such procedure is similar to the formation of gangs in our large cities. Every time a gang appears, a rival gang is bound to arise; and eventually there is conflict. That same procedure has been followed up to our time and will continue in vogue after this war unless steps are taken to counteract it. Always in such efforts there is the signing of the treaty, then the attempt to make the treaty last by forming some sort of security organization of which the nations concerned become members. But never is the nation with whom the treaty has been made invited to join the alliance. That nation is considered "enemy" and is compelled to form its own counter-security organization. Thus there is perfectly laid the groundwork for another conflict.

At the close of the first World War, the first really international attempt was made to solve the war-peace problem—the League of Nations. It was a master attempt. All nations were invited to become members—even the old enemy nations provided they met certain requirements. The plan was rational, high in ideals, and might have worked had the strong nations been willing to give up their selfish interests for the good of all.

One of the chief faults in the League of Nations was that it made no provision for *educating* the peoples of the world for peace. That task was left up to the individual nations. There was nothing to prevent member or non-member nations from teaching war to their peoples. We are now at the crossroads of making another master attempt at building a world organization that will assure world peace. We cannot afford to fail; yet are we, as peoples of a world

²Edgar Dale, "The Place of Sound Pictures in Education," *The Education Digest*, Vol. IV (March, 1939), p. 21.

citizenship, ready and willing to make the necessary concessions and plans and efforts to insure success? The answer seems to lie in the adoption of an educational program for all peoples of the world—an educational program not only planned by but controlled and initiated by some international authority for the purpose of teaching peace and brotherhood.

Today there is a crying need for a medium that has an international appeal and communicative power, a medium that can draw the world together spiritually as it has already been drawn together materially. Have we not exactly that medium in the motion picture? T. Y. Lo, the President of the China Motion Picture Corporation of Chungking, said: "As an international medium of education the motion picture has a wider appeal than literature, a more emotional appeal than radio, and provides the easiest and speediest method of instructing the masses."³ But we have not yet put the motion picture to its proper use. It is now used on a wide scale to provide international entertainment, but up to the present time it has been used hardly at all for the purpose of international education. Of course a certain amount of education is inevitable from the entertainment film but very often it is lacking in purpose, direction, and even desirability. What we need is a planned educational program, embodied in motion pictures, that will function on a worldwide scale for the purpose of teaching the truth about all peoples and countries and that will bring about a sympathetic understanding and tolerance for all. In this connection the Inter-American Conference on Problems of War and Peace, which met in Mexico City in March of 1945, recommended "that all American Republics undertake the obligation of seeing that their people have ready access to information at all times; that they take the proper steps to promote a free and impartial exchange of information for the use of their peoples; and that they make every effort to influence the rest of the world to adhere to the principle of free access to true information for

³John E. Dugan, "The Film and International Understanding," *The Educational Screen*, Vol. 23 (Jan., 1944), p. 23.

Victoria Embankment, London.
(From the British film "Know Your Ally Britain")

all . . . to the end that freedom, peace, and confidence may be established in and among nations."⁴

A great program of visual education has been worked out for post-war China by the Chinese motion picture industry. Its chief purposes include the training of thousands of technicians for reconstruction work; giving the people general scientific knowledge so they will be able to take advantage of modern inventions in a progressive world; acquainting the people with the reconstruction plans so they will feel a responsibility in the matter; enlightening the four hundred and fifty million Chinese as to the affairs of the rest of the world; and educating the people to cooperate with others in helping to create a better world. Similar programs are being worked out in other countries. The Soviet Union has for years been demonstrating what an educational power the motion picture is. Only recently has she increased appropriations for educational purposes, and undoubtedly a very large portion of that is for visual aids. England likewise has increased financial support for education via the motion picture. She recognizes the film as one of the most powerful mediums for education and propaganda. I need only mention what Hitler did with the motion picture in Germany. His success in completely bending the German people to his will demonstrates very clearly what can be done with the film in educating the masses. What he did in Germany through controlling the moving picture, radio, and other means of communication can be done just as thoroughly in any country either for good or for evil.

Let Your Pupils See Science

Some stimulating evidence that limited resources cannot defeat the audio-visual teaching method.

MARY JANE McCLARY
Public Schools, Brooklyn, N. Y.

THE following article deals with an actual teaching problem and how it was solved. A problem like this cannot be solved overnight. It might take two years to show a real change and you might still be far from a final solution.

Auditory and visual aids afford the child the see, hear, and touch materials which are all important to successful learning. Materials yield experiences. The children obtain real satisfaction and enjoyment from materials which appeal the minute the children experience them. The value of course comes from the method of presentation and not from the subject matter itself. The world is a material environment and the school should supply a like material environment to the child in order to give him a feeling of being at home, in school. Life gives the child many concepts, also. So must the school. Life is very real and school should be real also, in order that the child may learn what he most needs to learn.

Problem: How to use auditory and visual aids in a departmental system, in science, where the teacher is changing and the pupils are not.

Perhaps you have known a teacher or teachers who have been faced with this problem. Let us visualize the teacher who, upon arrival at the school, found a partial set of text books on the sixth, seventh, and eighth grade levels. There was a bird chart, and a health chart showing the human body with a diagram of a kidney destroyed by the use of alcohol. There was a box of test tubes brand-new, but quite old, a blackboard, chalk, and a bottle of ammonia so strong that it was dangerous. "And with these worldly gifts, I thee endow."

The teacher's first concern was "regents." The eighth grade was facing regents. The teacher had never seen an eighth grade regents and neither had the children. The teacher realized her ability would be judged by how many passed the regents. It took weeks of searching to find copies of previous regents. The teacher taught on the eighth grade level with the regents in mind. Perhaps the children learned nothing of value, but they received enough factual material to enable them to pass. While this was going on the teacher had in mind a plan by which lasting material could be taught. Using state requirements on the sixth grade level, an outline was made up and also a course of study on the seventh and eighth grade levels. Each child had one outline. In using visual outlines as guides for children a teacher must use care with some administrations. Outlines can be misused. It is important that children be taught to think and reason, not merely to memorize. Outlines should be used as a guide, to clear up misunderstandings, and simplify material.

In teaching with outlines many simple experiments can be done to go with the outlines to make the material meaningful. The five and ten cent store can supply many inexpensive materials. The children will bring in candles, bottles, jars and other things to help. The children become enthusiastic with experiments, and what to you may be crude experiments, to the children may often be "fascinating, big laboratory experiments." If the teacher begins by performing the experiments it will not be long before the children will be asking to perform them, and then real learning is beginning. As far as possible the experiment should fit the work being covered for the week. The children should copy the experiments, using the scientific method and the form for writing up experiments. The child doing the experiments would write it up on the board by writing the word "materials", and then have the class members give the materials used, and this is done with method, observation, and conclusion. Children like playing teacher. Toward the end of the term the children can make covers for their own experiment books made up from experiments they have performed.

The teacher could order *Current Science and Aviation* which is a science paper on the order of the social studies paper, *Current Events*. They can be purchased at thirty cents a term, and you have science reading under way. A science club should be organized. How this is run would depend upon the school set-up.

When the science teacher changes rooms she is facing a problem. In other rooms teachers do not want their desks disarranged, and who can blame them? Time is needed to disassemble a desk, work an experiment, put the desk to rights, and write up an experiment. Materials must be carried from room to room, water must be obtained, and cleaning up too takes time. Science classes should be allowed to change and go to the science room, but often the school administration feels children cannot be trusted to change. The following drawing may help in solving this problem. The size can be determined by the user.

Value of moving laboratory.

1. Time.
2. Available materials.
3. Handy.
4. Prevent accidents.
5. Does not upset rooms.
6. Easy to keep clean.

The science teacher can next begin field trips. Many a teacher has found her set-up one in which trips are discouraged or not allowed, but the teacher if she is really interested, and has the time, can use a day of vacation or a Saturday. Often

A. Working surface
 B. Prevent materials from falling
 C. Drawer for dissecting tools, glass rods, etc.
 D. Test tube rack
 E. Wheels to facilitate quiet and speedy moving
 F. Handle to move Laboratory
 G. Tray for equipment

you have heard the remark that trips do not help children pass regents. But, do regents help children learn how to live? Trips afford much learning. The children plan the trip, experience travel, learn how to change trains, order from a menu, eat in a restaurant, and have patience. If the restaurant is willing the children learn by paying their own checks, individually. They have an opportunity to change money and ask for information.

Teachers must ever be prepared in their own defense. Should a science teacher be asked what a farm diorama has to do with science she must be prepared to explain. Motion pictures should be pre-viewed but some set-ups prevent it, therefore the motion picture problem must be solved by the individual teacher. The social studies teacher and the science teacher can correlate much material.

Each term the children should read one science book and report on it. If the library does not have enough books, the teacher may lend her own. If you trust children you will find even your personal books may be lent and will be returned, in good condition. This is true of children no matter what side of the track they may come from. Trust them and they will prove themselves.

Projects can be built. The child should choose the unit of most interest to him. Below are listed some suggestions for projects.

- | | |
|--|--|
| 1. Electro-magnets | 2. Galileo on the leaning tower of Pisa dropping two weights |
| 3. The solar system | 4. The eclipse of the sun |
| 5. The eclipse of the moon | 6. Health projects |
| 7. Insect collections | 8. Spider collections |
| 9. Web collections | 10. Collection of leaves |
| 11. Cavemen and the story of their lives | 12. Scientists in their laboratories |
| 13. Model of inventions | 14. Motors |
| 15. Telegraph sets | 16. Dioramas |
| 17. Erosion | 18. Plants need light |
| 19. Caverns | 20. Flood control |
| 21. Soil collections | 22. Rock collections |

These projects should be put on display. It helps to give an exchange of ideas and allows each child to see the work of the other youngsters. Children like to see their work on exhibition and they do a good job. If the children know that, be the job good or bad, they will all go on display, they have a strong motive to do a good job.

If the science teacher is a real one she has no fear of animals. Some animals which can be kept in a classroom are turtles, rabbits, gold fish, snakes, mice, rats, and insects of every variety. Preying-mantis with freedom of the room will lay eggs which the children can watch and when warm weather again comes around they can see reproduction. Baby chicks can also be kept and raised to a large size. They become tame, and can be trained. Plants can be kept in the room and cared for by the children and they can learn how to start new ones from slips. The teacher can put out a simple rock collection which may act as an incentive to the children who may begin bringing in collections such as a dog's skull, a cat's skull, and many other things. Unborn animals can be preserved in alcohol.

The alert science teacher can obtain free materials and lectures. General Electric supplies lectures with demonstrations. The Maltex people supply fine charts which can be used when studying vitamins. The charts have the vitamins on them and a separate booklet of foods to be cut out, colored, and pasted under the vitamin or vitamins the foods contain. The Westinghouse people will supply large charts and diagrams of all the different electrical appliances, their workings, and the use and importance of each part. They will also send many booklets about electricity, and food preservation. Not only is Westinghouse generous but really gives fine material. The Metropolitan supplies many booklets about the lives of famous scientists. General Electric is more than generous with text books about the lives of different men in the field of electricity. The A.A.A. supplies posters and stories about safety. The manufacturers of dental creams send dental health charts, fine diagrams of teeth, and much material about the care and importance of the teeth. One of the companies sends health charts to help keep a daily check, and a story about good grooming. When you study about the different parts of the body, the local butcher may be willing to supply some parts for dissection. The children will bring in many dead birds which can be dissected. Arsenic and alum will preserve the skins and the animals can be stuffed.

Card collections are always of interest. Fine file collections can be built from different magazines. *Life*, *Scientific America*, *Science Illustrated*, *Science*, *Popular Science*, *Current Science and Aviation*, *The Journal American* Sunday magazine section, *Time*, and *National Geographic* make good sources for file materials. *Science Digest* makes good reading. A *Rural School Leaflet* has more value mounted as many children do not care to read.

A large bulletin board is a must for a science

teacher. Children should be put in charge of displays. They should choose materials from the files, plan how to place them on the board, and when in doubt ask advice. Wooden egg boxes painted make file cases if real file cases are not available. The egg boxes can be lined to help eliminate dust.

The Audio-Visual Budget

A brief and simple outline of procedure for putting visual education in any school on a sound and essential budgetary basis.

D. F. SCHUTTE
Director of Visual Education
Public Schools, Red Wing, Minn.

THE audio-visual budget is an attempt to substitute a reasoned, workable plan for a haphazard method of procuring needed equipment and supplies. A budget of this type is all the more essential because of the considerable cash outlay required to obtain some of the various types of projectors. Frequently certain important items are neglected if no definite plan is provided for their purchase.

How to Go about It

The first essential is of course to find out where you are, and then go on from there. A survey of the extent and manner of current use being made of audio-visual materials in your school, can be used to indicate deficiencies in the quantity and quality of available materials, and in the method and frequency of their use. Following completion of the local survey, the program of visual education in the school system can be compared with that of other schools of similar size, and with what in the opinion of experts is considered to be a desirable program.

The next step consists of drawing up a list of the future needs of the school's visual education program. This list can be in the nature of a tentative long term plan arrived at in a cooperative manner by the teachers and the administration. Several factors in addition to those already stated, should be considered in drawing up the list of needs. One significant point is that, in the opinion of most authorities, it is desirable to equip for the use of visual materials all class rooms wherein such materials can be used to good advantage in the instruction of the students; however, in some instances a fairly satisfactory program can be worked out based on the use of a centralized special projection room. Another item of some importance is that of room darkening. It is of course inadvisable to purchase a lot of expensive equipment only to discover that it can not be efficiently utilized because the rooms are not dark enough. One other point that is frequently overlooked is that there are other types of visual aids besides the projected ones. Additional information about visual materials can be secured by consulting some of the newer courses of study and texts, many of which contain lists of visual materials that are coordinated with the subject matter. Much of the

We cannot expect to perform wonders overnight, but we in the teaching profession should be thankful for what has been accomplished to date. And another fact is very much worth remembering: The teacher herself is a visual and auditory aid of the first order. If she can sell herself she can sell her subject to almost all the children.

data relevant to the school's present and future program of visual education can be combined to form the first basic part of the audio-visual budget, known as the educational plan.

How to Finance the Audio-Visual Program?

In the past it has sometimes been the practice to rely on donations from P.T.A., or funds raised by school carnivals and entertainments to provide for the purchase of projectors and other equipment. This method of financing is in most respects entirely inadequate and unsatisfactory. It frequently does not produce sufficient funds, and places an undue burden on various school organizations thereby interfering with their normal constructive functions. Visual materials and equipment are not toys, or entertainment devices. They are tools of learning just as books and other instructional materials are, and consequently funds for the procurement of visual materials should be provided from the general school funds derived from school taxes and other sources.

Occasionally one hears the statement that visual devices may be all right but that they are too expensive, and that other less expensive materials will do just as good a job. Data needed to refute such a claim can be obtained by: (1) Setting up a local experiment whereby the same material is taught with and without the use of visual aids to two comparable class groups, and following up the demonstration with an objective evaluation of student achievement in both cases. (2) Reference can be made to the numerous research studies made by experts on the increased efficiency resulting from the use of visual materials. All investigations made to date show conclusively that students learn more in less time, and retain it longer when visual methods are used.

In the event the powers that be can agree that some school funds should be spent for visual education, the next question is how much money should be so used. Some indication of the adequacy of the amounts currently spent for visual education can be obtained by comparing the local school system with what other progressive systems are doing. In any event the absolute minimum should be at least fifty cents per pupil per year for maintaining the current visual education program, with some additional funds available for

(Concluded on page 444)

A Picture Strip for the Opaque Projector

FRANK WALTER

Jackson Heights, New York

A concise article outlining simple procedure for assembling school-made picture-strips and projector guide.

The Guide

From heavy cardboard cut a base piece $7\frac{3}{4}'' \times 10''$, a top panel $7\frac{3}{4}'' \times 8\frac{1}{2}''$, and two strips $\frac{5}{8}'' \times 8\frac{1}{2}''$. Cut a 6" x 6" square from the center of the top panel.

Paste the two strips to the back of the top panel and paste this top panel assembly in the center of the base piece as illustrated. Press flat until dry.

The Strip in Use

The paper strip is threaded into the guide and the guide is placed on the picture plate in the projector as illustrated.

Focusing is checked and the first picture is positioned. The lesson is ready to begin. A pull on the strip will position each new picture.

With the lesson over the sequence may be filed flat in a folder, box or drawer.

Try it!

THIS, in brief outline, offers a practical method for the presentation of related pictures, in an orderly sequence, without the distracting light flashes and juggled pictures often associated with this projector.

It makes the opaque projector a new purpose machine, as valuable in its way as a film strip projector.

It is a more adequate device than the hand drawn slide for a student classroom activity. The drawing area is increased to six by six inches. There is no longer the danger of cut fingers or broken glass. No special materials are required.

It accomplishes all this with the available school materials. You make it from start to finish and in a short time.

Here's How:

The Strip

Photographic prints, newspaper and magazine clippings, and hand drawn pictures, in black and white or color, are trimmed to six by six inches and mounted with library paste on a strip of wrapping or other heavy paper six and one half inches wide and of a length to accommodate the number of pictures in the sequence. Or this strip may be made of shorter lengths pasted together.

Allow a few inches of leader at the beginning, as an aid in pulling the first picture through, and space pictures one-half inch apart centered on the strip. Paste well on all the edges. Titles may be pasted on or hand lettered. Those in the illustration were clipped from the same booklet as the pictures. A hand drawn sequence may be made directly on a drawing paper strip. Colored paint, ink and pencil all work well.

Fold strip midway between pictures in an accordion fold. Press this folded strip flat until dry.

The picture strip ready for projection.

Films in the Reading Program

A thoughtful, constructive discussion of uses and values of motion pictures in the teaching of reading.

KENNETH D. NORBERG
Encyclopaedia Britannica Films

ONE of the most challenging problems of the primary grade teacher is to provide experiences that will give adequate background and stimulation for young readers. Educators are widely agreed that experiences of sufficient variety and depth are prerequisite to reading. However, there are many indications that the problem of *implementing* this important conception in the classroom is recognized by classroom teachers everywhere as one of the most perplexing difficulties in the teaching of reading.

Planning experiences as a basis for the language arts program in the primary grades necessarily involves some evaluation of types of "learning" experiences which can and should be made available to young children.

The Instructional Film as Mediated Experience

In discussions of educational method a distinction is sometimes drawn between "direct" or "immediate" experiences and those which are "vicarious" or "mediated." Most classroom teachers attach considerable value to field trips, work projects, and many other types of "direct" experiences which help to enlarge the range of the pupil's contacts with his environment. Few would question the value of such experiences. The problem, quite often, is not primarily whether "direct" experiences have educational values (including their contribution to language development) but to what extent such experiences can be made available.

The use of audio-visual aids of various types has long since become established as a standard method of **mediating** between the pupil and the world outside the classroom. Audio-visual materials serve in one sense as a partial substitute for immediate experiences. Often they serve also to complement and to interpret the raw impressions that make up so-called "immediate" experiences. Audio-visual materials in general represent a class of "mediated" experiences which can be ranged along a scale approaching the actual environment, on the one hand, and pure verbal symbolism, on the other. We may think of the instructional film as occupying a place on this scale relatively far removed from pure symbolism and relatively close to "immediate" experience, although the visual elements of the film are usually accompanied by interpretative verbal commentary. The analogy has its limitations, however, in that while we may think of the "real thing" as a limit which is approached by educational motion pictures, it is also true that the instructional film is something more than the "reality" it depicts. As an instructional device, the motion picture selects and refines the raw material of its subject. The result is an experience which is mediated not merely in the sense

of a mechanical transaction by which certain visual and auditory effects are captured and reproduced under controlled conditions, but also in the sense of an act of communication by which meanings implicit in the raw or natural situation are edited and made explicit. It is precisely this combination of transmission of sensory effects with translation of meanings, this joining of images and graphic symbols with verbal interpretation, which gives the instructional film its peculiar kind of usefulness as an educational medium. This fusing of objects and names, processes and explanations, particulars and concepts represents a unique type of communication in which verbal and other symbols are conjoined in dynamic imagery with the very things they represent.

By the same token, it becomes evident that the potentialities of the instructional film as an aid to language development are rooted in the inherent qualities of the medium itself.

Use of Films in Language Development

Few films have been produced for use as reading "lesson" materials designed to teach reading skills or word recognition, as such; and most of these were not made for use in the public schools. Without experimental evidence it would be difficult to predict whether films of this type would be effective, particularly if they were not produced in such numbers as to meet a wide variety of reading problems which tend to fall into highly specific categories.

In any event, this discussion is concerned primarily with instructional motion pictures of the "content" variety. Such films have been produced in considerable numbers and used in the schools over a period of years. Granting their value as background and stimulation to language development, including reading, some specific implications regarding their use as a basis of related activities in speech, writing, and reading may be drawn.

We may assume that good instructional films for the elementary grades will deal with topics which are suited to the interests, maturity, and educational needs of children. For the lower age levels, particularly, good films will deal concretely with materials possessing intrinsic interest value for children, as well as pictorial continuity. The development of the materials will follow generally an episodic or simple narrative form of treatment and will fall within relatively limited time and space limits. Verbal commentary will not tax the average vocabulary level of the age group. Films

which meet these requirements help materially to provide a setting for the language activities of children.

Oral Communication

Characteristically, the verbal behavior of children tends to center in group situations where a common activity is going on or a common experience is being shared. The film, as shared experience, may be used effectively to stimulate oral communication both before and after its presentation, and in some cases during its presentation.

Group discussion prior to the presentation of the film would ordinarily grow out of the background interest, subject area, activity, unit of work, or whatever may have led to the consideration and selection of the motion picture for class use. The introduction of the idea of using an instructional film for the learning purposes of a particular group at a particular time poses the problem of approaching the film presentation in such a way that it will have meaning within the framework of the more inclusive interests and purposes of the group.

A general class discussion prior to the showing of the film will help to ensure such meaning, and may also serve as a fertile beginning for a rich variety of language activities.

Some questions which would probably arise in such a discussion are: "Why do we want to see this film?" "What should we look for?" Many other questions such as the following may arise:

Children help their mother with the marketing.
(From "Food Store," Encyclopaedia Britannica Films)

"Where will the teacher get the film?" "How will it be shown?" "What makes the pictures move?" The particular questions to come up will of course vary somewhat with the age level and previous experience of the group.

During the film presentation, itself, the language behavior of the class will usually be confined largely to listening. Certainly, the potentialities of the medium as a means of promoting good listening habits should not be overlooked. As a variant to the usual method, some teachers have found that the occasional projection of the film

Happy relationships of children at play.
(From the Britannica film "Play in the Snow")

with the sound system turned off offers an effective way of encouraging spontaneous comment among pupils. This procedure is most effective when the film has already been shown at least once with sound.

Group discussion following the film presentation is not only standardized procedure for general learning purposes but provides one of the most fruitful types of oral language experiences for young children. Spontaneous comments of all kinds are to be expected and encouraged. "What did the film show?" "What did we learn from the film?" "Did we find out what we wanted to learn?" "How can we learn more about what was shown?" "Should we see the film again?" Individual responses may be expected to vary widely, of course, and to introduce personal impressions and experiences having to do with the motion picture. Words and names from the film which may be new to individuals or to the entire group may be discussed and emphasized until they become familiar.

Other oral language activities growing out of the film presentation may be developed in a variety of forms. Nonsense rhymes, dramatic play, and singing suggest a few of the many possibilities.

Reading and Writing

Obviously many of the oral language activities suggested above either involve some reading and writing or lead directly to the use of visual language symbols. Class discussion, prior to the film showing, for instance, might be expected to give rise to a series of questions which the teacher could list on the blackboard. In a class of beginning readers, single words pertaining to objects in the film could be listed and discussed.

Following the film presentation the opportunities involving reading and writing can be expanded almost indefinitely within the limits of the continuing interest of the group. A simple and useful procedure followed by many teachers is to prepare a list of new words learned from the film. The list may then be used in preparing reading charts or

other "home-made" reading materials. Captions may be prepared for drawings or posters based on the motion picture story. Group compositions, poems, and stories may be written, depending of course on the age level and abilities of the class. Verbal materials may be prepared for a play or for scene titles to be used in a pantomime. Also, simple informational material and stories connected with the subject of the film can be collected and used for reading. Many teachers have found that the use of motion pictures creates many new interests

and thus helps to give a fresh impetus to reading. The advantage of the medium, in this respect, is that it offers an unusual degree of impact and variety of visual stimulation.

The foregoing suggestions represent a few of the many ways in which the instructional film can be used to bring rich new content and stimulus to the language development of children. The creative teacher who understands the function of educational motion pictures in the classroom will continue to find more and better ways to exploit the resources of the medium.

Audio-Visual Programs in State Universities--

A Recent Survey

HARRY M. KAUFFMAN

Director, Audio-Visual Service
University of Denver, Colorado

THIS study was made in an effort to learn more concerning audio-visual practices at the higher education level. A letter, accompanied by a brief questionnaire was addressed to the president of each of the forty-four state universities with the thought that he would provide the information desired or forward the material to some person he deemed qualified to do so. Replies were received from thirty-three schools. A brief resume of the results follow:

Twenty-four of the thirty-three schools have an audio-visual division or department; nine do not.

Twenty schools listed the name of the division or department; thirteen did not. The names include Audio-Visual Aids Bureau, Audio-Visual Aids Department, Audio-Visual Aids Service, Bureau of Audio-Visual Aids, Bureau of Audio-Visual Instruction, Bureau of Visual Education, Bureau of Visual Instruction, Campus Studios, Cooperative Film Library, Department of Audio-Visual Education, Department of Visual Instruction, Photo Visual Service, Visual Aids Service, Visual Education Service, and Visual Instruction Bureau. The name Bureau of Visual Instruction appears four times, Audio-Visual Aids Bureau and Visual Education Service twice each, and the others once each.

Twenty-one schools indicated that the audio-visual work was a part of the program of their extension divisions; three indicated that it was not; nine did not answer the question.

Twenty-three schools indicated that the audio-visual facilities were utilized on the campus as well as in outlying schools; ten did not answer the question.

In twenty-two schools an individual is responsible for the audio-visual program; in two the responsibility is divided; nine schools did not answer the question.

Fourteen schools gave the individual's specific title; seven gave titles too general to be of use; twelve did not answer the question. The titles include Assistant, Consultant, Director, Head, Secretary, Supervisor, and University Editor. The title of Director appears six times, Head and Supervisor twice each, and the others once each.

Twenty schools included the highest academic degree held by the individual in charge of the audio-visual

work; thirteen did not answer the question. The degrees include the B.A., B.S., M.A., M.Ed., Ph.D., and Ed.D. Eleven schools report the M.A. degree, four the Ph.D., two the Ed.D., and one each, the others.

Thirteen schools listed the individual's academic rank; eight designated it as "none"; twelve did not answer the question. The ranks include Professor, Associate Professor, Assistant Professor, Instructor, and Lecturer. In five schools he has the rank of Professor, in three Assistant Professor, in three Instructor, while the others appear in one school each. Eighteen schools gave the salary the individual receives for the academic year; fifteen did not. The salaries ranged from \$1,700 to \$5,200. Four schools reported \$3,000, three \$3,300, two \$3,200, two \$3,800, and the other salaries represent one school each. The average salary was \$3,130.

Thirteen schools indicated that the person responsible for the audio-visual work taught courses in the area; eight replied that he did not; twelve did not answer the question.

Six replies stated that the one in charge of the audio-visual program taught courses in some other field; thirteen indicated that he did not; fourteen did not answer the question. Four schools report education as a second teaching subject, one English and journalism as combination subjects, and one political science.

Replies to the question, "What do you consider to be the most desirable set-up for an audio-visual program in a school similar to your own?" provide interesting and helpful insights into current thinking and planning. In general they reveal:

(1) a growing awareness of the potentialities inherent in this type of instruction.

(2) the need for a centralized service which permeates the classrooms of the campus as well as those of outlying schools.

(3) a desire that the program be in charge of a capable person who would receive academic rank and salary commensurate with his qualifications and responsibilities, and

(4) the desire to have each staff member and student familiar with the audio-visual materials and equipment pertaining to his respective field.

The Curriculum Clinic

Visualizing Democracy

PAUL C. REED, Editor

Director, Visual and Radio Education
Rochester Public Schools, New York

A few weeks ago (in the September 9 issue of *Life*, to be exact) my attention was arrested by that striking two page picture story "What is Democracy? Evatt Tells the World." It started me thinking.

The circumstances that gave rise to that particular news story was a simple question asked by a Swiss correspondent of Herbert Vere Evatt, Foreign Minister of Australia, at a press conference in Paris. "Men are fighting in various parts of the world and invariably the word 'democracy' is used by both sides to define their motives. Mr. Evatt, what is democracy?"

That part of Evatt's reply to this basic question, reprinted in *Life*, was in simple understandable language; it should be repeated and retold, but not here, for that's not the point. That question, "What is Democracy?" is a question that is being asked and answered verbally a thousand times daily in the classrooms of America, yet so far as the behavior is concerned of large numbers of those who verbalize their belief in democracy, the word remains an abstraction devoid of real meaning.

cyclopaedia Britannica's staff and advisors struggled for months to produce their noteworthy pair of films, *Democracy* and *Despotism*. But they're not enough, contribution that they are to the field; we need more and still better attacks on the

Frank Sinatra tells young people the meaning of true democracy. (From "The House I Live In", RKO production released to schools by Young America Films.)

problem of visualizing democracy. It is not a job for a single picture, or a pair of pictures; there is a need for many pictures.

There's another picture, recently released for schools, titled *The House I Live In*, which may be related to visualizing democracy. This picture has an appeal to high school girls (in Frank Sinatra) that few pictures shown in classrooms can (or maybe should) have, but basically the picture is for the most part just a guy—and a very popular one at that—verbalizing about democracy. Don't misunderstand me though, if adolescents will listen more attentively to the words describing democracy when they're sung by Sinatra, let him sing.

There's another element in that picture, however, which needs to be considered in the production of pictures to interpret democracy. Too fre-

The film on "Despotism" offers the reminder that any community can be rated on the scale running all the way from democracy to despotism.

Here is the greatest challenge and opportunity that producers of audio-visual materials for instruction have ever had. Surely if the motion picture, and the filmstrip, and the transcription, have the great power that we attribute to them philosophically, then surely more can be done than has been done to utilize these media to make more real and more meaningful the abstraction "democracy."

This is a tough assignment, and there's no doubt that many an earnest writer and producer have given up in their attempt to produce just that kind of material. I've been told that En-

The film on "Democracy" shows how a community works to balance its economy and enlighten its citizens to achieve shared power and shared respect.

quently the makers of our educational sound pictures start first with a verbalized commentary and then try to illustrate the words. Far too often the total result is nothing but a verbalization and not a visualization. Words have great power and efficiency in the compressing of ideas. But that isn't what is needed in defining democracy. We need vivid, real, and convincing incidents to dramatize the meaning of democracy.

In the Sinatra picture there is only one dramatized incident—when the boys gang up on another because of his religion. The dramatization is not real or convincing enough, but it *is* a specific; and that's what's needed. We need many examples of specific instances to show and demonstrate what is meant by democracy.

Only recently I saw for the first time a picture that has been used in classrooms for many years. Maybe you've seen it—the TFC picture *The Story That Couldn't Be Printed*. This story from the life of John Peter Zenger is masterfully and movingly told. The meaning of "freedom of the press" is partially defined by dramatizing vividly what it meant to Zenger. The picture visualizes an important incident in the historic development of democratic concepts in this country and provokes thinking about its meaning for today.

Now back to "Evatt Tells the World." Just in case some producer turns to his September 9 issue of *Life* maybe I can illustrate the point in another way. Here's a part of Evatt's answer to the question, "What is Democracy?"

"After a government is elected by the people, democracy means that the verdict of the people must be respected by the people. To try and get rid of an elected government by violence or for the government to get rid of its opposition by violence, that is the very antithesis of democracy. It is part of the democratic process to accept defeat until that defeat can be reversed by constitutional means."

Now I can imagine some film producer using such words verbatim for a commentary, and I can imagine how the picture column of his script might look. Four quick scenes to illustrate those words:

1. Election night—people cheering
2. Mob scene—foreign land
3. Firing squad—foreign country
4. Defeated candidate tearing pages from calendar

That might pass for a motion picture, but we don't need that kind. Rather, in those words spoken by Evatt in Paris is the material for dramatic visualization. I can imagine the power of the sound motion picture medium being used to dramatize and give meaning to this concept. I can imagine the story unforgettably told in two juxtaposed incidents, that would visualize this aspect of democracy and its antithesis.

Maybe there's another aspect to the teaching of democracy that is just as important, or even more important, than knowing what democracy is. And if this is so, it is a still stronger argument for bringing the full power of the motion picture to bear upon this problem. How we behave depends upon how we *feel*, as well as upon what we *know*. Not only must we know how to act democratically, we must want to

act that way. Our attitudes must favor democratic ways. There is no question of the value of the motion picture to stir people emotionally and to affect their attitudes. Some of this power should be put to work in classroom films for teaching democracy. Maybe some of the *Why We Fight* techniques can be used in attacking the problem of teaching democracy.

The Audio-Visual Budget

(Concluded from page 438)

purchasing some of the more expensive major items of equipment. Surely no thinking citizen of any community would object to spending 50c per pupil per year for notably increased efficiency in the instruction of their children.

In addition to the money allotted to be spent for film rental, maintenance and replacement of equipment, and the purchase of supplies, some provision should also be made for the purchase of new equipment. The tentative list of visual education needs, drawn up as a part of the educational plan of the budget, can serve as a basis for developing a one year, and a long term or five year spending plan for the audio-visual budget. Items can be listed in the order of the urgency of their need, and in order of the contemplated frequency of their use. Then the most essential items can be obtained the first year, and other materials in succeeding years. For example, it would be advisable to buy black curtains for darkening a room before buying an opaque projector for use in the room. Various interesting comparisons can also be included in the spending plan, with brief explanations of increases, decreases, etc. One might compare this year's audio-visual expenditures with next year's, or your school's expenditures with that of other similar schools, etc. The long term spending plan should be revised annually to take into account changing needs and circumstances.

Recapitulation of Points to Remember in Developing the Audio-Visual Budget

1. Decide on a basic philosophy or educational plan.
2. Are all rooms to be equipped for visual education or, is a centralized projection room to be used?
3. Provision for room darkening is the first essential.
4. Survey your school's audio-visual program to determine its degree of adequacy and to discover future needs.
5. Plan for the use of both projected and non projected visual materials.
6. Compare your schools program with that of other schools.
7. Offer proof of the economy and efficiency resulting from the use of visual aids.
8. Through the cooperative effort of the faculty and the administration develop a short and long term budget.
9. Visual education materials and equipment should be paid for out of regular school funds.
10. Fifty cents per pupil per year is required for a minimum program.

School Made Motion Pictures

IF I'm ever destined to receive a traffic ticket, I hope I get it in Palo Alto. If I could be transformed to a school boy again, style 1946, I would choose Palo Alto. If I had the time and ability to organize my community, I would model it after Palo Alto. Where else in the world can you work off a traffic violation by helping with the staging of a show? What other school system gives its boys and girls a week to ten days off in order to watch or participate in a motion picture production? What other community on this globe of ours can boast of such fine, willing spirit of co-operation?

A short time ago I had the privilege of previewing this colorful, community-made film portraying the

DAVID SCHNEIDER, Editor
Evander Childs High School
New York City

trials and tribulations of the boy Titian on his way up to becoming the renowned painter. I congratulate Palo Alto and especially Mrs. Robertson on this fine production. I'm sure that every one who sees this film will look forward with great anxiety for future releases from this spirited community—this first real threat to Hollywood.

Mrs. Lillian P. Morley, a friend of the Children's Productions of Palo Alto, has given us the following account of the filming of "Titian." D. S.

Enter: The Community-Made Motion Picture—"Titian"

WITH the completion and release of "Titian" by Childrens Productions of Palo Alto, California, a new type of children's moving picture has been born. At last a non-commercial group has proved that such educational incentive films can be made with a moderate budget and combined community effort.

Palo Alto, a town of about twenty-thousand people has virtually sprung from the head of Stanford University. Daily life and entertainment there have become almost synonymous with the Community Center. This is, perhaps, the secret of Palo Alto's spirit. There is a common tie between all groups—a common meeting place where everyone participates and makes plans. Oddly enough the town has no paid officials. The mayor receives no salary. In view of this cooperative background, it is not difficult to understand how "Titian" came about.

Practically all of the work on "Titian" has been volunteer work. Where ordinarily, it would be necessary to spend at least forty thousand dollars to produce such a forty minute sound and color production, the people of Palo Alto have spent very little for essentials only, such as films, professional script, cameramen, sound technicians, and materials for scenery. Direction, supervision, acting, all production work, and research have been the joint voluntary achievement of the community.

The community playhouse, under the leadership of Mrs. Hazel Robertson, is the exact spot where the pioneering idea originated. Always, week in and week out, the playhouse work goes on. There are a total of sixteen plays produced yearly. It is a project designed primarily to keep youngsters off the streets and to divert child energies into constructive channels. The show, in other words, is never as important as child participation and growth. For this reason, no child may have a leading part more than once, and whether or not he is a good actor is incidental. There are all kinds of jobs for all kinds of children to perform. Many children participate in a passive way by observing rehearsals and being on hand for errands.

The playhouse is practically self-sustaining. The township pays only three people, one of these part time. Tickets to plays are fifteen cents each. Membership is fifty cents a year. In a true cooperative manner, when a child cannot afford the membership fee, he is encouraged to earn the money by doing odd jobs, such as, picking up pins with a magnet, or arranging book shelves. Never is the work exchanged for the membership. The child is paid and then must purchase his membership card personally, as everyone else.

Besides operating on a fifty-two week basis, the playhouse has two groups of high school students doing road work. There is a play on tour now dealing with the problems of a Japanese girl who returns from a Nisei Camp to her former community. It was in the supervision of the Road Plays that Mrs. Robertson began to feel the limitations of the play as a medium. She realized that well produced, timely plays, and many adaptations of "best books" (for that is the chief bill-of-fare) were reaching but a handful of children. These children were already enjoying urban advantages. It is the multitudes of

Cobbler scolds Titian for painting instead of working.

children starving for mental stimulation in the poor mining towns, in the isolated rural communities of the deep south, and elsewhere, who must be reached.

Films are the ideal medium for this, but fantastic costs of production and complete ignorance of the techniques were seemingly unconquerable barriers. Outside of Palo Alto, these would appear unconquerable. For this community with its wonderful popular support, the idea was almost natural.

As in other play productions, the adult actors and assistants came from the Drama and Motion Picture Departments of Stanford University. Music Departments of both Stanford University and the San Jose State College provided the orchestra and musical research. The music for the picture, now known as the "Titian Suite" was composed for the event by William Bergsma, a pupil of Howard Hanson. Audience reaction had been well tested by the play from which the movie is adapted, and by stories and library displays on the artist and his period. Slides, available for classroom use, and demonstration kit, were assembled after meticulous research.

When the decision was made to film the story of the boy painter, Palo Alto began to hum with enthusiastic workers. Production proved of great value to them as stimulus for community action. The call for a donkey to be used in the film, brought forth ten offers. When the stage hands found that the scenery for movies was too heavy for them to move, they simply enlisted their fathers. When a large procession was needed, and outdoor scenes were being shot in the country, a gala picnic was planned and a happy time enjoyed by all. Lanches and snacks for crew and cast were usually eaten at the playhouse. Neighborly town-folk contributed special savory dishes, sent homemade pies and cookies. Costuming and scenery construction became a community responsibility to the extent of allowing traffic violators the choice of paying a fine or "working it off" at the playhouse. It was the thing in Palo Alto to assist in the making of the film. The populace is eager to launch a new project.

The shooting of "Titian" took ten eight-hour days. A project of this intensity should require a great deal longer, but the beautiful California flowers remain in full bloom for just that long, and they had to be an integral part of the scenery. Besides, there was not a lavish supply of film. The ration was at a minimum. Public schools were dismissed for the whole period of shooting. It was considered an experience of educational moment for all.

The results of all this effort are far from perfect. There are many things to improve in the next filming, but the important step has been made. Our children deserve to be represented by a moving picture production group which has the child's welfare and mental growth as its only incentive. There is every hope that other communities, settlement houses, and children's drama clubs, in conjunction with collegiate and adult drama groups will take courage from this pioneering success. Everyone agrees to the dire need for incentive educational and fictional movies for children. Here is one practicable way of producing them!

Teachers Learn Audio-Visual Techniques

Mr. Charles R. Crakes, Educational Consultant for the DeVry Corporation (in dark suit), who conducted a six weeks' Audio-Visual Aids course at Northwestern University during the School of Education Summer Session, explains the "why" and "how" of

Northwestern Summer School Group.

camera technique to his class as one of his male students operates the DeVry 16mm. Movie Camera.

In addition to instruction in the production of motion pictures, film strips and slides, lectures, demonstrations and clinics were held to afford the teachers an opportunity to study the function of audio-visual aids in learning processes.

STATEMENT OF OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912 Of The Educational Screen, published monthly except July and August, at Pontiac, Ill., for October 1, 1946, State of Illinois, County of Cook, ss

Before me, a notary public in and for the State and county aforesaid, personally appeared Nelson L. Greene, who, having been duly sworn according to law, deposes and says that he is the publisher of The Educational Screen, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in above caption, required by the Act of August 24, 1912, as amended by act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Nelson L. Greene, 64 East Lake St., Chicago, Ill.; Editor, Nelson L. Greene, 64 East Lake St., Chicago, Ill.; Managing Editor, Josephine Hoffman; Business Manager, Evelyn J. Baker.

2. That the owner is: The Educational Screen, Inc., 64 E. Lake Street, Chicago, Ill.; Nelson L. Greene, 5836 Stony Island Ave., Chicago; Marguerite Orndorff, 7022 Warwick Rd., Indianapolis, Ind.; Marie Craig, White Plains, N. Y., Estate of J. J. Weber, Bay City, Texas.

3. That the known bondholders, mortgagees, and other security holding owning or holding 1 per cent or more of total amounts of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; and also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities than as so stated by him.

NELSON L. GREENE, Publisher.

Sworn to and subscribed before me this 2nd day of October, 1946.

VIRGINIA DANIELS ALLEN,

Notary Public.

(My commission expires June 3, 1950.)

The Literature in Visual Instruction

A Monthly Digest

ETTA SCHNEIDER RESS, Editor

UTILIZATION

- **Music Films in Education**—Helen C. Dill—*Music Educators' Journal* 32:62 June, 1946.

The author is chairman of the Film Music and Projection Equipment Division of the Music Educators' National Conference Committee on Audio-Visual Aids. A survey sent out in February, 1946 yielded replies from 80 educators, including 17 supervisors of music in cities 100,000 or over; 14 supervisors in smaller cities; 5 state supervisors; 4 county supervisors; 11 instructors in college; and 14 university instructors. Films are seldom used in music education, only 75% indicating that the schools use films often but *not for music*. Subjects on which good films are needed included: fundamentals of singing, of playing an instrument, of conducting; how instruments have grown up, teaching world culture through native songs, dances and instruments; contemporary artists, the symphony orchestra, etc.

Other articles previously published by the Committee in the same journal are: "Cinderella of the Cinema" by Miklos Rosza (Jan.-Feb. 1946), and "Music of the Animated Pictures" by Jose Rodriguez (April, 1946).

- **A Film Program for Social Living**—Dina M. Bleich, James Fenimore Cooper Jr. High School, N. Y. C.—*High Points* (Magazine of the High Schools of New York City, published at the Board of Education) September, 1946 p. 31.

An outstanding article, describing how films are used for instruction in the classroom, and for developing attitudes. A Visual Instruction Committee of teachers has steered the program, evaluating and planning throughout. The program included:

- a) A series of 5 discussions based on human relations films, under the direction of the Clinic Psychologist and the classroom teacher as part of the guidance curriculum.
- b) *Americans All* (March of Time) shown to all classes of the school in the auditorium, with discussion led by the Community Center teacher.
- c) YMCA film showing the activities of the various clubs was used to motivate interest in joining clubs instead of a gang.
- d) Youthbuilders (a significant club movement throughout the city) participated in a panel discussion at the American Museum of National History Film Forum.

The committee concludes that the total program of film use in the school would now be divided between the use of selected instructional films in the classroom, and good films for discussion and human relations in the auditorium. The article then lists films used, and some of the ways in which specific groups made use of them. The original article is recommended.

- **"How to Do It" Series**. National Council for the Social Studies, 1201 16th St., N. W., Washington 6, D. C. 10¢ each.

No. 1 **How to Use a Motion Picture**—Wm. H. Hartley.

A concise summary of motion picture use: the values of motion pictures, the types and sources of films, the steps in use of films, including preview and preparation by the teacher, the need for follow-up and (at times) repeated showings. An excellent short-cut for busy teachers.

No. 2 **How to Use a Textbook**—William H. Cartwright, University High School, University of Minnesota.

The textbook is probably the best single tool available to the social studies teacher. The fact that it may be

misused is not a criticism of the tool but of the training or ability of the craftsman.

No. 3 **How to Use Local History**—Ella A. Hawkinson, State Teachers College, Moorhead, Minn.

An excellent review of the techniques and the many values to be gained from using the resources of the local environment. Highly recommended.

No. 4 **How to Make a Bulletin Board Effective**—Edwin M. Barton, Elizabeth, N. J. and George B. Robinson, New Brunswick, N. J.

What types of material can effectively be displayed in the classroom, some of the good sources of materials, and some of the methods of arranging a good display. Very useful; would be improved with appropriate illustrations.

- **Cameras and Classrooms**—Reese Wade, Kansas City, Mo.—*Catholic School Journal*, June, 1946 p.194.

A recapitulation of the great value of the classroom film. Adds nothing to the literature in this field.

- **Audio-Visual Aids in Social Education**—A Commission of the National Council for the Social Studies—*Film and Radio Guide* 12:27 April, 1946.

The Commission recommends that: teachers and laymen recognize the values of visual and auditory aids; individual teachers, private and public agencies, and educational organizations undertake further research in methods of use; colleges and universities establish more courses and workshops for training teachers in the use of audio-visual aids; educational organizations (including the National Council for the Social Studies) collaborate with producers in the production of materials for social studies; the supply of multiple copies of visual aids and recordings be increased and made more readily accessible; boards of education equip classrooms adequately, and that the National Council for the Social Studies undertake a study of the equipment needed and issue recommendations.

MOTION PICTURE CLUBS

- **Movie Clubs Can Be Fun**—Edward T. Myers—*Popular Photography*, May, 1946, p. 98.

Very useful account of the experience of the University of Chicago Documentary Film Group. The club affords an opportunity for seeing outstanding documentary films and revivals of screen classics. It also serves those interested in the art of the cinema by means of a production group.

The article is written as suggestive of what groups everywhere might do with similar good results. It is a long, carefully-planned article with specific advice on programs, sources, projection technique, and so on. Consult the original.

- **Conference on Children and the Cinema**—Barbara Low *New Era* 27:138 May, 1946.

Report of a conference sponsored jointly by the Cinema Committee of the National Council of Women of Great Britain and the British Film Institute. Discussions and addresses at the conference revealed that the current movement of children's "clubs" in the Gaumont-British and Odeon theater chains has its good and questionable aspects. For example, one speaker pointed out that the motto which the enthusiastic youngsters sing in unison: "We're a Thousand Strong, So We Can't Be Wrong," smacks of dangerous Nazi regimentation! There are desirable aspects of the program, and the author recommends that further study be made by educators, psychologists, doctors, and the like.

A note informs us that an Advisory Council on Chil-

dren's Entertainment has been set up by Arthur Rank (represented by Mary Field). The Council includes educators, representatives of the British Ministry of Education, the B.B.C., the National Union of Teachers and others. The Council is to advise on the kinds of films that should be produced especially for children, on a non-profit basis. These would be shown first in the G-B and Odeon "clubs", and later to audiences everywhere.

PHOTOPLAY APPRECIATION

- **Children's Matinee**—A. O'Brien—*Parents' Magazine*, September, 1946 p. 158.

Describes a community in Oregon where matinee programs were held each Saturday for children 6 to 10 years old. The program was about 1½ hours long, the "feature" lasting about 20 minutes. This was usually a film from the Office of Inter-American Affairs. It was combined with a musical, an animal film and a comedy. The shows were held in a local housing project and the equipment and operator were donated. The average cost for each program was about \$4.50, defrayed by a small admission charge.

The programs were planned by a committee of 3 members of the P.T.A. Publicity was secured through the local newspaper and announcements in the first 3 grades at the elementary schools.

The matinee series was regarded as highly successful, although it is hoped that better films for young children will become available.

PERIODICALS

- **Documentary News Letter**—vol. 6 no. 53 May-June, 1946. Film Centre, 34 Soho Squ., London W1, England.

This stimulating publication for workers in the documentary film movement includes an editorial "Can We See Our Feet?" in which the trend is noted to be away from the social interpretation of current problems, but rather a reporting style where obstacles and weaknesses are side-stepped. "Documentary is on the one hand producing educational, instructive and descriptive films excellently and in large numbers, but on the other hand is neglecting the production of social documentaries."

"Films in Schools" is a news item of a conference held on May 20th last at the Ministry of Education, with Miss Ellen Wilkinson presiding. A committee of teachers was established, with the Ministry included, to draw up programs of films needed for education. The Ministry would arrange for the production of such films, and consultants would include the Ministry, teachers and film makers.

"The Visual Unit" describes a new project of the Ministry of Education. A variety of study materials and visual aids will be produced to be used in teaching a given subject or topic. The first unit is planned on "Local Studies." It will include films, filmstrips, slides, models, posters, illustrated booklets, etc.

- **Sight and Sound**—vol. 15 no. 57 Spring, 1946 British Film Institute, 4 Gt. Russell St., W. C. 1.

"Educational Films—Which Way Now?" by Ken Annakin (p.33) is very stimulating and should be of interest to teachers and producers. The author is a documentary film maker who wanders into the Dartington Hall Film Unit, where teacher-amateurs project some of their films. He is surprised to find that at least two of these were very interesting and instructional without any film tricks or professional editing. Later, when he projects one of his own documentaries, designed for theater audiences in wartime, he is struck with a realization that although his film was cinematically superior, it was unsuited to a school audience. "Though the 4 dialect commentators had provided a pleasing human touch on 35mm., I now found that on 16mm. they needed definite attention and concentration. I felt my attention being split between visual and sound. The two were not 'married' as in normal cinema screening."

The author then admits that silent films still have their place in instruction, because the mind is more at rest, and

the tempo is more leisurely. And the silent ones cost a fraction of the amount needed to produce a sound film.

Films must be made either for education or for the theater. Those intended for the theater must compare in quality and technique with the other subjects on the program. As for educational films, there are thousands of simple lessons crying out to be taught to children by film, and these should be produced as cheaply and as speedily as possible.

This leads to a proposal that teachers be allowed to examine some of the footage in stock-shot libraries, and use these with the editing assistance of professional technicians. Silent subjects of this type would also be useful in other countries.

- **The Films and Education**—*New Zealand Education Gazette*, 25:181 July 1, 1946.

A keen interest in audio-visual education is evident from news items in this and other issues of the *Gazette*. This issue contains an appreciation and appraisal of the movie, *Henry V*. The film stands up very well when compared with the original Shakespeare play and its rendition on the stage.

- **Building America**—"Public Health" vol. 11, no. 6 September, 1946.

A serious and forward-looking interpretation of the public health problem in the U. S. It gives a history of the public health movement in this country and indicates, with graphic illustrations and photographs, the status of medical and health services for the population. Would be an excellent source of information in high school classes or adult study groups interested in understanding current legislation.

- **Cine-Kodak News**—popular Kodak publication, has reappeared after a four-year suspension. This informative and up-to-date amateur movie-making magazine is automatically distributed without charge to all active home movie makers, by the Eastman Kodak Company.

Reduced in size, but with more pages added and with the use of color considerably increased, the publication is bringing readers a "refresher course" in home movie making in its first postwar issue. Titled an "Introductory Issue," this first Ciné-Kodak News—1946 style—stresses the fundamentals of good movies; easy movies; movies that are fun to take and to show.

Future issues will be published as frequently as paper supplies permit, and will contain seasonal and instructive articles of interest to all movie makers. In addition, as in the past, the editors offer a free review and criticism service to all movie makers who want to improve their movie making.

AUDITORY AIDS

- **Possibilities for Use of Radio, Phonograph and Recording Equipment**—Roy W. Gilbert—*Arizona Teacher-Parent*, 34:16.

The article is based on the experiences at Madison School, Phoenix, Arizona. A two-way communicating system with 40 sub-stations is located in the office of the principal's secretary. There are also speakers on the playground. In addition to the two-way communicating method possible, between classroom and office, radio programs may be tuned in to any or all rooms. Records and transcriptions may also be heard. Class "broadcasting" in the auditorium, or to all the other classes, is greatly enjoyed by the children. Recording equipment is used to make a record of children's plays and to help improve diction. Although audio equipment cannot be claimed to hold the answer for all instructional problems, it does have great possibilities to bring interesting educational experiences to the child.

- **FM**—*Science Illustrated*, May, 1946 p.42.

"Something is happening to radio, and listeners shouldn't miss it." This refers to the time when FM will be transmitted on a nation-wide scale. In popular, clear style the article gives a background of the history and principles of FM. Besides the vastly improved radio reception that FM

(Concluded on page 472)

The Church Department

A Monthly Service

WILLIAM S. HOCKMAN, Editor
2043 Mars Ave., Lakewood, Ohio

Third International Workshop In Visual Education

OVER two hundred and fifty leaders in the field of audio-visual religious education, representing nearly forty Protestant church groups in the United States and Canada, gathered at the Northern Baptist Assembly, Green Lake, Wisconsin, the week of September 2-7 for the Third Annual International Workshop in Visual Education.

The six-day program featured visualized worship services each morning and each evening, morning forums, and morning and afternoon workshop groups. Film reviews followed the evening worship services.

Rev. James K. Friedrich, producer of Cathedral Films, Hollywood, one of the guest speakers, told informally the story behind his organization and discussed its plans for the future. Two of the latest Cathedral films, *Go Forth*, which was made for the Episcopal Church, and *For All People*, made for the Disciples of Christ, were screened and well received.

An ambitious program of church film productions was outlined on Tuesday evening and Wednesday morning by Paul F. Heard, executive secretary of the newly-formed Protestant Film Commission. Mr. Heard screened several Navy training films to illustrate certain advanced techniques to be utilized in Commission productions.

A special workshop group composed of editors, lesson writers, visual education leaders from over a dozen denominations tackled the problems involved in integrating visual aids into the curriculum. They studied carefully the changes that would need to be made in Sunday school lessons, weekday and vacation school units, to take advantage of new developments in the visual method of teaching. This group was led by Dr. C. A. Bowen, executive editor of the editorial division of the Methodist board of education.

The use of visual materials and the visual method was studied in five groups: Miss Elsie Miller, of the Children's Department of the Methodist Board of Education, led the group on "Using Visual Materials In the Children's Curriculum"; Dr. Frank McKibben, of Garrett Biblical Institute, led the group on "Using Visual Materials In The Youth Curriculum"; "Visual Materials In Worship" was led by Rev. Lloyd R. Krepps, visual aids counselor in the Northeast Ohio Conference of the Methodist Church; "Film Forums" was led by Miss Margaret Carter, U.S. distribution director for the National Film Board of Canada; and Dr. S. Franklin Mack, of the Presbyterian Board of Foreign Missions, led the group which studied "Visual Materials in Missionary, Social, and World Education".

Other workshop groups included "Introduction To Visual Education", Rev. Harry Spencer, leader; "Regional Programs of Visual Education", led by Rev.

Frank A. Lindhorst; and "Visual Method In Leadership Education", by Rev. Alexander Batchelor and Mrs. Josephine Xander Sheeder.

The afternoon workshop groups were: "Distribution of Visual Materials," Rev. William L. Rogers, leader; "Making Non-Photographic Visual Aids", led by Mrs. August Beck; "Church-Made Films and Slides", by Rev. Allison R. Heaps; "An Introduction To Photography", by Dr. John C. Trevor; and, "Audio-Materials and Methods", which was conducted by Miss Pearl Rosser.

These daily work groups indicate clearly the scope and concern of the Workshop and show that the church is aware of the many facets of visual teaching. Better materials in all media are desired, and more effective techniques of utilization are being sought for every kind of material and with every age group.

A large library of films and slides for church use was maintained during the week and heavily used by those attending for private and group study and previews.

Dr. Benjamin Gregory, Secretary of Religious Films, Ltd., Great Britain, termed the 16 mm sound film "the greatest means of influencing people for good that this world has ever seen". In acknowledging

Left to right: Rev. Hamilton Aiken, Managing Director Religious Film Society of Australia; Rev. Alexander B. Ferguson, Chairman of the Visual Education Committee of the ICRE; Dr. Mary Leigh Palmer, Director of Visual Education for the ICRE; Mrs. Gregory, and Rev. Benjamin Gregory, Secretary of Religious Films, Ltd., Great Britain; Mr. William F. Kruse, Bell & Howell Co.; Rev. James K. Friedrich, President of Cathedral Films, Hollywood.

the financial aid of J. Arthur Rank, English film tycoon, he stated that Rank has given from \$300,000 to \$500,000 yearly to the film production program of the Society.

Rev. Hamilton Aiken, of Melbourne, Australia, told of the program of the Religious Film Society of his country, stating that it had even started to manufacture 16 mm movie projectors. He referred to the new educational act there which requires every state school to have projection equipment, and requires schools, also, to provide "released time" for religious training.

Inspired by a well-planned and reverently presented worship services under the direction of Rev. Oscar

J. Rumpf, and elated by the prospects of an ambitious program of film production by the Protestant Film Commission geared to the curriculum needs of the churches, those who attended the Workshop left the beautiful surroundings of Green Lake enthusiastic about the future of visual aids in the teaching work of the church.

PAUL R. KIDD
Director of Visual Aids
Christian Board of Publication
St. Louis, Mo.

How to Number and Label Stereopticon Slides

A DIRECTOR of religious education in a local church has asked for suggestions and directions for labeling and numbering a small library of stereopticon slides which are used by the church school staff and other workers. He specifies what kind of answer he wants by saying, "Make it simple and practical".

The following suggestions are simple and they are functional. There are two basic purposes for putting data on slides. They are: (1) to help the user in making his preparations, and (2) to facilitate accurate projection and return to the file.

All data to assist the user when he is studying the picture and making his preparation, should be legible

picture is given so that checking with the manuscript is easier and more certain. The penciled number on the extreme left is temporary, and indicates the position of this slide in a specific program, and it should be erased when the slide is returned to the permanent file. (Labels and thumb mark must be put on the proper side of the slide, of course, or the projected picture will be "lefthanded")

This is the minimum of information needed on slides to facilitate use and expedite filing. In extensive collections the numbering system can be expanded to meet the needs of each specific library.

In Figure Two we see the slide in the study and preparation position—the way it will be held when being viewed. The artist's name is given because it is essential. The title of the slide is given also because it is needed. After that, the Scripture reference, if any, is given. The other notation indicates that material on this particular picture can be found in Maus's book, "Christ and The Fine Arts", page 57. This is the minimum of information needed to help the user, and the remaining non-transparency area may be used to indicate other resources on this slide.

Type all this labeling data on white gummed paper trim and attach it to the slide. To protect it from wear and soiling, apply a coat of neutral finger nail polish to all except the area for the temporary number.

Figure 1

when the slide is in position with the picture right side up. All data relative to projection and filing should be placed on the slide to be legible when the slide is in projection position, with the picture upside down. These basic considerations, long overlooked by the slide people, are carefully regarded in the suggestions which follow.

In Figure One we see the slide in the utilization and filing position. The thumb spot, on the extreme right, insures the proper insertion of the slide in the carrier. The operator stands on the high side of the projector and holds the slide in his right hand, thumb upon this spot, for placing in the carrier. For maximum visibility this spot should be white. Next is the file number, or numbers, when the collection is extensive. This slide belongs in the New Testament set and is number 19 in that series. The title of the

Figure 2

There are several points to consider in a utilization tray for holding slides. Its width and depth should be slightly greater than slide-size to allow easy fingering of the slides. It should be long enough to accommodate the used slides in the back end of the box. The risk of breakage is great unless the operator has some certain and secure place for the slides that have been used. To lay them here and there about the table or projector is to invite trouble.

After a selected set of slides has been assembled for use on a particular occasion, they should be held close together and a white chalk line drawn diagonally across their tops. When placed in the tray this line enables the operator to see at a glance whether all the slides are in their proper sequence and right side up. This line should be removed when the slides are returned to the permanent file.

Reconstruction Films

The post-war world needs the three-Rs—relief, reconciliation, and reconstruction. The church should lead the way, and the school should not be far behind, in this great endeavor. Permanent peace will rest upon these three Rs.

Educators in church and school have in three new films—powerful instruments for building the world consciousness of children, youth and adults. Each film can be used to expand the horizons of the mind and the boundaries of Christian concern.

The Pale Horseman is a 19-minute film in sound released by Brandon Films, 1600 Broadway, N.Y. 19, which presents the present actualities and the future threat of that third Horseman of the Apocalypse, plague. For most Americans want, suffering, disease, despair are things reported but not seen. This film plunks us down in the real world.

Suffer Little Children is 10 minutes long and available from Brandon and its affiliates. Every church should use it. It takes more than stories and Scriptures to move the war-hardened Christian to action. Show this film. It has penetrating pathos, logic, and realism. It will appeal and motivate.

He Restoreth My Soul was made for backing up the Reconstruction Funds of the Presbyterians and The Northern Baptists, and can be secured from either 156 Fifth Avenue or 152 Madison Ave., New York. This 20-minute film calls upon every thinking citizen and churchman to support the rebuilding now being undertaken by the church in all of the war-ravished countries.

Use all three films. Set them up in a series. Use them with adult classes and groups. Use them Sunday nights. Each speaks powerfully.

Religious Film Library

A religious film library is being organized by the Louisville (Kentucky) Council of Churches. The plan will be in effect when thirty churches have paid in an initial amount of \$127.50 each and signed the membership agreement. Twenty-seven memberships have been sold.

It is anticipated that operating expenses the first year will be \$1125.00, leaving \$2700.00 for the purchase of 16mm motion picture films. The second year each church will pay a membership fee of \$50.00, and the income from this source, and from the rental of films to non-member churches, will be used for the purchase of films, operating expenses, and the extension of services.

Non-member churches will be permitted to rent films at the standard spot booking rates. Films may be used only by the original renter.

The library expects to secure religious, government, and commercially sponsored free films that are available to established libraries, and will accept memorial films from donors interested in the use of motion pictures in Christian instruction.

An evaluating committee, which will be selected by the members of the library and the Visual Education Committee of the Council of Churches, will preview and approve all films selected for purchase.

Visual Education Institutes

In Indianapolis, Ind., approximately 200 church, club, and school leaders attended the two-day third annual Visual Education Institute on October 3 and 4. Mr. M. Brunson Motley was general chairman of the Institute, and the principal resource leaders were Dr. Alexander B. Ferguson, Chairman of the Visual Education Committee of the International Council of Religious Education, and Lawrence C. Larson, Research Consultant in Audio-Visual Aids, Indiana University.

The Visual Education Workshop for the Washington, D. C., area was held at American University on the evening of Sept. 16, 17, and 18th, with more than 500 attending. The guest leader was Dr. Paul H. Vieth, of Yale Divinity School. The three-hour evening session was used for a general session on utilization, for a workshop session on organization and materials, and for previews.

A Good Sign

A keen and intelligent interest in all forms of visual education was shown by those attending the first National Workshop for Directors of Religious Education according to Rev. Frank Grebe, Director of Education in Westminster Presbyterian Church, Buffalo, N. Y., who served as dean. This workshop was held on the campus of Lake Forest College the last week of July.

From Britain

According to an announcement in the *CHRISTIAN SCREEN* magazine the newly-formed Christian Film Council (of Britain) proposes by means of the "cinematograph to make known the principles and teachings of Christianity through the production and distribution of Christian films." The Council is composed of men and women, drawn from many spheres of achievement and representatives of every section of the Christian Church, who propose to make the film an instrument for the evangelization of the masses at present outside the Churches.

The Council will undertake the production of a series of "screen services", complete in themselves, and mounted on a 1,600 foot spool with a running time of 40 to 45 minutes. The first series to be produced will deal with such human problems as "Loneliness", "Sympathy", "Worry", "Human Pain", "Temptation", and "Courage". It will also produce a series of discussion films for youth groups, and another for use with children.

Popular Guide Being Revised

The first edition of the Wartburg Film Service's "Guide To The Use of Visual Aids In Catechetical Instruction" met with such general acceptance that it is now being revised by a committee to give more information and a more systematic and logical arrangement. This progressive denominational film service announces scenarios for filmstrips which present the subjects of the catechism.

New Christmas Slides

Church-Craft Pictures, formerly Cathedral Pictures, of St. Louis 3, Missouri, is currently engaged in a greatly expanded production program, and has assigned the Cecil B. DeMille Pictures Corporation to make a series of 2 x 2 color slides covering stories of the Old and New Testaments. The first, just published, is *Christmas Blessings*, consisting of 40 slides presenting the Biblical account of the Christmas story—the Old Testament prophecies, the Birth of Christ, the Visit of the Wise Men and the application of the Christmas message to the world of today. *Christmas Blessings* comes complete with program guide, hymn slides and specially prepared recitations for children's Christmas programs and Christmas worship services.

The Church-Craft slide production schedule calls for 90 stories each from the Old and New Testaments, an estimated 1,500 color stills in all. "Our production activity is not for entertainment, but to provide high quality teaching tools for the church," states Paul G. Kiehl, B.D., general business manager of Church-Craft Pictures. "Intensive research is carried on before production begins on any one series, so as to make certain they are correct, Biblically." Mr. Kiehl has had 10 years of theological training. His thesis at Concordia Theological Seminary in St. Louis, where he completed his studies, was on "Bible Stories Photographed in Color" which is being used as the scenario for the present series of Bible stills.

A circular giving complete list of the Bible story slide sets currently available can be obtained from Church-Craft.

Lutheran Release

A feature length motion picture in the interest of youth, *Youth for The Kingdom*, is announced by its producer, the Lutheran Laymen's League of the Missouri Synod. This 75-minute dramatic film is being received favorably by Lutheran and other churchmen as an interesting, well-constructed, and convincing film. Its story deals with the problems of youth, and is developed in such a way as to interest both youth and their parents. Make inquiry at your nearest film distributor.

The Palace of The King, a sound "visualogue"; consisting of 24 kodachrome slides and two ten-inch, double faced, long-life unbreakable records, provides basic instruction on the meaning and appointments of the (Episcopal) church. It can be used in the church school, confirmation classes, vacation church schools, and with youth groups. Complete units are now available from Visualogues, P.O. Box 462, Howe, Indiana.

Can You Help?

Mrs. Lucy H. Howard, who has written plays which have had a wide circulation in her denomination, writes that she would "like to study the writer's angle along the line of visual education". Do you know of a course she could take, or of a text or two she could read? If you do, send your suggestions directly to her at Box 174, Hartwell, Georgia.

A Frequent Question

Rev. Harold L. Clark, of Brick Presbyterian Church, Rochester, N.Y., asks: "What are the denominational boards, and other producers of study materials, doing in the way of correlating visual materials with lesson materials?"

A complete answer cannot be given here. Not very much has been done. Paul Kidd, of the Christian Board of Publication, has issued a bulletin correlating visual aids with a certain unit of the Bethany lessons. The International Council of Religious Education issued a "Picture Guide for Uniform Lessons For 1946". Here and there a local church has worked at the job. Aside from these scattered efforts, there is little tangible material dealing with this problem.

Whose job is it? Can the curriculum builders of the several denominations undertake the task, with or without the assistance of those extensively familiar with visual resources and intimately acquainted with the educational processes of the local church? Are the lesson-producing agencies of the denominations facing the necessity of employing personnel to integrate visual resources into the curricula unit by unit? How much of this job belongs to the Protestant Film Commission? Will the local church be obliged, for years to come, to do its own integration? How can the average church school worker, minister, or director have the extensive knowledge of resources and processes which this presupposes?

Mr. Clark's question must be answered. Denominational curriculum builders and writers, and their supervising boards, will be expected by the local church and local leader to make the first move. Descriptions of these "moves" will be welcomed by the readers of this department.

Film on Protestant Education

Past and present in Protestant education in the Province of Quebec is the subject of a motion picture, in color, which was produced by the Department of Education and the Provincial Association of Protestant Teachers, in connection with the coming celebration of the centenary of Quebec's Education Act.

Four main sections make up the subject matter of the film. The Prologue will give a general impression of Quebec, its social and economic, religious and linguistic background. This will be followed by a portrayal of the history of education in Quebec. The next section depicts a cross-section of modern school activities. The Epilogue pictures preparation of teachers for their work in the schools, improvements in assistance to teachers, and modern aspects of Quebec's school building program. A talking film, in color, with musical background, the picture is expected to run about half an hour. The project is under the direction of C. Wayne Hall, Supervisor of English in Protestant Schools, Department of Education, Quebec.

Teach your students about

The POST-WAR WORLD and its PEOPLE

through the FILMS OF THE NATIONS releases—a group of selected 16mm sound films on many lands, now available from Ideal Pictures Corporation for sale (on an exclusive arrangement covering all but thirteen Eastern states) and rental throughout the entire country. Some 60 subjects are now ready, with more to come. Here are just a few of them. (Figures in parentheses show number of reels).

CZECHOSLOVAKIA The River Moldau (2)

Explains the historical, cultural and economic background of the Czech Republic. Commentary by Jan Masaryk, the well-known Czech statesman, was compiled from the works of Thomas G. Masaryk, the founder and first President of the Republic. Smetana's symphonic tone poem, played by the Czechoslovakian Philharmonic Orchestra, forms beautiful musical background.

GREAT BRITAIN The Fenlands (2)

Curving inland on the coast of East Anglia, this part of England, once shunned for its evil fevers and fogs, was in reality a wasteland of ruin. Nearly 300 years ago the people of the Fenlands began a perpetual battle with the waters. The intricate drainage system which developed has changed the desolation into rich agricultural country.

HOLLAND Friesland—Holland's Northernmost Province (2)

A revealing account of the great importance of this dairy and agricultural Province in supplying the food needs of its less fortunate neighbors in the war-torn sections of Holland. A heartening story illustrating once again the indomitable spirit of Dutchmen pitching in to work out their post-war problems.

LOAN SERVICE CHARGE: \$1.00 per reel for one days' use, with greatly reduced charges for multiple days' use.

Write to our nearest office for bookings, and ask for special FILMS OF THE NATIONS catalog covering all subjects currently available, and giving complete information on sale prices as well as loan service charges for more than a single day's use.

INDIA The Coconut Tree (1)

Shows the importance of the coconut tree in its relation to India's economy. Not only does this tree supply food and drink, but the fibres of the shells are the base of some of India's most important industries. The oil, the leaves, the shrub, the shell, in short, every part is used to advantage.

LAPLAND The Wind from the South (2)

A charming blend of fact and fantasy, highly informative of a little known part of the world—the land of the Lapps in northernmost Sweden. Young Nils, longing to go with his elders on their yearly migration to the mountains, falls asleep and makes the visit in a dream to this land of beauty and grandeur.

NETHERLANDS EAST INDIES Toradja (1)

A travelog through the island of Celebes in the Netherlands East Indies Archipelago, its cities and villages along the coast and in the interior, with special reference to the Toradja tribe, its folklore and ceremonies, intricate handicraft and unusual burial places.

NETHERLANDS WEST INDIES Dutch in Latin America (1)

The country and the peoples of the Netherlands West Indies in the Caribbean, and Dutch Guiana on the mainland of South America. Their cities, folklore and industries. The largest oil refineries in the world are shown on the island of Aruba, while the source of bauxite, the valuable ore from which aluminum is made, is shown in Surinam.

NEW ZEALAND This is New Zealand (1)

A good overall story of New Zealand. Scenic shots are combined with informative material about the farms, cattle and dairies, the cities, industries and the people themselves. Interesting sidelights are the dances and customs of the natives.

SWITZERLAND Swiss Scrap Book (2)

A good overall picture of Switzerland, particularly her people and their activities. Featured are the typical dances and parades of age-old annual carnivals and festivals, many of them with a religious aspect. The beautiful Swiss countryside is shown in all its famous glory.

The ABC's of Audio-Visual Equipment

“Where To Show It: One Man's Opinion”

Edited by
ROBERT E. SCHREIBER

WHEREVER purveyors, perpetrators, and proponents of the use of audio-visual instructional materials assemble, subjects for controversy are readied for the gala occasion. And since the motion picture seems the alpha and omega of such materials in many minds, the place of its exhibition in the school soon becomes a topic of more than tepid argument. Seldom, however, do the parties to these sessions of heat recognize that the “right” answer to the controversy may be a function of the relationships of three closely associated problems; instructional, administrative, and physical facilities. The question of where educational motion pictures are to be shown in the school may be, in addition, a function of the requirements of present practicality and future desirable refinement.

Hence, one cannot necessarily condemn, by surface inspection, a school in which films are shown in the auditorium or another in which only a specially equipped audio-visual room is used. Either practice may be the only practical solution to present problems. The enlightened audio-visual administrator no doubt has future refinements in mind. If not, if he is content with present arrangements of this kind, it is then opportune to step in and batter him academically about the head.

But, let us be more specific as to the three problems hinted at in the foregoing padded paragraphs. First of all, instructional: those who have studied the use of audio-visual materials are, for the most part, in agreement that such materials are used with greatest effectiveness in the classroom itself. The setting is at once academic, there is little theatrical tinge, and integration with subject matter and other course materials may be accomplished with facility. The teacher may prepare the class for the showing and quickly resume class discussion thereafter without the danger of having her preparation “wear-off” by a noisy junket through the halls. Clearly, the desirability of using motion pictures in the classroom may be academically underwritten.

Problems involving the administration of educational motion picture exhibition frequently center in the unfortunately small provision often made for personnel for such administration. Superintendents may provide a school with a full time librarian, adequate janitorial assistance, and what-not, but the necessary generosity of at least one full-time person for audio-visual administration is seldom considered. Relief from one class in exchange for undertaking such administrative duties is not fair either to the individual involved or the instructional program. In such cases, what more can be expected than that projection equipment is set up in the auditorium and left there or that

the audio-visual room remains the projection stronghold? — On the other hand, there is the easy-chair director who maintains that it is too much trouble to organize projectionists clubs and move equipment about from room to room; the auditorium is just fine and look how many classes can be gotten in it at once!—Given time and a reasonably adequate set of physical facilities, however, the enlightened director exploits the educational motion picture by showing it in the classroom whenever possible, combining classes in a projection room or auditorium when scheduling difficulties arise, and generally making the instructional needs of teachers and pupils come first.

Whatever the enlightened administrative philosophy or staff interest in the adequate utilization of the educational motion picture, the available physical facilities determine to a large extent where exhibition will take place. The auditorium has been utilized first in many schools since it can most often be easily darkened and since the use of the 16mm motion picture was early influenced by the requirements of 35mm exhibition. As the use of the 16mm medium has increased, the trend in many quarters has been to move the place of exhibition to the classroom. The tendency of some schools, however, to continue mass exhibition of educational subjects has brought considerable agitation for the provision of audio-visual projection rooms, in order to get educational films out of the auditorium and into a more restricted audience situation involving only one or two classes at a time. This agitation has been mistaken in many instances as a sign that films should be shown in neither classrooms or auditoriums but in such specially equipped rooms. Logically, however, the trend is actually from auditorium to projection room; from projection room to classroom.

Main obstacle to the use of classrooms for projection purposes has been inadequate darkening facilities. Until such time as reasonably efficient screen illumination is obtainable therein, no one is going to insist that the classroom be used—no matter what. However, in most schools, some rooms may be utilized while others cannot. For such situations, use of a projection room to care for the latter classes is in order. Conflicts in film scheduling may be resolved through the use of a large projection room for two classes. The auditorium may even be used for similar purposes; it is not the room itself that audio-visual educators object to—it is what such use often stands for: mass exhibition of films unrelated to the subject matter being studied by various classes, staff apathy toward the potentialities of the education-

SOCIETY FOR VISUAL EDUCATION, INC...

in co-operation with...

The National Safety Council and CORONET Magazine

Here is a new filmstrip offer of exceptional value and timeliness:

Each month, for 8 months, starting with October, 1946, the Society for Visual Education, Inc., will make available not only the regular 35 mm CORONET filmstrips of 25 pictures taken from Coronet Magazine, but in addition an authoritative filmstrip of 40 frames or more on SAFETY EDUCATION. This added, new 35 mm filmstrip feature, prepared by the National Safety Council, presents a striking and effective argument against the tragedy and damage caused by disregard of fundamental safety rules.

Each of the filmstrips on SAFETY EDUCATION will be accompanied by a separate teacher's manual prepared by the National Safety Council. Each filmstrip of the CORONET Picture Stories will be accompanied by a reprint of the Picture Stories, to serve as a teacher's manual.

Both the films and the reprints become the permanent property of the subscriber, to be used from year to year as desired.

educational groups, 1,000 churches and 750 different units of the 4 branches of the Armed Forces.

Now, through the courtesy of the National Safety Council, the Society for Visual Education, Inc., has arranged to send out simultaneously with the Coronet films the series of 8 urgently needed films on SAFETY EDUCATION. These films are especially designed for Intermediate and Secondary Schools.

Subject Matter:

The first two CORONET Picture Stories in the new series are "I Fight Fires" for October and "A World in Action" for November. Others to follow each month through May, 1947, will be equally or more interesting.

The filmstrips on SAFETY EDUCATION present 40 to 50 frames on subjects that need urgent attention. These are "Fire Safety," "Recreation Centers a Community Problem," "Traffic Safety," "Safe Practices with Laboratory and Electrical Equipment," "Small Machine Tools," "Home Safety," "Bicycle and Pedestrian Safety," and a Summary on the Accident Situation.

WHAT YOU GET 16 FILMSTRIPS

(about 520 pictures)

FOR ONLY \$12.00

to be released in units of one CORONET filmstrip and one SAFETY EDUCATION filmstrip each month for 8 months—October, 1946 through May, 1947.

[Reprints of the CORONET Picture Stories are available for individual use at \$3.00 for a set of 25 copies each month for 8 months.] 200 reprints in all in each complete set.

A Proved Educational Contribution

CORONET filmstrips have been used by more than 5,000 schools, discussion and

ORDER IMMEDIATELY

To be sure you start getting your films with the very first release, mail your order today to:

SOCIETY FOR VISUAL EDUCATION, INC., Dept. 15C, 100 East Ohio Street, Chicago 11, Illinois

Please enter our order for the following:

— Subscriptions for the 8 CORONET filmstrips and 8 SAFETY EDUCATION filmstrips at \$12.00 for all 16. (Orders not accepted for individual subjects.)

— Sets of 25 copies of each of the 8 CORONET Picture Story reprints—totaling 200 reprints for the year in each set—at \$3.00 additional for each set. (One complete set of 200 is the minimum order for reprints.)

(Please check.) We have projector equipment to show single frame filmstrips.

Remittance or Official Order Should Accompany Coupon

ABC's of Audio-Visual Equipment

(Concluded from page 454)

al film, inadequate budgetary provision for audio-visual instruction, or lazy administration.

Adequate darkening for educational film exhibition is, of course, not the only consideration regarding facilities, but it is perhaps the one which most often keeps the motion picture out of the classroom. More frequently mentioned as the reason why films are not more widely shown in the classroom is the one about projectors being too heavy. For years we have seen directors raise accusing fingers at manufacturers in audio-visual clambakes and complain about undue fatigue, aching backs, and general instructional frustration. Weight of projectors makes a wonderful excuse, and it has undoubtedly been used to explain why such and such a school is proceeding rather slowly in audio-visual utilization.

But, all kidding aside, the school DOES need a light-weight projector for classroom use exclusively. Provision of such equipment—plus efficient darkening devices—will eliminate the greatest deterrents to increased motion picture usage; actual and psychological. Then all we shall need to conduct efficient programs of visual instruction service will be money, intelligent selection of materials, money, curriculum-wise utilization, money, adequate administration, and money.

A Reader Speaks

DENNIS Williams' wholesale condemnation of industry sponsored films in your May 1946 issue deserves further consideration.

Mr. Williams' premise is stated as follows: "Truth, without any trace of prejudice or bias for special interest or group has always been the first requirement for a course of study, instructional materials, or the instructor. If any of these failed to meet this requirement, they have been discouraged from entering the door to American classrooms."

Throughout the article he implies that *Truth* can be established in the colleges and publishing houses and fed to the "young, impressionable minds" of our youth. That is the cloistered education of the middle ages. Unfortunately *Truth* is not so easily discovered and isolated. The modern conception of education is to bring all the facilities of the community to bear, including the minds of the youth, in the search for *Truth*. Surely we have abandoned the idea that children's minds should be insulated from the controversies and opinions of minorities, or the unsettled problems of our day.

Mr. Williams says: "Those who founded and have maintained our public school system even said 'no' to such groups with as noble and unselfish motives as the churches when they offered to sponsor the educational system in a democracy."

Of course all of us would oppose turning over the administration of our schools to a church, or an industrial group. But Mr. Williams has little faith in the judgment of school administrators when he assumes that, should they accept donations from industry to

pay teachers' salaries, they would permit those teachers to advertise the industry's product. He should realize that such a teacher would be under special surveillance to prevent any slightest advertising advantage. If product advertising has crept into our schools through sponsored educational aids, that is the point Mr. Williams should attack. He is wrong when he denies industry the right to seek good will through bringing its peculiar contribution to the school curriculum. The whole community must be brought into the school room, and the school must go out into the community. No longer do students merely study prescribed texts. Administrators should teach us all to look upon the school with the same reverence with which we approach the cradle and should encourage us to come, bearing our gifts. Church, business and industry have an interest in contributing much more than taxes toward making the school the cradle of a better and more glorious democracy.

Mr. Williams shows his lack of faith in school administrators when he assumes that one of them might show a film on the "Care of a Tractor" to an indiscriminate group of children. He might assume that a teacher would show such a film to students involved in the use of a tractor, and would use the film supplied by the manufacturer whose tractor was being used by the students. He is sorry for the village blacksmith who cannot afford to sponsor films. However, the blacksmith can demonstrate his trade and dexterity to the pupils individually, or to a whole class,—a much more effective educational method.

School administrators must adopt the same sensible attitude and practice the same discrimination that we expect from a competent parent, who guards the home against intrusion from evil sources, but encourages the best he can find in the community to enter the home to enrich the family's experiences.

However, since they represent all parents, school administrators cannot expect businessmen to follow Mr. Williams' narrow dictum and "leave it to unbiased, professional educators to evaluate the needs and interpret what and how our youths shall be taught." We have delegated final decision to them alright, but as interested citizens we reserve the right to make suggestions, offer to come into the schools with our peculiar contributions, and to be severely critical of the way they interpret and supply the needs of our children. If we are encouraged to do so, we will "put up less resistance when tax programs are advocated."

The modern successful teacher no longer depends upon the textbook publisher for material to broaden her pupils' experience. Teachers have discovered that much of their material on economics and business is highly prejudiced and unscientific,—seldom checked against the facts which are available only in the laboratory of business. Teachers who are awake apply the same discrimination to them that they do to materials offered by industry. However, they expect to find good in both. They have resented efforts to dominate and restrict their sources.

Quality...based on standards and craftsmanship

Examining a Star with a Microscope

In testing photographic lenses at B&L, a star image is beamed through the lens from an aperture of $1/1000''$ diameter. The image is viewed with a microscope and the lens focused at infinity with its optical axis in alignment with the axis of the collimator. With this mathematically exact lens testing instrument, designed and built by B&L, inspectors check resolving power and focal length. They measure the magnitude of spherical, axial chromatic, and lateral chromatic aberrations; coma; astigmatism; curvature of field; and distortion.

Scientific control of image quality in photographic lenses is standard practice at B&L. And this is one more of the precision functional tests that hold completed B&L lenses rigidly to their formulas. Formulas are designed to attain photographic images to satisfy specific photographic problems.

Thus, only *uniformly* corrected lenses are released by B&L. Bausch & Lomb Optical Company, 688-10 St. Paul Street, Rochester 2, New York.

The Film and International Understanding

Three Discussion Slidefilms on World Order

DR. JOHN E. DUGAN, Editor
Haddon Heights, New Jersey

How to Conquer War . . . The discussion slidefilm "How to Conquer War" was reported on in this department last year. This film tells how faith in the principle of federal government resulted in the found-

ation and growth of our own nation and suggests how this principle might be applied to world affairs in the interest of peace. A new edition of the film has been issued, and the producers have conducted a questionnaire survey of the use which purchasers have made of the film. Eight hundred prints are in circulation. According to replies to the questionnaire, the average print has been shown fifteen times. One person reported seventy-five showings. The film is in circulation in all parts of the United States, in all English-speaking countries, and in Holland, China, and India. Further international use of the film is being made possible by translation of the script and titles into other languages. A Chinese adaptation is being made by the National Christian Council of China's Visual Aids Director.

How to Live with the Atom . . . A discussion slidefilm, "How to Live with the Atom" has been prepared by Film Publishers, Inc., in cooperation with the National Committee on Atomic Information and the American Federation of (Atomic) Scientists. This film uses cartoons to visualize the various ways being currently considered to avoid world destruction by atomic warfare.

Several accessory aids are available to help make the showing of the film effective. One of these is a script of printed speechnotes, giving comments which the person presenting the film may make while the cartoons are projected on the screen. A discussion guide also is available. This guide contains questions and answers commonly arising after the showing of the film, gives suggestions for leading a discussion, and contains complete directions for projecting the film. A 15-minute, 16 inch electrical transcription recorded at 33-1/3 revolutions per minute has been prepared to accompany the film.

Some of the cartoons from the film are presented on this page.

World Control of Atomic Energy . . . Another discussion slidefilm, "World Control of Atomic Energy", has been released under the same auspices. This film explains in clear visual detail the working of the plans proposed by the State Department for international atomic control. The same types of accessory aids, speechnotes, discussion guide, and electrical transcription, are available for use with this film.

Use of Discussion Films

Educators and others who use these films should clearly understand that they are *discussion* films. Their showing should be followed by a discussion which grows out of the material presented in the films. This does not imply that the material presented in the film must be either accepted or rejected *in toto*. It does imply that the material should present a problem and initiate an intelligent discussion about it.

Frames from "How to Live with the Atom"

THE SHINING KNIGHT OF THE 20th CENTURY. . . . Here we are holding our atom bomb in sacred trust for the rest of the world. Do other nations think our motives are as pure as we believe them to be?

THE VALUE OF SECRETS IN A WORLD OF KNOWLEDGE. . . . Our atom secrets won't last long. Here we see the average man reading up on the basic scientific facts already known about atomic energy, while other atomic scientists and engineers of other countries are "cracking open" the remaining secrets for themselves.

ATOM BOMBS ARE MADE TO BE USED. . . . Maybe you'd better think twice before saying that every country will be afraid of atomic reprisals once the nations are all armed with atomic bombs. The fellow on the left, like Hitler, thinks he can win easily if he takes the other fellow by surprise. The one on the right says to himself, "This fellow is up to something. Maybe I'd better strike first while 'he striking is good," and the next thing you know we'd be in the midst of an atom war.

NO PLACE TO ESCAPE FROM ATOM BOMBS. . . . Maybe you're thinking of traveling to some far off place to get away from the threat of atomic bombs. Save your energy—you'll need it! There is no escaping the Atom Bomb. No place on earth is out of reach of atom bombs carried by planes or rockets.

NEEDED: WORLD CONTROL OF ATOMIC ENERGY. . . . Our only hope of safety seems to be in getting together with all other nations and getting the atom tied down and under control. But common sense tells us that we cannot begin to be safe as long as there are atom bombs anywhere in the world. And the only way we can get a world without bombs is to have some authority above nations with power to prevent nations from having bombs. We can't get something for nothing—Which do we value most? Our freedom to make bombs—or our security?

The Pale Horseman

Here is the bitter record of the health problems of two million displaced persons who at the war's end lined the roads of Europe, Asia and the U.S.S.R., living in primitive filth.

The Pale Horseman records the herculean epidemic control activities of the Allied Armies—their purification units, sewers, hospitals, clinics—all of which have successfully controlled the spread of typhus, malaria and similar infectious diseases. Soberly the film warns, *there is no guarantee that such epidemics can continue to remain checked.*

Medicine, clothing and particularly food are urgently needed. The film speaks eloquently in behalf of the world's eight hundred million hungry.

UTILIZATION

Program film for all community groups:
Churches • Veterans Organizations •
Adult Education Groups • Foreign Relief
• Public Health and Welfare • Social
Service • High School and Colleges.
A powerful aid in raising funds and supplies for emergency campaigns.

Experimental Research in Audio-Visual Education

DAVID GOODMAN, Editor

An Evaluation of Selected Instructional Films in Science*

By OREON KEESLAR, Director of Audio-Visual Department, Kern County Schools, Bakersfield, California.

TWENTY-FOUR motion picture films in science which had been rated as "excellent" in both *The Film Utilization Guide* (University of Michigan) and *Selected Educational Motion Pictures* (American Council on Education), were analyzed in order to determine the extent to which "the best" instructional films in science contribute, particularly by means of the **unique** and the **specialized** functions of the medium, to the realization of three of the major objectives of science teaching in the high schools. The three objectives chosen were (1) to effect an understanding of scientific principles that will function in the everyday life and activities of the student, (2) to teach the elements of scientific method as skills to be employed in the solution of problems, and (3) to develop the scientific attitudes. For the purposes of this study, the functions performed by motion pictures in science teaching were classified as "unique" when the educational experiences provided thereby are possible only through the medium of the motion picture, and as "specialized" when other visual aids might provide the same experience, though without benefit of the technical versatility possible in the motion picture medium.

It was considered that a scene serves a "unique" function when it depicts:

1. *Methods or processes not directly demonstrable*, so that a special form of pictorial demonstration is necessary to show the method by which men perform the processes involved. These processes must involve human manipulations and activities which, for complete demonstration otherwise, would (a) Extend over too long a period of time for classroom purposes, (b) Involve a complexity of intermediate steps or acts requiring the motion-picture medium to show the interrelationships of the various parts to the whole process, (c) Be impossible because of the student's confinement in time and space.
2. *Action observable only vicariously*, providing such experiences as contribute to the student's awareness or understanding of scientific subject matter, but which would be unavailable except through the motion picture medium because of (a) The student's confinement in time and space, (b) The limitations of the ordinary high school's demonstration facilities.
3. *Unobservable action through animation*, using progressive series of drawings to simulate motion. (A moving arrow or pointer is not considered to be an example of animation.)
4. *Swift movement reduced by slow-motion photography to visible action*, which would be (a) Unobservable because of the extreme rapidity of the motion, (b) Readily observable but moving too swiftly to permit clear understanding of the nature of the motion.
5. *Slow movement speeded up by time lapse photography to visible action*, which would be (a) Unobservable because of the slowness or remoteness of moving object, (b) Readily observable but moving too slowly to permit a clear understanding of the nature of the motion.
6. *Added simulation of reality through recorded sound or sound-effects* with the film's visual record of the motion but only when the sound assists in reifying the aspect of science which is the theme of the film.

It was considered that a scene serves a "specialized" function when it employs:

1. *Photomicrography*, depicting action otherwise unobserv-

able except through use of individual microscopes or microprojection.

2. *Miniature photography*, depicting action otherwise unobservable except through use of moving scale models or other miniature devices.
3. *Depiction of the human elements of science through the dramatic medium of the motion picture*. The scene must demonstrate how a scientist attacks and solves his problems. It should show him actually pondering the problem, experimenting, studying results, and drawing conclusions. His use of the scientific method and his possession of the scientific attitudes should be revealed by *pictorial* means, and the depiction should be accompanied, in the narration or titles, by direct verbal reference to method or attitudes.

This list of functions was judged by four specialists in the teaching of science to be adequate with regard to its appropriateness, practicability of application, objectivity, and comprehensiveness.

Criteria were also prepared to indicate concisely the conditions under which a contribution is made to one of the three major objectives of science teaching, notably only when a *direct reference* is made in the narration or titles accompanying a scene to a principle, an attitude, or an element of scientific method. Direct references might appear (a) as a clear statement of a principle, element of scientific method, or attitude, (b) as a statement capable of being reworded or paraphrased to become a principle, element of scientific method, or attitude, or (c) as a technical word or phrase which could not be understood without knowledge of a principle, element of scientific method, or attitude. These criteria were deemed necessary to render the findings more objective, eliminating any tendency of the investigator to read into the scenes implications not necessarily justified, subtle ideas which were not likely to be sensed by students viewing the films' contents, and which might not have been in the minds of the men who planned and produced the films. The criteria were carefully validated by the expert judgment of three specialists in the teaching of science to determine whether each criterion was appropriate, practicable for application, objective, and comprehensive.

A special form of check-sheet was devised for recording data, and a trial analysis of one film not included in the list selected for study was made by the investigator for the purpose of developing and refining a routine of film analysis, gaining facility in its use, and testing the adaptability of the check-sheet for its purpose. In this study, the unit of measurement for statistical purposes was the *scene*.

Findings and Conclusions

1. The chief functions now performed by the best motion pictures available for teaching science are (a) the provision of vicarious experiences by "bringing the world into the classroom" (action observable only vicariously), and (b) the depiction of unobservable action.

2. Several of the unique and potentially valuable functions of motion pictures are utilized far too little in films designed to teach science. These are (a) scenes simplified by animation, slow-motion photography, (b) sound recorded to reify the subject studied, and (c) instruction in a process or method of doing something.

3. Photomicrographs of objects in motion are used extensively and to good advantage, fifty-two such photomicrographs being found scattered through fourteen of the twenty-four films.

4. Miniature photography, which is exceedingly valuable in depicting certain types of subject matter in science, is not utilized to the extent which seems justified by the nature of the subject matter treated in the twenty-four films.

**this catalog
will suggest
exciting programs**

time now
to reserve the films
you may wish to show

masterpieces of America's foremost film producers, a great variety of educational films, and dozens of short subjects and cartoons are cataloged in this book. Every one is available from Films Incorporated for showing on 16-mm school projectors. By making cancellable-film-reservations immediately, you can assign to films an important part of your program burden.

your free catalog is ready now. To receive it promptly mail the coupon. Then, even if your plans are only tentative, don't hesitate to make reservations. The sooner you do the surer you are to get the popular features when you prefer them.

Please send me my **free copy** of the School List catalog.

MAIL COUPON TO ADDRESS NEAREST YOU

 The form is a rectangular coupon with a film reel graphic on the left side. It contains three horizontal lines for "Name", "School", and "Address". At the bottom right, there are two checkboxes: one for "We have the use of a 16-mm" and another for "sound", and another for "silent projector". The "films incorporated" logo is visible at the bottom left of the coupon area.

Experimental Research in Audio-Visual Education

(Concluded from page 460)

5. The depiction of the human elements of science is limited largely to those films of the inspirational-dramatic type, that is, to such films as those which dramatized the struggles of some scientist to overcome the bigotry or superstitious ignorance of the society of his time. Hence, the personalities, attitudes, and methods of scientists at work are not being demonstrated as intelligently or as fully as their importance in science on the high-school level warrants. Although the bearded scientist peering tensely at test tubes amidst a forest of miscellaneous glassware was often dramatized, these glimpses never seemed to serve any definite pedagogical end.

6. There is good evidence that the best instructional films in science may teach, or at least are fitted to teach, scientific principles. However, the twenty-four films studied reveal no definite intention or attempt to teach scientific principles. At no time were the observers of the films given an opportunity to generalize upon the facts presented. Obviously the prime objective was to dispense information to a passive audience. The narrator knew so much which had to be told. In the brief ten minutes which were at his disposal, he often had to discuss broad fields of subject matter quite comprehensively, cramming large amounts of generalized information into a short space of time. The statements of principles resulted, therefore, quite accidentally and unintentionally as an expedient in the interests of brevity. No direct evidence was found to indicate that the makers of films hold the elucidation of a scientific principle to be either a primary objective of science teaching or pedagogically valuable in itself.

7. There was likewise no evidence that the best motion pictures adequately provide for teaching the elements of scientific method. The producers of the films do not seem to be aware that the method of inquiry is a vital aspect of science. The motion pictures of the informational-expository type, which are devoted exclusively to dispensing information, were invariably replete with scientific facts but deficient in exposition of the method used to discover those facts. The inspirational-dramatic type of film naturally dealt almost exclusively with the "struggles" of scientists to solve problems, yet nowhere were their methods of problem-solving intelligently demonstrated.

8. No mention of or effort to teach the scientific attitudes through the medium of the best instructional films available today is evident. Consequently, since such evidence as is available strongly indicates that attitudes cannot be effectively inculcated incidentally or indirectly, it seems unlikely that these films would function to an appreciable extent in teaching the scientific attitudes.

9. There is evidence, therefore, which indicates that the film producers not only fail to provide the means of achieving the most important objectives of science teaching to the extent possible through the motion picture medium, but that they also fail to use optimally the **unique** and the **specialized** functions of which the medium is capable. Nearly half of the contents of the twenty-four films served no unique or specialized functions and contributed to none of the three major objectives. The fact that at least a part of this approximate half is needed in all probability to effect continuity in the film does not mitigate the deserved criticism that many potent means of effecting important outcomes in science teaching were not employed in these films to the extent that was practicable.

● How to Insure a Successful Film Showing—published by the Aetna Life Affiliated Companies, Hartford, Conn.

While handbooks have been printed concerning the operation of projectors, this little 16-page booklet, prepared for use by Aetna's agents in connection with the showing of Aetna educational films, is believed to be one of the first of its kind covering the subject of staging a successful showing in its entirety. Among the subjects covered are selecting the room, placing and operating the projector, testing the U. S. Public Health Service, Atlanta. "Visual Education—equipment, use of different sizes of lenses, and general hints on lighting, ventilation, and programming.

N.Y. Film Council Hears Times Critic

A LUNCHEON meeting of the New York Film Council had as its speaker Bosley Crowther, noted *New York Times* film critic. Reporting on a recent west coast trip, he expressed his opinion that Hollywood is not prepared to produce straight information films, nor is the regular movie theatre prepared to distribute them, mainly for purely economic reasons.

Addressing himself chiefly to the producers of informational films in his audience he said:

"Hollywood is doing a job, and certainly is doing it very well, according to its own lights and those of the stockholders of the companies, in the manufacture of entertainment films. But I feel that you are the custodians of a form of film which is completely apart from the type of pictures being made in Hollywood and that any possible contemplation on your part of production alliances or even the use of Hollywood facilities for production would be very unfortunate."

The immediate future of the information film insofar as distribution is concerned, is with non-theatrical outlets. The commercial theatre, he said, has reached a saturation point with this kind of product.

He predicted, however, that if the country had to face another depression, that the "whole complexion of the commercial theatre might change. I can see a breakdown of the mass audience theatre, if such a depression overtakes us," he said. "We may find that something will emerge as a community center idea, architecturally as well as culturally, where the motion picture theatre will serve as a focal point and wherein all types of motion pictures, entertainment as well as information, will find a ready outlet."

Mr. Crowther remarked that there has been a distinct borrowing of the so-called documentary technique in the production of entertainment films, and he cited *The House on 92nd Street* as an example. "This has been a very happy development and it has contributed very much to the responsibility of the entertainment film itself," he said. "It is very encouraging, but it does not mean that serious thinking and planning for the production of information films will take place in Hollywood."

He suggested to film-makers and marketers of the information film that they should not "anticipate too close an alliance or even understanding" with Hollywood.

Tom Brandon is chairman the New York Film Council; Willard Van Dyke, vice-chairman.

Atlanta Film Council Meets Weekly

WHILE most local film councils content themselves with monthly meetings, the Atlanta group meets each Monday, at noon, at the Atlantau Hotel. Program chairmen of other Film Councils, sometimes at a loss to arrange top-flight programs even on a monthly basis, will draw inspiration from the following six successive weekly events on the Atlanta schedule:

"Sound on Film Recording: Some New Developments", Mr. Will H. Kimberly and Mr. Walter Winn,

Special Introductory Offer

TO HELP YOU START YOUR OWN UP-TO-DATE YOUNG AMERICA SLIDEFILM LIBRARY!

Which of these outstanding new slidefilms may we send you

Free!

with your purchase of any one of the titles listed below?

Take advantage of this unique opportunity now! Let us send you one of these outstanding new slidefilms as a gift to help you get started in building a modern Young America Slidefilm Library for your class. This money-saving "two-for-one" introductory offer is good for a limited period of time only . . . so mail coupon today!

SAFETY ON THE STREETS

Illustrates principal causes of traffic accidents, including accidents to bicycles. **\$2.50**

THE CHARTER'S ORGANIZATION

Depicts the organization of the United Nations and the functions of its branches. **\$2.50**

AIR TRANSPORTATION

The story of aircraft—from lighter-than-air ships through the Wright Brothers' work to modern aviation. **\$2.50**

OUR FEDERAL GOVERNMENT

Shows the relationship of the three main branches of our Government to each other. **\$2.80**

MAGNETS

Gives the essential facts about the nature of magnets and their behavior—limited to simple magnets and does not include electromagnets. **\$3.00**

Now—your school can own the best in new educational slidefilms as they are released—and at big savings!

Today practically every teacher has access to a slidefilm projector. The use of this unique teaching tool is already well established . . . its value recognized throughout America's school system. Good slidefilms not only help your students learn individual subjects faster and easier but also stimulate their interest and participation in all classroom activities.

The slidefilms offered you through the Young America Library are of highest quality editorially and technically—planned and supervised by leading authorities. They are accompanied by carefully organized teachers' guides and discussion outlines.

How to Get Your FREE Film:

When you mail the coupon below you will be sent at once free the slidefilm of your choice (above). At the same time you will

become a participant in the Young America Slidefilm Library and receive advance notices of new Young America Slidefilm as soon as they are released. Your only obligation is to order any one slidefilm from the list given at right.

Get Additional Slidefilms Free!

Surveys in the school field indicate that most-schools plan to add from forty to fifty slidefilms each year. For each five different black and white slidefilm titles ordered by you—or ordered by your school (after the introductory offer which establishes you as a participant)—the Young America Slidefilm Library will give you or your school free a bonus of any black and white slidefilm on its list.

TYPICAL SLIDEFILMS NOW AVAILABLE:—

For High Schools:

- Needs and Purposes of the United Nations Charter **\$2.50**
- Organization of the United Nations Charter **2.50**
- Our Federal Government **2.80**
- Our Congress **2.80**

For Elementary Schools:

- Living in a Machine Age **2.50**
- Safety on the Streets **2.50**
- Safety in the Home **2.50**
- Safety at School and at Play **2.50**
- History of Land Transportation **2.50**
- History of Water Transportation **2.50**
- History of Air Transportation **2.50**
- History of Communication **2.50**
- Magnets **3.00**

Also FREE if you act promptly!

If you send the coupon right away and enclose payment for the slidefilm you wish to purchase, we will also send you free a brand new slidefilm entitled "How to Use a Slidefilm"—showing the techniques of how to get better pictures on the screen, how to stimulate better student participation, and how to care for your film. So don't delay, act promptly and get this extra FREE film!

PHILP PHOTO VISUAL SERVICE

1218 American Ave.
Long Beach 2, Calif.

U. S. Public Health Service, Atlanta. "Visual Education, Today and Tomorrow", Mr. Dennis Williams, Encyclopedia Britannica Films, Chicago. "Films at Work in Georgia Agriculture", J. Aubrey Smith, Georgia Agriculture Extension Service, Atlanta. "Responsibility of the Visual Education Dealer", Mr. Taylor Hoynes, Stevens Pictures Inc., Atlanta. First monthly film show: representative short subjects, Mr. Thomas J. McGrath in charge, U. S. Public Health Service, Atlanta. "Visual Aids in the Church", Rev. Sam L. Laird, Jr., Emory University, Atlanta.

Topics discussed at September meetings were: "Transcription Disk Recording", Philip Bangs, Recording Engineer, Acoustic Equipment Company; "Converting War Experiences to Peacetime Usage", Joseph T. McGrath; "World of Make Believe", Dr. H. R. Halsey; "Toward World Peace" (film showing and panel discussion), arranged by Hazel Calhoun.

Texas Council Discusses Safety

The Austin, Texas Film Council held an open meeting at Camp Mabry, with Joe Tisdale, of the State Department of Public Safety, as the speaker. The film shown was Training State Highway Patrolmen.

Notices for the meeting were sent out by D. V. McCavick, director of the Visual Instruction Bureau of the University of Texas.

Famine Films to Reach Eight Million

Three famine relief films (*Freedom and Famine*, *Suffer Little Children* and *Our Children*) will have been shown in 16mm width to an audience of over 8,000,000 as this issue reaches its readers. Cooperating with the President's Emergency Famine Committee and with the U. S. Dept. of Agriculture, were 233 film libraries. Within six weeks after their release, the 1470 prints had been shown 26,708 times to schools, churches and public meetings, and this during the least favorable season of the year. "An impressive record," writes the Department, "congratulations on this excellent showing."

Broader Distribution for USDA Films

A conference recently called in Washington by the United States Department of Agriculture drew in leading representatives from professional, commercial and consumer groups for consultation on how the notable increase in distribution of USDA films could be further accelerated. Among the active participants were Paul Howard (American Library Association), Tom Brandon (Film Council), F. C. Lowry (National University Extension Association), I. C. Boerlin (Educational Film Library Association), W. F. Kruse (Photographic Industry Coordinating Committee), Milton Stark (National Association of Visual Education Dealers), Horace O. Jones (Allied Non-Theatrical Film Association).

It was brought out that at present USDA films are distributed through two main channels. The older consists of a group of some 63 agricultural colleges and similar centers, into which government prints are placed without charge, in return for which specified groups of government agents and agricultural teachers get access to such films free of any charge, while such other demand as can be met in addition, carries a nominal service charge. The newer channel consists of film lending libraries that pay for USDA prints under the contract system originally worked out by the United States Office of Education with Castle Films, Inc.

There has been a most encouraging increase in the sale of USDA prints. In 1945-46 the sales were two-and-one-half times greater than during the previous year, and four times greater than during 1943-44.

There was general agreement that the deposit of free prints for the exclusive use of agricultural agents and teachers constituted no "competition" to rental circulation, and consequently no bar to broader purchases by rental libraries of every type. The insistence upon below-cost service charges, however, put an arbitrary ceiling on rental rates and deterred libraries from making purchases of USDA prints that were of genuine public interest and educational value. The consensus was that if this handling charge were left open the situation would be met, and that the prevailing rate would level off at actual handling cost plus amortization.

Evaluation Project Undertaken

Through the channels of the Film Council approximately one hundred centers now distributing USDA films will be asked to make recommendations, based on their own experiences, as to which of these films, if any, should now be withdrawn from further use; which should be revised and how; what specific audiences are best served by each of the USDA films now listed; and, finally, what new productions are most urgently needed.

After these appraisals have been received and summarized, a joint Evaluation Committee of the Film Council and of the USDA, representing various sections of the country and different kinds of users, will analyze and interpret the findings. These final findings will be made known to all film distribution centers, and as far as possible to all film buyers and renters. Any film lending library that thereupon buys not less than fifty per cent of all USDA films that are evaluated as being of general public interest, will be recognized as authorized distributors and will be publicized as such.

RESCUE FROM SHANGRI-LA

The only record of an hitherto unknown section of New Guinea in the Netherlands East Indies. Among the three American Army people who were sole survivors of a plane crash over Shangri-La Valley beyond the dangerous mountains, was Corporal Margaret Hastings whose vivid "Shangri-La Diary" appeared in newspapers all over the USA. There in the valley these three young Americans met a tribe of black men whose living conditions, knowledge and customs had not progressed beyond that of the Stone Age. Revealed are the primitive customs and villages of a people who never before had set eyes on white men.

Rescue was accomplished by glider, a dangerous feat faithfully recorded by this exclusive film.

SCENIC SWEDEN

The Land and the People

A comprehensive pictorial tour of Sweden, from the farmlands of Skane in the forests and streams of Norrland. In contrast are great fertile fields—summer resorts; textile and rubber factories—old castles and cathedrals; modern highways, railroads and housing projects—the provincial costumes and cottages of Dalecarlia; deep sea fishing—the delicate craft of glassblowing; the rich lumber region—the fertile countryside; the nomadic Lapps—the people of the cities.

These and many more aspects of modern, progressive Sweden are emphasized in this beautifully photographed film.

MAMPRUSI VILLAGE

The story of a simple friendly folk who live and farm in the Mamprusi District 500 miles inland on the African Gold Coast. Under the guidance of the British, the Mamprusi already have achieved a measure of self-government along tribal lines. The local chiefs have an important role collecting taxes and budgeting the income.

Scenes of the Mamprusi farms, the women at market, the townspeople and their daily life go to show the progress of the District. Complete self-government is still a long way off, but the natives already have their feet set firmly on the way.

WE OF THE WEST RIDING

A beautifully photographed film and sympathetic story about the people of West Riding, a section of Yorkshire, England. Told from the viewpoint of a young member of a typical West Riding family, the film reveals the small-town integrated life of an industrious happy people.

Generations have worked in the local woolen mills and have grown up to experience great pride in the production of their factories and a love for the hills and moors outside their towns. Special emphasis is given to the family as a unit, the hobbies and aspirations of each member, the recreational and religious activities of the young and older folks, the family's part in the pattern of the community.

NAMAQUALAND AND ZULULAND

An enlightening and entertaining film about two little-known and widely contrasting sections of South Africa:

Namaqualand, on the west coast, remarkable for its tremendous wealth of mineral resources and for its incredible September blooming of beautiful wild flowers from apparently barren and arid soil.

Zululand, on the east coast, an area slightly larger than the state of Massachusetts, which has been set aside for the Zulus, most famous of black races. The cameraman has caught the Zulu in daily life, following the ancient customs of the Zulu tribe.

**Nebraska Schools Get Film Experiment**

The curriculum of several Nebraska high schools this year will be enriched by extensive use of specially selected motion pictures, according to a recent broadcast by Eric A. Johnston, president of the Motion Picture Association of America, Inc.

The experiment is being jointly financed by the University of Nebraska Teachers College and Extension Division, the Nebraska Department of Public Instruction, Teaching Film Custodians, Inc., and Carnegie Corporation of New York. It will be developed through the Universities of Nebraska and of Omaha and four State teacher training colleges, each of these six institutions working with four high schools in their respective areas.

Nebraska is typical of the prairie states in having a system of small secondary schools in which an enrollment of 100 pupils and a faculty of from three to six teachers is common, according to Dr. Frank E. Sorenson, associate professor of education at the University of Nebraska, who is serving as executive secretary of the policy committee formed to develop the project. As a result the standard curriculum is very narrow, he said, and motion pictures are being introduced in an effort to stimulate student interest in such broad new subjects as aviation, the United Nations and the principles and implications of atomic energy. Sixteen millimeter sound films will be shown in school assemblies and also will be integrated into classroom work to dramatize regular studies.

To make as many motion pictures as possible available for the project, a master circulating film library is being set up at the University of Nebraska and smaller exchange libraries will be established at the other five centers. In order to develop the maximum educational returns, each of the participating high schools will be encouraged to concentrate its film activities in a single field, such as science, health or social science, during the coming year, selecting different fields in subsequent years.

The results of the program for both students and teachers will be carefully evaluated each year. Once the high school phase is successfully under way, the project will be extended to the elementary grades.

Director of the project is Dr. Weslie Mierhenry, formerly assistant director of the University of Nebraska's Extension Division. Members of the policy committee guiding the effort are: Dean F. E. Henzlik, Teachers College, University of Nebraska; Dr. K. O. Broady, Extension Division, University of Nebraska; and the Honorable Wayne O. Reed, State Superintendent of Public Instruction.

Notes

E. C. Waggoner Appointed State Director of Audio-Visual Aids

Mr. E. C. Waggoner has been appointed Director of the division of audio-visual aids in the Illinois Department of Public Instruction.

A pioneer in the utilization of audio and visual aids in the field of education, Mr. Waggoner received his education at Indiana Normal and Indiana University where he received his Master's Degree. He taught at Reddick, Illinois, and in 1920 joined the high school faculty at Elgin, Illinois, becoming head of the science department in 1928. Fourteen years ago he organized a program of visual education in the Elgin schools. In 1940 Mr. Waggoner directed the organization of audio-visual teaching aids in secondary schools at Sam Houston State Teachers' College. For the past eight years Mr. Waggoner has served as a member of the Mid-western Forum of Visual Teaching Aids.

In 1932 Mr. Waggoner conceived the idea for a visual aids service for the schools of Illinois, and he purchased the first film for the cooperative library at the University of Illinois, today the third largest library of visual and audio-visual teaching aids in the country.

In 1941 Mr. Waggoner and his assistant, Gilbert Renner, wrote the script and supervised production of the well-known film, "Properties of Water". Last year he wrote the script and supervised the production of "Sulphur", widely acclaimed by science teachers and chemists, and chosen as the film to be shown at the American Chemical Society Convention held in Chicago last September.

Audio-Visual Conferences

"Utilizing Projected Aids to Teaching" was the theme of Visual Aids Conferences conducted at five Colorado cities on subsequent days, September 18-24, under the auspices of the Bureau of Visual Instruction, University of Colorado, and the Colorado Education Association. Mr. C. R. Crakes and Miss Norma Barts, of the DeVry staff, were guest speakers.

A Regional Audio-Visual Conference at Olympia, Washington was one of the events on the October educational calendar at Olympia, Washington. The two-day session, October 4 and 5, stressed administration at the first meeting, this subject being discussed by J. Wesley Crum and Chet Ullin. "Putting Teaching Materials to Work" and "Making the Most of the Community" were the general topics of the other two sessions.

Bremerton was the site for a similar conference on October 17 and 18.

The Division of University Extension of The University of Tennessee arranged a series of nine Audio-

Blower Cooled

... AND LIGHT WEIGHT, TOO

TRIPLE-PURPOSE FILMATIC Slide and Film Strip PROJECTOR

3-WAY
USE...

- For Single Frame Slidefilm
- For Double Frame Slidefilm
- For 2x2 (35mm) Kodachrome or Black and White Slides

- Motor-Driven Forced Air Cooled
- No Rewinding Necessary
- Anostigmat Projection Lens
- Easily Adjustable for Either Horizontal or Vertical Pictures
- Smooth, Sharp Focusing
- Instant Framing
- Manumatic Slide Carrier
- Professional Efficiency
- Rugged—Stable—Portable

The GoldE Filmatic enables you to make the most effective use of all three types of still projection material. Can be changed from film to slide showing in a jiffy! Permits use of 300 as well as 200 or 100 watt lamp for more brilliant projection... yet safeguards precious slides or film against heat damage. Cooler handling. Complete with carrying case.

AIR-FLO STEREOPTON

LAMP CAPACITY
UP TO 1000 WATTS

FEATURES

- Forced Air Cooled
- More Illumination Per Watt
- Precision Optical System
- Smooth Focusing
- Adjustable Bellows
- Easy-Tilt Adjustment
- Silent Slide Carrier
- All-Steel-Welded

Get brilliant screen images at longer projection distances. Blower cooling plus heat filter protects precious slides, lengthens life of lamp, insures cooler handling. Shows standard 3 1/2" x 4" stereopticon slides. Choice of projection lenses. 3 ground and polished condenser lenses furnished. Very sturdy and stable.

MACBETH

THE MURDER OF KING DUNCAN (*Act II, Scene 2*) AND LADY MACBETH'S SLEEPWALKING SCENE (*Act V, Scene 1*). Two of the most dramatic episodes in English literature, brought to the screen by artists who are numbered among England's best. (Length, two reels. Running time, sixteen minutes.)

EVERY school film library in America can own both of these superb 16mm. sound films depicting famous scenes from Shakespearean masterpieces, produced by the British Council. They are priced at only \$37.50 each, and are also available (along with 327 other instructional films) under the Eastin School-Week Rental Plan.

EASTIN PICTURES CO., Davenport, Iowa

JULIUS CAESAR

THE FORUM SCENE INCLUDING MARK ANTONY'S FUNERAL ORATION (*Act III, Scene 2*). A remarkable glimpse of ancient Rome, with a powerful presentation of the speech which has become a standard of eloquence throughout the English-speaking world. (Length, two reels. Running time, nineteen minutes.)

Visual Education meetings at Colleges and Universities throughout the state, October 8-17, with the cooperation of the State Department of Education and the host schools. Visiting consultants included Frank L. Rouser and Dennis R. Williams, of Encyclopaedia Britannica Films, Miss Norma Barts and C. R. Crakes, DeVry Corporation.

▲ ▲

Two hundred teachers and superintendents from 15 member schools met Tuesday, Sept 24, in the Pocahontas School in the first film utilization clinic held under the auspices of the Upper Des Moines Valley Film Cooperative Library.

H. L. Kooser, director of Visual Instruction Service, of Iowa State College, Ames, previewed "What's Happening in Audio-Visual Aids". Arthur Twogood, also of Iowa State College, explained the part of "Audio-Visual Aids in the Learning Process". W. Gjerde, Supervisor and Director of Visual Aids, Campus School, Iowa State Teachers College, Cedar Falls, used a group of fourth and fifth grade students to demonstrate techniques of his talk, "Visual Teaching in the Elementary School."

Library Demonstration Bill

Audio-visual materials as well as books are to be expedited to rural areas when the Hill-Douglas Library Service Demonstration Bill becomes law. This has been the experience in Canada, in the course of a similar program, excellently portrayed in the film *Library on Wheels*.

Hearings on the Bill, introduced into the Senate and House by Lester Hill and Mrs. Emily Taft Douglas, were held before both the Senate and House sub-committees on education and according to reports reactions of the members of the committees were friendly. The Senate committee suggested changing the bill to allow the appropriations to run for five rather than four years and that the amount allowable by the government be raised from \$50,000 to \$75,000 a year. The House sub-committee unanimously approved the bill. Plans are to have the bills introduced into the next session of Congress, with the hope that it will be possible to get them through at that session.

Department of Educational Service

Eric Johnston announced today the establishment of a Department of Educational Service in the Motion Picture Association. The department, operating from the Washington headquarters, will coordinate all the Association's activities in the field of visual education.

Roger Albright has been appointed director. Mr. Albright, a graduate of Colgate University, is well known in educational circles. He has participated in film utilization programs organized and sponsored by many colleges and universities, and is a member of several committees dealing with visual education.

The Association is currently conducting a number of educational projects in cooperation with leading educators of the nation. Latest among them is the production of a series of films to serve as models for classroom use. All these projects will now come under the new department.

Pennsylvania Pictures Awarded High Honors

Color pictures photographed by Dr. George F. Johnson for the Agricultural Extension Service of the Pennsylvania State College were awarded three of a possible five first places at the recent national competition in Auburn, Alabama, by the American Association of Agricultural College Editors.

The Pennsylvania blue ribbon winners were: A silent, color 16 mm. motion picture entitled "What makes a good Corn Crop"; an 8" x 10" Kodachrome transparency captioned "Pattern for a Better Agriculture," and a set of Kodachrome 2" x 2" slides depicting "Lunch Time at School."

These transparencies and motion pictures were selections from the all-color library of visual aids built up under Dr. Johnson's direction during the last ten years. This library now contains more than 100 reels of silent motion pictures and 30,000 color 2" x 2" slides, and is used exclusively by the 300 extension workers in agriculture and home economics in Pennsylvania.

Junior Red Cross All-Nations Audio-Visual Service

The Chicago Chapter of the American Junior Red Cross has in operation a reference service which is designed to aid teachers in locating supplementary teaching materials on the people of other nations and regions. This service fosters the spirit of understanding peoples of the world which is one of the objectives of the Junior Red Cross program. The card file index contains information on: films, slides and slidefilms, recordings, posters and exhibit materials, pamphlet sources and supplementary books. In response to a teacher's request, listings are compiled under the heading of a country or a geographic region. The 113 areas of the world which are treated range from Africa to Yugoslavia.

This service is available at no expense to all educational institutions in the Chicago Chapter area of the Red Cross. Interested teachers should contact: Junior Red Cross All-Nations Audio-Visual Service, 529 S. Wabash Ave., Chicago, Illinois.

Newark Television Experiment

L. Bamberger & Co. recently introduced telecasting to New Jersey by installing video equipment and inviting the Newark Board of Education to experiment with it. Members of the Board termed the experiment "a great opportunity to obtain a first-hand knowledge of the possibilities of television as an educational and entertainment medium." Twenty-one shows were given by Newark school children during the three day experiment including singing, dancing, art demonstrations, debates, spelling bees, sports stars, fashion shows, puppet shows, dramatics, cooking and canning.

Equipment used for telecasting was designed, constructed and operated by Television Projects, Inc., Newark. Two iconoscope cameras, one close-up and the other long range, were used. There was one video stage with conventional public address

ENTERTAINMENT and EDUCATION

go hand-in-hand on the screen

Motion Pictures have become the world's greatest medium of expression! In the language of motion and action peoples of the world may come to better understanding of each other through the medium of the screen.

Universal Pictures company provides for education and entertainment both feature-length and short subject films, bringing to the screen the world's finest artists in fine plays and stories. Listed herewith are some attractions, either released or about to be, that you will want to watch for:—

system using a boom mike stand and floor mikes for off stage. More than 10,000 watts of light was used on the stage behind which the students acted like real troopers. Green lipstick and stage make-up were employed, much to the delight of the young actors. Viewing units were built in standard television receiver cabinets.

McGraw-Hill Publishes Visual Aids Lists in Textbooks

McGraw-Hill Book Company, Inc., is now including lists of correlated visual materials in a number of its new textbooks and revised editions. Information in these lists includes titles and brief descriptions of films, sources of supply, and where possible, suggestions on the parts of the book with which each film can best be correlated.

Twenty-three books containing such lists have already been published. Eighteen more have been prepared for release in the near future. The program will be continued with many new books during the coming year.

Film Libraries Serve Many Communities in Canada

Most Canadian communities with a population of more than 5,000 today have their own film library. Of the 73 now in existence, the majority have been set up by Community Film Councils, which are composed of members of local organizations. The films are housed in public libraries, schools, YMCA's, or any other suitable building.

The Community Film Councils are assisted in their work by the National Film Board, which makes many film prints available on extended loan. In addition, the Film Board supplies information on other sources of films and necessary equipment. Many community film libraries are now pooling their resources to purchase additional film prints. Under this system prints purchased are circulated in one community for two months, and then shipped on to the next community.

Pan-American Flights To Feature Latest Movies

The exhibition of 16mm motion pictures on planes has passed the experimental stage and will soon be a regular feature for the entertainment of passengers on all Pan American World Airways' trans-ocean flights. This was indicated when Pan American signed a contract with Seven Seas Film Corporation for 16mm motion pictures for exhibition in flight.

This is the first contract for the regular exhibition of 16mm films on planes. Seven Seas has been active for many years in the distribution of motion pictures to steamships around the world, and is now branching out into the aviation field. It will provide Pan American World Airways with 16mm programs consisting of features and shorts. The feature will be current product from major studios.

Film showings in flight have been tested successfully on Pan American's North Atlantic run. Special shock mounted 16mm equipment and lightweight speakers were used. The projectors were operated by stewardesses.

SIMPLE...

SIMPLER...

simplest!

Yes! *SIMPLICITY* was a major requisite in the design of the new DP 300 Dual Purpose Projector for 2" x 2" Slides and Slidefilms.

That our engineers have achieved a new high in *simplification* is evident from even a casual examination of this revolutionary, new projector. Those who have seen it are amazed at the ease with which slides and slidefilms may be interchanged—without requiring re-alignment of condensers to prevent light loss. This and many other improvements are already making the DP 300 the *preferred equipment of experienced buyers*. Ask your Visual Education Dealer for details or write for circular 102

IFA Limits Operations

The Board of Directors of International Film Associates decided at a meeting in New York on September 5th to direct its activities during the coming year primarily to the maintenance of an intelligence and publication service relating to the role of documentary film as an instrument of international understanding.

Mr. John Grierson, chairman of the board called the meeting to consider problems which have arisen due to the fact that a number of the members have become involved in full time production activities and are no longer able to supply the supervisory service in relation to production and distribution which the organization has undertaken to date.

IFA which has to date provided research, production, and distribution plans for UNRRA, the Inter-cultural Education Bureau, the Children's Bureau, the American Library Association and others will until further notice continue principally as a base for the exchange of information and as a source of papers and reports on specific aspects of documentary film developments.

visual aids for the Associated Colleges of Upper New York.

The association will run three emergency colleges for veterans and high school graduates throughout the country this fall. Mr. Bennett will be at Champlain College, Plattsburg, while organizing a comprehensive visual aids program for the three colleges. He is a graduate of the University of Manitoba and holds a master's degree from the University of Minnesota. Other colleges will be Sampson College at the former naval training station at Sampson, N. Y. and Mohawk College in Utica, N. Y.

Gleanings from Abroad

Egypt. The Egyptian Ministry of Social Affairs has criticized the quality of Egyptian film production and has demanded film producers of that country to make films to educate the people—films showing conditions, habits and folklore of the country. The Ministry has gone so far as to announce the prohibition of the production of pictures considered in bad taste.

Italy. All theatrical film exhibitors in Italy have been ordered by government decree to include in their programs, news or educational films to be produced by the Italian government.

Canada. The educational and religious film product of G-B Instructional, London, a J. Arthur Rank enterprise, will be distributed in Canada by Hanson 16mm. Movies, Ltd., Toronto.

The Literature in Visual Instruction

(Concluded from page 448)

broadcasting offers, there is the possibility of adding thousands of new stations (since FM carries only about 100 miles, stations at 100-mile distances can use the same wave length). The FCC has set aside channels for education and applications are pouring in. New York, Chicago, Cleveland, Detroit and San Francisco have already been successful in operating FM. It is estimated that about 2,000 stations will be operating in 2 years.

SOURCES

- **Audio-Visual Materials for Science Instruction**—Paul C. Reed, ed. Rochester Dept. of Visual and Radio Education—Sept. 1946. 19p. mimeo.
- **Audio-Visual Materials for Music Instruction**—Same as above.

The titles listed here represent the best films in each subject chosen by teacher committees and available upon request from the Rochester Dept. of Visual and Radio Education. The selective quality of each list, and the participation of the teachers themselves make these publications very useful to the Rochester teachers.

- **Sources of Educational Records and Transcriptions**—Radio Committee, Audio-Visual Education Ass'n of California, Southern Section—*California Schools*, 17:183 July, 1946 (Reprints available.)

A listing of selected organizations and companies, in alphabetical order, but no attempt has been made to evaluate the recordings.

- **Use These Co-op Movies**—published by the Co-operative League of the USA, a national federation of consumer co-operatives, located at 167 West 12th Street, New York 11.

A film directory listing seventeen motion pictures, four filmstrips and seven recordings, the films for rental or sale, the other material for sale only. The subject matter includes consumer co-operation, credit unions, marketing co-ops, reports from other countries, and the historical background of the co-operative movement.

AUDIO-VISUAL TRADE REVIEW

Wanted: Bridge Builders

(Concluded from page 429)

understanding, more and more barriers fall before him.

Most potent among all Man's tools for the bridging of ideological barriers is the educational screen. It stands supreme for the building of sorely needed new roads, toward broader, more peaceful horizons. No other medium of communication can speak so clearly, to so many, so persuasively, so quickly, so universally. Properly developed and intelligently used, this screen can weld into one all the myriad peoples of the earth. It can make the culture and progress of each the common property of all—to the unalloyed benefit of each and all, giver and receiver alike. It can create that common understanding of Man by men which alone can assure peace and progress in our world of today and of tomorrow. It can inspire that unity of action among men that will yet fuse our world into one community.

For the past quarter of a century, month after month, the EDUCATIONAL SCREEN has been a never-failing expression of the achievements, activities, problems, philosophy and aspirations of the audio-visual movement. Within that movement, too, barriers are not unknown. Non-theatrical film sources are counterposed to theatrical, for instance, regardless of their common long range purposes that should far outweigh the apparent immediate differences. Barriers exist between maker and user of these materials, between theorist and practitioner, between different subject matter areas, between clashing theologies, between warring social philosophies. Most senseless of all, perhaps, up to a few short years ago there was a wholly needless barrier between the professionals who used audio-visual materials and equipment on the one hand—and the commercial creators and purveyors of these materials on the other.

It is not so long ago that "commercial" representatives were barred from educational meetings. Then, slowly, we began to be admitted on sufferance. Gradually some of us were asked to participate in panel discussions, or to serve as source experts. Today the old barrier is

pretty well bridged—visual education dealers and staff men are recognized by many influential educators as equal with newspaper editor, broadcaster or clergyman in the cultural cadres of the community they serve. Educators now know more than they ever did about the technological basis and resources with which they do their job. Commercial men have learned much about what schools, churches, civic groups and other vital centers of community culture need and want, and as a result they are striving harder and more successfully than ever to create and purvey just that.

The EDUCATIONAL SCREEN has worked long and ably to bridge the barriers in its so-varied field. From nursery school to college campus, from church to grange or union hall, this magazine has sought to correlate the news and views of the many people who were trying to do things in audio-visual communication. It has consistently sought to bring to Industry a better knowledge of what Education needs, and to Education a more extensive knowledge of what Industry could furnish.

It so happens that during this same quarter century it was my privilege to take active part in many phases of the production, distribution and utilization of audio-visual materials in education. And the things that had to be done also had to be written up and talked about. So, when it appeared to Nelson Greene and some of his co-workers that the time had come when EDUCATIONAL SCREEN needed someone who could serve as a bridge between Education and Industry, the nomination of Managing Editor was proffered me.

This is an honor which any man would esteem most highly. I certainly did. The idea of being able to set one's thought into type, for mass distribution, gives a sort of heady sense of power. I was deterred from acceptance, finally, only by the reluctant realization that, in the present gestating changes of relationships between various decisive areas of our audio-visual field, I had greater responsibilities for service elsewhere. Anything I can do for the SCREEN is at its service at all times.

WILLIAM F. KRUSE.

Pictorial Color Slidefilms

Milton J. Salzburg, president of Pictorial Films, Inc., RKO Building, Radio City, New York, announces three new color slide films ready for release.

These three, *Alice in Wonderland*, *Rip Van Winkle* and *The Wanderings of Odysseus*, were created for Pictorial by Fletcher Smith Studios from original full-color artwork and reproduced by the Americolor process. The treatment and presentation, and the combination of artwork and color will help to stimulate interest and will supplement the reading of popular classics at home or at school.

These films, particularly the *Odyssey* and *Rip Van Winkle* in this set, will help the teacher explain customs, food, clothes, means of transportation and other facts of interest in certain historic periods of mankind. Such media will not only amuse an audience of children, but will also stimulate art appre-

Scenes from the series on "Alice in Wonderland", "The Odyssey", and "Rip Van Winkle."

eration, especially in cases where the full color version of the films are used.

This new series, like the first three released earlier this year, (*The Three Musketeers*, *Ivanhoe*, *Treasure Island*), can be obtained in either 35mm slide film, full color, approx. 100 frames per film; or in sets of approx. 100 2 x 2 individual color slides.

Filmo "Electro" Camera

A new Filmo "Electro" magazine-loading, electrically-driven, 16mm. motion picture camera, designed especially for accurate time and motion study work, is offered by Bell & Howell. The camera is equipped with a fast 21mm. F 1.9 lens (with positive viewfinder and matching objective), which affords a somewhat wider angle of view than the standard 1" lens. Other features are a dial footage indicator, accurate operating speeds of 1000, 2000, and 4000 frames per minute, and a built-in 24-volt motor which assures constant filming speed at all times.

Simplicity and efficiency of operation render the Electro especially well-suited to accurate job study, it is claimed. The magazine-loading feature facilitates film change, and enables the operator to keep individual case records separate at all times. And with the magazine and the motor functioning as a team, 50 feet of film can be run off without interruption. A transformer, which is standard equipment, permits plugging the Electro into any regular house line. Or, storage batteries can be employed when a job study must be filmed in a location where the usual sources of current are lacking. The low-voltage electric drive is equipped with an automatic governor mechanism which, Bell & Howell engineers state, will main-

Bell & Howell "Electro"

tain accurately the all-important motor speed despite all except the most severe fluctuations in line current. The Electro can be employed for general types of cinematography as well, wherever electric power is available, either from standard lines or a portable battery. For conventional use, it is available with speed control calibrated in frames per second;

or the motion-study speeds are readily translated into frames per second by means of a simple conversion table.

Companion-pieces for the Electro are offered by Bell & Howell in the form of a specially-designed 16mm. projector and a film viewer. The projector is equipped with a hand-crank (for screening one frame of film at a time); a special heat filter, which permits any single frame to be projected as a "still"; and a direct-reading, geared frame counter which can be reset for "clocking" any portion of a job-study film. A variable-speed control with electric governor provides the projector with a range of speeds from 800 to 1200 frames per minute, thus affording an ideal means of checking the perception of time-study personnel.

Further details concerning the equipment described, as well as its applications, are contained in an illustrated circular obtainable from the Industrial Sales Division, Bell & Howell Company, 7100 McCormick Road, Chicago 45, Illinois.

Slidefilms for Physics Classes

Visual Sciences, Suffern, New York, have produced a teacher-made filmstrip on *Radio and Electronic Symbols*, a series of 40 hand-drawn frames comprising 60 symbols and 90 sketches with names, abbreviations and appropriate textual matter of those devices most commonly used.

William Ganz Honored

The American Transit Association has presented a special award plaque to William J. Ganz, of New York City, "for his outstanding contribution to the cause of highway safety," through the production of the widely acclaimed traffic safety film, *It's Wanton Murder*, which has been seen by 16 million persons since its release in May.

Only once before in the 64-year history of the Association has a special award been made to an individual. This was to Lowell Thomas at the annual meeting earlier this year.

The one-reel film, produced by Ganz, is available without charge from the local transit company of each city.

Bausch & Lomb Expansion

To meet increased manufacturing demands, Bausch & Lomb Optical Company purchased one building and took option on an adjoining structure at Wellsville, N. Y. The building will be completely remodeled and equipment installed as soon as possible for light manufacturing operations.

Just previous to this step, Bausch & Lomb announced the formation of a Swedish company jointly owned by the optical firm and Aga-Baltic Ab, the new concern to be known as Aga-Bausch & Lomb Ab. With headquarters located in Stockholm, it will serve as a distributor of Bausch & Lomb's entire line of scientific optical and ophthalmic instruments, equipment and eyewear.

New Pict-O-Screen Announced

A unique innovation in projection screens has been developed by Radiant Mfg. Corp., 1144 West Superior St., Chicago. This is a combination of a lithographed painting and an invisible projection screen. The paintings—six in number—are reproductions in brush-stroke effect, of well-known art subjects, and are permanently mounted in hand-finished frames available in a choice of Antique Gold or Pickled Pine finishes. Concealed in the upper section of the frame is a specially designed projec-

Radiant's Pict-O-Screen

tion screen with the Radiant "Hy-Flect" beaded surface. By means of a parachute-nylon cord, the screen is instantly raised or lowered. When not in use as a screen the Pict-O-Screen is a decorative painting in a handsome frame.

AnSCO Improves Color Processing

The AnSCO Division of General Aniline and Film Corporation announces an important advance in Color Film Processing in the form of a new color developing agent for color films and color paper. It is claimed that this agent, being no more toxic than the developers used in ordinary black and white photography, does not cause any skin irritation, as color photographic processes have in the past with certain individuals who are sensitive to the developing agent.

Owing to the great demand for photographic products, resulting from the scarcity during the war years, there may be some delay before this improved color developer or developing kits containing it, before it reaches the public.

Movable Steel Projector Table

Howard B. Marks Co., Minneapolis 2, announces a low-priced, all-steel projector table for general institutional use. Sturdily constructed throughout, the new stand measures 35 inches in height, has an additional shelf for speakers and other equipment, a drawer for accessories, and is finished in olive green.

**Production Department of
Britannica Films Moves
To Chicago Area**

The First National Bank Building in Wilmette, Illinois, has been leased by Encyclopaedia Britannica Films Inc. for use by its research and production offices, now located in New York City, it was announced by E. H. Powell, president of the company. The films company will take possession of the building on December 1, and it will be ready for occupancy by February 1, 1947.

Lease of the Wilmette building, which provides approximately 12,000 square feet of usable floor space, will bring the creative end of the films business near the Chicago offices of the Encyclopaedia Britannica, where Dr. Robert M. Hutchins, newly-appointed chairman of the board of editors of Britannica is inaugurating an expanded program of educational film and adult education activities. In connection with the films program Mr. Powell, president of both the films company and Encyclopaedia Britannica, said, "In the past, instructional films have been limited to schools. The policy of the company has changed to admit wide extension of films for use by adult groups and other groups."

Dr. Arnsperger, now executive vice-president of Encyclopaedia Britannica Films, Dr. Brodshaug, vice-president in charge of research, Brill, vice-president in charge of production, and staffs are expected to move from New York to the Wilmette offices early next year.

Britannica Pre-View Centers

A fifth pre-view center has been opened by Encyclopaedia Britannica Films in the Cotton Exchange Building, Dallas, Texas. Others are in New York, Chicago, Pasadena and Richmond.

**International Film
Foundation Expeditions**

Three documentary film expeditions are being sent out by International Film Foundation. The first is to cover Czechoslovakia, Italy, France and if possible Yugoslavia; it is headed by Victor Vicas, formerly of OWI, and includes two former Army cameramen. It is fully equipped to make motion and still pictures in black-and-white and color, in both 35mm and 16mm.

The second will make pictures of the peoples of China, the Philippines and Japan. The third is now at work throughout the United States on five new films on American life ordered by the State Department for its program to make the real America better known throughout the world.

Recently released IFF films, including *Mary Visits Poland*, *Children's Railway* and others in the Julien Bryan series, are meeting very favorable reception by American film libraries and their patrons. They are particularly noted for their fresh, human approach and for their contribution to better international understanding.

New Teach-O-Filmstrips

Two new series of Teach-O-Filmstrips are available this month from the Audio-Visual Division of Popular Science Publishing Company, 353 Fourth Ave., New York 10, N. Y.

On the Farm with Tom and Susan is a primary science series of six subjects in black and white, designed to give pupils a basic understanding of scientific phenomena experienced on the farm. Each subject contains a number of provocative questions and problems for stimulating participation and discussion. Planned and prepared by primary grade teachers, this series is reported as the first attempt on the part of a producer to help teachers in the teaching of primary science in accordance with the newest curriculum trends and practices. Titles of the six subjects—each of which consists of approximately 40 frames—are: "Visiting the Farm;" "How Plants Live and Grow;" "Animal Homes;" "Animals and Their Young;" "Tools and Simple Machines;" and "Science Review."

All Aboard the Punctuation Express is a series of six subjects in vivid color,

for grades 7-8-9. Prepared under the direction of curriculum experts in the field of Language Arts, the series shows informally the use of each punctuation mark and develops an understanding of their functional use. Through especially created cartoon figures and other visual techniques the abstract conceptions are made concrete and understandable. Subjects are: "The Comma-Part I;" "The Comma-Part II;" "The Comma-Part III;" "Colon, Semicolon and Dash;" "Apostrophe;" and "Quotation Marks." Each consists of approximately 40 frames.

Functional teaching guide provided with each series.

**Britannica Consultants
Appointed**

Wayne L. Pratt, manager of the Des Moines branch of J. G. Kretschmer & Co., has been appointed visual education consultant in Iowa for Encyclopaedia Britannica Films. Kretschmer is state representative for Encyclopaedia Britannica Films. Pratt, formerly superintendent of schools at Carroll, Iowa, will assist schools, administrators and

SOUNDSCRIBER
Trade Mark

With a vastly increased enrollment in language classes, time is one of the instructor's most important problems.

Many language departments are solving this problem by employing the SoundScriber electronic disc recorder as an aid to language instruction—in lesson planning, drill and testing.

The SoundScriber electronic recorder records every shade of inflection, every nuance of diction on paper-thin, unbreakable plastic discs. Thus the scope and effectiveness of live voice instruction is multiplied — and

students' comprehension is increased by testing their own voice-recordings on inexpensive SoundScriber discs.

SoundScriber will instantly repeat a word, a phrase, a sentence or an entire speech. The SoundScriber is light in weight, is readily portable from one classroom to another, and easy to operate. It is low in first cost and low in operating cost.

Write for complete information on the ways in which the SoundScriber is being used by leading schools, colleges and universities.

teachers in establishing, maintaining and expanding their audio-visual instruction programs.

The appointment of Gordon Anderson as visual education consultant for Olson Anderson of Bay City, Michigan, and state representative for Encyclopaedia Britannica Films, has also been announced. Anderson has been administrative assistant in the Bureau of Visual Education at the University of Michigan, Ann Arbor, since his release from the armed services in January, 1946.

Film Alliance of America, Inc.

Twenty visual education dealers, spark-plugged by Tom Brandon, combined recently to form the Film Alliance of America, Inc. Purpose is to conduct "an organized campaign to develop effective and widespread use of motion pictures in the public interest". Among the names associated with Brandon are those of old standbys such as Calhoun, Davis, Reagan, Cousino, Holtz, Ewing, Lilley, Engleman, South, Swank, Kunz, Evers, Burch.

New SVE Filmstrip Productions

New filmstrip productions completed by the Society for Visual Education, Inc., 100 E. Ohio Street, Chicago 11, cover a wide range of subject matter. Among them are:

Wood—From Forest to Finished Production (45 frames) stresses the importance of wood in modern civilization. Present-day logging conditions and methods of preparing wood for various uses are shown. Top picture in accompanying illustration shows how a fine spray of water under high pressure is used to wash stones and dirt from the bark of a log moving along conveyor, to prevent them from damaging teeth of the band-saw.

How to Build a Simple Fire (22 frames)—useful for groups interested in camping and safety procedures in connection with building, caring for and putting out fires made out-of-doors. Second picture herewith shows one process in building a "squaw wood" fire with wood chippings.

National Monuments of the Southwest are presented in three separate subjects—one covering Colorado and New Mexico (38 frames); one on Arizona South of the Grand Canyon (42 frames) and the third covering Utah and Northern Arizona (38 frames). Pictured herewith is the Aztec Ruins National Monument from the strip on Southern Colorado and New Mexico.

Uruguay (39 frames); *Paraguay* (36 frames); and *Colombia* (47 frames) are three additions to SVE's South America series, presenting authentic, characteristic portrayals of life and

customs in each country. The bottom picture in the illustration herewith shows a classroom in a Montivedeo school, with children dressed alike. Uruguayans believe this is more democratic.

Also recently added to the S.V.E. Library for distribution to schools is a series of 42 filmstrips made from pictures taken under the direction of Dr. Raymond L. Ditmars from the collection of the New York Zoological Society, and re-edited by Film Highlights, Inc., of New York. Designed for use in classroom instruction in biology, zoology and natural history as well as for various "animal" and "visit to the Zoo" units on the elementary level, the series covers Primates; Carnivores; Rodents; Hoofed Animals; Bats, Insectivora and Flat-toothed Mammals; Marsupials; Birds; Reptiles; Amphibians; Insects; Anthro-pods; and a group titled "Depths of the Sea."

Sound Films for Training Sales Personnel

The Jam Handy Organization announces completion of a series of five sound slidefilms under the general series title, *Behind the Counter*. These films cover basic counter and sales floor customer-contact and conduct procedures as approved by leading department stores and chain groups. Subjects covered are: Friendliness, Attentiveness, Helpfulness, Sincerity, Enthusiasm.

While primarily designed for department and general stores, the material in this series is applicable to any line of business where an employer wishes to improve the store conduct of his people and their selling techniques. An instructor's guide accompanies the films and records. The material is so arranged that it may be integrated with any training program the retailer may now have in use or it provides visual material upon which to base such a program. For details write to The Jam Handy Organization, 2822 E. Grand Blvd., Detroit, Mich.

Film Preview Announces Change in Name

Midwest Audio-Visual Company is the new name adopted for Film Preview which has served the School, Church and Industrial field with audio-visual materials since 1929. The new name is considered more comprehensive than the previous name, and will indicate more clearly the firm's business. There is no change in ownership, personnel or policies. Keith H. South, absent from the firm for three years while on duty as an officer in the Training Division, U. S. Army, continues as President, and Mrs. Lucille A. South, who managed Film Preview during the war years, as Secretary-Treasurer. The business staff of the firm are all veterans of the Armed Forces and the visual training field.

The address is still 1504 Hennepin Ave., Minneapolis 3, Minn.

New Leitz Focomat Enlarger

The redesigned American-made Leitz Focomat Enlarger 1b embodies new features for increased darkroom convenience. Automatic focusing permits sharp focusing to be obtained simply by fingertip operation: the condensing lens holds the negative absolutely flat and enlarges the normal 75 watt light source with the correct kind of soft illumination desired for enlarging small negatives; the focusing range of the enlarger is from 2½ to 13x magnification, producing a 13x 19½ inch enlargement from a 35mm negative, and enlargements greater than this may be made by the usual accurate manually operated helical focusing mount. An innovation in enlargers is the fact that the enlarging head of the Leitz Focomat 1b tilts back for quick and easy cleaning of the film and the condenser lens. Accurate positioning of new lamps is assured through a lamp socket of novel design. The lamp housing is well ventilated for effective heat dissipation, keeping negative and lens cool and free from damage by excess heat. As with all Leitz enlargers, the Focomat 1b accommodates the highly corrected Leitz 50mm lenses (except the Xenon f:1.5 lens) for sharp, detailful enlargements—both in black-and-white and in color by means of the new color printing processes.

Full information on the new Leitz Focomat 1b may be obtained from: E. Leitz, Inc., 304 Hudson Street, New York 13, N. Y.

More Slide Sets in Natural Colors

Coast Visual Education Company, 143 W. Washington Blvd., Los Angeles 15, has added a number of new miniature slide sets on Art, Science, and the Social Studies to its present catalog. Each group of 12 slides is packaged in a quick inspection holder which permits all 12 slides to be viewed at once or displayed as a unit. This holder is said to simplify storage and cataloging and in addition provides on its surface much helpful information for teacher utilization. All slides are photographed in natural colors.

GE School Center Illustrates Proper Classroom Illumination

In the School Center of GE's new Lighting Institute, at Nela Park, Cleveland, Ohio, simulated daylight, entering from windows along the left side of the room, demonstrates the inadequacy of daylight alone for classroom lighting. Several different types of incandescent and fluorescent systems for providing efficient and comfortable lighting for schoolrooms are readily illustrated by the simple turn of a switch. Various positions and patterns of fixtures are also demonstrated.

In the School Center also are demonstrations of other new classroom features, such as three colors of glass

chalkboards—black, green and white—with different colors of chalk which are used to provide as good or better visibility as the old slate blackboard. A bank of fluorescent lamps is mounted behind the white chalkboard to illuminate it with a soft light. With a lantern slide projected on the board, teachers and pupils can write on it with dark chalk to emphasize points in unique fashion.

Ideal Holds First National Sales Conference

Executives and sales representatives of the home office and the managers of the sixteen branch offices of Ideal Pictures Corporation of Chicago, Ill., convened at Silver Lake, Wisconsin, in a four day sales conference August 31st-Sept. 2nd. Presiding was Bertram Willoughby, the firm's President. The tightly-packed agenda for this first national sales meeting by this organization provided thorough coverage of all aspects of its services and sales policies in the many fields into which it reaches. Main emphasis was on the fast-expanding school market for audio-visual equipment and teaching materials. With its exclusive sales rights in 35 states on the "Films of the Nations" releases, and with Young America films, Popular Science filmstrips and recordings, Encyclopaedia Britannica films and other educational materials added to its sale and rental product. Ideal is gearing itself for effective, re-

sponsible service on a large scale to the school market. The conference therefore was both a re-affirmation of the firm's fundamental sales policies through which it has grown into a strong, successful national organization, and a re-orientation of promotion and sales practices to meet the needs of the growing school market.

The conference included informal talks by Wm. F. Kruse of Bell and Howell Company, Adolph Wertheimer of Radiant Manufacturing Company, Otto Coeln of Business Screen, Don White of the National Association of Visual Education Dealers, Louis Simmel of Simmel-Meservey, Eugene White of Popular Science Publishing Company and Paul Foght of Young America Films.

Audio-Video Company Of New England

Charles R. Abry has announced the formation of a new company, the Audio-Video Company of New England, Inc. with headquarters in Norwalk, Conn. A sales office and service center will open soon in Boston. The new company, of which Abry is president, will act as distributors of projection equipment, films and recordings in the six New England states.

Abry was formerly Associate Publisher, an officer and director of Young America Magazine, and Business Manager, Treasurer and a director of Young America Films, Inc.

RCA Appointments

W. H. Knowles has been appointed Manager of the Educational Sales activities of the RCA Victor Division, as announced by Walter M. Norton, Director of Distribution. Mr. Knowles will be responsible for the promotion and sale, in the educational field and in the field of industrial training, of RCA Victor audio-visual equipment. His department studies school requirements and assists teachers in utilizing the latest developments in this equipment.

Before joining RCA Victor, Mr. Knowles was Vice President of the Jam Handy Organization in charge of the educational department, with headquarters in Detroit. He also handled field operations for extensive audio-visual training programs in schools and

W. H. Knowles

industries. He will make his headquarters at RCA Victor's main office in Camden, N. J.

In line with RCA Victor's recently expanded program in the field of audio-visual equipment for schools, Harry E. Erickson has been appointed Assistant Manager for the Educational Sales Division at Camden. Mr. Erickson, for the past three years 16mm Regional Sales Manager for RCA Victor in Chicago, will act as liaison between the Educational Sales Department and the various RCA Victor product departments manufacturing 16mm projectors, RCA Electron Microscopes, FM, and AM radio, Victrola radio-phonograph and television receivers, RCA Victor records, sound systems, transcription and playback equipment and disc and wire recorders. He will also work directly with the six RCA educational representatives in New York, Atlanta, Cleveland, Chicago, Dallas, and Los Angeles.

Erickson's wide experience in the audio-visual equipment field includes four years as Educational Sales Manager of the Ampro Corporation in Chicago and two years as District Sales Manager of the Encyclopaedia Britannica Films operating from Kansas City.

Harry E. Erickson

Appointment of Robert H. Hunt, as Regional Sales Manager for RCA 16mm equipment in the Chicago area, and Elmer H. Beneke to a similar position in the Atlanta region, were announced by O. V. Swisher, Manager of the RCA 16mm Equipment Section.

Mr. Hunt will represent RCA in the twelve mid-western states, replacing H. E. Erickson. Hunt will make his headquarters at the new RCA sales offices at 663 North Lake Shore Drive, in Chicago.

Mr. Beneke is replacing M. N. Heidenreich, who has been transferred to the Dallas regional office, in the same capacity. Mr. Beneke will be located at the regional RCA sales office, 530 Citizens and Southern Bank Building, in Atlanta.

Price Hikes Spreading

The rising price spiral in so many other lines is reflected in several announcements by suppliers of audio-visual equipment.

Pictorial Films, Inc. announces its films up from \$17.50 to \$21., blaming a 20% increase in raw film prices as cause, this in turn based mainly on Congressional action increasing the price of silver.

Films, Inc., have raised their rental rates from \$20 base on spot-booked single majors to \$22.50, the same \$2.50 boost applying all the way down the sliding scale, except that a new bottom category has been set for schools and similar closed audience groups with less than 150 enrollment. Heretofore the floor was 250, on which a series rate of \$10 applied. This rate is raised to \$12.50, but the new lowest category (enrollment of 150 or less) is now quoted a series rate of \$11.

Equipment, too, is going up. The Bell & Howell Filmosound went up 14% of dealer net on April 11, in line with an industry-wide OPA authorization. On August 14th a further increase not to exceed 6% was allowed to equalize retailer earnings. On August 26th a further raise of 7.8% was put into ef-

fect, but a 15% increase announced during the period when OPA had lapsed had to be withdrawn meanwhile. Increased cost of labor and materials, production blockades due to supplier lapses, and the general confusion and cost incidental to post-war reconversion are reasons given for these increases.

British Information Services announces an increase in its service charges. Henceforth BIS films will be loaned at \$1 per reel, with a ceiling of \$5 regardless of length over five reels. Color at \$1.50. A new scale of sales prices is also announced that "conform to current practices in the field". Single reels are sold at \$22.50 and two-reelers at \$37.50.

Eastman announces a world-wide price increase on film raw stock of 17½%.

DuPont announced a 13% increase on positive film, but it is reported that this increase did not apply to negative, or to sub-standard widths.

David McCulley in New Position

David B. McCulley, former Director, Bureau of Audio-Visual Instruction, University of Nebraska is now associated with General Pictures Productions, Inc., Des Moines, Iowa, as educational consultant.

Mr. McCulley, who has directed the audio-visual program of the University of Nebraska since August 1944, brings to his new position a background of 15 years in the Iowa public schools as a commercial teacher and superintendent and two years as Financial Secretary, Nebraska State Teachers College, Chadron, Nebraska. In addition to his administrative work, he has conducted audio-visual courses, conferences, discussion groups and demonstrations over the State of Nebraska.

Through General Pictures Productions company, Mr. McCulley will be available for meetings with teachers and others on audio-visual education and he will be in charge of sales of 16mm projectors and other visual equipment.

Sound Slidefilm on Retailing

A 30-minute slidefilm-with-sound has been produced by Capital Film Productions, East Lansing, Michigan, for the Michigan Retail Institute to present more forcefully to high school youth the opportunities awaiting them in selling, non-selling and executive positions in the retail industry.

The film, which is titled *We Choose Retailing*, is designed to hold the interest of the student, the high school faculty, parent groups, service clubs and chambers of commerce. It was prepared with the aid of the Michigan State Board of Control for Vocational Education and James R. Hunter of Capital Film Productions.

We Choose Retailing opens on a typical high school campus where three members of the junior class who are about to become seniors are discussing summer jobs. They enter the school auditorium for the final assembly pro-

gram of the year, where they hear a dynamic, successful local merchant, who feels keenly his industry's need for presenting to high school youth the many opportunities for a career in the merchandising field. He takes the three juniors on the following day to visit his well-operated department store and interprets his organization to them.

Calhoun Projectostand

Hazel Calhoun, owner of the Calhoun Company in Atlanta and Columbia, has introduced a new 8-Way Tilt, all metal tripod known as the Projectostand. Manufactured by the Colrod Mfg. Corp., the new tripod has been hailed for its sturdiness, portability, and all-around tilt which allows centering the picture perfectly on any screen.

The top of the Projectostand is of aluminum casting, finished with non-slip crackle paint. Removable legs are of stainless steel tubing. The standard height of 42 inches is slightly lower than the ordinary stand, and was so designed by Miss Calhoun for greater ease in lifting projectors safely to the top. Because of the excellent tilt feature, the light beam is directed well above the heads of the audience in an auditorium.

The Projectostand comes in two top sizes: Large (20") and Standard (18").

Organizations interested in dealership for the tripod may apply direct to Calhoun Company, 101 Marietta St. N. W., Atlanta.

Better Homes and Gardens

Resumption of the activities of the "Club Service Bureau" is expected soon. Visual materials are being submitted by manufacturers, from which the program will be built up. John S. Robling is the Public Relations Manager, at Des Moines, Iowa.

Castle in Big Ad Campaign

Eugene W. Castle announces a large-scale advertising campaign in national magazines such as Life, Look, Esquire, Popular Science, Popular Photography, U.S. Camera, etc., with total circulation of over 50,000,000. Films featured include "Wonder Dogs in Action", "Camera Magic", "Three Little Bruins Make Magic", "Chimp the Aviator" and fifteen fairy tale cartoons.

Consultation Service in Detroit

Clark E. Broderick has formed the Visual Research Corporation to act as a national consultation service organization to supply sales and service aids to visual education dealers who subscribe to the service. The new corporation will serve as a clearing house of new ideas in merchandising and management so that member dealers may better serve the consumers of audio-visual equipment and materials.

Mr. Broderick, who has been elected Executive Vice-President, was formerly with the Jam Handy Organization. For the present, Visual Research Corporation will be located at 4754 Woodward Ave., Detroit.

New Heavy Duty Splicer

An electrically headed heavy duty splicer has been announced by Micro Engineering Company of Hollywood. It makes a straight splice on 16mm film. It is said to be priced in the neighborhood of \$150.

Jam Handy Appointment

Nate Quillen has been named distributor in the eastern and southern sections of Ohio for the School Films Division of the Jam Handy Organization, Detroit, Mich.

Mr. Quillen brings to his new position 14 years of experience with the Jam Handy firm in the field of audio-visual aids and their utilization.

Viewlex Slide Projector

The new Model AP-1 slidefilm and 2x2 slide projector developed by Viewlex, Inc., 35-01 Queens Blvd., Long Island City 1, New York, utilizes—for the first time in this country, it is said—an aspheric condenser system capable of giving the highest lumen output per watt input. This coupled with the 2" Luxtar projection lens is reported to produce a more brilliant image of a given size in only two-fifths the projection distance needed for a conventional long-focus lens. The company further states that this latest development in aspheric lenses eliminates distortion and aberrations frequently encountered in short-focal projection.

Use of the 2" Luxtar lens makes practical a complete but compact projection outfit, screen and all. In a case scarcely 13" square are the projector, slide carrier, accessory lens, tuckaway screen and space for slide file and 180 slides. In use, this screen fits into the end of the opened case, so that no tripod or separate screen support is needed. For larger pictures, the tuckaway screen section snaps off, and the Viewlex with 2" Luxtar lens projects any size picture in only two-fifths the customary projection distance. When a picture is to be projected over a large audience, the Viewlex is used with the interchangeable Luxtar 5" lens.

Encyclopaedia Britannica Guide Books

An interesting new format characterizes the latest of the Teachers' Handbooks published by Encyclopaedia Britannica Films for better utilization of its instructional pictures. Each of the films in the Britannica library is to be accompanied by one of the new type books. Their size is designed to pack into the one-reel film container.

Each handbook contains a foreword suggesting the reasons for showing the film, a synopsis of the content and instructions for presenting the picture most effectively. Each also provides a list of suggested classroom activities which can be stimulated by the films and further the objectives of the course of study.

Reading references for both teacher and students are listed, and the script for the film is reprinted in full, with copious footnotes giving supplementary information and cross-references to related Encyclopaedia Britannica Films. Another innovation is the indication of film footage at each point in the script to make it easier for teachers to order new sections of film should any portion become damaged.

Filmosound Booklet Uses Graphic Presentation

In a manner especially appropriate to the subject, Bell & Howell Company's new booklet on the Filmosound projector employs pictures prominently in presenting 37 specific features which characterize the equipment. Primary emphasis is placed on consumer advantages of the Filmosound, with mechanical details subordinated and mentioned only in supporting these advantages. Effective use of color, with red check-marks affording instantaneous coordination between pictures and copy, distinguishes the new booklet also.

A copy of this up-to-date, informative, 16-page treatise can be obtained by writing to Bell & Howell Company, 7100 McCormick Road, Chicago 45, Illinois.

Viewlex slidefilm and 2x2 slide projector.

Current Film News

■ **SIMMEL-MESERVEY**, 9538 Brighton Way, Beverly Hills, Calif., has completed three more films in its series of cultural subjects. All are in color.

Let's Give a Tea—20 min. Presents in story form accepted procedures of invitations, guest lists, appropriate dress and manners. Understanding is enhanced by the employment of subtle contrasts of right and wrong ways to proceed.

Arranging the Tea Table—5 min. Illustrates step by step procedures for attractive and socially correct arrangement.

Arranging the Buffet Supper—5 min. Brief but comprehensive instruction in afternoon and early-evening entertaining.

The two shorter subjects can be used as separate instructional units, or can be used to complement the longer film. All are designed for high school and college use, and each is accompanied by a study guide.

With the announcement of the new releases, Simmel-Meservey simultaneously issued a statement of their production and research policy which was addressed to the educators of America. The company pledged itself:

To produce only those films which will motivate constructive student thinking . . . To employ only accepted educational techniques and, with the aid of competent research, to produce material which complements the existing curriculum. . . . to maintain a standard of quality above all considerations of cost, sponsorship or other factors which might detract from our primary instructional function. . . . to regard the educational film as a teaching tool capable of infinite adaptation and improvement and, to welcome and be guided by recommendations of qualified educators. . . . to maintain maximum interest level through well-paced realism rather than unwarranted artifice. . . . to regard the classroom as the real laboratory, standing ever beside the teachers in their use of this medium. . . . to assume an active responsibility in aiding the progress of educational techniques. . . . to regard as an honored privilege and a sacred trust our function in aiding in the development of finer men and women to the end that a better understanding may exist among all the peoples of the world.

■ **CARL DUDLEY PRODUCTIONS**, 9724 Santa Monica Blvd., Beverly Hills, Calif. is producing a series of sound films, in color, covering each of the 48 states, the District of Columbia, Hawaii, and Alaska. Title of the Series is *This Land of Ours*. Subject matter presented includes geographical locations of the states; historical facts; principal cities; natural and developed resources; industries, scenic wonders; seasonal activities and sports. Accompanying each film is a summary sheet,

describing the contents of each film, for use by the instructor in advance of the film's use. A further instructional aid is provided in the form of questionnaire sheets listing a number of test questions by means of which the teacher may check on the knowledge derived by the pupils from the showing of the film.

Subjects in the series now ready are: Arizona, California, Utah and District of Columbia. Each is ten minutes in length, and available for sale or rental.

■ **KNOWLEDGE BUILDERS**, 625 Madison Ave., New York 22, have completed several more films in their *Practical Geometry Series*, namely:

The Circle—in which such important phases as radii, diameters, chords, tangents, secants, arcs and central angles are clarified, and theorems and proofs are introduced.

Chords and Tangents of Circles—an advanced phase of the film on the circle. It deals with the theorem on a perpendicular to a chord within the circle.

Angles and Arcs in Circles—explains measurement of central angles, arcs, inscribed angles and angles formed by two chords.

Areas—presents the needs and uses for finding areas of various figures; methods of computing; how relations in the figures result in relationships in the formulas.

These 16mm sound films are available on an outright purchase basis or can be rented.

■ **FRITH FILMS**, Box 565, Hollywood 28, Cal., have produced two new color and sound one-reel films in the social studies area:

Bill Garman, 12-Year Old Business Man—showing the relationship of a boy with people outside his school and family. Bill is a typical American boy who likes to be independent and earn his own money which he does by raising rabbits and a few hogs.

Patty Garman, Little Helper—a film which will serve to orient children to farm life. Patty is a self-reliant little girl who helps with the animals on a small farm. This subject shows family relationships and responsibilities, how the family lives together and how the child helps her family.

■ **THE PRINCETON FILM CENTER**, Princeton, New Jersey, collaborated with The Electric Boat Company in the production of the dramatic picture:

Giant Killers (25 minutes)—presenting the story of the PT boats used by the United States Navy. The film records the methods used to give the elusive wraiths of the Navy's "Mosquito Fleet" their sleek lines and speed, illustrating manufacturing processes involved. Commentary is by radio newscaster Fred Vandeventer.

Good Splicing IS IMPORTANT — MAKE SURE OF IT — WITH

GRISWOLD

FILM
SPLICERS

The GRISWOLD gives you everything you want in a film splicer. It has exclusive design features that make splicing a fast, easy job and assure a clean, perfectly aligned splice right on a frame line every time. It is a sturdy precision-built instrument, good for years of trouble-free service.

GRISWOLD Splicers have long been first choice with makers and exhibitors of motion pictures in the entertainment world who know the importance of good splicing to proper presentation and film preservation. It will pay you to follow their lead and use GRISWOLDS.

GRISWOLD Splicers come in models for all film sizes. All models splice both sound and silent films. Order from your Photo Supply Dealer or direct from us if he can't supply you. Descriptive folder on request.

GRISWOLD
MACHINEWORKS

PORT JEFFERSON, N. Y.

■ **PICTORIAL FILMS, INC.**, RKO Building, Radio City, New York, have released three new subjects in their *Sportsopes* series covering the fields

Scene from "Pinehurst"

of baseball, hunting and golfing. Titles are "Big Leaguers," "Bird Dogs," and "Pinehurst." They are available in either 8 or 16 mm, sound or silent, black-and-white, and are 1 reel each.

Pictorial Films has signed a contract with Viking Films for the production of a series of six one-reel educational shorts on classical music, to be released exclusively, world-wide, by Pictorial. These shorts will feature such top-flight concert artists as Helen Jepson, Met soprano; Todd Duncan, baritone and ballad singer; Rudolph Firkusny, pianist; Appleton and Field, duo-pianists; John Sebastian, harmonica; and Carol Glen, violinist.

Through a contract with Tri-Continental Pictures, Inc. of New York, Pictorial has been assigned world-wide theatrical and non-theatrical distribution rights of three musical films featuring the United Nations String Quartet in the following selections:

2 Schubert compositions: "Andante in A minor" and "March Militaire"

Excerpts from "Eine Kleine Nachtmusik" (Serenade) by W. A. Mozart
Excerpts from "Go Down Moses", "Drink To Me Only With Thine Eyes" and "Turkey in the Straw".

These films are intended primarily for release in the 16mm home movie and educational fields, but will also be independently distributed by Pictorial in the 35mm theatrical field.

■ **A.F. FILMS, INC.**, 1600 Broadway, New York 19, are preparing the second series of six educational and documentary shorts for distribution in this country, and expect to have them ready for October release. The new films have all been produced in France during the past year and are being adapted for American consumption with English narration. Titles of these 16mm subjects are:

The Sunken Fleet—1 reel—depicting the careful and precise underwater work necessary for raising the sunken French merchant marine.

The Glass Bell—1 reel—an enacted film on the causes of Fascism, designed for audience discussion.

Caverns Measureless to Man—2 reels—a camera record of the new

science of apeleology (the exploration of caverns beneath the earth's surface).

The Devil's Needles—2 reels—the adventure of scaling the sheer rocky cliffs of the Alps.

Rouad, the Island of Crusaders—1 reel—a visit among the people of this tiny island off the coast of Syria who still retain the customs of the time of the Crusaders.

Mecca—2 reels—the first photographic record of the yearly pilgrimage to Mecca filmed by a Moslem cameraman.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, offer the following 16mm film releases of G. B. Instructional, Ltd. productions from their Filmosound Library:

The Life Cycle of a Plant (1 reel)—study of the Lupin from seed to

"Life Cycle of a Plant"

seed, including the processes of pollination and fertilization.

Breathing (1 reel)—showing experiments in the chemical process of burning and oxygenation, and illustrates by growing plants that oxygen is essential for life. Various methods of recording the inhalation and exhalation of breath are explained by moving diagrams.

Recreational feature films recently acquired by Bell & Howell include:

Here Come the Co-eds—9 reels—As caretakers of a women's college, Abbott and Costello lift the mortgage and score as Cupid's aides and as basketball players.

The Suspect—9 reels—in which Charles Laughton presents fine character study of a kindly shopkeeper who kills two people whom the world could spare, then surrenders.

Night Club Girl—6 reels—a homey story of farm kids who crash Hollywood on the strength of their corn chowder rather than on their song and dance act.

■ **U. S. ARMY AIR FORCES**, Washington 25, D. C., has just released for non-theatrical showings:

AAF-Special Delivery—a 16mm 2-reel film which has the Bikini Atom Bomb Test in it. To secure a loan of the print write to the Director of Information, U. S. Army Air Forces.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York adds two further releases in its group of films depicting industrial advances in the African gold coast:

Gold Coast Builders—1 reel. At the new brick works at Alajo, workers are taught a simple and effective method of making bricks, tile and pipes, which materials are used to enlarge the plant itself and also to build houses to replace the mud huts now in use.

Pcttery in the Gold Coast—1 reel. In Africa the ancient craft of pottery-making has been practiced for thousands of years, but without the advantage of the potter's wheel. A new Government training center in Alajo is now teaching modern methods developed by potters in other countries.

Also now available in 16mm from British Information Services is **The True Glory**—9 reels, official film document of the European phase of World War II, which received the Academy award for distinctive achievement in documentary production. It was produced jointly by the Governments of the U.S. and Great Britain, and in both money and lives it was a most costly motion picture. Of the United Nations combat cameramen who shot the film, 32 were killed, 16 were reported missing and 101 were wounded. The complete perspective of a whole campaign is offered in this film. The participants are the men who took part in that campaign—American GI's, British Tommies, French Maquis; sailors, cooks, pilots, truck drivers. Their comments are those of plain men, direct and unaffected. The phrases are humorous, resigned, bitter or bewildered. All of them are honest. Over all the film sternly pleads a vigilant peace, an enduring remembrance of the miracles of comradeship and cooperation which war has taught, and which must be maintained if permanent peace is to be achieved.

■ **FILMS OF THE NATIONS, INC.**, 18 West 55th St., New York 19, announce the acquisition of the following three subjects for exclusive release through its organization and Ideal Pictures Corporation:

Toradja—depicts the Toradjan country in the heart of the Celebes, an island of East Indies Archipelago. The tribe and its typical villages and quaint homes are portrayed. The making of delicate silver jewelry, native carving, and the ancient cradle rock graves are other features covered.

The Coconut Tree—an informative film showing importance of this tree in relation to India's economy; its many uses in industry.

The Sofia Girls—so called because they are pupils in the public schools of Sofia parish in Stockholm. The picture mainly consists of scenes of the girls in rhythmic exercises and the gymnastics which have become associated with their name.

■ **DEVRY CORPORATION**, 1111 Armitage Ave., Chicago, has acquired three 16-min. 16mm sound films on birds, photographed in natural color by Jack Van Covering, author, photographer and lecturer.

"What Bird Is That?" will stimulate interest in birds. In all, there are 21 different birds shown, including closeups of bluejays, orioles and redstarts.

Spearheads In The Sky is the story of a boy and girl who discover the nest of a real Mother Goose. They watch the young hatch, grow up and flock for Fall flight.

Sharp Eyes presents two boys and a girl who build a bluebird house, watch the eggs and young. Includes purple martins, killdeer and their broken wing-act, song sparrows on the nest.

■ **NEW YORK CENTRAL SYSTEM**, Motion Picture Bureau, 466 Lexington Ave., New York 17, is distributing the third film in its "Running the Railroad" series, dealing with:

The Railroad Signal (17 minutes)—which after a short review of the history of signal development, takes the audience on a tour of a modern system, showing in operation the complicated automatic signalling equipment which contributes so much to railroad safety. In addition to a non-technical explanation of their operating principles, the film shows how signals are used and reveals the meanings they have to the engineman, conductors and brakemen.

■ **JOHNSON & JOHNSON**, New Brunswick, N. J., is distributing free of charge:

Bathing Time for Baby—a 13-minute 16mm Walt Disney production in Technicolor approved by the Children's Bureau of the U. S. Department of Labor and the Visiting Nurse Service of New York City. Utilizing the famous Disney animated cartoon technique, this new film was prepared under the supervision of experts in the field of baby care to help mothers understand the importance of safeguarding baby's health by following an approved technique in every step of his bath. The technique of the table tub bath is demonstrated, step by step, by diagrammatic technique.

■ **U. S. DEPARTMENT OF AGRICULTURE**, through a cooperative arrangement between the Veterans Administration and the Department of Agriculture, has produced seven new films for veterans covering varied subjects. The films which were planned and written by the VA Visual Aids Service, are entitled:

Future Assets—discussion on the reasons for retaining National Service Life Insurance.

Medical Service Second to None—What the medical program of the Veterans Administration offers the doctor.

Hang On!—a trailer stressing the

retention of National Service Life Insurance by World War II veterans.

Write Right—tells veterans when, why and how to write to the VA.

Veterans Report No. 1 and No. 2—newsreel type subjects.

Service to Those Who Served—up-to-date pictorial summary of the activities and functions of the VA.

Prints of these films can be obtained from VA Branch Offices.

■ **GENERAL ELECTRIC COMPANY**, Schenectady 5, N. Y., has produced a new 16mm color and sound picture in cooperation with the United States Public Health Service emphasizing the importance of

Clean Waters—as the film is titled. The effects of water pollution are shown: the destruction of wild life and recreational facilities, the deterioration of waterfront property, spread of waterborne diseases. Methods of sewage treatment developed to prevent water pollution are shown by animated drawings and pictures of modern sewage plants in operation.

Bookings can be made through local utility companies or General Electric Apparatus Sales Offices. The film runs 27 min.

Catalogs

DeVry

DeVry Corporation of Chicago announces the availability, without charge, of its new 136 page Film Catalog. Just off the press, this lavishly illustrated catalog should be a valuable guide in the selection of 16mm. sound and silent films for educational or recreational use. All films are currently available on rental basis, many for outright purchase.

More than 1000 films are listed and described. Hundreds of new releases are cataloged for the first time. Classroom teaching subjects include films on Geography, History, Health, Safety, Physical Science, Mathematics, English Literature, Music, Biological Science, Vocational Training, etc. Included are a wealth of film subjects and 2"x2" color slides for church use. A special 32 page insert is devoted exclusively to 16mm. sound recreational films.

Copies of this catalog may be obtained, without charge, by writing to the DeVry Film Library, DeVry Corporation, 1111 Armitage Avenue, Chicago 14, Ill.

Eastin

Two 1947 catalogs of 16mm. sound films are now being distributed by the Eastin Pictures offices at Davenport, Iowa, and Colorado Springs, Colo.

One of these is a large catalog of entertainment films, an attractive 104-page book generously illustrated, which lists feature pictures, Westerns, serials and many varied short subjects and cartoons. A special feature of this catalog, in observance of the firm's twentieth anniversary, is a section devoted to the founding, growth and present operations of the Eastin film libraries.

Eastin's other new catalog, called

the 1947 Guidebook to Instructional Films, is a 96-page booklet containing comprehensive descriptions of 329 selected educational films. These are offered to schools under a new plan in which films are rented by the school-week at minimum rates, rather than by the day.

In addition to these two new catalogs, Eastin Pictures is now preparing a list of religious films and a special list of Christmas short subjects. It is expected that these will be ready for mailing about October 15th.

Films, Inc.

Educational films available for distribution during the current academic year are listed in the 1946-1947 School List catalog recently issued by Films-Incorporated, 330 West 42nd Street, New York 18, N. Y.

Featured in this illustrated catalog are full-length features of the foremost film producers in the country, presented in 16mm. form for school showing. In addition, a wide variety of subjects of educational and entertainment interest is offered, including literature, art, music, science, the social sciences, and sports, as well as many short subjects and cartoons. The catalog may be obtained upon request.

Forum Edition Films Readily Obtainable

The March of Time has announced a simplified plan for the more effective distribution of its popular Forum Edition Series.

These 16 mm. sound releases have heretofore been available from the publisher on a subscription or special rental basis. But they may now be obtained from University and local film libraries throughout the country—by direct application or through the March of Time which will channel any inquiry to the nearest distributor.

The prints held by libraries will be leased but not sold outright by the March of Time in order that films may be called in for periodic re-editing and repair, when necessary.

In all, there are 26 subjects available—for each of which there is a special Discussion Outline to aid users in previewing and study.

The latest Series M includes the new titles: *The Philippine Republic*, *The Pacific Coast*, *Greece*, *Palestine*, *Italy*, *Britain and Her Empire*, *Music in America* which deals with the development of interest in all types of music, and *Life with Baby* which was taken under the direction of Dr Arnold Gesell at his celebrated Yale University Clinic.

A booklet describing the new films and the 18 previously issued may be obtained from your local film library or from The March of Time Forum Edition, Dept. D, 369 Lexington Avenue, New York 17, N. Y.

 CORONET INSTRUCTIONAL FILMS
Announces...

5 NEW COLOR SOUND FILMS

WHAT IS SCIENCE?

Introduces through two children conducting simple experiments and observations in their home the basic concepts of the scientific method. Educational collaborator: Dr. N. E. Bingham, Northwestern University.

FRED MEETS A BANK

Fred visits the bank with his father and learns about the various services rendered the community. Educational collaborators: Prof. I. Owen Foster, Indiana University, and Frederick G. Neel, Canterbury College.

THE SECRETARY'S DAY

Just what is the work of a secretary? This film answers that question, showing the responsibilities and duties of a secretary during a typical day. Educational collaborator: Dr. Peter L. Agnew, New York University.

THE SECRETARY TAKES DICTATION

In an actual office situation, the skills and consequent responsibilities of a secretary taking dictation are compared with those of a stenographer. Educational collaborator: Dr. Peter L. Agnew, New York University.

THE SECRETARY TRANSCRIBES

This film follows a secretary through the transcription of a day's notes, depicting general skills of transcription organization, as well as detailed techniques. Educational collaborator: Dr. Peter L. Agnew, New York University.

Celebrating the tenth birthday of Coronet Magazine, Coronet Instructional Films announces the addition of five new subjects to its ever growing library of 16 mm. sound-and-color motion pictures. Characteristic of colorful Coronet films, these new reels fill a definite need in education, and fit into standard curricula. Preview prints are available to those interested in making selections for purchase. Write for complete catalog.

FILMSTRIPS

CORONET'S 10th Anniversary Filmstrip Series offers every month one 25-frame roll of a selected Picture Story from Coronet Magazine and one 40-frame roll of a timely safety education subject produced in collaboration with the National Safety Council and the Society for Visual Education. For the complete series of sixteen Filmstrips, \$12.00.

SLIDES

2" x 2" KODACHROME SLIDES of all the famous Coronet Magazine Color Features. With order, specify page number and month of issue. Each, 50 cents.

WRITE TO: CORONET INSTRUCTIONAL FILMS

Ever see a machine like this?

This strange-looking machine is, we believe, the only one of its kind ever built. Its job is to help assure long, trouble-free life for Bell & Howell 16mm motion picture projectors.

How? The most uniform steel bearing balls we can buy vary slightly in size. An oversize ball in a bearing, as shown in the exaggerated small drawing below, will carry far more than its share of the load. This encourages early failure.

MEASURES TO WITHIN .00002 INCH!

So our engineers designed and built this grading machine. It puts into each glass vial balls which are uniform to within *two one hundred thousandths of an inch!* Assembled into a bearing, each precisely-

matched ball then does its exact share of the work.

THAT'S WHAT WE MEAN BY "PRECISION-MADE"

This astonishingly accurate ball grading is just one of many reasons why Filmo and Filmosound projectors are famed for superior, lastingly dependable performance in rigorous school service.

For complete information on today's improved Filmosound 16mm sound film projectors, write Bell & Howell Company, 7117 McCormick Road, Chicago 45; New York 20; Hollywood 38; Washington 5, D.C.; London.

Floyde Brooker Addresses New York Film Council

"IS the United States leading with its chin again?" was the question posed by Floyde Brooker of the United States Office of Education in an informal talk at a luncheon meeting of the New York Film Council, October 16, at the Sheraton Hotel.

By adhering to the present policy in regard to mass media which the United States representatives will advocate at the November 19 meeting of the United Nations Educational, Scientific, and Cultural Organization in Paris, this country may be laying itself open to possible future charges of commercial aggression, Mr. Brooker declared.

Mr. Brooker pointed out that he felt it was a matter of regret that, although the Report of the Commission of Consultants to the United States Department of State is a splendid series of recommendations for the United States official policy for the November meeting of the UNESCO in Paris, that the present slant is limited to theatrical and commercial interests with no recommendations toward the educational use of the various mass media of motion pictures, radio, and the press. He called for a more balanced policy.

With the tremendous challenge facing UNESCO to work with the United Nations in developing international cooperation, there must be a sizable place for mass media in developing peace through world literacy toward world understanding.

Mr. Brooker described some of his impressions of London and Paris during his recent six weeks in Europe. He attended an international conference of representatives from thirty-seven nations, preparatory to the November 19 meeting of UNESCO in Paris.

He underlined four points which must be basic in an understanding by those of us in the United States of peoples abroad. First and foremost, there is the desperate evidence of relentless destitution. With man's need for sustaining foods and even the smallest of necessities, there is an apathy in the eyes of all, a lack of energy and enthusiasm. However beaten down these peoples may be, there is a very distinct resurgence of nationalism. They are turning to their own great cultural traditions and heritage; to their own films and equipment, greatly to the exclusion of those of other nations, for instance. There seems also to be a general lack of refinement in distinctions between types of films, among other media. Only two general types are recognized: theatrical and documentary. We in the United States have learned much about the specific methods of production and use of the educational or instructional film as opposed to the documentary.

There is a tremendous interest abroad, according to Mr. Brooker, in the use of motion pictures in education. They have a whole generation over there which has been taught the reverse of peace and understanding. There is a raw and terrifying situation of the worst kind of juvenile delinquency, with a limitless need of emotional and moral re-education.

In the light of this, we of the United States have an obligation to expand and develop further our program of activities as a Commission member of UNESCO. If

we permit the present recommendations to serve as the basis of policy for our representatives, our scope will be perforce limited. Of course, we must have a free flow the world around of mass media, but, if this is dominated by commercial interests without the balance of an educational representation, shall we not again "lead with our chins"?

MRS. JOHN FLORY
New York Film Council

Movement Under Way to Censor 16mm Films

The ugly monster of screen censorship rises to plague us again. In at least two states current efforts are observed to enforce to the letter blue laws on 16mm showings and there are sputtering attempts to set up film censorship where it doesn't exist. It is suggested that all local films councils devote a meeting at the earliest possible date to the problems of censorship.

FCA has a strong national committee on freedom of the screen. The chairman is Richard Griffith, executive secretary of the National Board of Review of Motion Pictures, Inc. The National Board has complete data on the state of existing state censorship and its past history. Councils should write to Mrs. Bettina Gunczy, secretary of the National Motion Picture Council, National Board of Review of Motion Pictures, 70 Fifth Avenue, New York City.

THURMAN WHITE, Chairman
FCA Committee on Local Organization

Atlanta Film Council Meeting Inspires Active Discussion

Does the use of 16 mm films create interest in a subject? Is that interest greater than if no visual portrayal of the subject matter were given?

The Atlanta Film Council proved at its September 30th showing that films do create greater interest. An audience of about 150, a panel of seven, and four Public Affairs (Brandon) films brought about the following expressions of thought.

1. To bring about the world peace, we must first begin at home.
2. News commentators and the press should be encouraged to emphasize the good being done in World Conferences, along with errors now so highly publicized.
3. It is easier to sell fear than to sell hope.
4. As individuals we may not be able to help much towards world peace, but our first step should be "right thinking".
5. We cannot help our less fortunate neighbors until they have been educated to the point of wanting our help—especially in the matter of raising living standards.

The program, under the direction of Miss Hazel Calhoun, had as its subject: "Toward World Peace". Miss Calhoun selected the following four films for the showing: "Made in USA", "When Asia Speaks", "Toward Unity", and the much-discussed, "Now the Peace".

Panel members who led the discussion following the showing of the films included Frank McAllister,

(Continued on page 528)

Experimental Filmstrips in English Fundamentals

Interesting evidence that filmstrips, even under severe limitations, are valuable in English teaching at college levels.

JOSEPH JONES
Assistant Professor of English
The University of Texas, Austin

THE Department of English at the University of Texas has for several years been interested in audio-visual instruction. Work began with the acquisition of an electric phonograph and two combination opaque and lantern-slide projectors in 1942, and has continued to grow. The department now has a sizable collection of 2x2 slides, a picture file, and a very satisfactory repertory of phonograph records. No very sustained experimental work had been done, however, until the writer undertook a project to compare the results of teaching by filmstrips with those of teaching by methods regularly followed by most teachers of college composition: lecture, recitation, drill.

To support such an investigation, the University Research Council in the spring of 1945 appropriated the sum of \$1,500 to provide apparatus, materials, and assistance for the preparation of materials. During the summer months, a total of eighteen filmstrips were designed and prepared. These covered such elementary subjects as parts of speech, agreement of verbs, phrases and clauses, parallel sentence structure, and principal uses of the comma. Simple in form, with occasional drawings or diagrams but chiefly in typescript, the strips were planned for use in a rapid view of fundamentals traditionally given in a period of 7-8 weeks at the beginning of the term, which is followed by a Uniform Examination on Mechanics taken at a designated time by all students currently in English 1a. Failure on this Uniform Examination results in a student's being automatically reported as failing at mid-term; consequently, a good deal of emphasis on review and drill characterizes these preliminary weeks. This was the period chosen for trying out the filmstrips, which were to be placed in direct competition with conventional methods of procedure.

The department was of sufficient size to provide a number of teachers having at least two sections each of English 1a. This condition would enable such teachers to use filmstrips in one section and conventional methods in another, thus affording a controlled experiment involving a number of sections and several teachers. With the approval of the Chairman and the departmental Committee on English 1, detailed plans were drawn up. Four filmstrip projectors and four screens were ordered,

and work on the filmstrips themselves was begun late in June.

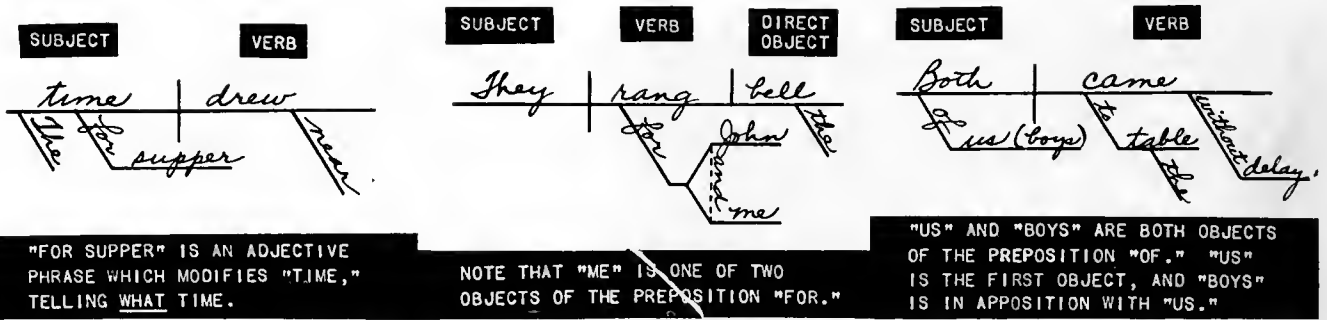

It could not be taken for granted that because filmstrips were thought useful in other subjects, they would necessarily work in English courses. In fact, most teachers and some experts in visual instruction appeared skeptical whether filmstrips could have any application in the teaching of composition. The first question to be answered, therefore, was not "How much better (if any) is the filmstrip than the ordinary classroom procedure?" but "Can the filmstrip actually be used in college English classes? Will it work at all?" So far as the writer could learn, no systematic attempt had ever been made to determine this point. In fact, not much interest in experimental procedures has yet appeared on the college level, though a good deal may well be expected within the next few years. This experiment, then, was set up as a strictly pioneer effort, without any known previous guides.

Preliminary Design of the Experiment

As originally designed, the experiment was to cover the period of 7-8 weeks previous to the Uniform Examination on Mechanics. Sixteen filmstrips were to be shown; twenty-seven exercises in the drill book (a regular text for all sections) were to be worked out. Periods for review of certain filmstrips were provided. Two uniform tests, modeled closely after the general Uniform Examination (which includes spelling, grammar, punctuation, and sentence-structure, with the same pattern but varying examples from year to year) were made up for use just before and just after the experimental period, the second to be given immediately before the general Uniform Examination. In outline, the procedure for each pair of sections was as follows:

- I. Preliminary test on mechanics (both sections)
- II. Drill throughout period (both sections)
 - A. With filmstrips ("visual" sections) or with conventional classroom procedures ("non-visual" sections) and
 - B. With exercises in a drill book (both sections)
- III. Regular weekly themes, with conferences (both sections)
- IV. Achievement test on mechanics (both sections) (Later it was decided to add a second achievement test at the end of the semester, to be taken by both sections)
- V. Final achievement test on mechanics (both sections)

*The writer wishes to acknowledge with many thanks the assistance of several persons: Mrs. Frances Umbenhour Speck, Mr. and Mrs. Charles Stewart, and Mr. J. Monroe Lanmon, assistants; Dr. B. F. Holland, Department of Educational Psychology, and Mr. D. W. McCavick, Director of the Visual Instruction Bureau, The University of Texas; Mr. Homer DeGolyer, Dallas; Mr. Ellsworth C. Dent, Chicago; Miss Edleen Begg, Miss Gertrude Reese, Mr. Fred Eikel, and Mr. Frank Goodwyn, cooperating instructors; and Mrs. Joseph Jones, for constant assistance and encouragement.

Sample frames from the filmstrip, "Testing Grammer with Diagrams." Students are given time to make their own versions before the completed diagrams are flashed on the screen.

This design was discussed and approved by the participating instructors before the experiment began.

Cooperating Instructors

It was felt that experienced, representative teachers should conduct the experiment, participating on a strictly voluntary basis. The choice was therefore made in the following manner: the Chairman furnished a list of some eight or ten experienced teachers who had been assigned two or more sections of English 1a. A note of invitation was sent to all, and the first ones to reply were designated as participants. Of the quota of four instructors thus chosen, two were men and two women; all had taught freshman English for several years.

Each instructor was provided with a projector and a set of filmstrips. None had ever used filmstrips before or had operated a filmstrip projector. A preliminary conference of one hour was held to issue materials, discuss plans, and learn the operation of the projectors; subsequently, other brief conferences were held, chiefly to make minor modifications in the uniform schedule and to discuss the tests. After this minimum of preparation, each instructor was "on his own."

Scheduling of the Experiment

Unsettled conditions of registration at the beginning of the term, together with an earlier-than-usual date for the Uniform Examination on Mechanics, restricted the actual experimental period to slightly less than six weeks (November 9 to December 13, 1945), with thirteen class periods in which fourteen strips were scheduled to be shown. These rather rigid conditions were efficiently met; all the instructors finished the schedule on time. Some rather adverse reaction to such pressure was anticipated, both on the part of students and teachers, but none appeared.

The Experimental Sections

Each of the four instructors, as has been stated, taught two sections of English 1a. One section of each pair was designated as a "visual" section; the other, the "non-visual," was to follow whatever customary procedures the instructor used. Classrooms had already been assigned; the "visual" section was therefore designated chiefly on the basis of the relative suitability of the room it occupied. No attempt was made to ascertain the abilities of students in the various sections before the choice was made. No class was moved from its regularly scheduled quarters; the most that was done by way of physical change was to reverse the direction of the chairs in one of the rooms so that the base plug would be at the back.

A few students in both types of section dropped out during the course of the semester. Their scores were eliminated from the calculations, as were those of a few others who for one reason or another failed to take all the uniform tests. Such losses, fairly evenly distributed, were not sufficient to disturb the balance between paired sections or to modify appreciably the general outcome.

Sizes of sections, after eliminating drops and irregular participants were as follows:

	Visual Section	Non-Visual Section
Instructor "A"	23	17
Instructor "B"	14	15
Instructor "C"	18	16
Instructor "D"	27	21
Totals	82	69

We lost the tire near a bridge.

PHRASE WITHIN MAIN CLAUSE

We went back to where we had lost it.

CLAUSE WITHIN PHRASE: OBJECT OF "TO"

Sample frames from filmstrip, "Phrases and Clauses"

Physical Conditions in Classrooms

Teachers of English at the University of Texas have no regularly assigned classrooms to work in from term to term. English classes are held in many different buildings, in classrooms offering almost every conceivable variation in physical facilities. Most rooms, however, have curtains or shades of some description, usually venetian blinds. No special effort was made at any time to provide rooms especially designed for visual instruction; the experiment was predicated on normal conditions which would have to be met as best they might.

Fortunately, all the rooms used for projection did have venetian blinds; one had dark blinds. The laboratory-type strips used were by no means models of outstanding film technique, but they were functional and could be seen by the class, occasionally not without some difficulty. It may be fairly stated that the physical conditions were far enough from ideal to constitute a considerable though not insuperable handicap; but the teachers accepted the situation with grace and adapted themselves to what they found.

The experiment proved beyond doubt that filmstrips may be used in the average classroom with a minimum of change in arrangements, frequently with none, at all. This is not to say, of course, that they will not do better under more favorable conditions.

Operation of the Experiment

With excellent cooperation from all the teachers, the experiment proceeded without interruption. No serious difficulty with the physical problems of projection was reported; operation of the projectors proved to be simple and easy. For the most part, the filmstrips fitted the class periods fairly well, though occasional crowding for time was reported.

The first uniform test was allotted forty-five minutes. This amount of time was found to be excessive; and on subsequent tests the amount was reduced to thirty-five minutes. Data acquired through the uniform tests was reported and tabulated, with results as shown below.

Quantitative Results

A. Scores on Uniform Tests

Scores on the three uniform tests were averaged for the eight sections. Progress was noted between Numbers I and II (given at the beginning and end of the experimental period) and between II and III (the latter at the end of the semester). Performances of individual sections and the two large groups as wholes are given in the following tables.

Table I

In- struc- tor	Section	Aver- age: Test I	Aver- age: Test II	Gain	Aver- age: Test III	Gain	Over- All Gain, Tests I-III
"A"	Visual	47.82	55.65	7.83	58.43	2.78	10.61
	Non-Visual	39.58	49.23	9.65	53.52	4.29	13.94
"B"	Visual	36.57	48.5	11.93	46.00	-2.50	9.43
	Non-Visual	39.06	47.92	8.86	51.00	3.08	11.94
"C"	Visual	46.06	59.88	13.82	61.50	1.62	15.44
	Non-Visual	39.75	58.12	18.37	58.62	.50	18.87
"D"	Visual	42.07	54.00	11.93	55.88	1.88	13.81
	Non-Visual	44.23	53.90	9.67	56.00	2.10	11.77

A FAILURE TO OB-
SERVE PARALLELISM
IN A SERIES THAT
HAS BEGUN IN
PARALLEL FORM...
**THROWS THE READER
OFF THE TRACK**

Frame from filmstrip on "Problems in Sentence Structure: Parallel Structure, Periodic Structure, Transitions".

Visual sections of two teachers, it will be noted, made better gains between Tests I and II; non-visual sections of the other two were ahead at this point. Complete results on all three tests for the combined groups follow:

Table II

	Aver- age: Test I	Aver- age: Test II	Gain	Aver- age: Test III	Gain	Over- All Gain, Tests I-III
All Visual Sections	43.13	54.7	11.37	55.45	.94	12.31
All Non-Visual Sections	40.65	52.29	11.64	54.78	2.49	14.13

Interpretation. These figures indicate that at the end of the experimental period, both types of section had made approximately the same gain. The filmstrips had thus far successfully competed with other varieties of classroom procedure, and the equation was evenly balanced:

WORKBOOK		WORKBOOK
+		+
THEMES		THEMES
+		+
CONFERENCES	=	CONFERENCES
+		+
FILMSTRIPS		REGULAR CUSTOMARY PROCEDURES

On the final tests, this close correlation is lost, principally through the negative score made by one visual section. No reason for this divergence is apparent, unless it is that the filmstrips were not sufficiently reviewed. No formal review or preparation for the final test was assigned.

From this information we may safely conclude that the filmstrip, even in a relatively crude and untested, unrevised laboratory form, is a device well worth the serious attention of teachers of English. It challenges the customary procedures of experienced teachers who use it for the first time, without previous acquaintance with visual methods. The primary question, "Will the filmstrip work in college English classes?" had been answered affirmatively: it will.

(To Be Concluded in December)

Making Films For Children*

An expert writes on the problem of motion picture content and child psychology as England sees it.

MARY FIELD, Director
Children's Film Department
Gaumont-British, London

ONE of the most important things to remember when you are making films for children is that children make a very critical audience. Films are a part of the culture into which they are born. They accept films as an integral part of life just as they accept aeroplanes, telephones and the radio. In many parts of the world, of course, films are almost the only form of public entertainment, so they take the place of the theatre and the concert hall. It is clear then that films form the chief contact which many millions of people have with the Arts. So we cannot afford to neglect the film in relation to the child.

For many years teachers and welfare workers have felt that children should not attend adult films which are not suited to them. But special exhibitions of adult films that seemed harmless for children never proved a sustained success. The reason was simple. The films were advertised as being good for children, so naturally enough, the children preferred to stay away.

Just before the war, in England, the film industry set to work to remove children from adult audiences. With a sound sense of psychology, two of the big circuits founded "children's cinema clubs." *You could attend the Saturday morning club meetings only if you were a Club member!* Non-members were left outside. As a result membership filled the English cinemas to capacity and attendance was regular. Now over four hundred thousand children attend cinema Club meetings every Saturday morning.

These Clubs are non-profit making. The members enjoy other activities beside film-going. There are football teams and cricket teams, swimming clubs, orchestras, concert parties, stamp clubs, model-making clubs, boating clubs, dramatic societies, even bands, all attached to the Clubs. This movement developed all over Britain in spite of war conditions and the blitzing of big towns. Membership is limited to children from the ages of seven to fourteen. The Clubs are playing an important part in their lives, since very few other club facilities are provided for children under the age of fourteen. But the problem for the organizers was, and is, what films to put on.

There are very few present-day films suitable for child audiences, and relatively few that are harmless. But most films, made for grown-ups, are definitely unsuitable, if not positively harmful for children. So about a year ago, Mr. J. Arthur Rank, the Chairman of both the Odeon and Gaumont Circuits—the pioneers of the Club movement—decided that special entertainment films must be made for children. He set up a Children's Film Department entrusted with this production. So we began making the first entertainment films to be produced entirely for children. We experimented with two short story films, a cartoon, a nature

film, and a topical film that is coming out once a month and is called "Our Club Magazine." It was a bad time to start as most of the film technicians were in the services and the war had produced a great shortage of film stock and studios. Still we thought it better to make some pictures and get them into the Children's Club entertainments so that we could learn by "trial and error" what the children's taste in films really is, and we have certainly learnt a lot.

One pleasure the children have been starved of in the cinema is the pleasure of being able to identify themselves with the actors on the screen. That is what adults enjoy doing so much at the pictures, but children had seen no children in the films, except an occasional child star whose environment was foreign and who was not in the least like themselves and their companions. We have found that they take the greatest pleasure in watching stories of very ordinary children in very ordinary British scenes. Between the ages of 7 and 14 we find children are realists in their filmgoing. They do not want to see heroes and heroines in very beautiful homes or very modern schools but in the kind of kitchens and classrooms that they are used to themselves. Nor do they like the kind of child actor that is attractive to adults. They like the ordinary, plain, rather pudding faced little boys and girls, and too glamorous a child in a film is apt to be branded as a "show off."

Once they have identified themselves with the characters in a film, the members of a child audience are extremely curious and want to see everything that is going on on the screen. This means that they want many more close-ups in their films than grown-up audiences do. They want to see what coin is offered as a reward; they want to know what is in a handbag or what is written in a letter; and if the story is set in a school sports meeting they want to see all the sports and not only an impression of the whole. They are also extremely logical and follow the story very critically ready to find fault with any mistake in time or sequence. If a picture does not seem to them to be really logical they tend to dismiss it, their greatest term of contempt for an ill directed story being "This is a silly film." This logical criticism applies not only to pictures with living actors but to cartoons and to nature pictures. The children are, however, exceedingly sensitive to beauty and I've heard a whole audience break into spontaneous applause. It was an exquisite scene of surf-riding where camera and actor combined to produce an effect of perfect rhythm in motion.

On the whole, child audiences go to look and not to listen. This means that in making films for them, the plot must be worked out by action and not by dialogue. Children will however listen very attentively to dialogue which is really essential to the development of the story and they remember the names of places

*An address broadcast by the British Broadcasting Corporation.

Needlework Class for Girls

(From "Citizens of the Future," British film)

and people with surprising accuracy. They like good speech too. One little boy of eight, who was asked his opinion of a nature film, to which the commentary was written in rhymed couplets, was stimulated by the rhythm of the commentary to write his reply in very much better verse.

One thing we have learned very clearly from observing children's reactions and studying their written criticisms is to pay little or no attention to adult criticism of films made for children. It is the criticism of the children that matters and they like their stories constructed somewhat differently from those which suit grown-up taste. Children like their stories to be moral. They like black to be black and white to be white, and they demand that good shall triumph and that the bad boy or girl shall be punished. Nor is it sufficient to intimate that the evil-doers will get their deserts. The children want to see what is coming to the criminals and to judge for themselves whether the punishment is suitable and sufficient. They have no objection to moralising that makes grown-up critics wriggle in their seats, and they will cheer a chase across a town to restore a lost purse with the same enthusiasm as they would cheer the Sheriff riding down a horse-thief.

In all their pictures, however, children do like action and suspense. We must remember that the children already have had their taste formed by the ordinary grown-up pictures, and being as conservative in their film-going as they are in most other things, they would not appreciate a sudden radical change in their films. So we are prepared to take a very long term policy. Gradually we hope to improve the content of the films, while keeping to the present accepted form. Then in about five years when our present audience will have grown away from us we shall hope to introduce more far reaching changes. Ultimately we feel that children's entertainment films should provide adventure, fantasy, well-camouflaged information, and an opportunity of taking part in the screen entertainment. But above all, the films provided for children should be first class pieces of film craftsmanship. Thus, we shall be training intelligent adult film audiences before whom the film industry might put its best and most intelligent products.

Most people are interested to know who selects the stories for these films. The responsibility of selecting entertainment for so large a proportion of British children is too great to rest upon one group. There exists, therefore, an Advisory Council on Children's Entertainment Films. On this sit representatives of government departments and of all the National organizations that are interested in the leisure time of children. This Council has been kept small enough to be really active and practical. It advises on stories and the treatment of action and views and approves the films when they are completed.

One delicate point put up to the Advisory Council was whether a child character in a film should be rewarded for returning lost property or not. On the one hand it was important to show that one does good with no hope of reward, but on the other hand it was equally important to show that one should be generous to those who help you. This was an exceedingly delicate point of ethics and the responsibility of settling it lay on the Council. I wonder if you'd agree with their decision. They decided on a reward.

After our initial experimental films we made two serial stories as the children are particularly fond of

Courtesy Bell & Howell

Nest and eggs of the Tawny Owl

(From the G. B. Instructional film, "The Tawny Owl")

serials. One, made in Britain, is called *The Mystery of Smugglers' Cove*, while a very thrilling serial dealing with the capture of horse thieves by a group of children is called *Bush Christmas* and was produced in Australia. A series of children's travel films are in hand and special attention is being paid to the Dominions. It is hoped that some very interesting pictures of Australasia will be taken in the very near future.

Two children's feature films were made, one in Canada and one in this country. The British produced one is particularly interesting. It is called *The Little Ballerina* and deals with the life of London's stage children. We are hoping by means of this picture to introduce children to the ballet as a living and exciting art. If this proves successful we shall be able to go ahead, and by putting our stories into the right settings, we shall be able to arouse the children's interest in other great arts such as music, painting, sculpture and drama.

We are always being asked whether we are making

screen versions of the great children's classics. We are certainly hoping to do so if the stories lend themselves to film treatment, but we must remember that good films tell their stories in action, while many good books rely on telling their stories in words or by conversation and, therefore, do not make good screen material.

The films and the film clubs are already spreading

their influence outside Great Britain. The first Associate Club opened at Toronto last summer and more Clubs along these lines will be opening in the Dominions very soon. We have every reason to hope that in the future our children's entertainment films will serve as a link to join the children of the whole world in friendship.

The Motion Picture in World Peace

(Concluded from October Issue)

E. F. IMLE, Principal
Ascarate School, El Paso, Texas

ALTHOUGH we have won the war and are now striving to make that victory secure, if we do nothing about properly supervising the education of conquered and reoccupied countries there is nothing to keep any country from indoctrinating its young people anew with the idea of war and conquest. If even one nation is permitted to pursue such a policy, no other nation can safely or effectively teach peace and cooperation in its schools. Why cannot there be set up some sort of United Nations Educational Council whose duties it will be to organize and supervise on an international scale the education of all countries in general and of the conquered and reoccupied countries in particular? One authority says:⁵ "Education can be turned into a powerful weapon for peace. Two or three generations of the entire youth of the world educated with the belief that international differences can and should be settled by peaceful means only, would do much to break down the prejudices of national hate and distrust. The ideals and methods of peace could become so strong and so well understood that notions of conquest and war would be nipped in the bud. Persons advocating such notions would be treated, not as worthy leaders, but as criminals against mankind."

Educating for peace has been tried before but only on a national scale and only half-heartedly at that. But today we have a new tool, the film, which if used wisely can "span geographic frontiers . . . and crumble the barriers between people of different educations and different economic backgrounds",⁶ and between different racial and national groups. It will be difficult to convince people of the importance and need of controlling education of all countries in this respect. However, there is one bright hope; and that is that such a proposal will be a part of the peace treaty while the winning nations are willing to accept it because they cannot do otherwise.

To use the film effectively in education for international peace there must be an expertly formulated plan. The very important UNESCO conference in Washington last summer was reported in detail by Dr. Dugan in the September issue (page 386) of *EDUCA-*

TIONAL SCREEN. That meeting was concerned chiefly with desirable objectives and general services to be attained, and less with concrete organization and method for achieving world distribution of materials produced for the great end in view. There are undoubtedly many plans that will work, some better than others. I should like to suggest a plan modeled in part on the Texas War Film Program which was set up in that state in 1942-43.

The program used films put out by the Office of War Information and the Co-ordinator of Inter-American Affairs. It was in charge of a State War Film Coordinator who was an official in the State Department of Education. The state was divided into twenty districts, each with a District War Film Coordinator in charge. In each district prints of each film program were deposited with the district co-ordinator. He was given a list of all schools and organizations in his area that had 16mm. projectors, and it was his duty to schedule the film programs to the various places as demanded. In each district there were a number of Local War Film Coordinators whose duty it was to receive the films from the district coordinator and to see that they were given the greatest possible number of showings. The local co-ordinator was required to make regular reports to the CIAA, the OWI, and the District Coordinator, showing the size and character of the audiences seeing each film and making his comments. The data thus provided served to guide the further development of the program. There was no attempt on the part of the government to finance this program. It was a cooperative affair, the Federal Government furnishing the films free of charge, the District and Local Coordinators donating their services, and the schools and organizations paying the cost of transporting the programs they used. Certain administrative costs, which amounted to very little, were borne by the State Department of Education.⁷

On a world scale I would propose, as an integral part of the United Nations, an *International Movie Commission*, to have charge of administering the film educational program in all nations of the world. In each nation there shall be a *National Movie Commission* to coordinate the film educational program on

a national scale. In case a country is very small, the national office may also serve as a film depository. But in most cases the films would be deposited in District Movie Banks established at convenient places throughout the nation. These district depositories are to be under the direct supervision of *Regional Movie Commissions*, branches of the *National Movie Commission*. (In the case of the United States these branches of the National could very well be our State Departments of Education.) Assisting the District Movie Banks there shall be Local Movie Banks which will have the temporary deposit of and direct distribution of films sent out for local use. Eventually there can be sufficient prints of every film to stock completely every film bank in every nation with a complete set of the film programs.

The personnel of the *International Movie Commission* is to be chosen from among well qualified men of all nations by the new organization for world peace. The personnel of each *National Movie Commission* shall be chosen by the national government concerned; that of the *Regional Movie Commissions* by the *National Movie Commission*; and that of the District and Local Movie Banks by the *Regional Movie Commissions*. In every case the *International Movie Commission* shall have veto power over these appointments. It shall be the duty of the International to set up the standards for the production of all films for international use and to see that these standards are held. Films not meeting the standards as set up are to be rejected by the International Commission. Periodic inspections of each National Movie Commission office shall be carried out by officials from the International office. The Regional office shall be checked by men from the National office, and the district and local movie banks by men from the Regional office. Recommendations made by the International office are to be carried out as far as possible by the National Movie Commissions, by their branches, and by the district and local banks of every nation.

The over-all distribution of the films within a country shall be directed from the *National Movie Commission* office through its branches, the actual distri-

bution being carried out by district banks and local centers. In charge of the National Movie Commission office there shall be a National Film Coordinator who might well belong to the national office of education. Assistant National Film Coordinators shall be in charge of the Regional Movie Commission offices. District Film Coordinators shall be over the district movie banks and Local Film Coordinators over the local banks. The district and local coordinators might well be school administrators. Films are to be distributed primarily to the schools, but also to various organizations which would have facilities for showing them to groups of people. The District Film Coordinators will schedule the films to the various Local Film Coordinators, and they in turn are to see that the films reach the schools and organizations where they can best be shown.

Since all of the films must of necessity be of the same size, the International Movie Commission will have to decide what that size shall be. Perhaps the most economical both from the standpoint of film production and projector, is the 16 mm. film, which therefore seems the logical one to adopt. In the matter of projection and sound equipment each nation is required to provide such machines and to train an adequate number of operators. Nations so backward that they have nothing on which to build an organization are to be aided by the international office to set up an organization and to buy the necessary equipment. All films are to be furnished free of charge, the nations using the films to bear the cost of their production.

The films shall vary as to type and purpose. They may show the life, occupations, and customs of a people; they may depict ceremonies participated in by a people; they may show the people at play; they may show the scenery of a country. The films may be silent or sound depending upon the scenes shown and upon the purpose for which they are made. They may be in color or black and white. But regardless of all other factors, the films must be true—they must show conditions as they actually are. There must be no attempt to 'cover up' in order to mislead the peoples of other countries. Neither must there be any

of the old type of propaganda that aggrandizes one nation and belittles others in any manner. The only propaganda to be permitted is the new type, the type which we hope is now coming into its own to such a great degree that the very meaning of the word 'propaganda' shall be changed from something heinous, as we now know it, to something high and noble. Another important characteristic these films shall possess is that of teaching tolerance and respect for what other peoples are and for that in which they believe. This can be done if lives, customs, beliefs, etc., are portrayed in their true light without attempt to color them or make them seem superior or inferior to those other peoples. And all the films, of whatever category, must be richly informative in content, a vast treasure-house of raw materials for world education.

The problem of producing such films is indeed a great one. Probably the surest solution would be for the International Movie Commission to go into actual picture-production. But that would cause widespread resentment, decrease cooperation, and tend to defeat the very purpose for which we are working. Perhaps a better way is for each country, insofar as possible, to produce the types of films required and submit them to the international office for judgment and comment, for acceptance or rejection. Each country is to bear the expense of the production of its films for foreign use. If some are too backward, or financially unable to do so, the International Office shall arrange for their production; for no nation or people is to be left out of this program.

Is knowledge of neighbors a certain cure for suspicion and fear? It is highly probable that the answer is "yes". Many of the peoples of the world, to be sure, claim to hate their national neighbors because they "know too much about them." But is that really true? Do they really know the truth about their neighbors, or is their knowledge a result of the wrong kind of education given them by their leaders for the purpose of keeping better control over them politically? The movies in a planned program could soon erase these false impressions and put in their place a true picture of all peoples, showing their hopes and aspirations, their problems and sorrows, and their culture and accomplishments in such a manner as to leave no room for anything but sympathetic understanding and a feeling that we all have much in common.

In speaking of our recent failure to educate for a permanent peace, one authority said, ". . . we are not punished for the folly we commit so much as for the wisdom we fail to enact."⁸ This could be applied to our present knowledge of the motion picture and of its wonderful power as an educational aid. We know of its power, and we know of the need to educate for peace. If we don't use this powerful means of dispensing knowledge and understanding of one another which we have at our call, we shall be guilty of failing to enact the wisdom we have. In speaking

⁹Alexander J. Stoddard, "Education and the Peoples Peace," *National Education Association Journal*, Vol. 33 (Sept., 1944), p. 136.

of the peace we hope to build, another authority said:⁹ "The only way in which we can even partially amortize the debt, which civilization owes to those who have already died and who are yet to die in war, is to establish now a *beachhead for peace* that has a decent chance of being extended beyond our time."

The moving picture is our strongest "beachhead" and will make possible the infiltration of knowledge and understanding, ultimately of brotherly love and the idea of peace, unto all countries and among all peoples. Let us remember that the Japs used infiltration tactics very successfully in the early part of this war in order to break down the morale of the enemy. Theirs was a physical infiltration of soldiers. Let us now bend every effort to use infiltration tactics through the medium of the motion picture to break down the morale of those enemies of peace still to be found in every country. Let us use the motion picture to build up the morale of the masses who hate war and who are crying for some assurance that peace, a long-lasting peace, shall be theirs for the future. Until this is done, we shall have failed to enact the wisdom we have.

WE are indebted to Miss Helen Moffat, of the Tupelo Schools, Tupelo, Mississippi, for the following heartfelt tribute to a new piece of visual equipment from the instinctively poetic souls of her 5-B pupils.

The Overhead Projector

Two weeks ago in our school, in
came a new machine.

It was an odd apparatus, quite the
queerest we'd ever seen.

5-B wondered what it was, with
mirrors, lens, and light.

We tried to sit calmly and wait and
keep still with all our might.

It's just a new projector, a
very handy thing.

It doesn't wobble back and forth,
neither does it swing.

A technicolor map can be
flashed upon our wall,
'Tis so much fun to draw it . . .
not like work at all.

It makes our reading easier; we
use it in history.

Things really do seem true now
that were once a mystery.

Health is made much better when
we see it through a film.

Even Jack says spelling is easier;
it was so hard for him.

We know how our teeth look and
the inside of our ear;

Now school will be better the
remainder of the year.

Left: Figure 1

An overall view of the three-dimensional mathematical demonstrator with two geometric figures set up—a right hexagonal pyramid inscribed in a right hexagonal prism showing the slant height of the pyramid and the altitude which is common to both pyramid and prism; and, at right, a hyperboloid showing altitude and radii of upper and lower bases.

Right: Figure 2

Shows how the four diagonals of a quadrangular prism intersect one another.

Solids from Strings

W. G. GNAEDINGER, Head
Bureau of Visual Teaching
State College of Washington
Pullman, Washington

A concrete account of a newly developed visual device of high potentialities in the teaching of mathematics and engineering.

NCESSITY is often given the maternal credit for invention, but one wonders whether this accolade is not sometimes misplaced. It would appear that at least a share of any such credit should be retained for the simple determination to just, plain, do-a-better-job. Such a motive may not have been involved on the parental tree, but certainly was the source of inspiration which led to the creation of the Three-Dimensional Mathematics Demonstrator, brain-child of Floyd Armstead, of Shelton, Washington.

Many teachers, and good teachers, have faced and struggled with the twin problems of little interest and mis-concept formation while teaching classes in solid geometry. This has been true in college as well as on the high school level, and the problem exists as realistically in descriptive geometry, analytics and engineering drawing. People just can't readily translate figures on a two-dimensional plane, as they see them on a blackboard or in a textbook, to figures which will represent the theorem, corollary, problem, projection, or hypothesis laid down in cold print.

Mr. Armstead analysed the use of solid models, stereo pictures, and other devices in his attempt to meet the situation. Each of these devices made a contribution (in fact, he still uses wood models with his demonstrator), but all fell short in some measure—size, flexibility, or some other. Rather than settle for a half-measure, he set to work to produce a medium which would answer his problem, and the device shown in Figure 1 is the result.

The idea was germinated at Shelton, and construction work took place both there and at summer session workshops at the State College of Washington. An early pilot model proved too limited in size and flexibility, so the present one took its place for field trials during the past school year.

The pictures tell the story—but here are some added details. The stand is three feet high, with a top surface of about two by three feet. The table top is blackboard surfaced to permit chalk-construction of figures. Inter-

Figure 3. A quadrangular right pyramid showing a cross-section plane parallel to the base with altitude and construction lines.

changeable top-units permit a variety of possible figures; each top being drilled with a different pattern of carefully calculated string-holes, from which white, weighted strings may be drawn to depict lines representing solids. Also in the unit is a collection of various upper members of shapes and sizes such that a great variety of forms may be made; so many in fact that Armstead can give no total, even approximate, of the possible variations which can be demonstrated for polyhedral, cylindrical, and conical figures. They may be inscribed as in Figure 1, or circumscribed as in Figure 3. A figure once constructed may be altered by movement vertically, horizontally, or at the oblique; or may become something entirely different, as in the hyperbo-
